THE SCREW PROPELLER QUESTION.—Whatever be the merits of the question as to who was the chief *introducer* of the Screw, there appears to be some direct and pretty clear evidence, that on 8th September, 1832, a model was prepared by Mr. E. Bailey, of 272, Holborn, for Mr. W. Batten, R.N., who has since been for many years agent to the Marquis of Westminster. Mr. Batten states that the idea was suggested to him by watching the action of the dorsal fin of a fish in the Adelaide Gallery, and that after employing Mr. Bailey to make the model, it was submitted to the Navy Board, at Somerset House, and also explained personally to William the Fourth. This model was afterwards deposited in the Adelaide Gallery (for the very purpose, of course, of leading others to assist in all the more effectually working out the suggested idea). The gallery changed hands and purposes, and what became of his model Mr. Batten does not know; but it would be an interesting circumstance were it once more to turn up. Mr. Batten, as he says, from happening to look at a drawing of the Archimedean Screw in "Emerson's Mechanics," was induced, from mere whim, to name his model "The Archimedean Screw Propellor." Now, it is notable that the very first vessel afterwards fitted with the screw was named the Archimedes. Mr. Batten's claim as the originator of the idea of applying the screw to steamers, as a substitute for the paddle, seems worthy of notice.

THE SOUTHAMPTON SCHOOL OF ART.—The opening of the new school of art at Southampton was inaugurated at the Victoria Rooms on Wednesday before last, according to the *Hampshire Advertiser*, under exceedingly favourable auspices. The Mayor presided. After the reading of the report by the Secretary Mr. Crichlow, the chairman introduced Mr. G. Scharf, who delivered the opening address, which was a general review of the advantages of a knowledge of art, with especial reference to Greek and early Christian art and architecture, and illustrated by diagrams. The meeting afterwards adjourned to the school-room, to examine the casts and models arranged for the occasion by Mr. Baker, the master of the school, who explained the purpose and meaning of each object or article of interest. According to the report, the school is intended to be self-supporting. The master is to receive 100*l.* a year, to be paid by half the fees received from pupils. The whole yearly outlay will be 150*l.* The master, by his engagement with the Government Department of Science and Art, is bound to teach four parochial schools, each school to pay 5*l.* a year: this (20*l.* a year) will help to liquidate the expenses.

A MUSEUM OF INDUSTRY AT EDINBURGH.—A Bill, introduced by Sir W. Molesworth and the Lord Advocate of Scotland, proposes to ratify conditional agreements entered into by the Commissioners of Works and Public Buildings, and to vest in them certain property near the College of Edinburgh, to form a site for a National Museum of Industry for Scotland.

THE SCENE OF THE POPE'S LATE PERIL.—The object of the Pope was to visit certain excavations, comprising an Alexandrine basilica and catacombs recently discovered about seven miles from Rome, on the Coazza estate, belonging to the Propaganda College. He was accompanied by various cardinals, archbishops, and bishops, generals and diplomatists, and while all were assembled in a large hall on the first floor of the cloister of the Monastery of St. Agnes, after dinner, when the pupils of the college were about to be admitted to kiss the Pope's toe, the whole assemblage, about 150 in number, were suddenly precipitated, together with the floor, into the lower story, where, however, the Pope was left sitting still in his papal chair, a fortunate issue, which was immediately declared to be *miraculo!* His Holiness had previously assured those around him that the cracking or vibration felt before the descent was made to the lower regions, arose from an earthquake. Not many escaped so easily as the Pope did.

LANERCOST PRIORY—DAMAGE TO THE TOMBS.—Some persons having been admitted into the ruins of Lanercost Priory, without any one to overlook them, are said to have committed shameful depredation upon the Dacre tombs in the monastery. The two carved monuments have been broken and defaced in various places. Three or four stones were found lying close to the tombs, with marks upon them showing them to have been used for the purpose of chipping off pieces of the carving, with the intention probably of carrying them away as geological specimens of the red sandstone of the district, or memorials of antiquarian research. Such wretches ought to have pieces chipped, shall we say, off their own thick skulls.

ECONOMIZATION OF THE COST OF BRICKMAKING.—In reference to what was said on 28th ult. on this subject, our attention has been drawn to the fact of Mr. William Hickson having letters patent for a system having for its object the accomplishment of some such economy as that suggested. Mr. Hickson's patent is said to be "For improvements in the application of heat for baking and drying purposes, and in the generation of steam, adapted for the manufacture of all descriptions of bricks and other similar articles, effectuating a saving therein, of say 4*s.* per thousand, viz.—in carrying clay to tables, 6*d.*; carrying to, and turning on the flats, 7*d.*; putting into racks, 3*d.*; fuel in drying and burning, 2*s.* 6*d.*; and wheeling to the kilns, 7*d.*: total, 4*s.* 5*d.*" The description the patentee gives of his invention is illustrated with diagrams, without which it would not be easy to give anything like a clear idea of his patented arrangements, which, however, appear to comprise a centralized congeries of kilns or ovens, supplied with heat from the centre, and conducted in shape of hot air through galleries, hollow walls, and flues. Arrangements are also provided for the consumption of smoke from the central fire, and for re-heating the warm air to the proper temperature.

LECTURE ON SMOKE CONSUMPTION.—A lecture was delivered in the Council Hall, Sheffield, on Monday evening before last, by Mr. Cashin, C.E. and architect, "On heat in relation to the combustion of fuel, and the perfect combustion of smoke." The schemes introduced for the consumption of smoke under a system of rapid combustion were classed by the lecturer under three heads:—1. Those which cause the smoke from the fresh coal to pass through or over the more perfectly-ignited fuel. 2. Those which provide for the admission of a supply of air to the gases. 3. Those which have a jet of steam thrown into the furnace or chimney. A number of the smoke preventing contrivances belonging to each of these classes were described and their several advantages and defects pointed out. In reference to a plan by Mr. Ashberry, of Sheffield, he stated that posterior to the bridge Mr. Ashberry introduces a combustion chamber the full width of the space between the boiler seating. The second bridge or wall of this chamber is built close up to the boiler, within an aperture in the centre, reaching to within about nine inches of the boiler. Through this aperture the flame and gases from the fire must pass. In passing over the first bridge the gases are checked in the centre and directed towards the sides of the furnace, so as to cause them to impinge against the part of the second bridge farthest from the aperture. In rushing to and through this aperture the flame and gases are commingled and the gases thoroughly mixed, and if sufficient uncombined oxygen be present they necessarily inflame. Mr. Ashberry's plan, the lecturer added, had this advantage—that a constant supply of air is admitted through slots in the furnace door.

GAS AND WATER FOR COPENHAGEN.—After years of deliberation, it is at length decided to introduce gaslights and waterworks into Copenhagen.

STAINED GLASS.—Mr. Holland, of Warwick, has recently executed a large east (subscription) window in the chancel of Stratford-on-Avon Church, containing twenty-one subjects, illustrating the principal events in the life of Christ. The tracery is filled with the four Evangelists, angels with texts of Scripture, Gothic foliage, &c.; richly coloured in the Perpendicular style. The same painter has also put up the following:—A monumental window in St. George's Church, Ramsgate, containing two subjects, "Christ Healing the Sick," and "The Raising of Lazarus," with appropriate canopies, pedestals, &c.; a large east window for St. James's Church, Wolverhampton,—the tracery filled with the rose and lily, with texts of Scripture upon ribbons, &c. in the Perpendicular style: a monumental window for Forest-hill Church, near Oxford, containing two subjects, "Christ Knocking at the Door," and "Christ appearing to Mary Magdalene,—angels bearing texts of Scripture, &c.; east chancel window for Welton Church, near Daventry, Northamptonshire, containing four subjects, and a side window, containing the subject of "Christ Healing the Sick."

SURREY ARCHÆOLOGICAL SOCIETY.—A general meeting of this society took place on Friday week before last at the Town Hall, Chertsey. It was numerously attended, and comprised a great display of ladies. The contributions appeared smaller than at the inaugural meeting of the society, or at the first general annual meeting, but the exhibition was not deficient in any other respect. Among those articles which possessed local interest were a quantity of architectural fragments of Chertsey Abbey, found during the recent excavations, several encaustic tiles found at the same time and place on a floor of concrete (in connection with these a number of drawings from the designs on the encaustic tiles, by Mr. Shurlock, were exhibited), a transcript of the inscription round the Saxon or curfew bell in Chertsey church, and a pen and ink drawing of Chertsey church (both presented to the society by Miss Bartrop). Colonel Challoner presided. A paper on Chertsey Abbey was read by Mr. W. W. Pocock. At the close of the historical details connected with the abbey the reader, after observing that among the most remarkable objects in connection with it were the stone coffins which had been found, concluded by suggesting the probable form of construction of the now razed building. After some other procedure the meeting separated, and numerous groups proceeded to the site of the abbey, which presents few indications of its former importance, the excavations, as yet, having only elicited the encaustic tiles before remarked on, a few stone coffins, supposed to be the coffins of the Abbots, and a few skulls. The coffins are generally about six feet long. The Rev. C. Boutell read a paper on some ornamental tiles recently discovered on the site of the Abbey; and Mr. G. R. Corner, one on an Anglo-Saxon grant of land to the Abbey. Cowley House, the residence of the Rev. J. C. Clarke, was thrown open to the visitors, who wound up the proceedings by a cold collation at the Crown Hotel, where about 120 were present, one half of them ladies. The *Sussex Express* of last Saturday gives a pretty full report of the whole proceedings.

PHOTOGRAPHIC SOCIETY.—A meeting of this society was held on 3rd inst. at their rooms, in Regent-street, Sir W. Newton in the chair. Mr. Mayall read a paper descriptive of his new plan of producing pictures by a "dry" collodion process. The reader went into the chemistry of the subject, and explained the law of substitution of organic compounds. His new process was founded upon this law. As the ether in the collodion evaporated from the plate, albuminate of silver was substituted, and the plate continued for weeks as sensitive as when humid. A dry tablet could now be used for all meteorological registrations by light, astronomical registrations, and the copying of plants for surgical and other observation where the vital parts soon change: to this was to be added the facility afforded to travellers, who could now prepare their plates at home.

ELECTRO-TELEGRAPHIC PROGRESS.—Messrs. Fenton, Hyde, and Co. have just completed two cables for the Electric Telegraph Company, which are to be laid down between Holyhead and Howth in Ireland. The wire is protected by four coverings, to preserve it from injury. The weight of the two cables is 290 tons, and their joint length 140 miles. The company's steamer *Monarch* will lay both cables at same time. This, with the cable already in use, will make three Irish channel lines in connection with the Electric Telegraph Company.

THE LIVERPOOL TIMBER TRADE.—In their last monthly circular, Messrs. Holme, Slater, and Crooksay.—The arrivals from British North America, containing timber, into the docks of the Mersey, during the month, are—six vessels, 6,525 tons, against four vessels, 3,513 tons for the corresponding period last year. The consumptive demand has been good, owing to the extremely low price of all descriptions of wood, but the resident dealers do not feel inclined to increase their stocks even at the present low rates.

A SELF-TAUGHT ARCHITECT.—The last report of the Christian Knowledge Society gives the following extract from a letter by the Bishop of Colombo:—"The fittings of the nave and choir (of the cathedral at Colombo) are completed: those of the chancel are now in progress. They will all be of ebony, as I wished them to be made wholly of the productions of the country, and as far as possible by native workmen. One single European has directed and superintended the work, and he is a corporal in the 15th regiment, a most expert and skilful mechanic, whose value was undiscovered till he built, under Colonel Brunker, our church at Nuwara Eliya. His taste, moreover, is equal to his skill; and, with Bloxham and the Glossary of Architecture in his hand, this carpenter from Greenwich (for such he was when he enlisted fifteen or twenty years ago) has built a church and a cathedral in my diocese, which surpass every structure raised before or since the tenure of Ceylon by the British."

THE PARIS EXHIBITION.—The intimation we gave in our last number but one, that part of the Exhibition *would* be opened on the 1st of May, came from head quarters: the ceremony was, nevertheless, put off, at the last moment, till the 15th, and for anything we can tell it may be again postponed. It is said that the arrangement of the goods has been retarded by the architect not providing adequate ventilation; that the floor has had to be lifted from end to end to enable air drifts to be formed; and that the roof has had also to be cut at the ridge to put in ventilators.

EATON HALL.—The mansion of the Marquis of Westminster, near Chester, will be shown to the public this summer during June, July, and August, on Monday, Tuesday, and Wednesday in each week, between ten and four, by tickets—to be procured in Chester at the Royal and Albion Hotels, &c. Foreigners and travellers from a distance will be also admitted on Thursdays in the same months. Parties wishing to visit the gardens only, will be admitted with their tickets by the Lodge, near Eccleston Village.

NOTICES TO WORKMEN.—The owner of a colliery near Wednesbury, appeared lately to answer summonses preferred by six of his men, for sixpence a day deducted from their wages without notice. The defence was, that it was a custom always acted upon at the defendant's colliery, for the wages to be raised or lowered without notice, according to any alteration which took place at some other works in the neighbourhood; but the magistrate said no custom could do away with the men's right to have notice, and ordered payment in each case.

STRIKE AMONG IRON-WORKERS AT LIVERPOOL.—The riveters in the employ of Mr. Laird, of Liverpool, according to the local *Journal*, turned out lately in consequence of an alleged reduction of wages. It appears that the men have been paid 26s a week for doing a certain prescribed amount of work. Finding that the same work could be well done by some of the men in nearly one-half the time Mr. Laird offered to advance the wages to 28s. per week if each man would finish thirty more rivets in a day. This the men looked upon as a decrease of 8s. per week in the wages, and they consequently turned out. They offered to go back at half the stipulated amount of work and 28s. per week, but the offer was refused. The plate labourers, who struck for an advance of wages from 16s. to 20s. have been taken back at the advance sought.

COVERED STREET FOR LONDON.—We hear of a scheme now in process of incubation, under distinguished auspices, for the formation of a road through London, eight miles long, roofed in with glass, with houses and shops on each side and beyond these, also on each side, two lines of rails, one above the other, the lower for trains stopping at every mile, the upper for expresses.

SALE OF PROPERTY IN THE STRAND.—Some property in Exeter-street, Wellington-street, Exeter-change, &c. has been sold by auction by Messrs. Farebrother. The *Civil Service Gazette* gives the following particulars. The first lot was "eleven houses in the Exeter-change, only one of which was let, the remainder being on hand, the whole of the Arcade (which runs from Catherine-street to Wellington-street North), being of the estimated annual value of 361*l.*; a dwelling, No. 17, Wellington-street, and forming No. 12, Exeter-change, producing 110*l.* per annum; dwelling and shop, No. 4, Catherine-street, and forming No. 7, Exeter-change, in hand, annual value 100*l.*; No. 5, Catherine-street, value, 60*l.*; Exeter-change Coffee-house, No. 6, same street, let at 70*l.*; the Fountain Tavern, let for 150*l.* (this includes the White Hart Tavern); No. 40, Exeter-street, let at 45*l.* and Nos. 36 and 37, ground rent 20*l.* and No. 345, Strand, being the Engineers, &c. Life Office, annual value 375*l.* together with the reversions, estimated in all to produce 1,850*l.* This lot was knocked down, after a spirited competition, at 21,800*l.* The second lot comprised 16, Wellington-street, let at 100*l.*, No. 2, Exeter-street, let at 62*l.* 10*s.*; the Bell Tavern, at the corner, annual value 200*l.*; Nos. 3, 4, 5, 6, 7, 10, and 11, Exeter-street, producing 213*l.* 7*s*; and the Boar's Head Tavern, at the top of Burleigh-street, annual value 150*l.* This lot was sold for 10,500*l.* The third and last lot comprised Nos. 343 and 344, Strand, of the annual value (and nearly all let) of 310*l.*; No. 1, Catherine-street, let at 90*l.*; No. 2 (office of the *Courier de l'Europe* newspaper), let at 75*l.*; and No. 3 (office of the *Era* newspaper), let at 125*l.* 4*s.* 10*d.* per annum. This lot was sold for 10,500*l.* It will be seen that this important freehold property, worth nearly 3,000*l.* a-year, realised under the hammer 51,800*l.*"

STATUE OF THE POET CAMPBELL.—Mr. Calder Marshall's statue of the poet Campbell has at last been erected in "Poet's Corner," Westminster Abbey.

RAILWAY MATTERS.—The foundation-stone of the Barnardcastle station of the Darlington and Barnardcastle Railway, was laid on Thursday week. This appears to have been regarded as a very important event by the inhabitants of Barnardcastle, who made a regular holiday of it, with processions, flags, and music.——The *Boulogne Gazette* says,—"There is once more a serious intention of uniting France and England by a submarine railway. The latest project is that of Dr. Payerne, who, with forty subaqueous boats, of which he is the inventor, fifteen hundred sailors and navvies, 4,340,000 cubic yards of material, and 10,000,000*l.* sterling expense, would undertake to construct a tunnel by means of which the strait that separates the two countries would be crossed in thirty-three minutes. The position of this tunnel would be no doubt nearly parallel with that of the electric telegraph, and contiguous to it, as being the narrowest part of the channel, as well as that where the depth of water is the least." Could not Dr. Payerne, by the way, make some use of his subaqueous boats in clearing the way for the allied fleets into Sebastopol?——The engineers who are now occupied in the surveys for the new lines of railway which are to cross the Swiss Alps, have estimated the expense of the different passages as follows:—Passage of the Splugen, 160,750,000*f.*; St. Bernard, 185,275,000*f.*; Lukmanier, 183,125,000*f.*; St. Gothard, 160,425,000*f.*; Grimsell and Albrunn, 191,500,000*f.*; and Grimsell and Simplon, 205,550,000*f.* The St. Gothard will be crossed by the line from Lucerne to Locarne, which is the most difficult of all, and where avalanches are dreaded. The line of Rorschach will cross the Lukmanier to proceed to the Lago Maggiore and the Mediterranean. The St. Bernard will be crossed by the line from Lausanne to Aoste by Vevey, which line is the most direct between Paris and Geneva.

A GLASGOW WAREHOUSE.—Messrs. Wylie and Lochhead have of late years acquired the properties from Buchanan-street, directly opposite the Argyle Arcade to Union-street, crossing Mitchell-street, which lies between; and have erected very extensive premises on the Buchanan-street and Mitchell-street portions. The part between these two streets is of a striking character, presenting a well-designed front to the former, with three lofty shops, the central forming a capacious entrance to the premises behind. The basement, which is of great extent, is devoted to stowage and packing purposes. The ground-story is entirely open, countered, and affording a thoroughfare to Mitchell-street, to be extended to Union-street. The three succeeding stories are broad galleries surrounding a central well, from which they receive their light. This is covered with a hemi-cylindrical glass roof, after the manner of the Crystal Palace transepts, the crown being 70 feet from the ground-floor. There is, in connection with the lifts, which are worked by steam-power, a *rising-room*, as was at the Colosseum, for the convenience of those who may object to climbing the stairs. Mr. Lochhead (brought up, as I understood, to the profession in early life) is the architect. Messrs. W. and L. are the Shillibeers of Glasgow, in the undertaking line, and are also extensive omnibus proprietors.

TENDERS FOR THE DRAINAGE OF LUTON.—The following is a list of the tenders delivered for pipe-sewage for the township of Luton. Mr. T. L. Evans, surveyor. Quantities supplied.

Wright and Brown, London.....	£1,861	0	0!!
Brewster and Speller, London ...	1,493	0	0
Sheil and Manning, London ...	1,465	0	0
Yeoman, London.....	1,382	0	0
Pedley, London	1,374	0	0
Culverhouse and Co. Finchley...	1,196	0	0
Pound, London	1,161	0	0
Carlyle, London	1,153	0	0
Williams, Luton	1,082	0	0
Smart, Luton	1,077	0	0
Brown, West Redford.....	1,010	0	0
Plowman, Finchley.....	961	0	0
Rogers, London	944	0	0
Rowe, London	861	0	0
Coker and Oakes, Ware	808	0	0!

How are these things to be explained? It cannot be altogether attributed to the difference in price charged by different manufacturers; for in this list, those who sent in the highest tender and the lowest but two (one exactly double the other in amount), proposed to use the pipes of the same manufacturer.

TENDERS

For proposed work in Richmond-road, Dalston, for Mr. C. Benfield; Mr. G. Wales, architect. Quantities supplied:—

Ashby and Son.....	£1,259	0	0
Little and Son	1,158	0	0
Fox	1,120	0	0
Norris.....	1,077	0	0
Kebble	1,046	0	0

THE BUILDER.

For building a new house for Messrs. Steeds, Frome, Somerset; Mr. Stent, of Warminster, surveyor:—

Chapman, Frome	£1,479	17	0
H. Stent, ditto	1,456	0	0
Davis, ditto	1,441	0	0
Browne, ditto (accepted)	1,375	0	0

For new markets at Gloucester; Messrs. Medland and Maberly, architects:—

Chollerton, Quedgley	£4,580	0	0
Pratt, Coventry	4,500	0	0
Taylor, ditto	4,406	0	0
Walker, London	4,415	14	0
Niblett, Gloucester	4,305	0	0
Jones and Son, ditto (accepted)	4,250	0	0

TO CORRESPONDENTS.

"C. I." (under our mark).—"B. F." (ditto).—"W. S. W."—"T. and Sons."—"J. and R. M."—"G. W."—"W. W." (there have been such observations, &c. but we are unable to refer).—"One of the Public."—"Bridgewater."—"W. B."—"J. T."—"Mr. H."—"J. W. P."—"W. B."—"P. and D. C."—"J. C."—"R. L."—"J. N. E."—"E. L." (thanks).—"W. W."—"P. and N."—"B. H." (too late).—"W. G. D."—"B. and L."—"E. L."—"W. S." (apply to the architects as to the amount of tender).—"A. M. D."—"C. C. N."—"J. B."—"G. and Co."

"*Books and Addresses.*"—We are forced to decline pointing out books or finding addresses.

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the EDITOR, and not to the Publisher.

ADVERTISEMENTS.

AGENCY.—A Merchant, having extensive Waterside Premises, and a good connection with Agriculturists, Builders, and others, is open to a re-practable and lucrative AGENCY for the County of Kent.—Address, A. G. Messrs. Witherby's, No. 9, Birchin-lane, Cornhill, London.

AN OUT-DOOR APPRENTICE WANTED to a CARPENTER and BUILDER.—Address M. P. Mr. Newcomb's, 6 Athol-place, Pentonville-hill.
Also an IMPROVER WANTED.

A CLERK REQUIRED in a BUILDER'S OFFICE.—Apply, post paid to A. B. 147, Cambridge-street, Pimlico, stating salary and where last employed.

AN ARCHITECT in London has TWO VACANCIES for Gentlemen who have completed their Articles, and would consider the advantages offered by his office in improvement, as an equivalent for their services.—Applications to be addressed to X. Z. Messrs. Cartwright and Son's, Law Stationers, Brownlow-street, Bedford-row.

MIDDLESEX COUNTY LUNATIC ASYLUM, COLNEY-HATCH.—WANTED, as RESIDENT CLERK of the WORKS, at this Asylum, a Person, between the ages of twenty-five and forty, who is practically acquainted with and capable of superintending the working of gas, and who can undertake the management of gas-making and lighting apparatus, warming and ventilating apparatus on Price's principle, stationary steam-engine, water-supply, drainage, sewage, and liquid manure works, general building repairs, and carpenters', plumbers', painters', glaziers', bricklayers', and smiths' work. He will have the superintendence of the mechanics and workmen employed in the establishment, and he will be required to perform all such other duties connected with the situation as the Committee of Visitors from time to time may direct him to do. His services will commence at Mid-summer next. The salary will be 120*l.* per annum, with an unfurnished house, coals, gas, milk, and vegetables. Each person who may be desirous of becoming a candidate for this appointment must forward to me, at the Asylum, before SATURDAY, the 12th day of MAY next, a letter of application, in his own handwriting, stating his age, present or late employment, length of service, present residence, and number of family, to either will testimonials of fitness for the situation, and of good character. Candidates must personally attend at the Asylum, on WEDNESDAY, the 16th of MAY next, at one o'clock precisely, when the Committee of Visitors will proceed to the election.—Further information may be obtained by application personally, to the Steward, at the Asylum, on any MONDAY or FRIDAY, between TEN and FIVE; or printed rules will be sent by post on application by letter to me.
April13 1855 JOHN S. SKAIFE, Clerk to the Visitors.

WANTED, in a Surveyor's Office, a respectable YOUTH, from 15 to 17 years of age, who writes a good hand, and is quick at figures. A small salary given, which will be increased if merited.—Address, in own handwriting stating age, terms, and references, to A. B. 8, Bedford street, Bedford-square.

TO WORKING COPPERPLATE ENGRAVERS.
WANTED, for permanent employment, a QUICK HAND, experienced in engraving fine and highly finished engineering drawings. Apply by letter, accompanied with specimens of machinery engraved by the applicant, stating the salary required, where last employed, &c.—Address, ALPHA, Messrs. Kingsbury and Whitmore, 14, Tavistock-street, Covent-garden.

WANTED, in a Timber Merchant's Office, a CLERK, thoroughly qualified to keep Books, and who has been used to the business. Apply, post-paid, to X. Y. Z. CARRAWAY'S Coffee-house, Change Alley.

TO ARCHITECTS' ASSISTANTS.
WANTED, in the Country, an ASSISTANT, who can make finished and working drawings, understands Gothic detail, and can take out quantities.—Apply to Mr. T. OLIVER, jun. Sunderland.

WANTED, an experienced practical Man, as an ASSISTANT at an ENGINEER'S, one who can make a working drawing and superintend workmen. Salary from £60 to £64. per annum.—Apply by letter, to N. Office of "The Builder."

WANTED, an ENGAGEMENT in a BUILDER'S OFFICE, by a practical YOUNG MAN, capable of measuring, taking out quantities, and versed in the routine of the Office.—Address A. B. Mr. Richardson's, Iron-monger, 16, Leather-lane, Holborn.

TO PLUMBERS AND BUILDERS.
WANTED, by an experienced PLUMBER, a SITUATION; can turn his hand to any part of the business, and has no objection to the three branches. He is middle-aged.—Direct, B. S. 5, Hardy-place, Ledbury road, Bayswater.

WANTED, to APPRENTICE a respectable Youth, 15 years of age, to a PATTERN Maker, or MECHANIC. A moderate premium will be given. Country not objected to.—Address, J. B. J. 8, Ernest-street, Regent's-park.

TO BUILDERS, CARPENTERS AND JOINERS, AND CABINET MAKERS.
WANTED to PLACE OUT, an active well-educated Youth as indoor APPRENTICE. A moderate premium will be given.—Apply by letter, post-paid, to C. O. S, Ann-street, Arlington-street, New North-road, Islington.

WANTED, by an experienced Joiner, ONE or more HOUSES to FINISH, or SHOP-FRONTS.—A. B 39, Somerset place, East-road, City-road.

TO CARPENTERS AND BUILDERS.
WANTED to PLACE OUT, a steady YOUTH, aged 18, for two or three years for improvement. Has been at the trade three years. A small premium would be given.—Apply by letter, prepaid, to A. B. W. Gee's, Ham-common, Surrey.

TO ARCHITECTS AND OTHERS.
WANTED, by a Young Man, a SITUATION in an office as above. Can make fair and working drawings, and has been accustomed to measure artificers' works, and assist in taking out quantities. First-rate reference given. Moderate salary required.—Address, A. B 27, Pickering-terrace, Westbourne-park, Paddington.

TO ARCHITECTS.
WANTED, an ENGAGEMENT, by an Assistant of several years' experience, and competent to prepare finished and working drawings, details, and perspective. Would, if preferred, prepare drawings &c. at his own residence. Address, M. B. Office of "The Builder."

TO BUILDERS AND IRONMONGERS.
WANTED, a SITUATION by a Locksmith, Bellhanger, and Gas Fitter. Can also work at the lathe. No objection to the country. Address, stating wages, to A. B 17, Ad m street, Manchester-square.

TO ENGINEERS, SURVEYORS, ESTATE AGENTS, &c.
WANTED, an ENGAGEMENT, by a Surveyor and Draughtsman.—Address, pre-paid, to B. C. B. Office of "the Builder."

SAW MILLS AND TIMBER YARD.
WANTED EMPLOYMENT, a SITUATION as SAW SHARPENER. Is able to work the bench or frame; otherwise to measure any kind of timber, and tendering dimensions for sale yard, and can make himself generally useful in timber yard or mill. Can give a four years' reference to last employer, and satisfactory reasons for leaving.—Address, C. K. 33, Radnor-street, King's-road, Chelsea.

TO PLUMBERS AND BUILDERS.
WANTED, by a respectable Young Man, a SITUATION as PLUMBER and PAINTER. Can be well recommended.—Address to C. S. 30, Roupell street, Cornwall-road, Lambeth.

TO BUILDERS.
WANTED, by a Young Man of business habits, who has a knowledge of drawing, and is accustomed to the routine of a counting-house, a SITUATION in a Builder's Office, where he will have an opportunity of becoming conversant with the business. Salary no object. Address ALPHA, Robinson's (late Moore's) Library, 33, Caledonian-road.

TO ARCHITECTS AND SURVEYORS.
THE Advertiser, who will shortly complete his articles with an Architect and Surveyor in the country, wishes for an ENGAGEMENT in a London office. Good reference can be given.—Apply by letter, addressed NEMO, Office of "The Builder."

TO BUILDERS, CABINETMAKERS, AND OTHERS.
THE Advertiser is in want of a SITUATION as a TURNER, and understands the twisting branch. Can find his own lathe and tools, and would be glad to fill up his time as Carpenter.—Address, C. M. 74, Hampden-street, Harrow-road, Paddington.

TO ARCHITECTS, &c.
AN Architect's Draughtsman is desirous of a SITUATION in the country. Accustomed to fair, working, and perspective drawings &c. Salary moderate.—Address, L. J. Mr. Dyer's, 25, Jonson's-place, Harrow-road, London.

TO ARCHITECTS AND LAND AGENTS.
AN ASSISTANT, well versed with the Gothic, Italian, and Elizabethan styles, as also with the fitting and management of building estates, is in want of a SITUATION. Has been engaged for six years in a first-rate London Office. Terms desired, moderate. Testimonials, &c. shall be forwarded upon written application to L. H. Z Mr. Davidson, Baker, 13, Bevidere-road, Lambeth, London.

TO PLUMBERS, GLAZIERS, AND PAINTERS.
A YOUNG MAN, practically acquainted with the three branches, lead glazing, &c., and is an excellent writer, wishes for an ENGAGEMENT in the above line; has been foreman for the last seven years, and can have the highest testimonials as to ability and character.—Address G. M. B. at D. Gill's, 4 Charles-street, Margaret street, Hackney-heath.

TO ARCHITECTS.
A GENTLEMAN, thoroughly versed in Italian Architecture, is desirous of a RE ENGAGEMENT in town.—Address, EXCELSIOR, Mr. Elmslie's, Post-office, Brixton road.

A LAND SURVEYOR wishes to meet with an ENGAGEMENT. References given. Address, H. Mechanics' Institution, Derby.

TO ARCHITECTS AND SURVEYORS.
A YOUNG GENTLEMAN having just completed his Articles, wishes for a SITUATION in town in either of the above offices. A moderate salary only will be required.—Address S. S. S. Mr. Dyer's, 25, Jonson's-place, Harrow-road.

TO SURVEYORS, BUILDERS, &c.
AN experienced practical Man, thoroughly acquainted with the building business, is in WANT of a SITUATION, in a Surveyor's or Builder's Office. He is proficient in measuring, estimating, taking out quantities, bookkeeping, drawing, superintending works, and all office duties.—Address, W. H. 61, Coleman-street, City.

TO BUILDERS.
A YOUNG MAN, aged 19, who has been four years in the trade, wishes for IMPROVEMENT in a shop; town preferred.—Address, S. W 21, Edward-street, Wenlock-road, City-road.

TO CARPENTERS AND BUILDERS.
A YOUNG MAN, aged 21, is desirous of meeting with EMPLOYMENT, as a JOINER, where he could improve himself. Beach preferred. Address A. D 3, Old North-street, Red Lion-square.

A LAND, &c. SURVEYOR, DRAUGHTSMAN (Engineering or Architectural), &c. requires a SITUATION for any term, in Town or Country. Testimonials for some years past, and references of respectability. Terms at rate of 7*s.* per day.—Address, prepaid, A. Z. 23, Bridge-street, Blackfriars, London.

A YOUNG MAN, aged 22, desires a RE-ENGAGEMENT. He is a fair architectural draughtsman, a ready reckoner; can map, plan, and take out quantities; and is thoroughly acquainted with book-keeping, and the principles of levelling and surveying. Salary expected, 16 per week, as the Advertiser's object is improvement.—Address, X. Y. Mr. Lowe's, Law Stationer, Bell yard, Temple-bar.

TO ARCHITECTS AND SURVEYORS.
TO BE DISPOSED OF, upon moderate terms, a small but increasing PRACTICE, in a rising and beautiful watering-place.—For particulars, address, S. S. 8, Studley-terrace, Larkhall-lane, Stockwell, Surrey.

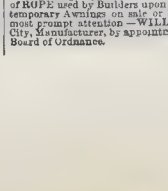
FREEHOLD BUILDING GROUND for SALE, Votes for the County of Herts. This offers advantages for investment of capital that cannot be surpassed, being near to the Free Grammar School, Great Berkhampstead, at which an education is given to each boy equal in value to about 40*l.* per annum. It is close to the station on the London and North Western Railway, which now gives one free pass to and from London for twenty-one years to occupiers of houses valued at a rental of 35*l.* per annum. The Ashridge estate also joins. The views are very extensive and beautiful, is near to the common, and very healthy, lying high and dry, and central for Lord Dacre's, Lord Lonsdale's, and Baron Rothschild's hounds, and in a neighbourhood where houses of a good class are much sought after. For particulars apply to Mr. J. HARRIS, Builder, Great Berkhampstead, Herts.

WEYBRIDGE and PUTNEY, SURREY, and FOREST HILL, SYDENHAM.—Several PLOTS of FREEHOLD BUILD NG LAND, close to these railway stations. To BE SOLD, subject to a small chief rent, instead of purchase-money, for private villas. Also, a Plot for an Inn. Moderate advances made. For further particulars, apply to Mr. A. C. HOOK, Land Agent, 13a, Great George-street, Westminster. The railway companies issue season tickets to these places at reduced rates.

TWICKENHAM.—TO BE SOLD, two semi-detached COTTAGE RESIDENCES, newly and substantially built, with small Gardens in the front and rear, held for an unexpired term of ninety-eight years, at a ground rent of 16*l.* per annum. They are let to highly respectable tenants for a term, of 23*l.* per annum each, thus producing an improved rent of 46*l.* per annum.—For further particulars, apply to M. ADAMS and SON, Auctioneers and Surveyors, Isleworth.

WORKSHOP and WHARF.—TO BE SOLD, convenient MANUFACTURING PREMISES, adjoining the Creek-bridge, Deptford, consisting of a substantial brick Building, Yard and Wharf, fronting Deptford Creek, and having direct communication with the Thames. Apply to W. DELBRIDGE, at the Creek Bridge House, Deptford.

TO BE SOLD, within a few minutes' walk of the Kilburn Station, on the North-western Railway, and immediately adjacent to the intended line of the Hampstead Junction Railway, about EIGHTEEN ACRES of COPYHOLD LAND, having a frontage next West-end-lane of more than 800 feet. The estate, which is beautifully situate, is at present let to a yearly tenant, and immediate possession may be had. The soil is capable of being made into bricks, and a specimen of the earth may be seen at the Office of Mr. BOWNALL, 67, Bloomsbury-square, where lot arranged plans and further particulars may be obtained; or of R. B. ARMSTRONG, Esq. 8, Staple-inn.



CAMDEN TOWN.—To BUILDERS, CARMEN, CAB, or OMNIBUS PROPRIETORS and OTHERS.—FOR SALE, a Bargain, valuable and roomy BUSINESS PREMISES, comprising Dwelling-House and two Cottages, large Yard, with Gateway entrance, and Stabling, the whole held on Lease at a Ground Rent of only 8*l.* per annum.—Apply to Mr. MOORE, Auctioneer and Estate Agent, 16, Melton-street, Euston square.

LAMBETH and PROVINCIAL FREEHOLD LAND SOCIETY.
Enrolled as the "Borough of Lambeth Benefit Building Society."
PRESIDENT,
The Hon. JOHN LOCKE KING, M.P.
TRUSTEES.
George Singer, Esq. James Smee, Esq. S. Etches, Esq.
Offices, 211, High-street, Borough.
Open from Ten A.M. till Seven P.M.
Shares, 50*l.*
Entrance fee, 1*s.* Payments, 4*s.* monthly.
Allotments distributed by rotation, ballot, and to completed Shares in the order of their completion.
No Fines on undivided Shares. No back payments.
The Society within four years has divided five estates, satisfying 1,814 Shares out of 3,756. The value, as divided amongst members, being 87,797*l.*
A Bonus of 5 per cent. in addition to 5 per cent. interest, in all 10 per cent was declared upon all undivided Shares at the annual meeting of 30th January last.
WM. BANKS, Secretary.
211, High-street, March 1, 1855.

ILLUMINATED FURNITURE.—Will open to public view To-morrow, SATURDAY.—B. HURWITZ, sole Agent, begs respectfully to inform the nobility, gentry, and the public, that F. Barnett's PATENT ILLUMINATED FURNITURE may be seen in daily operation on and after the 24th inst. at his Establishment, 9, Southampton-street, Strand, between the hours of TWO p.m. and SIX o'clock.

ROYAL POLYTECHNIC INSTITUTION.
PATRON: H.R.H. PRINCE ALBERT.—The Lectures and Exhibitions as delivered before her Most Gracious Majesty and the Royal Highness Prince Albert, will be continued during the week, consisting of the Telephone Concert Dissolving Views of Sind and the Sailor, Dobbsey's Illuminated Cascade, the Diorama illustrating the Voyage across the Atlantic, and the Cities in the United States; and in addition on Thursday Evening, the 17th, Dramatic Reading, by Mrs Chatterley "Much Ado about Nothing." Lectures on Songs and Song Writers, by George Buckland, esq. Dissolving Views of the War, &c. &c.

VENTILATION.

D. and E. BAILEY beg to call the attention of Architects and others to their improved
CIRCULAR ARNOTT VENTILATORS,
which are more sightly than the square ones in general use, much less liable to get out of order, and the flaps, being hung from the top, do not admit any smoke caused by down draught.
Price, bronzed, from 6*s.* 6*d.*
D. and E. BAILEY, 272, Holborn.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 115, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

THE LONDON AND MANCHESTER PLATE GLASS COMPANY

Beg to inform the TRADE, that the EXTENSION OF THEIR WORKS being now completed, they are enabled to execute orders to any extent at immediate notice. The Company also beg to intimate that owing to improvements effected in the reconstruction of their Works, the COLOUR and QUALITY of their GLASS will be found to be considerably improved, and that they can guarantee the maintenance of these essential requirements. They further beg to invite attention to their reduced List of Prices, which may be obtained on application at their London Warehouse, or at the Works

The Hon. R. Rowley Sir E. Graham, Bart.

10£ to 1,000£ advanced on personal or other security. Bills of exchange cashed. Five per cent. interest on deposits payable in January and July. Forms forwarded on receipt of twelve postage stamps.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers of White Zinc Paint on a large scale in this country, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Those direful maladies, paralysis and painters' colic, will be entirely avoided. It is entirely free from any poisonous or pernicious property. Neither exposure to heat, nor tropical climates act upon it. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. To be had of the Wholesale Paint-dealers in Original Packages, each cask stamped—HUBBUCK'S LONDON PATENT. And if not so marked, the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers in this country. Paint and Varnish Works, Upper East Smithfield, opposite the London Docks.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the dispersed painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B MORLEY and CO. and by the Company's Grinding Agents, in London, Messrs. CHARLES DEVEY and CO. Wholesale Agents, 62, King William-street, City; FREDERICK BRABY, Wholesale and Retail Agent, 6, Tottenham-court, New-road. In Manchester and Liverpool by R. CLAY, 8, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bush. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable. Orders received at Great Scotland-yard, and at the Works.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality,—a desideratum never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which, its eminent hydraulic properties stamp it at once as the first Cement of the day for work where all the above qualities are requisite. It is manufactured on a larger scale than Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly. Manufactured by R. CREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used in process will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly exceeds them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland cement as manufactured at these works with especial reference to its destination, whether for concrete-work, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

KENNARD, BROTHERS, beg to submit to Builders and others, their cash prices for Lime of best quality:—Grey Stone Lime, 9s. per yard; Do. delivered four miles, 11s. do.; Chalk lime, 8s. do.; Do. delivered one mile, 9s. do.; Do. delivered four miles, 10s. do.; White Flare Lime, very superior for plastering and gas works, 9s. do.; Do. delivered one mile, 10s. do.; Do. four miles, 11s. do. A fresh supply by London and Brighton Railway daily. Office, Swan-place, Old Kent road.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL. Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Magic, Hair, Lias Lime, Tiles, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, No. 1, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

BATH CEMENT.—This Cement is equal to Portland in strength and durability, does not vegetate in damp situations, is perfectly hydraulic, of a regular and warm colour, resembling the Bath stone.—CHARLES RICHARDSON, 6, South Wharf, Paddington.

FRONTS of HOUSES.—GREENE and CO.'s PORTLAND CEMENT WASH, equal to oil paint for durability; in casks, 1 cwt. for 10s.

DAMP WALLS.—GREENE and CO.'S OXIDE SOLUTION PAINT, for damp, salt, or spotted walls; price 12s. per gallon, which will cover 200 square feet.—Prepared only by GREENE and CO. Original Inventors, 32, Norfolk-street, Islington.

SOUTHAM.—BLUE LIAS LIME, and CEMENT WORKS.—OLDHAM and TATHAM'S Blue Lias Lime, Portland, Roman, and Lias Cements.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS', STOCKS, and other BRICKS.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 20, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF-ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester, March 31, 1855.

GREAT NORTHERN WHARF, York-road, King's cross.—WHITE BRICK and TILE DEPOT.—L. B. PRICE and CO. Brick, Tile, Lime, and Cement Merchants Builders, contractors, and others supplied with every description of building material at the lowest market prices.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

STONE-COLOUR BRICKS, moulded to any pattern, for cornices, copings, labels, &c. at about one-third the cost of cone; also ornamental ridge and other tiles; may be had to order of Messrs. HOOPER and CO. 3, Portland-street, Southampton.—Illustrated list of prices or samples forwarded on application.

TO BUILDERS AND CONTRACTORS.

A LARGE quantity of superior quality GREY STOCK BRICKS on SALE, from Huggin's Crown Quay Fields, Sittingbourne, Kent, delivered alongside in the river Thames, or into vessels for the West Coast, on low terms.—Apply to Mr. W. ALLAWAY, 4, Catherine-court, Tower-hill.

TO BUILDERS, CONTRACTORS, &c.

THE LONDON PATENT BRICK COMPANY have a STOCK of BRICKS for SALE.—For price and particulars apply at the Office, No. 8, Old Jewry.

JOHN A. F. DUFF, Secretary.

Contracts entered into for a regular supply of Bricks.

TO BUILDERS and OTHERS.—BRICKS delivered at any part of the River up to Battersea-bridge, at the following prices, viz.:—Grey Stocks, 23s. per thousand; Grizzles, 24s. per thousand; Rough Stocks, 28s.; Place, 16s.—Terms, cash on delivery.—Apply to Mr. G. SNEED, Sittingbourne, Kent.

350,000 hard-burnt, RED TUBULAR BRICKS, TO BE SOLD, in one or more lots. They are stronger than the ordinary bricks, and for fire-proof or other buildings requiring strong and dry walls, they will be found worthy of early attention. Price very moderate. Apply to J. S. NORTON, Brick and Tile Machine Maker, &c. Union Works, New Park-street, near Southwark bridge.

FIRE-BRICKS, BLOCKS, TILES, and CLAY!! Shippers and consumers will find our stock of these goods unsurpassed for quality and price. Illustrated circulars with prices, free on application.—TRAGAIR and MORGAN, Southwark bridge Wharf, 7, Banks de, Southwark.

MILLS and PRICE, Brick and Stone Merchants and Agents, very respectfully announce, that their business, hitherto carried on at 7, New Cut, Lambeth, Newington-butts, will from MONDAY, the 11th inst. be carried on at 5, APELAIDE-PLACE, LONDON-BRIDGE.—Dec. 8, 1854.

BRICK MOULDS (Improved) steel-faced stocks and plates with regulating screw pegs, used three seasons by the leading Brickmakers. References where in use, Bowls, Hoes, Cuckholds, Pug Mills, Millwork, &c.—J. LEACH, Millwright and Manufacturer, 26, Crutchi l place, New North-road, Hoxton.—N.B. Moulds of various sizes kept on hand.

Depôt, Agar Wharf, King's road, St. Pancras.

VITRIFIED STAFFORDSHIRE BLUE BRICKS, Paving, Roofing, and Ridge Tiles, Sanitary Pipes, &c. Stourbridge Fire Goods, &c. of all descriptions, and of best quality.—WOOD and SON, Manufacturers, Portway, Oldbury, near Birmingham. Agent—Mr. J. UNWIN, Private Residence, 59, Nelson square, Blackfriars-road.

WHITE SUFFOLK and RED FACING BRICKS

COWLEY, KENT, and ESSEX BRICKS.

Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.

KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE (successors to Mr. Benjamin Gough), 5, ADELAIDE-PLACE, LONDON-BRIDGE.

TO BUILDERS AND OTHERS.

30,000*l.* to be ADVANCED on BUILDINGS, well finished, and tenanted at rentals not less than 80*l.* or 90*l.* per annum.—Principals may address to F. S. care of G. J. Rhodes, Esq. Architect, Lincoln's-Inn-Fields' Chambers.

GAS BREEZE for SALE.—About 300 CHALDRONS, lying at Bankside, Southwark, to be cleared by 8th MAY. Tenders, stating price at per chaldron, of forty bushels on board, to be sent to the Phœnix Gas Works, Bankside, and to be endorsed, "Breeze Tender." The company do not bind themselves to accept the lowest or any Tender.

TO MANUFACTURERS of EARTHENWARE, FIRE BRICKS, ENCAUSTIC TILES, &c.—TO BE LET, a FIELD, eleven miles from London, having water-carriage to Paddington and the Thames, and also situate on the Great Western Railway. This eligible locality is well worthy the attention of the trade. It contains two varieties of clay, which together are well adapted for the manufacture of all or any of the articles above enumerated, enjoying also, as it does, the best water-carriage to all parts of the metropolis. It offers unequalled advantages for the make of earthenware, which, from hence could be transported without breakage, and also free from the heavy freight charges now borne by brickmakers, earthenware, &c. manufactured in the northern districts for the London market. A considerable sum has recently been laid out in improving the field, which has an extensive drying ground, and also a private dock or branch communicating with the Grand Junction Canal.—For terms, apply to Mr MEEKINS, Dauley-court, Uxbridge; Mr. STRANSOM, Uxbridge; or to Mr. PETER BROAD, Auctioneer and Estate Agent, 38, Poultry.

GLOBE-TOWN BRICKFIELDS, within one minute's walk of Bethnal green.—A large quantity of light-coloured PIT SAND, of excellent quality, on SALE, reasonable.—Apply to SAM. EMSLEY, for large quantities; or to the Foreman, JOHN SARGENT, on the Premises.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 27, WHARF, Macclesfield street North, City-road Basin. Secondly, that this trade term, "Terro-Metallic," is the exclusive right of the Proprietor, and, thirdly, that the "Reports of the Jurors," page 581, of the Great Exhibition, rank the Manufactories known as the "Tile Pineries," Tunstall, Staffordshire, as the first of the kind in the world.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 22s. 6d. per 1,000; floor bricks and 6-inch paving, at 40s. per 1,000; 8-inch pavings, at 60s. per 1,000; 9-inch pavings, at 72s. 6d. per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties Railway.

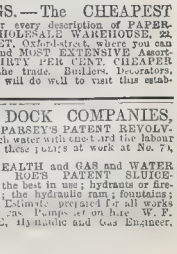
HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE-PACKING, both round and flat, and SOCKET-RINGS, for Hose Pumps. Vulcanized Rubber Door-springs, and Solid Round Rubber Cord of all sizes of any length. Billiard Cushions and Rubber Strips cut to any pattern for bagatelle tables.

Also the same Patentee's make, and improved Vulcanized Rubber Supply-pipes for ditto.

Vulcanized Rubber, in sheets, from three to four feet wide, and of any thickness. Mineral Valves and Cushions for Portable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order.

All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell-mews, Goswell-road, London.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.



J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and less costly than heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, ready or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with covered Clappers, hanged on a new system, which gives a superior tone and facility for ringing.

PAPER-HANGINGS, &c.—W. SHIERS and CO. Manufacturers and Importers. Largest and most magnificent stock in the world (half a million pieces). Prices lower than any other house in the kingdom.—3 to 8, DEANSGATE (old Church-end), Manchester.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is GROSSS WHOLESALE WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

TO WATER and DOCK COMPANIES, CONTRACTORS, &c.—PARSEY'S PATENT REVOLVING PUMP will throw as much water with one hand the labour as any other pump. One of these pumps at work at No. 74, Strand.

TO LOCAL BOARDS of HEALTH and GAS and WATER COMPANIES.—FREEMAN ROE'S PATENT SLUICE-VALVES, acknowledged to be the best in use; hydrants or fire-plugs; wells sunk and bored; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all Works connected with hydraulic or gas. Pumps for sale. W. P. R. E. late FREEMAN ROE, Hydraulic and Gas Engineer, 74, Strand, London.

FOWLER'S
IMPROVED FARM AND COTTAGE PUMPS.

To be had of any Ironmonger or Plumber, at 19s.

The usual allowance to the trade.

PUMPS of SUPERIOR CONSTRUCTION, in various plain and ornamental patterns, for squares and market-places, roads, conservatories, liquid manure, ship, barge, brickmakers, contractors, gold diggers, brewers, chemical works, and in wrought and cast-iron, copper and brass, for hot or cold liquors &c. &c. Long barrel and hydraulic lift-pumps, with handles on planks, and engines of various powers, for wells of any depth.

ON SALE SINGLE PUMPS, BARRELS AT SHORTEST FOR HAND STEAM

AND HIRE, AND DOUBLE 3 in. to 15 in. to any depth, NOTICE, OR POWER.

FOWLER'S
PORTABLE PUMPS,

3-inch to 9-inch Barrels, Plain or Sliding Telescope Suction.

Wrought-iron Pails, Galvanized or Painted.

Pulley Blocks of every description.

BENJ. FOWLER, WHITEFRIARS-ST. FLEET-ST. **NOT DORSET-ST.** as formerly.

GUTTA PERCHA TUBING.—May be buried for years, without injury, and it is therefore valuable for conveying water, chemicals, &c. It is peculiarly valuable for liquid manure, drain, and soil pipes. Being a non-conductor, it is not affected by the frost; neither does it, in any manner, lie metal or leather. Its strength is extraordinary; the small half-inch diameter tubing having resisted a pressure of 350 lbs. on the square inch, without bursting. The smaller sizes may be had in 100 feet, and the larger in 50 feet lengths. The joints are easily made. As a conductor of electricity it is peculiarly valuable for long passages in long fields. ELECTRIC TELEGRAPH WIRES INSULATED WITH GUTTA PERCHA. The GUTTA PERCHA COMPANY, Patentees, 18, Wharf-road, City-road, London.

TO DRAUGHTSMEN AND CIVIL ENGINEERS.

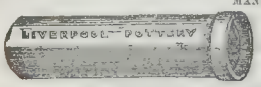
H. MORRELL, BLACK LEAD PENCIL MANUFACTURER, No. 149, Fleet-street, London.

These Pencils are prepared in various degrees of hardness and shades.

H H H H for drawing on wood.
H H H for architectural use.
H H for exact lines.
H for setting.
H B hard and black for drawing.
M medium.
F F light and shading.
F for general use.
B black for shading
B B ditto ditto.
B B B ditto ditto.
B B B B ditto ditto.

Sold by all the principal Stationers in town or country.

GUEST and CHRIMES, ROTHERHAM, and 7, SOUTHAMPTON-STREET, STRAND, London, Manufacturers of CHRIMES' PATENT HIGH PRESSURE LOOSE VALVE COCKS



Bateman and Moore's, and Chrimes'
Patent Hydrants, or Fire Cocks. Improved Self-lubricating and other Sluice Cocks.
Kirkwood's Tubular Water Closet. Improved Self-acting and other Water Closets.
Siemens' Patent Balance Water Meter.
Hibbon's Patent Water Waste Preventer.
Morris's Patent Water Supply Regulator.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.

IMPORTANT TESTIMONIALS
TO THE EFFICIENT WORKING OF
STEPHEN GREEN'S
PATENT SYPHON FLUSHING BASIN,
AND
SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

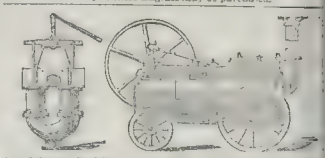
Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

WHOLE OR HALF-SOCKET PIPES SAME PRICE.



HENRY MILLICHAMP,

CLOSET-PANS AND TRAPS, 5s. 6d. EACH.
AN ILLUSTRATED LIST WILL BE FORWARDED FREE ON APPLICATION.

TO CONTRACTORS.

PORTABLE STEAM ENGINES TO BE LET, on HIRE, by the WEEK, MONTH, or for any period, of Seven, Ten, Fifteen, Twenty, Twenty-five, and Thirty Horse Power, adapted for Contractors, Railways, Mines, Quarries, Brick-fields, Collieries, Farmers, and all the principal Contractors; and are ready for letter, a day's notice. Several may be seen at work at Messrs. MILLWIN and HALLS, Engineers, 93, Blackfriars-road, Sole Patentees and only Manufacturers.

N.B Any of these Engines may be purchased.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. M. A. RICHARDS and SON, Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS.

Pumps in Wrought and Cast Iron and Brass, for mines, machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, purses, waterworks, &c. Adapted for any depth. Diagraph Pumps for deep wells.

PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N.B The above can be worked either by hand, horse, or engine power.

Iron Pails 18s. per doz. painted.
Ditto .... 18s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey side.

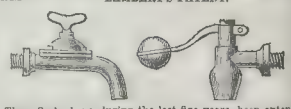
TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to JOHN WARNER & SONS'

PATENT VIBRATING STANDARD PUMP,

which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the prove considerably less than pumps made on the old plan.



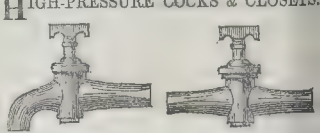
Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle

JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

PRIZE MEDAL, CLASS 22.

HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 350 feet; their efficiency and durability is everywhere established.



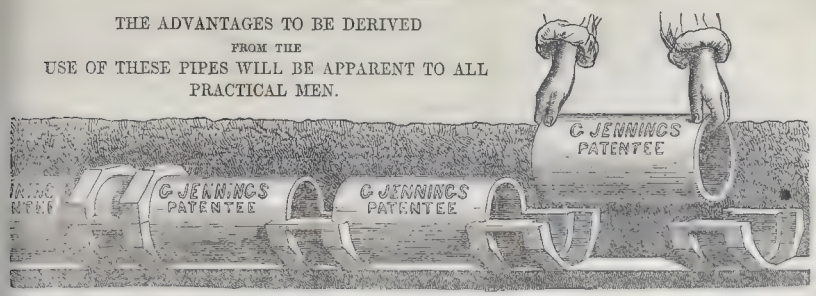
The Equilibrium Balance-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economical arrangements, suitable for public buildings, cottages, asylums, &c.

THOMAS LAMBERT and SON,
Brass and Iron Founders, Short-street, New-cut, Lambeth.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.



The Health of Towns Commissioners having recommended the adoption of the high pressure principle in all towns, WARNER'S HIGH PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

JENNINGS'S PATENT DRAIN-PIPES.

THE ADVANTAGES TO BE DERIVED
FROM THE
USE OF THESE PIPES WILL BE APPARENT TO ALL
PRACTICAL MEN.

The Chairs require to be bedded to the required fall and distance apart, and so bedded, that the pipes as well as the chairs take a bearing on the excavation, as here shown. This done, the remainder of the chairs have only to be filled with cement or other material, and the pipe pressed down to the line of chair,—the laying of the pipes and the making of the joints being all done at one and the same time. No excavation under the pipe is necessary to make these joints, as is the case with the old-fashioned socket or half-socket pipes. Before fixing the saddle piece, the workman can strike up the bottom of the invert, and the subsequent operations of the work in properly connecting, laying these PIPES, the SAVING of LABOUR in EVERY RESPECT, and improper work can be at once detected.

Another important advantage in connection with these Pipes is the facilities they offer for the INTRODUCTION of JUNCTIONS to FINISHED LINES of PIPES. This may be accomplished by removing one of the plain saddles, and exchanging it for a saddle having a junction in it of the required size; and this exchange is effected without disturbing the invert, or even impeding the flow of sewage.

THE IMMENSE DEMAND FOR THESE PIPES, combined with THREE LARGE GOVERNMENT ORDERS, has prevented the Patentee from supplying many works, in which they were specified to be used; but the arrangements now made, and the granting of Licenses throughout the United Kingdom to manufacture, will prevent in future delay or disappointment.

JENNINGS'S IMPERISHABLE AND OTHER CLOSETS

can be seen in every quality, fixed, at his factory. Also JENNINGS'S URINALS and LAVATORIES, as fixed throughout the Crystal Palace, Reform Club, and other public buildings.
A Book containing Illustrations, Descriptions, and Prices of all JENNINGS'S Sanitary Inventions, can be had FREE ON APPLICATION, or by post, if two stamps are enclosed to

GEORGE JENNINGS, SANITARY ENGINEER, 29, GREAT CHARLOTTE-STREET, BLACKFRIARS-ROAD.

JAMES STIFF,

MANUFACTURER OF GLAZED STONEWARE DRAIN PIPES, WATER-CLOSET PANS, SINK TRAPS, INVERT BLOCKS, AND ALL OTHER ARTICLES SUITABLE FOR DRAINAGE AND OTHER PURPOSES.

DANIEL CRONIN will SELL by AUCTION, on the PREMISES, 5, Lothian-terrace, Loughborough-road, Brixton, and on the PREMISES, Millbrook road, adjacent, on MONDAY, MAY 21, at TWELVE, the sound and useful STOCK of a BUILDER, comprising bauk, battens, deals, and other timber of various sorts, 40,000 stock bricks, large quantity of York paving, prepared kerbs for iron railings, ironmongery in nails, screws, &c.; scaffold poles, ropes, putlogs, mortar boards, stone piping, carpenters' benches, ladders, two iron dogs, and various paper hangings. May be viewed on the SATURDAY prior, and Catalogues had on the Premises; at the Sussex Arms Tavern, Sussex-road; and at the White Horse, Brixton Wadway; and of the Auctioneer, 42, Bloomsbury-square

KNIGHTSBRIDGE, adjoining the Barracks.—Building Materials of several Houses

PULLEN and SON respectfully announce that they are directed to SELL by AUCTION, on the PREMISES, on MONDAY, MAY 21, at TWELVE, the whole of the valuable BUILDING MATERIALS of Five Houses, situate in the High Road, Knightsbridge, adjoining the Barracks, with garden walls and outbuildings in the rear, extending to Hyde Park; comprising about 200,000 sound stock bricks, a large quantity of paving and paving tiles, useful timber in roofs and floors, slate slabs, floors, partitions, floor boards, stone paving, iron railing and fencing, lead gutters and pipes, and various useful fixtures and fittings-up. May be viewed on the Saturday previous Catalogues had at Mr. HARVEY'S Office, 31, Cornhill-square; and of PULLEN and SON, 80, Fore-street, Cripplegate.

SALVAGE MACHINERY.—By

MR. MASON, on THURSDAY, MAY 17, on the PREMISES, 38a, Skinner-street, Bishopsgate, an EIGHT-HORSE HIGH-PRESSURE STEAM-ENGINE, with pump and fittings, capital nearly-new egg-shaped boiler 32-horse power with fixing, three lathes, with overhead motions, benches, shafting, steam-pipe, and other machinery, battens &c. Catalogues of Messrs. JONES and BETTEN, Solicitors, 48, New Bridge-street, Blackfriars, and of the Auctioneer, Northfolgate.

BUILDING LAND, situate in the best part of ST. JOHN'S WOOD, about FIVE ACRES TO BE LET or DISPOSED OF, in one or more plots Apply to Messrs. HOLD and HUGHES, 33, Manchester-street, Manchester-square

FREEHOLD LAND To Builders or Parties wishing to Build Suburban Residences.

FREEHOLD LAND TO BE SOLD on some of the most eligible building estates in the neighbourhood of London, viz.:—
Forest-hill, Croydon Railway.
St. Margaret's, near Richmond, South-western Railway.
Oatlands Grange, Weybridge, Sur ey, ditto.
Tottenham-green, Eastern Counties Railway.
Putney, South-Western Railway.
Rectory Estate, Ealing, Great Western Railway
The Waddington Estate, Enfield, Eastern Counties Railway.
Woodgreen, Green-lanes, Harnsey, Great Northern Railway.
Old Ford Estate, Eastern Counties Railway.

Each of the above estates offers its own peculiar advantages. Plots of land of any size, or for any class of houses, to the extent of One sore, can be obtained. On the two first estates, large pleasure-gardens are allotted to the freeholders tenants of houses. Part of the purchase-money may remain at 5 per cent. interest. Parties assisted in the building of their own residences. Builders may obtain the freeholds of plots of land to build upon, and the greater portion of purchase-money may remain at an annual charge (for about ten years) less in amount than the ground-rent of the same under the usual system. Plans, Estimates, &c. furnished, and the money to be raised on the building by mortgage, they can sell the ground-rent created by themselves at a large profit. Several plots to be let on building leases for terms of 99 years, to responsible parties Apply to Mr. GEORGE MORGAN, Architect, 8, Chancery-lane.

BUILDING GROUND.—Desirable PLOTS TO BE LET, for Cattle-rate Houses, Four and Six Rooms, facing the Kentish Town Road, now being built. Bricks supplied Apply to Mr KELLY 1, Tower-place, or Mr. LAWFORD, Slate Works, 15 New-road, St. Pancras.

Freehold Building Land, Twickenham, within ten minutes' walk of the Twickenham or Richmond Stations, near the beautiful estate of Sir R. Harvey's, and Adsh Park Villas.

TO BE LET, as a whole, for a term of twenty-nine years, upon very advantageous terms, 2a. 3r. 26p. of very desirable BUILDING LAND, with entrances and frontages to Hyde Park, a commanding view of the surrounding well-wooded country, and within a few minutes' walk of the Railway Station. For further particulars apply to M. ADAMS and SON, Auctioneers and Surveyors, Isleworth.

TO BE LET or SOLD, several Plots of FREEHOLD BUILDING LAND, extending upwards of [illegible] chiefly detached villas, each with the first [illegible] adjoining the Ryc, with a commanding view of the surrounding country, and within sight of the Crystal Palace. The same to be let on Building Leases, if desired, together or separate on moderate terms. Plans of elevation may be seen, and further particulars obtained of Mr. ADAMS, Tavern, Peckham Rye; of JOHN WELLS, Esq. 23, Percy-street, Bedford-square, or of Mr. SPONG, 5, Grove-street, Camberwell.

TO BUILDERS.

BRICKS ADVANCED.—Eligible GROUND! TO BE LET, on long building leases, direct from the freeholder, at low ground-rents. The land is situate near the Kentroad, and in the locality of a station on the intended line of railway from the west-end.—Apply to Mr. R. J. WOODCOCK, Architect and Surveyor, Adelaide chambers, Gracechurch-street, City.

TO BUILDERS. — TO BE LET, the BUILDING of a WESLEYAN CHAPEL, at WREXHAM. Plans and specifications may be seen in the Vestry of the Old Chapel, Salop-road, Wrexham, from the 7th until the 21st of MAY.—Sealed Tenders to be sent to Mr. P. C. JONES, Church-street, Wrexham, on or before the 1st of JUNE.

May 1, 1855.

FREEHOLD BUILDING LAND TO BE LET, at BATH-ROAD, in large or small plots, where bricks will be advanced. It fronts a parish road, with good sewer, plenty of sand and water may be easily obtained on the ground, and every probability of a railway crossing the land, notices having been given.—Apply, personally, to the Owner, at Chesterfield House, Bath-road, Peckham, before TEN o'clock am.

BUILDING LAND TO BE LET.—Liberal advances made to builders. Also, several Sums of Money to be Lent, as mortgage upon good security. Apply to Mr. PATMAN, surveyor, 4, Serjeant's-inn, Fleet-street.

TO BUILDERS AND OTHERS.

BUILDING FRONTAGES TO BE LET, for detached or semi-detached VILLAS, in BLESSINGTON-ROAD, Belmont, Lee, Kent, close to the church. This is the most attractive, picturesque, and respectable locality on any side of London, from which it is only distant one quarter of an hour by railway, and five minutes' walk from the Blackheath Station of the North Kent Railway. Accommodation will be afforded to respectable men.—For particulars, apply to Messrs. J. and C. W. TODD, Milner-street, Brompton; or at their Offices in the Church, lane, Lee; or to Messrs. NELSON and INNES, 6, Whitehall; or to Mr. TIERMAN, Wellington-chambers, Strand.

MARK LANE.—TO BE LET by TENDER, at a Court of Assistants of the Drapers' Company, to be held at their HALL, on THURSDAY, the 7th JUNE next, the SITE of the HOUSES, Nos. 37 to 41, Mark-Lane, both inclusive, which will be let on a building lease or leases, for 80 years, from Michaelmas next. A plan of the ground may be seen at the Clerk's Office, Drapers' Hall, where, on personal application, further particulars may be had. Persons desirous of treating for the same must send in written Tenders, sealed up, and attend the Court at ONE o'clock on the day mentioned.

CROWN LANDS, WINDSOR.—By order of the Commissioner in charge of Her Majesty's Land Revenue, TO BE LET, for the erection of villas and close rows of houses, BUILDING LAND, eligibly situate in Windsor near the Great-park, having frontage to new roads, with ample provision for good drainage. For particulars apply to Mr. JOHN CLUTTON, 8, Whitehall-place, Westminster.

CASSLAND ESTATE, South Hackney.—FREEHOLD LAND TO BE LET, on Building Leases, in Victoria-park-road, Kenton-road, &c. for second, third, or fourth-rate houses. The roads are well formed and sewered.—For particulars, apply to Mr. WALES, at the Estate Office, Cassland-road, or at 8, Great St. Helen's, City.

AUGUSTUS SMITH, Auctioneer to Engineers, Machinists, and the Metal Trades, 295, Blackfriars-road, near the bridge, is specially instructed to dispose of, by AUCTION, Engine, Machinery, Foundries, Plant, or Ironmongery businesses to dispose of, to forward the particulars thereof for insertion in his HANDBOOK, for which NO CHARGE will be made unless sales be effected.

TO FOUNDRY PROPRIETORS and OTHERS.—TO BE LET, and may be entered upon immediately, a convenient FOUNDRY, with Stock, Plant, and other effects in good condition, and in full work. As satisfactory reasons will be given for the present proprietor leaving. Coming in very low to purchase.—For view and treaty, apply to AUGUSTUS SMITH, Auctioneer to Engineers, Machinists, and the Metal Trades, 295, Blackfriars-road, near the bridge.

TO ENGINEERS, MACHINISTS, and OTHERS.—A first-rate PREMISES in the above line, on the Surrey side, TO LET, fitted up with an excellent 8-horse engine boiler, 3 furnaces and flues, screw cutting and other lathes, benches, anvils, blocks, tools, &c. The foregoing spacious premises are in full work, and will be supplied, as may be had on application to AUGUSTUS SMITH, Auctioneer to Engineers, Machinists, and the Metal Trades, 295, Blackfriars-road, near the bridge.

BRICKFIELD TO BE LET, at a Royalty. About Seven Acres, near Uxbridge, the best Cowley earth, 6 feet 6 in. in depth, close to the Canal and Railway.

N.B.—The Field has still recently been in full season, commanding a large local connection, and stools, mills, and implements of all kinds are on the spot, together with a large quantity of earth quite ready to be immediately made up, so that one can begin to commence directly, and with all the advantages of established trade and a ready demand. Samples may be seen, and particulars obtained at MITCHELL'S, 14, Brecknock-street; Mr. LODDIDGE, Jun. 5, Crown-court, Old Broad-street; or of Messrs. ASHPITEL and WHICHCORD, 2, Poet's-corner, Westminster Abbey.

WHARF and PREMISES on the THAMES. To Boiler Makers, Manufacturing Chemists, and Parties requiring Waterside Premises.—TO BE LET, with immediate possession, an excellent WHARF and DRAWING DOCK, with a frontage, from 50 to 60 feet, on the Thames, by a depth of 180 feet, with about 25 squares of brick buildings as workshops.—Inquire at the Premises, Borden Wharf, East Greenwich; or at the Sea Kitch Tavern adjoining.

TO STOVE GRATE MANUFACTURERS, FOUNDERS, ENGINEERS, BUILDERS, SMITHS, and OTHERS.—TO BE LET or SOLD, spacious MANUFACTURING PREMISES, most desirably situate in a central part of London, and in a leading thoroughfare. The freehold may be purchased. Immediate possession will be given. Rent required to about £40.—For further particulars, apply to Messrs. FULLER and HORSEY, Billiter-street, City.

TO BUILDERS, WHOLESALE CHEESEMONGERS, CIGAR MANUFACTURERS, and OTHERS REQUIRING EXTENSIVE BUSINESS PREMISES TO BE LET, PREMISES, at Southampton, of the largest description, consisting of a Warehouse, 100 feet by 40, with Counting-house, Basement Cellarage, Lift, Dry Warehouse, stabling for four horses, double coach-house, three dwelling-houses, and other conveniences, all in good repair, and covering a superficial area of about 7,500 feet. For particulars apply to Mr. ELLIS, Estate Agent, 13, Minories, City.

TO BRICK, TIMBER, and other MERCHANTS, in connection with the BUILDING TRADES WANTED, a BARTER, a first-rate Freehold Property for Building Materials. The property consists of a Wharf, Drawing Dock, and Premises, with Workshops, &c. and a fine tenantable House, with Garden attached, in the Parish of Hackney. Inquire, for further particulars, of Mr. ROBERT GRAY, Estate Agent, &c. 9, Southampton-street, Strand.

LONDON: Printed by CHARLES WYMAN, of 13, Hatton-street, Brunswick-square, in the Parish of St. George, Middlesex, Printer, at the Printing-office of COX (Bros.) & WYMAN, of 74 & 75, of Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields, aforesaid, and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 1, York-street, in the Parish of St. Paul, Covent-Garden, all in the County of Middlesex. Saturday, May 12, 1855.

HENRY CLUTTON, Hon. Sec.

COMPETITIONS.

TO ARCHITECTS AND OTHERS.

THE BURIAL BOARD for the Parishes of ST. THOMAS, ST EDMUND, and ST. MARTIN, Salisbury, in the county of Wilts, is desirous of receiving DESIGNS, to comprise Plans, Elevations, Sections, and Specifications, with Estimates for laying out a NEW BURIAL-GROUND of Eight Acres, enclosing the Ground, building a Lodge with Entrance-gates, and building TWO CHAPELS, one consecrated, and the other not. The party whose plans, &c. may be approved will be paid a premium of 50*l.* for the plans, designs, estimates, and specifications, which must be delivered at my office, High street, Salisbury, free of expense, without the author's name, but with a motto, on or before the 4th day of JUNE next. A sealed letter, containing name and address, should accompany each design, which will be opened after selection made, and the plans not approved will be returned.—Further particulars, together with a plan of the site, may be obtained, on application to me,
G. SMITH, Clerk of the Board.

Salisbury, May 11, 1855.

TO ARCHITECTS, BUILDERS, AND OTHERS.

THE BURIAL BOARD for the PARISH of HALSTEAD, in the county of Essex, are desirous of receiving PLANS, DESIGNS, and ESTIMATES, comprising ground plans, sections, and elevations for laying out, surfacedraining, planting, and fencing a NEW BURIAL GROUND, with suitable entrance gates, and for building a LODGE and TWO CHAPELS thereon. The ground contains five acres, a plan of which may be seen, and further information obtained, at the Office of the Clerk to the Board. The party whose plans are approved will, at the option of the Board, either have the superintendence of the works, or be paid the sum of Twenty guineas for his designs. The plans and estimates must be delivered at the Office of the Clerk to the Board, on or before the 14th day of JUNE next. Each plan is to be distinguished by a motto and a sealed letter similarly inscribed, containing the author's name and address, to be sent therewith. The Board do not pledge itself to accept any plan.
C. F. ARDEN, Clerk to the Board.

Halstead, May 16, 1855.

COMPETITIONS.

PREMIUMS for DESIGNS.—The Berwick-upon-Tweed Burial Board offers a PREMIUM of 15*l.* to the Architect or other person whose DESIGNS shall be accepted for Two Chapels, an entrance Lodge and Gates, and for fencing, laying out, planting, and draining, under the Burials beyond the Metropolis Act, 8½ acres of land for a new BURIAL-GROUND at Berwick upon-Tweed, the cost of the whole not to exceed 1,150*l.* The Premium will be increased to 25*l.* if the approved designs be accompanied by a guaranteed estimate of the expense, and by detailed working plans and specifications sufficiently extensive as to enable the Board forthwith to enter into contracts for the works. The Designs, Plans, &c. to be sent to me (prepaid) on or before the 6th JUNE next.
By order, JAMES C. WEDDELL, Clerk to the Board.
Berwick-upon-Tweed, 14th May, 1855.
N B.—The Burial Board does not pledge itself to employ as Architect the party whose designs may be accepted.

TO ARCHITECTS.—PLANS, &c. are required for the ERECTION of a NEW CHURCH, on the Lincoln-road, Peterborough, to contain 700 sittings, without galleries. Architects desirous of submitting designs, may obtain full particulars by applying to H. P. GATES, Esq Secretary, Cathedral Precincts, Peterborough The plans to be delivered within a month. Peterborough, May 9, 1855.

CONTRACTS.

SHOREDITCH CONTRACTS.—Notice is hereby given, that the Trustees for the better repairing the Highways, &c. within the Parish of St. Leonard, Shoreditch, Middlesex, will meet in the Vestry-room of the Parish Church on THURSDAY, the 24th day of MAY, 1855, at SIX o'clock in the EVENING precisely, to receive PROPOSALS and CONTRACT with any person or persons for the FOLLOWING ARTICLES and WORKS for One Year, from the 24th day of JUNE next, viz.—

The Local Board do not bind themselves to accept the lowest or any Tender.

Signed WILLIAM ACKERLEY,
Wigan, 14th May, 1855. Clerk to the Local Board.

[*For remainder of Contracts see next page.*

CONTRACTS.

TO GAS ENGINEERS and CAPITALISTS.

Notice is hereby given, that the town of Harrow-on-the-Hill, being in want of a supply of Gas, the Local Board of Health are prepared to give every facility in their power to persons coming forward to provide the necessary works.

By order of the Board,

Harrow, May 5, 1855. WM. WINKLEY, Jun. Clerk

TO BUILDERS

THE GUARDIANS of the GRAVESEND and MILTON UNION, in Kent, are ready to receive TENDERS for the ERECTION of an INFIRMARY, at the Workhouse of the Union, situate in the parish of Gravesend, according to the Plans and Specification thereof, which may be seen at the Board-room at the said Workhouse; and all further information may be had of Mr. JOHN GOBLE, Jun. Architect and Surveyor, in Parrock-street, in Milton, next Gravesend aforesaid. Tenders, sealed, and marked "Tender for Infirmary," must be delivered at my Office, in King-street, in Milton, next Gravesend aforesaid, on or before WEDNESDAY, the 30th day of MAY instant. The person whose tender may be accepted will be required to enter into Sureties, with two sufficient householders, to be approved by the Guardians, in the sum of £—— for the due performance of the contract. The contract and bond will be prepared by the Clerk to the Guardians, to be at his office for the inspection of the Guardians, who do not bind themselves to accept the lowest or any tender. By order of the Board,

Gravesend, May 16, 1855. FRAS. SOLLICHAE Clerk.

TO SCAVENGERS and OTHERS.—Sewers' Office, Guildhall, May 17th, 1855. The Commissioners of Sewers of the City of London, hereby give notice, that they will meet in the GUILDHALL of the said City, on TUESDAY, the 29th day of JUNE next, at TWELVE o'clock at noon precisely, to open the PUBLIC OFFICE LAMPS on Side-Lights and MOVING DUST, &c. from the 24th June of this City, for the term of one year from Midsummer last, and ready to treat upon terms of a new Lease, to commence at the said period upon such terms as may be then agreed upon between the Commissioners and the Contractor, in six divisions. Each Contractor will be required to enter into bond, with two sufficient sureties, for the due performance of his contract. The Commissioners do not pledge themselves to accept the lowest Tender, nor any, unless deemed satisfactory. No Tender will be received after the above hour, and the Contractor or Contractors whose Tender shall be accepted, and will be bound in the other cases until the contract and bond are duly executed.

JOSEPH D'OYLY, Principal Clerk.

LONDON and NORTH-WESTERN RAILWAY.—CONTRACTS for STORES for the Year ending JUNE, 1856. The Directors are prepared to receive TENDERS for the SUPPLY of the undermentioned STORES, viz.:—

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

MOREWOOD & ROGERS'S PATENT PLUMBIC ZINC,

A SUBSTITUTE FOR SHEET-LEAD FOR

ROOFING, RIDGES, GUTTERS, FLOORING,

AND ALL OTHER PURPOSES TO WHICH SHEET LEAD IS APPLICABLE.

This Metal consists of distinct layers of Lead and Zinc, perfectly united in the process of Manufacture one side of each sheet being pure Lead and the other pure Zinc; it therefore combines the Stiffness of Zinc with the Durable Qualities of Lead. The Lead side of the sheet being laid upward, effectually protects the Zinc but when from these atmospheric influences whilst, so rapidly, cause its decay, whilst the Zinc so renders the Lead as to make a sheet of Plumbic Zinc equal in strength to one of Lead of several times its thickness and weight.

Plumbic Zinc not requiring to be more than one fourth or one-fifth as thick as Sheet Lead, is consequently much cheaper than that material.

For covering Terraces, Flats, Floors, Stairs, Passages, &c. it is well suited, being like Lead to the tread, whilst the Zinc on the under side of the sheet prevents it from treading out of shape.

The Size of the Sheets is 7 feet by 2 feet 8 inches.

No. 11	Gauge weighs about	18 oz.	per foot super.		
No. 12	"	"	"	24 oz.	do. do.
No. 13	"	"	"	22 oz.	do. do.
No. 14	"	"	"	20 oz.	do. do.

For further particulars, apply to

A. MOREWOOD and CO. GALVANIZED TINNED IRON WAREHOUSE,

DOWGATE DOCK, UPPER THAMES-STREET, LONDON.

FLAVEL'S PRIZE KITCHENER.

The only Kitchen Range which obtained a Prize Medal and special approbation at the Great Exhibition 1851.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

SOLE AGENTS:

BENHAM AND SONS,

19, WIGMORE-STREET, LONDON;

R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world

OFFICES.—Gateshead-on-Tyne.

13a, Strand, London.

67, Hyde-park-street, Glasgow.

27, Dale-street, Manchester.

TO ARCHITECTS AND BUILDERS.

PATENT CLIMAX DOOR-SPRINGS.—The attention of architects, builders, and ironmongers is particularly directed to the above patented improvements in door-springs, being the most perfect and durable yet invented. Their power is equal to doors of any size and weight, and they are warranted to stand the wear and tear of any bank, public building, or business establishment in the kingdom.—Drawings, with full particulars, may be had from the manufacturers, WEBB and GREENWAY, Steelhouse-lane, Birmingham.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON. House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees', POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers. Ironmongery Establishment, 26, Watling-street, City and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

SAWING, PLANING and MOULDING, MACHINERY.—SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the Kingsroad, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, &c.

THE following are the PRESENT PRICES of PATENT SASH LINE:

No. 3	4	5	6
5s. 6d.	6s. 6d.	8s.	9s. 6d. per gross.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails wrought and cut, Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, 4s.; and the new registered Venetian Ventilator, so much admired, &c. &c. 6d. each.

J. H. BOOBBYER (late STUBBS and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices

11, Stanhope-street, Clare-market, London.

No. 17-4, British Section, Hardware Department, Paris Exhibition, 1855.

CHUBB'S LOCKS & FIREPROOF SAFES.

INEFFECTUAL ATTEMPT FROM THE STRONG ROOM OF THE LONDON AND SOUTH WESTERN RAILWAY, to break open a

"London and North Western Railway Company,

"Liverpool, May 17, 1851

"Gentlemen,—I have much pleasure in bearing testimony to the efficiency of the iron door and locks of your make, which secure the strong room at this office, and which completely baffled the efforts of one or more burglars to get at the money chest on the night of Tuesday last, although it is evident that considerable force was used to break open the door. I am, gentlemen, your obedient servant,

"GEORGE PALMER.

"Messrs. Chubb and Son."

FROM MR. OTWAY, SUPERINTENDENT OF POLICE, C DIVISION.

"3, Great Vine street, May 3, 1838.

"Gentlemen,—I have the pleasure to inform you, that having one of your locks on the street door of my house prevented my being robbed last night. The thief tried to open it, but not succeeding, has so damaged it that I have sent it to you for inspection, and shall feel obliged if you will have it repaired.—I am, gentlemen, your obedient servant,

"C. OTWAY.

"Superintendent C Division of Police.

"Messrs. Chubb and Son."

CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock.

Complete Illustrated Lists, with prices and sizes, will be sent on application.

CHUBB and SON, 18, MARKET-STREET, MANCHESTER; 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; and Horsfield-road, Wolverhampton.

WARMING and VENTILATING.—COTTAM and HALLEN, 2, Wimpole-street, Oxford-street, having had thirty years' experience, and having warmed by the circulation of hot water upwards of 4,000 buildings, consisting of churches, prisons, lunatic asylums, halls, and staircases, galleries, conservatories, forcing houses, &c. can with confidence recommend their system, which, by the various improvements they have made, has perfected the construction, and economized the expense of such apparatuses, conservatories to maintain constantly and entirely of iron or wood, and of iron and wire fencing. Estimates upon application.—COTTAM and HALLEN, Engineers and Ironfounders, 2, Wimpole-street, Oxford-street.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE, the result of long experience. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is so constructed as to be very suitable for large or small families. In operation daily in the stove and fender department of DEANE, DRAY, and Co.'s establishment, where may also be obtained engravings with prices, or forwarded free by post. DEANE, DRAY, and CO. opposite the Monument, London-bridge. Established A.D. 1700.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEPRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and cinders from fire are effectually prevented by its use, while it presents all the comforts and appearance of an open coal fire, securing, at the same time, perfect ventilation. To be seen in action at DEPRIES'S Office, 145 Regent-street, London.

THE PATENT PRIZE KITCHENER, with Boiler to supply Bath, Scullery, Hand and Steam Closet, is Manufactured, with all its recent improvements, by THOMAS RADCLYFFE, Leamington, Warwickshire, of whom plans, prices, and testimonials may be had on application. It is made from three feet to twenty, all worked by one small fire. A great saving in fuel is effected by having the whole oven and effectually cures smoky chimneys, and is the best cooking range extant.

THE COTTAGERS' STOVES.

Testimonial.

"Lord Hardinge requires Messrs. BAILEY will be so good as to inform him how much he is in their debt for the stoves which they supplied to him. He is happy to inform them the stoves have proved VERY GOOD ones in the Camp before SEBASTOPOL.

Horse Guards, 26th Feb. 1855."

D. and E. BAILEY, Ironmongers, 272, Holborn. Price 30s.

HEATING BY HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating buildings to the extent of 1,200 feet in length, at the small expense per day in fuel and labour of 3s. 8d. This achievement in heating by hot water is unprecedented.

LARK'S PATENT SMOKE-BURNER: an improved means of perfecting Combustion, and thereby destroying Smoke.

This invention is now in operation upon Steam engine Furnaces, of Cornish and Waggon Boilers, and upon Ovens. It is adapted to other descriptions of Furnace, such as Marine Boilers, Coppers, Coke Ovens, Bakers' Ovens, Potteries, Chemical Works, &c. Its effect is acknowledged by Government Inspectors to be amongst the most perfect of the inventions extant, combining the Smoke Nuisance, and in many instances with a diminished consumption of fuel.

The furnaces, of various construction, to which it has been successfully applied, may be seen in operation at the Cement Works of Messrs. FRANCIS BROTHERS, Nine Elms, London.

Address, THE SMOKE-BURNER COMPANY, Nine Elms, London.

IRON FOUNDRY,
HARROW-STREET, LANT-STREET, SOUTHWARK.
W. H. BARTLETT, manufacturer of Girders, Columns, Cantilevers, Newel and Railing Bars, Panels, Iron Coping, Hot Plates, Tank Plates, Area Gratings, Sash Weights, Fly and other Wheels, Riggers, Pinions, Engine and Lathe Castings, Forge Backs, Furnace Bars, Kilns, Pans, and other castings, to patterns or drawings.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.
ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of
UNITING LEAD TO LEAD WITHOUT SOLDER.
Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.
PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, and GENERAL IRONMONGERY at PFEIL and STEDALL'S,
Nos. 5 and 6, BROAD-STREET, BLOOMSBURY.
The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

MARBLE.—Mr. B. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depot of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.
MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 5, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account, Mr. Thompson being no longer his agent.
Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.
N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

PIMLICO MARBLE WORKS,
BELGRAVE WHARF,
LOWER BELGRAVE-PLACE.
SAMUEL CUNDY.
THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL
PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors, and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their STOCK of MARBLE is received direct from the principal quarry-owners in Italy and Belgium, for SALE on COMMISSION ONLY, and that they can consequently supply the Trade with the finest marbles at the lowest prices. Sawn Slab, Mortars, Vases, &c.; Yorkshire and Portland Stone for sale on commission.
The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

SERPENTINE.—THE LIZARD SERPENTINE COMPANY are now prepared to execute orders for any description of work, Architectural, Ecclesiastical, or general, at prices in competition with coloured marbles. During the last twelve months the quarries of this Company have been worked to a considerable depth, and the stone produced is of a character infinitely superior to any previously brought into the market. The Company are prepared to supply blocks and slabs eight and nine feet in length. They invite an inspection of chimney-pieces, columns, balustrades, fonts, vases, &c. For exterior application the stone is preferable to granite, neither colour nor polish suffers from acid or the atmosphere, and no marble can compete with the extreme beauty and durability of Serpentine Stone, in block or slab, of a good working quality. Can be supplied in any quantity.—Show Rooms, 30, Surrey-street, Strand.

TO BUILDERS, STONE-MERCHANTS, &c.
MARBLES.—The Advertiser is desirous of entering into Treaty with some Builder or Stone-merchant, for the purpose of IMPORTING MARBLES, FIRE-STONE, and ROMAN CEMENT, from a newly-worked District in the North of Spain.—Any party wishing for further information, to apply by letter, or personally, to Messrs. F. T. BARRY and Co. Merlton's Wharf, Deckhead, Bermondsey.

YORKSHIRE STONE.
GEO. VINT and BROTHERS beg respectfully to inform Architects, Surveyors, Contractors, Builders, Masons, &c that they can supply to any extent all kinds of YORK STONE of the very best quality, from their Quarries, to all Railway Stations and Ports in the Kingdom, on the most reasonable terms.—GEO. VINT and BROTHERS will gladly forward prices by post on application. Address, Idle, near Leeds.

By Her Majesty's Royal Letters Patent.
SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in this most durable material. Sole Agents and kept of Mantel-pieces, Balustrades, Quoins, Tombs, Fonts, &c. at the new premises, Whitehall Wharf, Cannon-row, Westminster.

HAYTOR GRANITE COMPANY.—Incorporated by Royal Charter. London Agent, C. HOAR, 4, Millbank-row, Westminster.—This Granite was used exclusively in the Nelson Monument, Trafalgar-square; King William Monument, City; and extensively for the plinth and steps at the Royal Exchange, and terraces at the Crystal Palace, &c

ANCASTER STONE DEPOT, King's-cross Station, London, from the Original Quarries. JOHN WILSON begs to inform Architects and others they can, at any time be supplied with the ANCASTER STONE, in any quantities and to any extent, there being at all times in stock at the above depôt many thousand feet. For terms and particulars apply at the depôt, or at Messrs. GAPES and GEORGE'S, Hibernia-chambers, London bridge; or at the office of Mr. WILSON, Grantham.
Grantham, April 30th, 1855.

TO FURNACE, OVEN BUILDERS AND OTHERS.
THE GODSTONE STONE COMPANY will supply the best description of FIRE STONE in large or small blocks, Oven Tiles, Backs of Grates, and all descriptions of Furnace work, at prices about half those quoted for other goods of the same description offered to the public. The price of this Fire Stone is erroneously stated in Builders' Price Books for 1855, at 5s. per foot cube; whereas any quantity can be supplied at the Bricklayer's Arms Station, at 1s. 6d. Apply at the Offices of the Company, 21, New Bridge-street, Blackfriars

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

MARBLE WORKS.—In consequence of a DISSOLUTION OF PARTNERSHIP at Midsummer next, the whole of the superior-manufactured and well-selected Stock of Marble Chimney-pieces, Monuments, Pedestals, Tombs, &c. will be sold at very reduced prices.—ROUKES and PEARCE, 1 and 2, South-row, New-road, St. Pancras.

MARBLE WORKS by PATENT MACHINERY.—Commercial-road, Pimlico, London.—THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble in bold, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Verd Antique, Brocatella, Dove, St. Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c. Also, Monuments, Tombs, Tablets, and Ped-stals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late LUARD, BEEDHAM, and CO.) Caen Wharf, Rotherhithe, London, General Stone Merchants and Quarrymen, continue to deliver from their Wharf and Depôts CAEN STONE, AUBIGNY, PORTLAND, ANCASTER, GODSTONE IN, BUILDING, BLOCK, and RUBBLE STONE; BLOCK and BURR HEARTH STONE; also RUBBLE BUILDING STONE, direct from the Caen and Aubigny quarries, at very moderate charges, to compete with the price of Brickwork.—For information, direct to Caen Wharf, Rotherhithe; or to Hibernia-chambers, London-bridge, Borough.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman, Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Waterloo-bridge. Offices: 346, High-street, Southwark, near the Townhall.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard.
This Granite is selected for the New Westminster-bridge.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

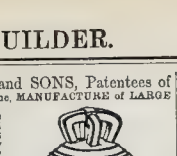
TO BUILDERS and Others in Town or Country.—For PRICES of BANGOR SLATES, apply to SCOLES and WOOD, Market Wharf, Regent's park.

ENAMELLED SLATE.—REDUCTION in PRICE.—Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in price in the shape of a large and increased discount to the TRADE. His best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work. PIMLICO SLATE WORKS, 39 and 40, Upper Belgrave-place, Pimlico.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prisons, Penitentiaries, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street, and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

BOW-BRIDGE SLATE WORKS, Stratford, near London.—A. A. ROBINSON begs to inform Architects, Contractors, Builders, and others, that his PRICE LISTS for SLATES and SLATE WORK for 1853 are now READY, and can be had on application, inclosing a postage-stamp.
N.B. A liberal discount to the trade.

TO ARCHITECTS, BUILDERS, &c.
ENAMELLED SLATE CHIMNEYS, of elegant designs and superior workmanship, in great variety, at prices from 21s. to 10 guineas. Slate Cisterns made to any size. J. HOWELL, Manufacturer, 5, Cook's-grounds, King's-road, Chelsea.



IMPERISHABLE STONE.—TRICKETT and PEMKINS having erected new and powerful machinery, at their extensive quarries, are now able to execute orders to any extent with their much esteemed HAWDON-HILL STONE, which, from its strength and durability, together with its beautiful colour and readiness of conversion, ranks as one of the most desirable stones cut, being at once useful and ornamental. Architects and others are requested to test its qualities for strength and durability, either for external, internal, or ornamental purposes. Samples and prices furnished by SAMUEL TRICKETT, Stone Wharf, Isle of Dogs.
NOTE.—Can be got any size, or delivered to any part by rail or water carriage.

NORTH-WESTERN STONE DEPOT, Hampstead-road Bridge, Camden-town.—W. ASPINALL, Legs to call the attention of Contractors, Builders, and Masons, to his Stock of Portland, Park Spring, Pottern-worth, Newton, Harehill, Bath, Caen, and other Block Stone; York Paving, Landings, Steps, Sinks, Sills, &c.; Park Spring, Robin Hood, Hare-hill Landings and Slabs. Also, Aberdeen, Guernsey, and Hayton Granite Curb and Pitching, all at the very lowest prices.
N.B. Estimates given for Masons' Work.

SCAGLIOLA done on an improved principle. I refer to the Gothic Arch, by D. DOLON, in the Great Exhibition in 1851, in Hyde-park, which gained the only prize medal awarded for the manufacture of the above work in the British Department. Specimens to be seen at 192, Drury-lane, two doors from Holborn, more brilliant than anything ever yet introduced in the country. Architects and builders can be supplied with columns, pilasters, cupolas, trusses, ceiling flowers, &c. &c. at less than half the original expense. Modelling in every style attended to.

TERRA-COTTA.—Statues, Statuettes, Vases, Terms, Busts, Consoles, Bas-relievi, &c. by J. M. BLASHFIELD, of Millwall, near the West-India Docks Station, and sold at No. 1, Praed-street, Paddington-basin, where prices and designs can be obtained. Examples of Terra-cotta, by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Mineral Court. The statues of Australia, Venus di Medici, and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta, so are the fountains at the Renaissance Court, and the roof of the Alhambra Court. The Pompeian roof is of Terra-cotta and red serpent combined. Since the execution of these works, J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.
Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.
TUNED BY MACHINERY.
Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.
MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and hegged on a new system, which gives a superior tone and facility for ringing.

TO BUILDERS AND OTHERS.
TO BE SOLD, a bargain, 1,500 PIECES of PAPER-HANGINGS, of various patterns and good quality, all of which are of 1851 and 52 patterns. The whole can be sold from 3d. to 7d. per piece.—To be seen at 28, Duke-street, Union-street, Bishopsgate.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER HANGINGS is GROSS'S WHOLESALE WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment

FREEHOLD LAND.—To Builders or Parties wishing to Build Suburban Residences.
FREEHOLD LAND TO BE SOLD on some of the most eligible building estates in the neighbourhood of London, viz.:—
Forest-hill, Croydon Railway
St. Margaret's, near Richmond, South-western Railway.
Oatlands Grange, Weybridge, Surrey, ditto.
Tottenham-green, Eastern Counties Railway.
Putney, South Western Railway.
Rectory Estate, Ealing, Great Western Railway.
The Waddington Estate, Enfield, Eastern Counties Railway.
Wood-green, Green-lanes, Hornsey, Great Northern Railway.
Old Ford Stratford, Eastern Counties Railway.
Each of the above estates offers its own peculiar advantages. Plots of land of any size, or for any case of houses, to the extent of One acre, can be obtained. On the two first estates, large pleasure-gardens are allotted to the freeholders or tenants of houses. Part of the purchase money may remain at 5 per cent. interest. Parties assisted in the building of their own residences. Builders may obtain the freeholds of plots of land to build upon, and the greater portion of purchase-money may remain, at an annual charge (for about ten years) less in amount than the ground-rent of the same under the usual system. In addition, therefore, to the amount to be raised on the building by mortgage, they can sell the ground-rent created by themselves at a large profit. Several plots to be let on building leases. Money advanced to responsible parties.—Apply to Mr. GEORGE MORGAN, Architect, 5, Chancery-lane.

BUILDING GROUND.—Desirable PLOTS TO BE LET for fourth-rate Houses, Four and Six Rooms, situate in Kentish Town, at low Ground Rents. Bricks supplied. Apply to Mr. KELLY, 15, Gower-place; or Mr. LAWFORD, Slate Works, 15, New-road, St. Pancras.

TO BE LET or SOLD, several Plots of FREEHOLD BUILDING LAND, extending upwards of 1,400 feet frontage, eligibly situated at Peckham, Surrey, on the hill adjoining the Rye, with a commanding view of the surrounding country, and within sight of the Crystal Palace. The same to be Let on Building Lease, or Sold, together or separate, on most reasonable terms. Plans of elevations may be seen, and further particulars obtained at the Queen's Arms Tavern, Peckham Rye; of JOHN WELLS, Esq. 23, Percy-street, Bedford-square; or of Mr. S. SPONG, 3, Grove-street, Camden-town.

TO BUILDERS AND OTHERS.
BUILDING FRONTAGES TO BE LET, for detached or semi-detached VILLAS, in BLESSINGTON-ROAD, Belmont, Lee, Kent, close by the church. This is the most attractive, picturesque, and respectable locality on any side of London, from which it is only distant one quarter of an hour by railway, and five minutes' walk from the Blackheath Station of the North Kent Railway. Accommodation will be afforded to respectable men.—For particulars, apply to Messrs J. and C. W. TODD, Milner-street, Brompton; or at their Office in Church-lane, Lee; or to messrs. NELSON and INNES, 6, Whitehall; or to Mr. TYERMAN, Wellington-chambers, Strand.

CROWN LANDS, WINDSOR.—By order of the Commissioner in charge of Her Majesty's Land Revenue. TO BE LET, for the erection of villas and close rows of houses, BUILDING LAND, eligibly situate in Windsor near the Great park, having frontage to new roads, with ample provision for good drainage.—For particulars apply to Mr. JOHN CLUTTON, 8, Whitehall-place, Westminster.

CASSLAND ESTATE, South Hackney.—FREEHOLD LAND TO BE LET, on Build ng Leases, in Victoria-park-road, Gascoyne-road, Kent-road, &c. for second, third, or fourth-rate houses. The roads are well formed and sewered.—For particulars, apply to Mr. WALES, at the Estate Office, Cassland-road, or at 3, Great St. Helen's, City.

GREENWICH.—BUILDING GROUND TO LET, in the most commanding part of the town, nearly opposite the Railway Station, adjoining the Bains Literary Institutions, suitable either for public institutions, first-class shops (much wanted), or dwellings. There is a great depth, and a frontage of nearly 100 feet. A part or the whole may be taken upon a long lease.—Further particulars of Mr. DOWSON, Auctioneer, London-street; or at the Portland Hotel, Greenwich.

MAITLAND-PARK, HAVERSTOCK-HILL, Hamp-stead-road.—LAND-TAX REDEEMED—TO BE LET, upon Building Leases, for ninety nine years, desirable BUILDING SITES upon the above Estate. The continued demand for houses in this locality, and the picturesque position of the property, adjoining the grounds of the Orphan Working School, render this a desirable opportunity for builders or gentlemen wishing to erect villas for themselves.—For terms and view plans, apply to the Secretary of the Orphan Working School, 32, Ludgate-hill; Messrs. TERRELL and CHAMBERLAIN, 30, Bucklersbury-street; the Architects, Messrs WEHNERT and ASHDOWN, 45, Charing-cross; or at the Porter's Lodge, on the Premises.

TO ENGINEERS, SMITHS, FOUNDERS, BUILDERS, and OTHERS.—TO BE LET, on Lease, extensive and eligible PREMISES, situate in a leading thoroughfare near the City-road, and within five minutes' walk of the City; comprising a good dwelling-house, large paved yard, with gateway entrance from the main street; ranges of three-story substantial workshops, and other buildings; engine-house, with a six-horse power steam-engine; good stabling, with hay loft and sleeping room over: the whole occupying an area of about 13,000 superficial feet on plan. Any portion of the stock or plant may be taken at the option of the lessee at a valuation.—Apply to Messrs. PHILLIPS and SON, Auctioneers and Valuers, Chiswell-street, Finsbury.

BUILDING FRONTAGE.—TO BE LET, on a building lease, a FRONTAGE to the Kingsland-road (near Shoreditch Church), having a depth of 87 feet, and having a right of a side entrance; it is deemed to be exceedingly adapted for a pawnbroker, or any other trade for which manufacturing premises are required.—For terms apply to Mr. W. F. BRAY, Jun. Auction and Estate Offices, 16A, King's-road, Bedford-row.

TO MANUFACTURERS, WHARFINGERS, and OTHERS.—To LET, BEAUVOIR WHARF, on the Kingsland Canal Basin, with Dwelling house, Stabling, Sheds, and Offices. Extensive water frontage with good depth.—Apply to LEA and CO. on the Premises, or at either of the Coal Depots, Kingsland or Highbury.

BUILDING LAND TO BE LET, in the GLOUCESTER-ROAD and PRINCES-TERRACE, Regent's-park, and on the foot of Primrose-hill, a first-rate situation for third-rate eight-roomed houses, which are much in request in that locality, for purchase or hire. The ground rent very low. Term, 99 years. Money advanced if required.—Inquire of F. ELLOART, Esq. No. 9, Harrington-square.

SMALL PLOT of BUILDING LAND, with two old HOUSES, TO BE LET, on lease, for about sixty years, being Nos. 14 and 15, Great Wild-street, Drury-lane. Rent, 30l. a year.—For particulars apply to Mr. GEORGE HENSMAN, Solicitor, 25, College-hill, City.

VALUABLE BUILDING SITE TO BE LET, on Lease, situate in High-street, Camberwell, with two frontages, making together about 468 feet, having a large quantity of old materials in buildings on ground.—For particulars, apply to W. C. REED, 64, Old Broad-street, City, where a plan of the estate can be seen.

RIVER-SIDE PREMISES TO BE LET, with use of 40 and 10-ton cranes and drawing-dock.—Apply at Lett's Wharf, Waterloo-bridge.

NEWINGTON, SURREY.—TO BE LET, on a REPAIRING LEASE, No. 9, CUMBERLAND-PLACE, Newington.—For particulars, apply to Mr. PUGH, 6, Blackman-street, Borough; or Mr. ABBOTT, 26, Bedford-row.

TO MANUFACTURERS, MERCHANTS, and OTHERS.—TO BE LET, a HOUSE, well and substantially built, and in excellent condition, with extensive premises, situate in the western part of the City, and well adapted to any business requiring light and space, with or without a wharf.—For particulars, apply to Mr. H. PALMER, Solicitor Mitre Court-chambers, Temple.

TO BUILDERS, MASONS, WHARFINGERS, and OTHERS, requiring Roomy Premises.—To be DISPOSED OF, large WATER-SIDE PREMISES, with good Wharf, Stables, Sheds, Workshops, Ten-ton Crane, Dwelling-house, &c. adapted for carrying on an extensive trade.—Apply to Mr ALEX. NICHOLSON, 12, Little Tower-street, City.

LARGE MANUFACTURING PREMISES TO BE LET, situate in Baker-street, Bagnigge Wells-road, consisting of large yard, workshops, sheds, sawpit, stabling, &c. together with a convenient dwelling-house.—May be viewed on application on the premises.

EXTENSIVE BUSINESS PREMISES.—TO LET, a LARGE BUILDING in Dunning's-street, Peter-street, Sun-street, Bishopsgate, commanding a frontage of about 147 feet, and well calculated for a Warehouse, at a moderate rent. For particulars, apply to Mr. MEREDITH, No. 7, Great Winchester-street, or, to Mr CLARKE, Bishopsgate Churchyard.

BUILDING LAND.—For SALE by PRIVATE TREATY, about FIFTY ARCES of LAND, admirably adapted for a good residence, or for plots, suitable for villa residences, being within half a mile of a railway station, on a commanding position, with extensive views, and gravelly soil; the water excellent, and a large quantity of kiln-made bricks close at hand. The land is situate three miles from London, on the East Cast Railway. For particulars and terms, apply to Mr. GEO. FULLER, Land Agent, 34, Great George street Westminster.

A FARM of SIXTY ACRES.—To be DISPOSED OF by PRIVATE TREATY, a Freehold Farm of 60 Acres of sound useful Land, 30 miles south of London, near to a Railway Station.—For particulars and terms apply, by letter, pre-paid, to Mr. GEO. FULLER, Land Agent, 34, Great George-street, Westminster.

KENSINGTON GORE.—Valuable SITES for first-class MANSIONS, in the new (Prince Albert's) road, Kensington Gore, with frontages to the Park like property purchased by the Royal Commissioners for the Exhibition of 1851, as a site for institutions connected with science and art, may be obtained upon 99 years' lease, by application at Mr W. JACKSON'S Office, 14, Kensington Gore.

TO BE SOLD, for 140l. FOUR PLOTS of FREEHOLD BUILDING GROUND: one at Hook, near Kingston, Surrey, 250 feet by 47 feet: one at Bushey, Herts, 180 feet by 32 feet; one at Merton, Surrey, 107 feet by 33 feet; and one at Chalham Station, Surrey, 75 feet by 30 feet.—Apply to Mr. IVISON, Builder, &c. 1, Bowling-green-street, Kennington-park.

GREENWICH. — SHOP and TWO COTTAGES for SALE, together or separate. The cottages each contain four rooms, kitchen, and garden, back and front, with iron rails, suitable for genteel families. Price only 95l. each. The shop, a corner one, well fitted, also a parlour, three bed-rooms, side entrance, and shed. Price 135l. Most pleasantly situated, not overlooked, in good repair, nearly new; lease, between sixty and seventy years. Immediate possession.—Further particulars of Mr. DOWSON, Auctioneer, London-street, Greenwich; or of Mrs. BOURKE, 5, Conduit-terrace, Conduit-lane, Greenwich East. To view.

REFORM FREEHOLD LAND and BUILDING SOCIETY and BANK of DEPOSITS.—A MEETING will be held in the Chief Office, on Tuesday, the 22nd inst. at seven o'clock, p.m. to compete for 1,000l. to be advanced in the Building Department, in sums of 100l. each, for the purpose of building houses on the Abbey Wood and Carshalton Estates. Each 100l. will be put up as a minimum premium of 5l.; the principal as a premium to bear no interest at the rate of 6l. per annum on the balance due to the society at the commencement of each year.
By order, A. KINTREA, Secretary.
Chief Office, 147, Cheapside, London, May 10, 1853.

TO ARCHITECTS.
EXHIBITION and COMPETITION DRAWINGS, coloured or tinted and superior LITHOGRAPHY, in its various branches, executed by Mr. T. J. RAWLINS, author of Elementary Classes, adopted at Marlborough College, Rome &c. &c. Lithographs (including all charges), from 3l. each.—38, University street, University College, London.

ROYAL POLYTECHNIC INSTITUTION. The Lectures and Exhibitions, as delivered before her Most Gracious Majesty and his Royal Highness Prince Albert, the Patron of the Institution, will be continued, consisting of the Telephone Concert Dissolving Views of Sunland the Sailor, Professor's Illuminated Cascade, the Diorama illustrating the Voyage across the Atlantic, and the Cities in the United States, Lectures on Songs and Song Writers, by George Buckland, esq. Dissolving Views of the War, &c. &c. Monday Evening, the 23rd.—Lecture to the Industrial Classes: History of a Coral Island, by Trevethan Spicer, LL.D.

PAPIER MACHE AND CARTON PIERRE ENRICHMENTS MANUFACTORY,

49 & 50, RATHBONE-PLACE.

GEORGE JACKSON AND SONS

Beg the attention of Architects, Builders, Decorators, and others, to their large assortment of ENRICHMENTS, in every style executed in the highest class of art. Enrichments for ceilings of every pervading character, Elizabethan, Jacobethan, pendentive or flat, Louis XIV in panels of variety, and to any degree of cost; Italian and Greek, Renaissance, and many modified characters, executed for the first houses, and from designs of architects of the highest eminence; wall dressings, rich panels of every period, rich Elizabethan and Gothic Dados, in many designs Door-cases, mouldings, and dressings.

A large assortment of Gothic Bosses to many varied intersections of all sizes, tracery and panel headings for church works, organ dressings, of most periods, and faithfully executed to the traits of each. The general decoration of Drawing and Dining Rooms, Libraries, &c. of very considerable extent, as furniture, glass frames, tables, wainscotings, screens, cabinets, and the whole range of accompaniments to reception-rooms of the first class, as well as more subdued.

The facilities and repeated enlargements of means enable GEORGE JACKSON and SONS to announce the execution of works of the above descriptions in these admirable materials at a cost considerably below any known method, while for quality, relief, and finish, they flatter themselves they stand unrivalled.

DESIGNS MADE FOR ANY WORKS.

PAPIER MACHE AND CARTON PIERRE WORKS, 49 & 50, RATHBONE-PLACE, LONDON.

WM. BANKS, Secretary.

211, High-street, March 1, 1855.

TO STOVE GRATE MANUFACTURERS, FOUNDERS, ENGINEERS, BUILDERS, SMITHS and OTHERS.—TO BE DISPOSED OF, spacious MANUFACTURING PREMISES, most desirably situate in a central part of London, and in a leading thoroughfare. The freehold may be purchased, if desired. The whole or part may be retained to about 2,000l. For further particulars, apply to Messrs FULLER and HORSEY, Billiter-street, City

TO ENGINEERS, IRONFOUNDERS, and SMITHS.—TO BE DISPOSED OF, in a good market-town, near a Station on the Great Western Railway, in Wilts, a BUSINESS of six years' standing, with the plant, offering a ready employment of talent and capital.—Apply to Mr. STRANGE, Swindon.

TO IRONFOUNDERS, ENGINEERS, MANUFACTURERS, &c. requiring strong roomy Premises, with powerful Cranes, Steam-engine &c. TO BE LET or SOLD, by PRIVATE CONTRACT, the LEASE of an IRONFOUNDRY (in work), sixty-six years unexpired, situate in Kingston-street, Green-street near the South Western Railway station, Waterloo-road, London. A plan and particulars may be had of WM. LEKIN Lessee, on the Premises. The Premises are well adapted for a warehouse; three waggons could be loading or unloading under cover at the same time; the distance from the bridges convenient.

TO CABINET-MAKERS, BUILDERS, FURNITURE DEALERS, and OTHERS.—TO BE DISPOSED OF, a PREMISES and BUSINESS in the above line, in a populous market-town in Oxfordshire. The premises are extensive, with good show-rooms, workshops, and warehouses, situate in the centre of the town, and well adapted for an extensive trade, there being no other of the kind in the place.—For particulars apply to Mr. JOHN CLARKE, Auctioneer, Haddenham, Bucks; or to Mr. W. BROWN, Auctioneer, Tring, Herts.

TO CAPITALISTS.—1,000l. WANTED, to carry out an invention of great commercial utility and decoration, now being secured by Letters Patent. The party advancing the money to be admitted to a share of the profits. Agents will not be treated with.—Apply by letter to D. P. M. 16, Flatt-street Old St. Pancras-road.

MONEY.—WANTED, 2,000l. on the security of the Doncaster Cemetery Act. The money will be repaid by instalments of one-thirteenth part, with interest every year for thirty years.—Apply, within fourteen days, stating the rate of interest, to J. B. MASON, Clerk to the Cemetery Commissioners.—Ona Clerk's Office, Doncaster, 15 May, 1855.

LOANS from 25l. to 1,000l. upon approved personal or other security, repayable by easy instalments, extending over any period not exceeding fifty months, are readily OBTAINABLE from the BRITISH MUTUAL SUBSCRIPTION LOAN ASSURANCE CLASSES. Prospectuses, reports, and every information may be obtained on application at the British Mutual Life Office, 17, New Bridge-street, Blackfriars. Rules 6d. each copy. 1s. per post.

CHARLES JAMES THICKE, Resident Secretary.

SMOKE CONSUMER.—A Patent Smoke Consuming Apparatus supplied for 2l. 2s. and upwards, by Mr. JAMES CARTER, 21, New Bridge-street, Blackfriars.

TAKING OUT QUANTITIES, ABSTRACTING, &c.—A separate CLASS is being formed for taking out Quantities, Abstracting, and Valuing the same, at the Architects', Builders', Civil Engineers', and Mechanics' Drawing Establishment: Offices, 15, Old-street, City-road. The Course consists of taking the quantities from a set of plans, and then from the building. Fee for the course and prospectuses of the classes to be had at the Offices. Application to be made on or before the 26th. T. J. HILL, Architect, Conductor of the Classes.

TO ARCHITECTS AND OTHERS

MR. EDWARD L. PARAIRE is desirous of Meeting Gentlemen who require COLOURED ARCHITECTURAL DRAWINGS. External, Internal, Isometrical Perspective, and Outline of same neatly coloured, with background, on terms that will insure approval. Temporary assistance given in getting up Plans, Elevations Sections, Detail, and Working Drawings.—Mr. E. L. P. makes a consideration in his charge where competition drawings prove unsuccessful.

Address, 8, Rathbone place

TO ARCHITECTS

COMPETITION and other DRAWINGS.—Mr THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr BOYS, 32, Albany-street, Regent's-park.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES Established by Messrs. DOSE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural and Civil Engineering, Drawing, and Colouring. Making, Finished and Working Drawings Prepared. Specifications, Taking out Quantities, Estimating, &c. &c. Terms: Day Pupils Three Guineas per Quarter; Evening Pupils, One Guinea per Quarter, which includes Drawing Boards, Tee Squares, Plans, Drawings, Models, &c. For Prospectuses apply at the Offices, 24 Old Ford-street, Russell-square.

PRACTICAL INFORMATION WANTED upon the latest Plans of proceeding in the Bleaching of Palm Oil, the Formation of Palm Limes, the Pressing of Palm, Cocoanut Oil, and Tallow. Enumeration, &c. to be applied for by letter.—Address, L. *poste restante*, Lubeck.

TO ENGINEERS, CONTRACTORS, &c.

LEVELS of first-class work, price 6l. to be had of the Maker, JOHN DAVIS, Optician, Derby. The Level consists of a Gough telescope, focus adjusted by rack; fitted in an excellent case. The legs either tripod or jointed, for use in a pit.

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London-made instruments, and considerably cheaper.—Apply to Mr. S. BARLOW, 3, Thavies-Inn, Holborn (between 1 and 2 p.m.); or to Mr. H. B. BARLOW, Office for Patents, Ducie-place Exchange, Manchester.

MATHEMATICAL DRAWING INSTRUMENTS JOHN ARCHBUTT, 20, Westminster Bridge-road, Lambeth (late Assistant to Messrs. Troughton and Simms), begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An illustrated price-list will be immediately forwarded, free, on application.

TYLOR'S improved METAL-BOUND PAINTING BRUSHES.—These are the lightest metal-bound painting brushes hitherto introduced; the bristles are perfectly secure against the action of all kinds of varnishes and colours, the caps will not loosen or rust when the brushes are placed in water, and the handles cannot come loose.—Price lists forwarded, post free, on application to the Manufacturer, J. B. TYLOR, 2, Bury-court, St. Mary-axe, London.

THE PERMANENT WAY COMPANY, 20, Great George-street, Westminster, beg to call the attention of Civil Engineers, Contractors, and others interested in the construction of railways, to their patent rails, sleepers, fish-joints, and other important improvements now in use on upwards of 3,000 miles of railways. Every information can be obtained on application to CHARLES MAY, F.R.S. Manager; or WILLIAM HOWDEN, Secretary.

IMPORTANT SALE.—Two elegant Fountains; also a Pair of very handsome Rustic Piers, with encircled caps and bases, 7 feet high; Five Pairs of elegant designed Vases, with pedestals. These classical garden decorations will be sold very cheap, under particular circumstances,—a positive bargain. Apply to J. VIRGO, Highstreet, Camberwell.

MAINE LAW.—A Public preliminary MEETING will be held, by the United Kingdom Alliance, on MONDAY EVENING next, MAY 21, in St. Martin's Hall, Long Acre. Chair taken at SEVEN o'clock. Admission free.

TO BUILDERS, CONTRACTORS, AND OTHERS.

THE Advertiser wishes to TAKE BRICKWORK, at per rod, labour only, or scaffolding and all materials. First-rate testimonials from late employers. No objection to country. TO BE SOLD, a CART-HORSE. BRICK-CART, and HARNESS, price thirty guineas.—Address, E. M. 36, Ridge-place, Bishop's-road, Paddington.

IRON STAIRCASE.—TO BE SOLD, an ornamental circular IRON STAIRCASE, made by Cottam and Hatton, occupying a space of 4 in bes with iron hand rail cased with brass, and ornamental bolu tops. Has been little used. May be seen at Messrs. SPALDING and HODGES', 147, Drury-lane.

TARPAULINS for COVERING ROOFS during Repairs SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 116, Bunhill-row, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

The Builder.

SATURDAY, MAY 19, 1855.

LEAVING the "difficulty" between the Royal Academy, the architect-members of that body, and the general architectural "interest," to be adjusted as opportunity may admit, we proceed to notice such of the drawings as may still deserve attention, in the room once the "Architectural."

In interior decoration there are some evidences of the advance which is being made. The "Design for a Ceiling," (1217), C. Kuckuck, we are glad to quote as an example of this. It contains some excellent ornament, and is for the most part free from defects in principle, such as are too often met with. The compartments supply several different designs, and the drawing deserves praise. We might say much the same of the design for the boudoir ceiling, Harewood House, Yorkshire (1263), by R. Beavis, to be executed by Trollope and Sons; though we must take exception to the use of the fan-shaped fillings of semicircular spaces, so much loved of the Adam school of architects.——"The Staircase Saloon at the Earl of Harrington's new Mansion, Queen's Palace Gardens, Kensington" (1183), is far better in the arrangement of the plan than in the decorative features, where it seems to us that the architect cannot have had fair play.——"The Principal Staircase, Falconhurst Lodge, Kent, erected for the Hon. J. C. Talbot" (1245), is a plain Elizabethan interior, by Mr. D. Brandon.——Messrs. Banks and Barry's "Claudet's Photographic Gallery" (1209) is worth looking at for the pleasing, though simple, arrangement of the light in the ceiling. Such forms for top lights are an introduction of late years,—having their own advantages in effect as compared with the old lantern light.

We see less than might have been expected, of the recent designs for cemetery chapels. Mr. R. H. Potter has a design for the entrance of such a building,—a well-grouped low tower with spire—with boldly projecting buttresses, and archway under (1196). Messrs. Barnett and Birch show what they have done at Finchley, for the parishes of St. Pancras, and St. Mary Islington (1204 and 1220); and for St. Marylebone (1224), in the same neighbourhood; and Messrs. Bidlake and Lovatt exhibit their chapels at Bilston, Staffordshire (1266).

We have said nothing of ordinary ecclesiastical architecture; and, indeed, of late years, there has been less and less (as to design, at all events), for illustration. We should, however, notice the "Interior of Doncaster Church, as now being rebuilt" (1189), by Mr. G. G. Scott,—a large outline drawing, showing architecture of the Decorated style, with a lofty nave, covered by an open-timbered roof with curved braces, and tracery-work filling in the spandrils.——Mr. R. W. Billings adopts the Norman style in the Garrison Church of Edinburgh Castle, about to be erected from his designs. The view (1192) shows part of the interior. The chancel arch springs from moulded corbels of great projection, and similar corbels support the braces of the roof. The timbers are hatched at the angles in the character of the style.——The "Interior of a Church" (1269), by Messrs. Brown and Blackall, has the end arranged with two large and two narrow arches—filled in with a screen of woodwork, supporting the organ,—the pulpit, with steps on each side, being at the same end of the church.——Mr. Colling's "Interior of the Chapel at Hooton Hall, Cheshire" (1198) is noticeable for its use of a style which has lately been avoided, but whether with due reason, or from the prejudices of those to whom architects are subservient, this is hardly the place for us to examine. The present work has a coved ceiling, groining in with the arches over the heads of the windows, with a narrow *plafond* for the centre. The chapel is decorated with numerous emblematic figures; but is not free from the fault of such attempts, in regard to excess of the positives in the colouring,—recent arguments for which style of treatment we may perhaps trace to restricted study of examples belonging to the infantine, or savage period of chromatic art.——Mr. J. F. Wadmore's view and sketches of his church at Sutton-Coldfield, Warwickshire (1208), should be referred to in our encomiums upon those who take the trouble to supply us with proper means of judging of their works.——To the drawings of others, we may mention, that plans are more frequently attached than formerly; and if all the advantages of public exhibitions are to be gained, the same simple but useful system must be continued.

We have heretofore looked at the tendency towards originality of treatment in modern Gothic architecture, seen in designs for the "Congregational" and other Dissenters' churches. The same hopeful tendency continues; modified, however, by the use, in certain cases, of ill-proportioned and tasteless details. It is necessary to have studied, and to know what exists in, ancient models: but, few there are who use them aright. Mr. J. James, in his Congregational Churches at Halifax (1178) and Barnsley (1228), is not free from both the merits and demerits referred to. In the former, the plan and perspective view do not seem explanatory of each other.——"The New Congregational Church, Queen-square, Brighton" (1280), by J. James and R. Brown, is better—though the window of flowing tracery, for such a building, may be deemed by some too elaborate. The drawing is catalogued as by T. James. Such drawings, however, help to show that some novelty of character is being worked out,—through the necessity of new forms of combination of the church with the school-room.

On the other hand, it is the fear of challenging objections from persons who have very little real love of ART, which makes our architects ecclesiastical take up such forms as could never have been *designed* by them, simply because these have somewhere or other a precedent. Mr. S. S. Teulon, so ready when his pencil can have play, would never have chosen the gabled tower,—supporting a tabernacle and spirelet on the back of the roof, as in the "Chapel to St. Andrew, Watford" (1215)—had something of the sort not been done before.

Mr. E. W. Pugin contributes "An Elevation of St. Michael's and All Angels' Abbey Church, now erecting at Belmont, near Hereford, for F. R. Wegg Prosser, Esq." (1227). The heaviness of effect in the tabernacle niches, or lucarne lights, at the springing of the spire, would perhaps not be so striking in a perspective view.——The same architect shows (1182), "A rough Sketch of the Interior of a Chantry Chapel about to be erected at St. Mary's Church, Greenwich, for Stuart Knill, Esq."

The principal views of churches now, or lately, undergoing "restoration"—a process which, as not always productive of very satisfactory results, has lately called forth a protest from the Society of Antiquaries—are contributed by Mr. E. Christian and Mr. J. H. Hakewill. The former gentleman has (1242) an "Interior view of the choir, Carlisle Cathedral, showing the restoration of the ancient wood ceiling," &c. and with stained glass in the east window, from a sketch by Mr. Wailes. The large brackets having all the appearance of the braces and spandrils under a tie-beam—but which here are used merely to hang the *coronæ* from, the ceiling being raised above—are very curious. There is a good reredos. Drawings of this class should be always accompanied by a section, or sketches, showing the exact extent of the restorations, executed and proposed. Mr. Christian's "View of the Collegiate Church at Wolverhampton" (1214), shows the restored clerestory and south aisle of nave, and his proposal for the rebuilding of the chancel. The building is worthy of attention as an example of its style,—late Perpendicular. Mr. Hakewill's work is (1262), the "Interior of Nicholas Church, Great Yarmouth," where polychromatic embellishment has been used to a considerable extent in the ceiling. The exceeding depth of blue colour in such situations, would hardly ever be imitated in modern works;—æsthetic objections would surely prevail against it.

Mr. E. Falkener's views of portions of the houses of Pompeii are artist-like and scholarly as ever. The series which this gentleman has now produced, must be considered as forming a contribution of some value to our knowledge of the domestic life of the ancients. The drawings also give curious information, as to details of architecture little known in works of Roman date. One drawing (1230) represents one of the shops of Pompeii (which invariably consisted of two stories), with a dwelling above. There is more external decoration in the latter than might have been expected. The view of the Lararium of the peristyle, in the house of the Faun (1244), is one of the drawings illustrating a remark just made,—the Doric columns being without bases, and generally agreeing rather with the description of Vitruvius than with statements by writers who should have known better, who appear to have confounded the Roman with the late Italian Doric. The third drawing (1267), is the Sacrarium in the house of the Quæstor.

Amongst the views of old buildings generally Mr. A. E. Everett's "Queen Elizabeth's Room at Coombe Abbey," is well, though sketchily coloured, and the drawing is accurate in perspective and truthful in details. Such merits, though of the slightest *comparative* moment in an exhibition of architects' designs, should be singled out here,—where, annually, so much valuable wall-space is filled by productions of school-boy character. What makes the matter worse is, that dabblers in architectural drawing generally select buildings that are most elaborate in detail. A high standard of skill in delineation has usually been required from the competitors for the Academy medals: why, then, should a different practice prevail in the Exhibition—as to works, where a little show of colour, or elaboration without accuracy, are allowed to stand before the public eye, necessarily in most cases beside those which, though correctly drawn, have been produced with peculiar limitations as regards the objects represented? Misconception, both as to delineation and as to what constitutes architectural character, must result. At the top of the room we detected an outline drawing of "St. Peter's at Rome" (1258), by Mr. F. Oliver, which, without the aid of the telescope—useful at the Academy—appeared to be both minute and careful in its workmanship. That any such drawing should have been "pitchforked" where we descried this one, whilst some of the worst views of existing buildings that we ever had the ill-fortune to be offended with, are "on the line;" and oil pictures, not even of buildings (unless we except the wretched representation of St. Mark's, at Venice), usurp the place of architectural designs,—can only arise from that sort of Balaklava of notions amongst Academicians and hanging committees, which packs the right things in the wrong places—the square peg into the round hole. We would not have views of old buildings excluded, and such drawings as those by Mr. Aitchison it is a

pleasure to examine,—but the originative architectural talent of the country requires to be cared for in chief.

So far as we can now concern ourselves with works not of the class just referred to, we must say that the oil painters' delineative talent in architecture, the present exhibition shows to be itself questionable.

We should not conclude our remarks without noticing that an effort has been made to improve the ventilation of the rooms, by large openings in the ceiling. Whether the clouds of dust, which this year encircle the visitors more than ever, have any connection with the difficulty which appears to be still found in ventilating rooms, or whether they are the necessary result of the narrow space to which the Academy is restricted (and will be till the settlement of the National Gallery question)—we are unable just now to decide. The system adopted is Mr. Watson's of Halifax, and certainly appears to give plenty of air.

THE ROYAL ACADEMY EXHIBITION.

We resume our remarks on the general collection, with unqualified praise of (269) "A North Sea-breeze on the Dutch Coast—Scheveling Fisherman hauling the 'Pinck' out of the Surf;" wherein the illusion is so perfect, that you are prompted to seek your handkerchief to wipe the salt spray from your eyes. Mr. E. W. Cooke, A. must have been a very close observer, to render so faithfully the motive water in this exquisite picture. (287) "Evening," F. Danby, A. one of the customary sunsets we year after year find and admire, not the less for their frequency: in this, as in (46) "A Party of Pleasure, on the Lake of Wallenstadt, in Switzerland;" (563) "Dead Calm—Sunset at the Bight of Exmouth;" Danby is quite equal to himself. Mr. T. Danby's (527), "The Poet's Hour," might, with credit, have claimed his parentage too. Mr. P. F. Poole possesses the ability of transferring sunshine to canvass, and exults in bathing his Decameron in a golden flood. (457) "The Seventh Day of the Decameron—Philomena's Song by the Side of the beautiful Lake, in the Ladies' Valley," breathes such an air of languid luxurious indolence, irresistibly charming, that you *must* throw yourself at length upon the emerald turf, there's no help for it, and listen to syren strains to which the gnats are buzzing a symphony. With Brittany, as with Ireland, are associated the earliest successes of Mr. F. Goodall, A. The artist, more at home in depicting the peasantry in natural domestic phases, falls short in (402) "The Arrest of a Royalist, 1793," of elucidating history. The principal figure has little indication of his being a political offender, either in lineament or situation; and although expression and action have been carefully studied in others, there is an absence of the life and bustle inseparable from so exciting an event, for which nice painting hardly atones. F. R. Lee, R.A., and T. S. Cooper, A. affectionately testify each to the other's excellence: side by side they conspicuously shine, as in (422) "Cattle on the Banks of a River." Not but what they can independently assert their respective greatness—the former in (154) "A Devonshire Mill;" (219) "Trees, on the Banks of the River Taw, North Devon;" (356) and "The River Awe, Argyleshire;" while Mr. Cooper's (75) "Cooling the Hoof;" (172) "A Group in an Interior;" (310) "Autumn Showers:" (525) "A Way over the Fells;" and (565) "Haymaking Season," are eloquent sentences in his behalf. Mr. J. C. Horsley has exerted himself to some purpose. (476) "A Scene from Don Quixote," where the officious zeal of the curate, barber, and the erratic hero's old housekeeper, are condemning his library to destruction, on the plea that the books on knight-errantry had set the Don beside himself, and executing their verdict whilst he is dozing off the effects of his first adventure, abounds in first-rate qualities. (497) "Rivalry," Mr. W. C. Thomas, is original in a certain severity of style that characterises it, but Mr. Thomas can more satisfactorily cope with higher themes. (506) "The Apothecary," Mr. J. Grant, elaborates the information respecting him which we glean from the play of "Romeo and Juliet," without much advantage in the result. (520) "English Gamekeeper," comprises a conscientious study of pointers and game, touched in with that clean, decided execution by which Mr. R. Ansdell is recognised: the dogs are exceedingly life-like. In the companion (468), he pictures with similar truth a "Scotch Gamekeeper," substituting indigenous dogs and still life. (526) "Hark! hark! the Lark at Heaven's Gate sings," is very gracefully illustrated by Mr. G. E. Hicks; and with (268) "Haymaking," betokens a stride in advance. (288) "Columbus in Chains," C. A. Duval, is recondite in intention, and imperfectly presents the great discoverer. (378) "The Fortune-teller," of Mr. J. Sant, suggests Reynolds in its juicy execution and masterly freedom. (638) "Eda," still more so. (396) "Bacchante and young Faun dancing," do not fairly represent Mr. W. E. Frost, A.: their attitudes are quaint, if not awkward. (170) "Wood Nymphs," though so small, is preferable. (111) "Il Penseroso," by the same, is disagreeably cold and slaty. Mr. H. W. Phillips portrays the situation of a mother contemplating suicide and child-murder (409): "The modern Hagar" appeals in extenuation of her crime in this darkest scene of a dark story. (432) "Harold," instead of the Saxon king, renowned for bravery and simple majesty,—

"Now reigns here, a very very peacock,"

with such a splendid train, as only Mr. Lance could have given him: the fruit, flowers, and accessories are as autographic as usual. An event from the career of Cimabue has provided Mr. Leighton with an opportunity of displaying to what extent devoted attention to the practices of a particular school will influence the student, and how far he may succeed in imitating its distinctive features. (569) "Cimabue's celebrated Madonna is carried in procession through the streets of Florence: in front of the Madonna, and crowned with laurels, walks Cimabue himself, with his pupil Giotto; behind it, Arnolfo di Lapo, Gaddo Gaddi, Andrea Tafi, Nicola Pisano, Buffalmacco, and Simone Memmi; in the corner, Dante." The treatment of this remarkable production completely identifies its author with the Venetians: availing himself of extant examples, and appreciating that which constitutes their excellence, he adapts their arrangement of colours, and enhances brilliancy by the silvery hue of greys and half tones, so remarkable in the works of Paul Veronese. The chief interest of the subject is derived from the portraits of contemporaries with Cimabue introduced, though not in every case so perfectly executed as their well-arranged draperies are. Study of realities will overcome some apparent weaknesses, lessen adherence to precedent, and ripen the promise of this very favourable *début*. Too close an adherence to an individual style is decidedly reprehensible: if painters studied nature with a conviction of her unquestionable transcendency of all attempts at imitation, and contented themselves by depicting, with as much integrity as possible, only what they really see and know of her, mannerism would become extinct in universal truth. This theory is the ring that proves true metal, and however imperfectly expressed at first, will and does force itself upon the perception of those who recognise art's principles and purposes. (594) "Rome," D. Roberts, R.A. appertains to the panorama, so vast in the comprehension of the "eternal city:" the sunset effect imparts extra grandeur to the mass of architectural monuments, enveloping them in melancholy shadow,—a shroud for departing glory:—

"Rome, thou art no more as thou hast been;"

but still rich in thy dower of "sunset glow," remaining to the last, when but a lurid funereal memento. Great skill, the fruit of long experience, has enabled the artist to accomplish what few would be justified in attempting. (640) "Griselda expelled from the House of the Marquis," W. Gale, has merits of high class, being well composed, and exhibiting general care in performance throughout. (666) "John Evelyn's First Meeting with Grinling Gibbon," F. S. Cary, deserves attention for its power and true effect. (682) "A Vessel under Conduct of an Angel, coming over the Waves with Spirits to Purgatory," W. F. Woodington, is sufficiently unearthly to commend itself to those who feel the unreal,—with clever passages to repay the observation of those who do not. (683) "Summer-hill,—time of Charles II."—T. D. Wingfield, is a pleasant costume picture, but devoid of narrative. Amongst those few who combine the author with the painter, Mr. A. Rankley may be classed; his (1141) "Old Schoolfellows" relates in the simplest language a biography: who can doubt that the suffering brother, "born for adversity," has struggled long and hard, endeavouring to turn to the best account a college education, dearly bought, but how slightly valued by those who would buy again; that his generous friend has just discovered him, prostrated by sickness, and promptly succours at the right time and in the right way? We read further that he is not the sole victim of "hopes deferred:" he has a wife of course, and "encumbrances" are hinted at by the rattle introduced. The lesson the picture inculcates is so salutary, and has so much purpose seldom inheld, that it deserves special commendation.

In turning over the catalogue, there are many calls for notices of admiration. (29) "Anxiety," R. Carrick. (63) "The See-saw," H. Le Jeune (so delightful that we regret his unusual absence in the more ambitious category). (90) "An Armenian Lady, Cairo," J. F. Lewis (a marvel of finish and delicacy). (121) "Flitting Shadows," H. Jutsum. (162) "The Coast, at Fairlight," J. Thorpe. (228) "In Betchworth Park," W. F. Witherington, R.A. (240) "The Bird-Keeper," and other transcripts as sweet and as true; R. Redgrave, R.A. (239) "The Broken Window—Who threw the Stone?" W. H. Knight. (267), "The Wedding Morning," J. H. S. Mann. (286) "On Wimbledon Common," A. W. Williams. (304) "Primula and Rhododendron," Miss Mutrie. (309) "A Hearty Welcome," G. B. O'Neill. (319) "The Temple of Bassæ or Phigaleia, in Arcadia," E. Lear. (337) "Ruins of the Castellum of the Julian Aqueduct, Rome," W. Linton. (357) "Scottish Presbyterians, in a Country Parish Church—the Sermon," J. Stirling. (437) "Interior of an Irish Cabin," J. J. Hill. (686) "Trout Stream in Wales," J. Dearle; with others that have an equal right to consideration. Neither must Mr. T. F. Marshall's (1335) "Reduced to Servitude;" (1346) "The Anxious Moment," J. Danby; (1401) "Lalla Rookh," F. Wyburd; or (1405), "The London Gazette, 1854," J. B. Barwell, be lost sight of in the darkness of the Octagon Room.

In the portrait department, Sir John Watson Gordon, Messrs. Grant, Knight, Pickersgill, and Boxall, all members of the Academy, still lead the van, if Messrs. Sant, Desanges, Richmond, Dicksee, Middleton, and one or two others, tread very closely on their heels.

THE NEW METROPOLITAN BUILDINGS BILL.

The select committee of the House of Commons, named in our last, have met two or three times. So fully have the objections we named been felt, and the opinion we acted on (that it was quite useless to discuss its minor details), justified, that we believe the Bill as originally drawn, *never came before the committee at all*. An amended Bill, remedying many of the objections we had pointed out, was printed for the committee, and this it is that the committee have been working upon. The dangerous exemptions alluded to have been modified; the complicated mode of ascertaining the required thickness of wall has been changed; and various other steps have been taken towards improving the measure. The regulations for determining the thickness of walls have been taken out of the body of the Bill, and made to form a schedule. What shape the rules will take cannot yet be known. Amongst other determinations arrived at is, that the election of district surveyors shall remain in the hands of the justices. The required distance of a wooden story-post from the centre of party-wall has been changed from 11 inches to 6½ inches; the thickness for chimney-backs has been lessened; and the

regulations as to chimneys modified. Mr. Braidwood, Mr. Gwilt, and Mr. Tite have given evidence, and the committee have fixed to meet again on Tuesday next, to proceed with the Bill.

It is to be hoped that the committee will alter the clauses referring the enforcement of the provisions of the Bill to the police magistrates. As they now stand, irrespective of the tribunal, they would be altogether inoperative in just those cases where the necessity of applying them would the oftenest occur, namely, where the builder was of bad character and devoid of means,—the exceptional cases. The Bill provides, that the *builder*, alone, if the justice's order be not complied with, shall incur a penalty of 20*l.* a day during such non-compliance; and in addition thereto, "the district surveyor may, if he think fit," proceed to do what may be necessary, and then recover the outlay from the said builder. "May, if he thinks fit," means, according to the reading given of certain parts of the present Act, "must, whether he is willing or not," and then he would have to find his remedy against a man of straw. The owner should, as in the present Act, incur the same liability as the builder.

For the sake of builders, surveyors, and the public at large, we must urge again, as we have often before, the formation of a "Court of Metropolitan Buildings," presided over by an architect, with a legal clerk or assistant, to give effect by summary decisions, except in specified cases where a jury might be considered necessary, to the provisions and requirements of the Act. We would seriously commend this proposition to the consideration of the Parliamentary committee.

The Institute of British Architects have appointed a committee with reference to the Bill, with authority to take such steps as may seem to be expedient to oppose any objectionable provisions; and the Builders' Society have appointed a committee, with the same object in view.

PICTURES PURCHASED BY THE ART-UNION OF LONDON.

THE following are some of the works already selected by prizeholders in the Art-Union of London:—

From the Royal Academy.—The Silence of pure Innocence, &c. T. Brooks, 250*l.*; In Betchworth Park, W. F. Witherington, R.A. 100*l.*; Summerhill, J. D. Wingfield, 100*l.*; from Vicar of Wakefield, J. Absolon, 70*l.*; The Truant, J. Smith, 70*l.*; The Firth of Forth, J. Wilson, jun. 60*l.*; San Giulio, G. Stanfield, 52*l.* 10*s.*; Haymaking, G. E. Hicks, 42*l.*; Near Ceuta, W. Welby, 35*l.*; Robinson Crusoe, J. D. Watson, 30*l.*; The Mountain Rambles, J. Thompson, 25*l.*; A Misty Morning — Connemara, W. Luker, 25*l.*; Sunday in the Highlands, J. A. Houston, 21*l.*; The Shades of Evening, A. Gilbert, 20*l.*; Uncertain about the Weather, H. P. Parker, 20*l.*

From the British Institution.—Waiting for the Laird, G. W. Harlor, 75*l.*; L'Innamorato, H. O'Neil, 52*l.* 10*s.*; The Village Carrier, G. Chester, 52*l.* 10*s.*; A Woodland Scene, H. Jutsum, 50*l.*; The Simplon, G. Stansfield, 50*l.*; Highland Scene, H. Jutsum, 40*l.*; Brockham, Surrey, J. Stark, 35*l.*; Fruit, Miss Stannard, 31*l.* 10*s.*; On the Hills, J. D. Wingfield, 25*l.*; The First of September, H. Hall, 20*l.*

From the Society of British Artists.—Dante begging his Bread, F. Y. Hurlstone, 100*l.*; Family at Saragnesco, R. Buckner, 80*l.*; Market Morning, J. Tennant, 70*l.*; Pevensey Castle, C. Davidson, 63*l.*; On the Yorkshire Coast, G. Cole, 60*l.*; Windsor Castle, G. Cole, 60*l.*; Golden Morning, North Wales, H. J. Boddington, 60*l.*; Road over a Heath, J. Tennant, 50*l.*; Sheep and Figures, G. Cole, 50*l.*; Kilman, P. C. Auld, 50*l.*; Exultation, T. Clater, 35*l.*; Lane Scene, G. Cole, 26*l.* 5*s.*; Near Glassriff, G. Shalders, 25*l.*; Salmon Fishing, A. F. Rolfe, 25*l.*; Richmond Hill, A. F. Rolfe, 25*l.*; St. Peter, G. P. Green, 21*l.*; Fishing Lugger, A. Webb, 20*l.*

From the National Institution.—Autumn in the Highlands, S. Percy, 150*l.*; Evening, Lights and Shadows, H. B. Willis, 100*l.*; Scene in Surrey, A. F. Rolfe, 50*l.*; Kilchurn Castle, J. Danby, 50*l.*; A Walk by the Conway, F. W. Hulme, 50*l.*; Village Musicians, J. W. Haynes, 50*l.*; Margate Old Pier, H. P. Parker, 35*l.*; Rest by the Way, Bell Smith, 35*l.*; Close of a Sultry Day, E. Williams, 35*l.*; Contentment, H. P. Parker, 31*l.* 10*s.*; Ferreting Rabbits, H. P. Parker, 31*l.* 10*s.*; Nant Mill, J. Steeple, 25*l.*; Summer Flowers, H. Barraud, 25*l.*; Lane Scene with Gipsies, J. E. Meadows, 25*l.*; Cader Idris, W. Williams, 25*l.*; The Fortune-teller, D. Passmore, 25*l.*; A Footbridge, F. W. Hulme, 20*l.*; A Weedy Part of the Thames, E. Boddington, jun. 20*l.*

From the Water-Colour Society.—Tintagel Castle, S. P. Jackson, 60*l.*; Sidmouth (South Devon), John Callow, 31*l.*; Dinas, H. Gastineau, 21*l.*; Clearing away a Wreck, F. Nash, 21*l.*; Vraiking Time, J. P. Naftel, 20*l.*

From the New Water-Colour Society.—The Trysting Time, J. H. Mole, 35*l.*; On the Wharfe, Bolton Abbey, J. W. Whymper, 30*l.*; The Gleaner, A. Bouvier, 21*l.*

NEW CHURCH AT NORWOOD.—The foundation-stone of Holy Trinity Church, Tulse-hill, Norwood, was laid on Thursday before last, by Sir C. D. Crosley, Knt. sheriff of London and Middlesex.

THE PARIS UNIVERSAL EXHIBITION.

THE opening of the Exhibition—postponed from the 1st of this month—took place on Tuesday last, the emperor being present, and a ceremony being performed somewhat after the manner of that of 1851 in Hyde-park. The arrangements were, of course, very far from complete,—and, indeed, the prospects of the undertaking, we regret to say, seem to be in some measure imperilled by the alterations made from time to time in the plans of the buildings, and the absence generally of the limitation of effort necessary to success in any such case. Of the heterogeneous group of buildings,—the Palais de l'Industrie, the "Annex" (a shed 4,000 feet long, by the Seine, for machinery, materials, and produce), the gallery across the Champs Elysées, joining these two, with its central space, formerly the Panorama, an extra shed in course of construction, and the separate building for the Fine Arts department at the west end of the "Annex," the latter is the only portion where the works are really arranged for exhibition. There, indeed, the display of works of art is of great extent, and in value and interest altogether unprecedented.

The Sèvres china, and other national productions, for which the Panorama is appropriated, are not yet open to inspection; and elaborate arrangements for refreshment in the galleries adjacent are merely in progress. The machinery department is in great confusion. The British exhibitors, however, appear to have arranged all their productions, except where the building remained in a state unfitted for their reception.

The collection of works of art comprises 5,028 works, in the several classes of painting, sculpture, engraving, lithography, and architecture, contributed by 2,004 living artists, of France and foreign countries. The greatest number of artists, and of works, are French, the numbers being, besides those in the other classes,—in painting, artists, 690, and works, 1832;—and in architecture,—artists, 69, and works, 156. From Great Britain there are in painting, 99 artists, and 231 works, besides what are under the head of water-colours, where we find 49 artists and 143 works. In architecture, our country has 51 artists and 126 works. We also remark separate headings for engraving on wood, and chromo-lithography, which do not appear in the French list. The United States of America have nine artists and 36 works in painting, but none in architecture. From Prussia, in painting there are 78 artists and 154 works; whilst in architecture, marvellous to state, there is but one architect, and he exhibits but one work. Exactly the same numerical contribution proceeds from even the architects of Bavaria; the painters in that State, however, having 65 works from 31 artists. From Austria, there are 107 paintings sent by 50 artists, whilst three architects send five works. From Belgium, 108 painters send 206 works, and one architect sends two works; and from the Netherlands, 57 artists send 95 works in painting, besides three artists who send four works in water-colours,—the architects being three in number, and sending four works. The contributions of Italy seem most insignificant; and neither Tuscany, the States of the Church, nor the Two Sicilies, show a single work of architecture.

Our own country, therefore, if not represented as it should have been, stands in advantageous contrast to other countries.

ANNUAL REPORT OF THE INSTITUTE OF BRITISH ARCHITECTS.

THE report of the council read to the annual general meeting, on the 7th inst. contained the following passages:—

"The very remarkable view of the masterpiece of Sir Christopher Wren (the Cathedral Church of St. Paul), which was developed by the improvements in progress at the west end of Cannon-street, and in St. Paul's Churchyard, excited much interest in the minds of architects and men of taste in the early part of last year. As it was understood that the arrangements of the City authorities would cause much of the land then vacant to be built upon, and that this magnificent *coup d'œil* would be thus lost for ever, some of the principal architects thought it incumbent on them to take up the question, with a view to inducing public consideration of the matter. A committee, of which Mr. Tite was elected chairman, appointed by the Institute, presented a memorial to the Improvement Committee of the City of London (with whom they subsequently had a conference), at which the chairman, Mr. T. H. Hall, stated that they could not afford to give up so valuable a site without some adequate compensation. A memorial from the Institute to her Majesty's Government, requesting their aid, was kindly forwarded by our president to the Prime Minister; at whose recommendation application was made to Sir W. Molesworth, the Chief Commissioner of Public Works, by a deputation, who subsequently waited on Lord Palmerston, then Home Secretary. By his lordship's request, Mr. Tite forwarded to him a full statement of the whole case, with a plan; and a copy was also sent to Sir William Molesworth. Lord Palmerston promised to use his best endeavours to interest the Chancellor of the Exchequer and the Lords of the Treasury in the matter. The committee suggested that the duty of 4*d.* per ton on coal, granted to the City by ancient charters (which duty, it is said, may be abolished in 1862), should be continued for one year beyond that term, by which means the cost of the land could be repaid to the City. The committee of the Institute, however, subsequently received, with great regret, a communication from Lord Palmerston, stating that the Government declined to entertain the suggestion, or to give any assistance towards this most desirable object. The communication, indeed, showed no sympathy or interest whatever in the subject. The committee had again an interview with the City authorities, when they repeated their former opinions, and requested further delay until the meeting of Parliament. This was granted; and as soon as Parliament assembled, questions relating to the subject were asked by the late governor of the Bank, and Mr. Labouchere; and the committee still hope that, notwithstanding the indifference of the Government, this opportunity for carrying out a great public improvement, ornamental to the metropolis and advantageous to the citizens, may still be secured.

In conformity with the report of Mr. G. G. Scott, made to her Majesty's Chief Commissioner of Works and Public Buildings, a certain sum of the public money has been voted for the purpose of preserving the royal monuments in Westminster Abbey. No restoration has been attempted; but it is understood that measures will be taken to arrest their further decay, and that records of the monuments in their present state will be kept by means of drawings and models

The attention of the Institute having been called to an omission in the Public Statue Bill, application was made, through our president, to Earl Granville (who had charge of the Bill in the Upper House), and a clause was inserted, on the suggestion of the Institute, giving power to the Commissioners of her Majesty's Works and Public Buildings, should they think fit, to take charge of such statues as the owners might be willing to make over to them for that purpose. A list of the statues omitted in the Bill was forwarded with the application. Another addition to the comparatively speaking few public statues which relieve the monotony of our streets, will shortly be erected under the skilful superintendence of our fellow, Mr. Tite, at the western extremity of Cheapside."

"The strong expression of feeling against the Public Health Bill, 1855, which was evinced at the special meeting called in these rooms to consider it, induced the committee then appointed to use their best endeavours to obtain some satisfactory alteration in the Bill, to which they set forth their objections in a petition presented to the House of Commons by Lord Seymour. A deputation had a special interview with the First Commissioner of the Board of Health; and our honorary secretary, Mr. Scoles, appeared as a witness in support of the petition before the select committee of the House of Commons. . . . The statement made by the First Commissioner, that the objectionable building clauses would be omitted, but that power would be given to local boards to frame bye-laws for the same purpose, has not improved the opinion which the council entertain of the proposed enactment; and should the measure pass the Lower House in its present form, they have the satisfactory promise of aid, from a leading member of the profession, in supporting the petition against the Bill before a committee of the House of Lords."

"It is not in their power to report anything respecting the process of MM. Rochas and D'Allemayne, for preventing the decay of calcareous stones. The committee, to whom the subject was referred, had several interviews with the patentees, and arrangements were made, by which permission was obtained to apply the process to certain buildings in and near London; but, since June last, nothing has been heard of them or their process."

The Institute now consists of 128 fellows, 125 associates, 17 honorary fellows, 16 honorary

members, 83 honorary and corresponding members, and 5 contributing visitors.

The financial statement shows the balance of 636*l.* 19s. in hand. Further additions to the annual income may be expected when the existence of the class of contributing visitors becomes more generally known and appreciated.

It is a curious and melancholy circumstance that of the four members lost to the Institute by death during the past year, namely, Messrs. Carpenter, Christopher, Martyn, and A. Dobson, all in the prime of life, three were taken away by a sudden dispensation of Providence.

CASH ADVANCES FOR THE POOR.

WHEN, two years back, this subject was first treated in the *Builder*, trade was prosperous, for the country was at peace,—and the working classes were better off. Since that period employment has diminished, and wages for those in work have not increased; the necessaries of life are dearer, and, in addition thereto, a winter of unexampled length and severity has tried the reins and endurance of the multitude. Arts and manufactures advanced, and commerce increased in a progressive ratio since the peace of 1816; all that increase arose from labour, yet it is very doubtful whether there has been any improvement effected in the condition of the sons of toil, who were the producers of all this prosperity—in education, none, save what arose from combinations amongst intellectual operatives—in their dwellings; a little in the form of a few model lodging-houses; but so infinitesimal as affects the *twelve millions* depending on the product of manual labour, that it may be set down at the lowest cypher. Where the poor by coalition try to help themselves, they succeed: in forming reading societies and schools (in which they have certainly been aided by the benevolent rich, and a *little* by Government) their success has been signal, but their Burial Societies, and their Freehold Land Societies, have to this period been more hurtful than beneficial; and their combinations to support sections of operatives on strike for high wages, have been utter failures in all cases—utter ruin in many. How different is the result of combination for mutual support when out of work? This is the true application of combined action for the purpose of genuine charity; and in this, however short it may fall of complete support in distress, the good that arises is incalculable.

Thus, when well directed, the means of the working classes are adequate to extend a feeble relief to the indigent of their body; but without aid from Government or municipalities, or from benevolent persons in a private sphere, little can be done to improve the general condition of the class, intellectual, moral, or physical; whatever good is done through the generous sacrifice of workmen, by small weekly or monthly contributions from their pay, can, in reality, do nothing more than assuage in a trifling degree the extremest wants in the extremest cases.

It is for the wealthy who hold the stake in property—the product of labour, to come forward, and to sustain that on which the country thrives and flourishes; but it is more especially for the Government, whose office is to protect the multitude, to omit no occasion that may present itself for their improvement and advantage.

There is no institution in the land that presses for attention upon the Legislature, more urgently at this crisis of general distress, than the old, unreformed, and grinding system of money accommodation to the *humble indigent*.

The phrase may be thought a solecism—it is not so—there are *needy rich*—men of large income always in distress,—always short of money, always borrowing, and always paying 60 per cent. per annum; a sure way to perpetuate difficulties. This is a class who rarely apply to pawnbrokers, and who, perhaps, never would apply to a public or great national establishment, such as a *Mont de Piété*, for loans of money on deposits.

While any one has credit and property he parts not with his personal ornaments, much less his furniture or clothing—the poor only, having no credit, when in extreme distress, make these sacrifices.

Their only alternative is to pawn their effects, whatsoever they may be; and their only resort is to the caterers to misery at 25 per cent. for money, loaned, redeemable at twelve months, *then to become forfeit*. This is the provision made for labour by our paternal Government, that the artisan, dependent (*with his family*) on the labour of his hands, shall pay 25 per cent. for advances on real security (that security being commonly double the value of the loan), whilst the merchant or trader can obtain it at 5 per cent. on credit, or even at 3½ on real security.

The smallness of the amount lent is no argument for the excessive cost; on the contrary, poverty can spare less.

Hitherto our municipalities have attempted nothing to correct the evil complained of—our Government nothing; and yet we were wont to consider ourselves the most civilized and the most humanized, because the richest of nations! Yes, and the origin of the evil consists in this assumed quality—we do not like to interfere with the progress of money-making, nor with the free action of private enterprise. Trades go on as hitherto; we (that is, the few) prosper, but the multitude labours as it has laboured, and there is little sympathy for them—though in the midst of wealth we are in poverty.

When the pledge depôts for the poor were before recommended, no injury was intended to existing interest, nor interference meditated with any trade, except only so far as the necessitous poor should be guarded against usurious charges. If private companies or governmental institutes were established to advance money (in small or large amounts, on goods left in deposit, no injury could be alleged as an outrage upon trade, or as a confiscation of commercial rights; yet the pawnbrokers rose *en masse*, proclaiming that 15 per cent. was their charge, and that the ticket fee (1d. 1½d. or 2d. as the case may be) but ill requited the trouble, the cost of store, and the *skilled experience* requisite in the administration of their complicate calling.

Now the great bulk of their business is transacted in amounts not exceeding 2*l.* and on these an interest of 25 per cent. (4d. per pound per month) is levied, the ticket being also charged for and deducted in the first instance. There are many houses in London doing a business of 100*l.* a day, in this fashion; the operations of some extending even to a 1,000*l.* a day on all transactions. This is, in fact, a money bank on the most secure of all commercial bases, because the material capital is taken in pledge,—that capital not being the less real whether it is a child's pinafore, or a service of gold plate.

France, which in fiscal regulations far excels our commercial state, has well guarded the poor against such extortion. With true paternal solicitude that government has long established *Monts de Piété*, or pledge depôts, for the advance of money on valid deposits. The scale of charges has been fixed by that Government at 5 per cent. together with an additional 5 per cent. to commissioners, and some other very trifling expenses. The depositing is wholly under the protection and control of the executive, and particularly under the supervision of the Mayor of Paris, and of the Prefet of the Seine.

Large central depôts are established for the reception of the goods in pawn, but as applicants for assistance in this kind, would be loth to make personal application, much less to carry their offerings to the public charity, a very wise provision is made in the appointment of agents on commission, who being located in various parts of the city, negotiate all transactions of business between the borrower and the central establishment: thus security is attained by the public against extortion, and by the *Mont de Piété* for the fulfilment of the office, without further trouble than is imposed by acceptance and storage of pledges. If an agent were to charge more than his just due, he would at once lose his position; and the *employés* at the Grand Bureau have no interest in the matter beyond the performance of their duties at fixed salaries.

Every Government since the Republic of 1794, when the *Mont de Piété* was founded under authoritative auspices, has recognised the charity (for charity it truly is—"charity that vaunteth not itself, and that seeketh *only* its own"); and the present Emperor of the French, Napoleon III. has by especial decrees, fostered and encouraged this most beneficent institution.

In Paris the poor are not poorer than those of London; nor is there any more occasion for such resources in cases of extreme distress; but most certainly the Government has shown itself more solicitous for the multitude, and as throughout France, the municipality is more solicitous for the commonweal.

The establishment in this great metropolis of similar institutions, would be productive of immense benefit, and would be, if it were only for the storage of furniture, a source of redemption not only to the utterly necessitous, but a saving *even at* 12 *per cent.* for persons of moderate means, wishing temporarily to store away effects, and at the same time to have the use of and fair value for the deposit.

Examples can be given of the usage now current in such cases, where 25 per cent. is charged for the usance of the loan, and as much as 40 per cent. for the storage of the pledge! It is palpable that in such cases the whole value of the moveables must be eaten up altogether in one year and a half; and yet there is in the greatest commercial city of the world no other alternative but to sell off at once: this sacrifice, although the more summary, is yet the better.

THE PRESENT STATE OF ARCHITECTURE.

I PERCEIVE in the very able leader of the 14th ult. the following paragraph:—"Why, with professors of our art by the thousand—academies and societies—knowledge of examples such as the cinque-centisti did not dream of—and similarly with powers of delineation perhaps unattained till the late period of a Pozzi and a Piranesi—why, with our modern science of æsthetics and observation of every work of Nature—and, finally, our accumulated resources of mechanism and chemistry, and of material products from every corner of the globe,—why, with all these things, an opening should be left for those who may have been ready to detract from the real merits of the architects of the nineteenth century, is still to us the modern riddle of the sphinx."

I have myself expressed so strongly in your columns and elsewhere my opinions with respect to their "real merits," that I, too, may possibly be accused of an attempt to "detract" from them. Sorry, indeed, should I be to do this; but, surely, sir, in the name of that right of free discussion which you, I am thoroughly convinced, would be the first to promote, is no one to be allowed to give utterance to his sincere and calm conviction that the present state of architecture is a degradation, deep and foul, to our civilization?* When mention is made of the *real* merits of the architects of the nineteenth century,—that century which has seen the steam-engine perfected so highly, and thought communicated with the rapidity of lightning through the waves, whose undying roar would fain separate "that pale, that white-faced shore," from other lands,—that century in which science has struck so many of her thrilling chords, and has taught so much of the subtler power of chemical affinities and magnetic relations, of the constituents of the stars above, and of the earth under one's feet, of the past history of the globe, and of the future which is to come,—when we muse on these high things, and next look to that art of which you are the public orator, I blush for its professors, and echo asks again, what *are* their real merits? Things are so bad,—so low and miserable a copyism prevails, and is deemed by many absolutely meritorious,—that half measures will never remedy it. No courtly compliments to this man, no misplaced efforts to spare the feelings and prop up the reputation of that,—no mincing whatever of the matter should be for one moment allowed. The plain, naked facts of the continuous eclipse of the glories of architecture—be that eclipse partial or total—must be proclaimed and fully acknowledged before its sun can again shine out in its noon-day splendour. The startling solitudes of Egypt's temples spread, like a dreamy vision, their lights and shadows over my imagination: the stately fanes of Greece rise up

* The writer, it will be seen, draws an erroneous inference from the remark in question, but we pass this over.—ED.

before my eyes: the ruined glories of Rome, in their immensity, expand the mind. I see before me St. Peter's rise—"the most august temple which the human genius, inspired by a divine idea, has ever erected here below,"—and then I return to the streets of London, with their busy, active, wondrous life, and contemplate its architectural nonentities. Sir, the comparison is a degradation to us. This Augean stable must be thoroughly cleansed—not by hints here, and innuendoes there, but by turning a torrent upon it: it might carry it away entirely: far better this than that it should continue for ages to spread its infectious influence over the life to come. "Truth is strong next to the Almighty," and "there is nothing good anywhere in untruth,"—nothing manly, simple, and noble in the untruths we are piling in brick and stone, and graving them with olden symbols of fabled mythologies and monkish traditions,—always archaic, never truthful, original, and appropriate. Even the Rev. Mr. Petit, one of the lights of the school of church restorers, has at length found out that the revival of Gothic art "does not seem favourable to the development of the full powers of the architect." "Does not *seem* favourable! Why, sir, there can be no doubt about it. The writers on ecclesiastical architecture are centuries behindhand in their ideas. Had it not been for the date of your paper containing the quotation, I should have imagined that the sentiment came from some pious monk who had never quitted his cloistered cell, and who was unaware that Protestantism and the steam-engine existed. True, "it is not expected of every original architect that he should strike out a new style;" but he cannot be original, in these days, without going far towards doing so. To say that a modern architect "*cannot* escape the trammels of imitation, however lightly he may contrive to bear them," is to crush the hope within him, and to forbid all future efforts to cast off the shroud which envelops his art. But that "the architect who aims at novelty must combine it with truth, purpose, and order," is a sentiment to be impressed on all who would endeavour to rescue architecture from the slough of despond into which she has fallen.

E. L. TARBUCK.

PROVINCIAL NEWS.

Horncastle.—A design for a new Corn-exchange, prepared by Messrs. Maughan and Fowler, of Louth, architects, has been submitted to the shareholders, and approved of. The Exchange will be a hall lighted from the roof, and in front, on one side of the entrance, will be a subscribers' room, and a shop on the other, over which, occupying the whole length of the front, will be two large public rooms, adapted for the purposes of the Mechanics' Institution, could an arrangement be effected. The elevation is to be executed in red stock bricks, with stone dressings, and the works, according to the *Lincolnshire Chronicle*, are to be proceeded with as soon as contracts for carrying them out can be entered into.

Lynn.—A meeting of subscribers towards the proposed public baths was lately held, at which a scheme (differing from that adopted by the committee) for the erection of baths and wash-houses on a central site, at a cost of 3,000*l.* one-half to be borrowed by the Corporation from the Exchequer Loan Commissioners, and repaid out of the Borough fund, and the other half raised by subscription, was brought under consideration. On a division, however, the numbers were—for the new scheme, 25; for that of the committee, 30. The latter was, therefore, finally adopted and confirmed.

Norwich.—Last year, Mr. P. Squires, of Mulbarton, presented the Norfolk and Norwich Hospital with a stained glass window, as an ornament to the entrance-hall. This gentleman has now substituted one of higher artistic pretensions. The subjects are—Christ Healing the Sick, Christ Restoring Sight to the Blind, Peter and John Healing the Lame, and the Good Samaritan. The work was done by Messrs. J. and J. King, of Norwich.

Oxford.—The tender of Messrs. Lucas to erect the new museum for 29,041*l.* has been accepted.

Shorncliff.—The notices for tenders for the erection of temporary barracks at Shorncliff for 5,000 men have been issued. Orders have already been received for the erection of barracks for 1,000 men, and the work has commenced. Messrs. Myers, of Lambeth, are the contractors, who are to complete that portion of the work within a month.

Hunton.—The new bridge over the river Beult, near Hunton Mill (to connect the parishes of Yalding, Hunton, &c.) is commenced, and the whole is to be finished in six weeks. The cost will be about 200*l.* realized by subscription.

Pontesbury.—On 10th inst. the ceremony of opening a school, in connection with the Established Church, took place at Pontesbury. The school is situated near the church, on the north side. The designs for the building were executed by Mr. E. Haycock, jun. architect; and the contract was taken by Mr. Thomas, builder, both of this town. The school-room is 78 feet 6 inches, by 19 feet 4 inches, and it has an open-timbered roof, stained. It is capable of accommodating about 150 children. Provision is made for separating the sexes by means of a curtain drawn across the centre of the room. There is also a class room, 15 feet by 16 feet. A residence for the master has been built at the south-west end of the building, and the school is approached by two porches, one at the south-east, and the other at the south-west corner. The total cost of the erection, including the master's residence, is about 800*l.*

Birmingham.—Mr. Joseph Sturge has presented the Corporation of Birmingham with eight acres of grass land for a public recreation-ground.

Boston Spa.—The erection of an enlarged National School connected with St. Mary's, Boston Spa, is about to be commenced. The tenders were opened on Monday before last, when Mr. Nettleton, of Thorner, was the lowest for the masons' work; Mr. John Gray, of Leeds, for the joiners' work; painter, Mr. John Bradley, Boston Spa; plumber, Mr. Smith, Wetherby. The buildings have to be completed in five months. Mr. T. W. Atkinson, of York, is the architect.

Doncaster.—Tenders for the new purifiers, centre valve, scrubber, &c. for the local gas-works, have been opened, and that of Messrs. Chambers and Newton, of Thorncliffe Iron Works, accepted. Mr. Matthew Chambers, on behalf of the firm, signed the plans and specifications, and Mr. Gore, the engineer, on the part of the gas company.

Newcastle.—The contract for the construction of the All Saints' cemetery at the Minories has been let to Messrs. Gibson and Wilson, builders. There were twenty tenders, five of which were very close in amount; and the successful competitors obtained the contract for the sum of 3,200*l.*

Glasgow.—A considerable number of applications for leave to build came before the dean of Guild Court on Thursday before last, but few had reference to very extensive operations. The case of the Edinburgh and Glasgow Railway Company's new station was postponed. As regards the churches in progress, or about to be built,—see *Church Building News*. In the Great Western-road, opposite the Botanic Gardens, a range of self-contained tenements of three flats is being built by Mr. Robertson. The height of the buildings is between 50 and 60 feet. The lower flat presents a long succession of Doric columns, placed in couples. On the second flat the arrangement is the same, but the pillars, entablature, &c. are Ionic; and on the third flat the arrangement is also the same, but the style, Corinthian. The architect is Mr. Rochead, and the builder, Mr. Waddell, of Dunoon. A good many buildings are going forward in different parts of the city, but they are almost entirely dwelling-houses or small factories. In many cases unsightly gaps of feuing ground in the line of streets already formed are now being covered over. Several building speculations on a scale of some magnitude have been in contemplation for nearly a year, but have been delayed by the high rate of wages and material. Now that building material is cheaper than it has been, a resumption of the activity which so long characterised the building trade in Glasgow is expected.

Rockabill (C. Louth).—The Board of Trade are about erecting on the Island of Rockabill (Co. Louth), a lighthouse, the plans, sections, &c. of which have been prepared in the office of Messrs. Louch and Sons, of Dublin, architects.

CHURCH-BUILDING NEWS.

Spalding.—Contracts have been entered into to remove the flat roof of Pinchbeck church, repair the external walls, and place a new pointed roof thereon. In addition, it is said that the whole of the exterior is to be restored at the expense of the incumbent, who caused to be erected, about four years since, the new church and school-house at Pinchbeck West.

Cinderhill (Nottingham).—The foundation-stone of Christ's Church, Cinderhill, was laid on the 3rd inst. Mr. T. C. Hine is the architect, and Mr. J. Fisher the builder.

Tetsworth (Oxon).—The parish church here, which has been recently rebuilt, was consecrated by the Bishop of Oxford on the 12th ult. It is in the Early English style, of Wheatley and Headington stone, and consists of a nave 62 feet by 25 feet; south aisle, of similar length; chancel, 25 feet by 18 feet; and at the west end of the aisle, the tower and spire 80 feet high. Under the vestry is the warming apparatus. The church provides accommodation in appropriated seats for 164 persons; free seats, 153; children, 105, at a cost of 1,950*l.* Mr. John Bellamy was the architect, and Mr. Giles Holland, of Thame, the contractor.

Broughton.—On Wednesday before last, the parish church of St. Andrew, Broughton, was formally re-opened, after having been repaired and restored; the works conducted under the superintendence of Mr. E. F. Law, of Northampton, architect. The unsightly square pews, which occupied the area of the church, have been replaced by low open seats, plainly wrought. The large west gallery has been removed, the tower arch thrown open, and the area made available for free sittings. A modern buttress has also been taken away, and the tower strengthened with masonry. The whitewash and plaster have been removed from the piers and arches, and the whole re-worked and restored. The old glazing of the windows has been replaced by quarries of tinted glass, and two new decorated windows have been inserted in south aisle of chancel. The east window is of painted glass, representing our Saviour as the "Good Shepherd." The prayer-desk and lectern are of oak, as are also the fittings of chancel, all of which are new, but the carvings appear antique. The chancel roof has been thrown open by the removal of the ceiling, and new timber added: it is to be decorated, and the remainder of the west window filled with stained glass, as soon as the funds will permit. The number of sittings gained is 130, but there is still want of accommodation. The east window was executed by Messrs. Powell and Sons, the other windows by Mr. T. Nixon, of Kettering, the traceries of stained glass by Messrs. Webb and Nixon, the wood-work and carving by Mr. S. R. Brown, of Kettering, and the masonry by Mr. G. Dawkins, of Broughton. The funds to meet the expenses have been raised almost entirely by voluntary subscription, and the sum so raised (including 75*l.* granted by the Church Building Society) is 615*l.*; but as the cost is 860*l.* a deficiency has to be made up amounting to 245*l.*

Luton.—The Luton cemetery is now almost complete, and is open for burials. Just inside the gates a lodge and chapel have been erected: these buildings are in the Early English style. They are designed and built under the superintendence of Mr. John Cumberland, of Luton, architect, to whom the entire management of the cemetery, laying out of the grounds, &c. has been entrusted, and under whose superintendence the works have been executed. The buildings are faced with black flint, with red brick quoins, &c. and Bath stone dressings. The chapel has an open roof, the timber of which, as also the boards on the top of rafters, seat, desk, and chair, are stained and varnished. It is plainly fitted up in the interior. The lodge has a sitting-room, kitchen, registrar's room, staircase, and entrance, with octagonal bell tower over; also three sleeping rooms on the upper story. The cost of chapel, lodge, and entrance piers is about 450*l.*

The cost of land was 1,200*l.* and with buildings, planting of ground, and all incidental expenses, will be about 2,700*l.* which has been raised by a joint stock company.

Stafford.—The first stone of the enlargement of the parish church of Colwick was laid on the 8th inst. by the Countess of Lichfield.

Llanrhaiadr.—The Rev. John Luxmoore, the rector, has placed a memorial window in the east end of the chancel of the church of this parish. The painting has been executed by Mr. Wailes, under the direction of Mr. Penson, of Oswestry, from whose designs the new church was built, in 1843. The window consists of five compartments, the subjects for the principal painting in each being the Nativity, the Baptism, the Crucifixion, the Resurrection, and the Ascension. The subjects in the several lower portions of each compartment represent Adam and Eve after the Fall, the Flood, Abraham about to offer up Isaac, Jonah, and the Translation of Elijah. In the upper portion of each compartment are the "Agnus Dei," and the Symbols of the Four Evangelists. The subjects were suggested by Mr. Luxmoore.

Farnworth.—This church, says the *Liverpool Journal*, has been recently re-opened, after having been closed since last August. At a vestry meeting held in that month, Mr. H. Hoghton, of Bold-hall, offered to bear the expense of the restoration of his own private chapel in the church, and also one-half of the cost of restoring the body of the edifice, provided they would undertake to raise the other half. A committee was formed, and the requisite amount was subscribed in a few days. The total expenses of the restoration will be very little short of 3,000*l.*

Holderness.—On 12th ult. the village church of Withernwick, in Holderness, East Riding of Yorkshire, was re-opened, having been restored, or partly rebuilt. The inhabitants of this little agricultural village (about 500), commenced the work by granting a rate of 8d. in the pound, *nem. dis.* They also subscribed 65*l.* and again 15*l.* towards the east window, which is of stained glass, from Messrs. Powell's manufactory. The church, which is dedicated to St. Peter, consists of a nave and south aisle, and a chancel. It is furnished with stalls, those in the chancel being of oak. The chancel floor is paved with Minton's encaustic tiles, more elaborate in pattern than elsewhere around the altar. The architects were Messrs. Mallinson and Healy, of Bradford; and the contractor, Mr. C. Stewart.

Newcastle-upon-Tyne.—All Saints' Church has at length had its last portion of repairs finished by the restoration of the two chancel windows of stained glass, which were destroyed by the explosion in Gateshead in October last. They were originally executed by Mr. Wailes, who has also replaced them. The windows have been restored by private subscription, one window being patronised by the corporation, and the other by the master and brethren of the Trinity House, while the arms of each body, together with the arms and names of private subscribers, fill up the ornamental portions of them. The north window contains the figure of St. Peter in the centre, standing on a pedestal with Agnus Dei. Around the figure is a rich ornamental scroll ground, and on the scroll the arms of several members of the corporation and other subscribers. At the top of the window is the Newcastle arms; the whole surrounded by an ornamental border. The south window contains, in the centre, the figure of St. Paul, holding the Scriptures laid open. The apostle is standing on a pedestal similar to the other but with the emblems of the Passion, the Crown of Thorns, and Nails. Above the figure in a medallion is, "I. H. S.;" and around it scroll work similar to the other window, with the arms of several of the brethren of the Trinity House and other subscribers.——The foundation stone of a new Wesleyan Chapel was laid at Shotley-bridge, on the 2nd inst. The style of architecture to be adopted is Gothic. The entrance will be from the east end, which is to be ornamented with a tracery window above the door, and four octagon turrets built from the basement. All the sittings, including free seats, are to be pews without doors. The size of the building will be 60 feet by 40 feet. A school-room will be built under the west end, which may be used as a library and class-room, in which the Sabbath school will meet, and there will be a vestry at the south-west corner of the building. Mr. John Smith, of Medomsley, is the architect.—During the year a chapel has also been built at Annfield Plain.

Glasgow.—The West George-street Independent congregation, whose church has been sold to the Edinburgh and Glasgow Railway Company, have at last procured a site for a new church at the head of Pitt-street. The Unitarian congregation is now nearly ready to set about the erection of a new meeting-house in the triangular piece of ground bounded by Bothwell-street, Terrace-street, St. Vincent-street, and Pitt-street. The new United Presbyterian church in Pollock-street is progressing. There will not now be much longer delay, it is said, with the West End Park Church, to be erected by members of the Establishment. At the east end of the city, in Barrack-street, the foundation-stone of a new church for Dr. Graham, was laid week before last.

FALL OF THE ATLAS IRON WORKS, BOROUGH-ROAD.

ON Monday, the 14th, the premises belonging to the Atlas Iron Works Company, facing the Racket-ground of the Queen's Bench Prison, in the Borough-road, fell to the ground, and buried a large number of persons in the ruins: happily, however, no lives have been lost yet. The building was of considerable extent, and was four stories in height. In explanation of this very serious accident, Mr. Thomas Polgase has stated that his brother, the proprietor of the works, had been some time back proceeded against by the Crown, for not complying with the recent Act of Parliament, making it compulsory for furnaces to consume their own smoke. Having government work on hand, such as the casting of bombshells for the East, and knowing the importance to the country of getting the same finished as soon as possible, the proprietor made the necessary inquiries as to whether the alterations that were required, to conform with the Act of Parliament, could be carried out with perfect safety, so as not to jeopardise either the several workmen or even the building. The advice he then received was to this effect, that a new and a larger boiler was required, but that an iron pillar standing on a turned arch which covered the former boiler used, would have to be removed, but providing a temporary wooden column, sufficiently strong, was used during the removal of the iron one, no danger need be apprehended. Consequently, a piece of timber, of twelve inches square, was placed on the old arch, and which ran as high as to support the main wooden girder that ran the extreme length of the premises. The great heat of the adjoining furnace, or from some other unexplained cause, made the timber shrink, and at the moment of the accident Mr. Thomas Polgase, who was within a foot or so of the prop, saw it fall out of the perpendicular, and, as may be supposed, made a hasty retreat, giving as he proceeded a general alarm. Before, however, he had time to accomplish his object, the girder, which was 99 feet long, snapped short in the centre, which caused floor after floor to fall to the ground in rapid succession, making the walls on each side swing previously like a ship upon troubled waters.

COMPETITIONS.

Burnley Cemetery.—The first premium, 25*l.* has been awarded to a design by Mr. Thomas Worthington, architect, Manchester.—The second premium, 15*l.* has been awarded to a design by Mr. Thomas Adams, of Grimsby. There were twenty-two competitors.

Chester Market Hall.—The architect, to whom as mentioned in our pages recently the second premium was awarded, having declined to comply with certain requests made by the directors, it has been awarded, we are informed, to Messrs. Bidlake and Lovatt.

Drainage Plans for Blackburn. — Twenty-two plans were submitted for the sewerage and drainage of the borough of Blackburn, and were submitted to Mr. J. F. Bateman, of Manchester, for examination. In accordance with his report (which has been printed), the first premium of 350*l.* has been awarded to Messrs. Morgan and Horne, Huddersfield,—motto, "Nil sine labore;" the second premium of 150*l.* to Mr. P. M. Coogan, Engineer's Department, Public Offices, Liverpool,—motto—"Utile;" and the third premium of 50*l.* to Mr. Hamilton H. Fulton, Westminster—motto, "Abidus."

Taunton Assize Courts.—In consequence of letters asking as to the offered second premium in this matter, we have inquired, and are informed that it was awarded to Mr. Giles, of Taunton.

Newcastle.—The Burial Board of St. Nicholas have decided upon a design for erecting two chapels and a superintendent's house, with gateways, at the new cemetery. According to the local papers, there were several competitors, and the designs of Mr. A. M. Dunn, architect, Newcastle (Early Decorated), were accepted. The buildings are to be of stone.

Cambridge: Hobson's Conduit.—It is stated that seventeen designs have been received, and that a committee has been appointed, consisting of four members of the council, four Improvement Commissioners, and four of the Feoffees of Hobson's Charity, to select three plans from amongst the number; these three plans to be again submitted to the council for their approval of *one*.

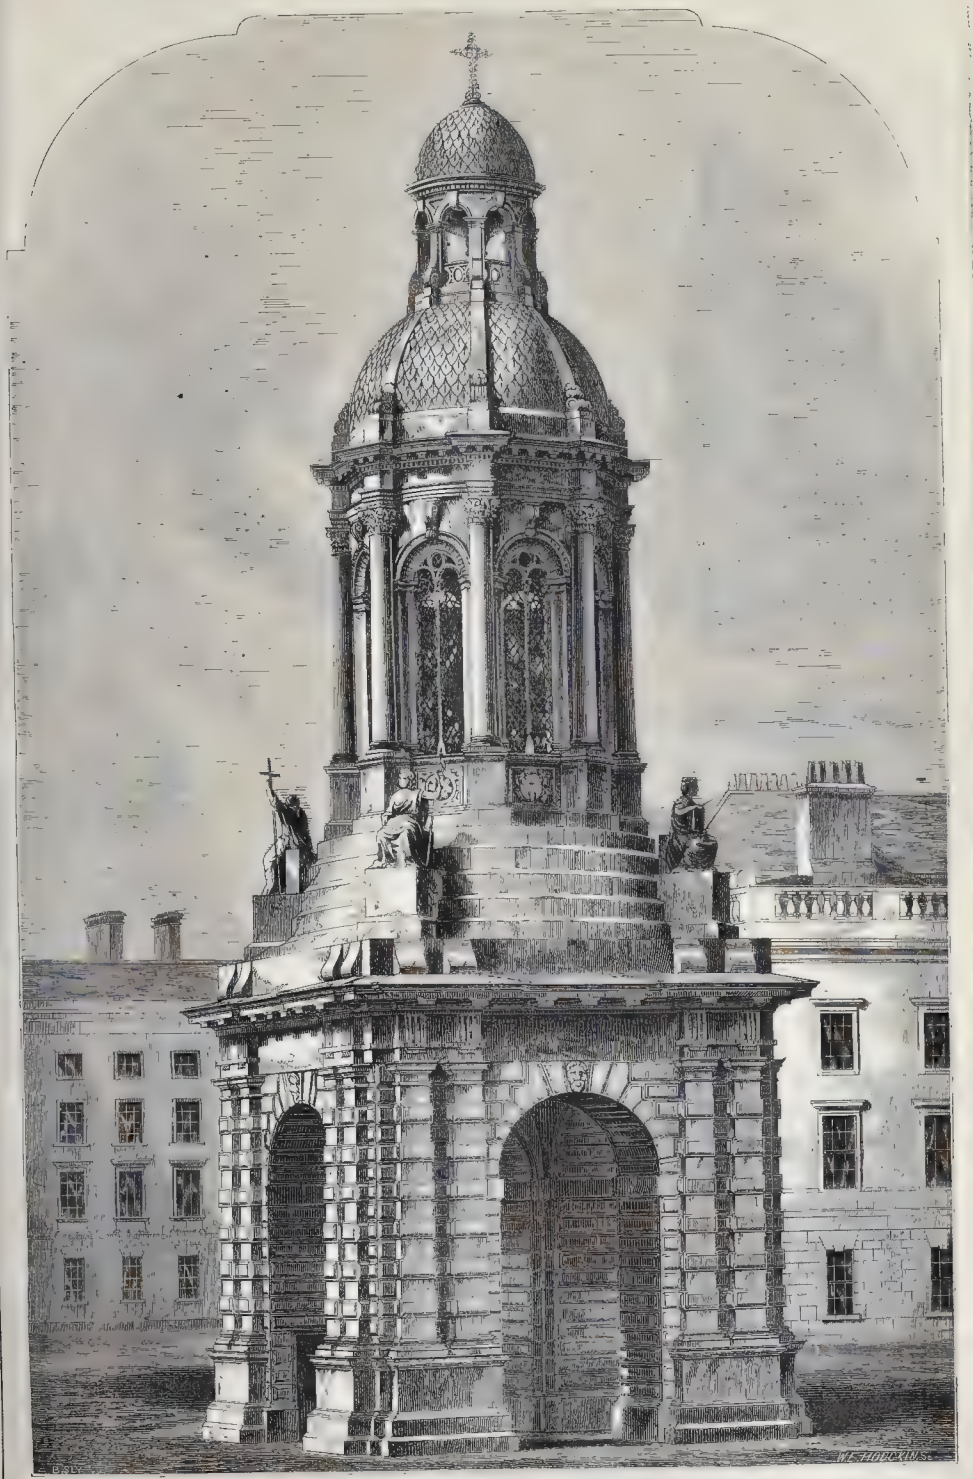
Dudley Workhouse.—Upwards of twelve designs were lodged with the clerk to the guardians, on the 8th of May, including two from Dudley.

Shabby Competitions.—A correspondent urges that "since, however low the premium, and however impossible the conditions, there are men found to lend themselves to this disgraceful and humiliating business, the best remedy would be to publish in every case the *names* of the competitors. By a little watchfulness on the part of the profession, this could be done, and then perhaps such an announcement as that Mr. Christopher Crowquill had received the premium of thirty shillings from the Hookey-cum-Snivey Burial Board, would tend in some measure to show who are the men who keep alive a practice which is daily lowering the profession in the estimation of the unprofessional public."

NEW RIVER WATER WORKS.

EXTENSIVE reservoirs in Maiden-lane are now progressing, and will be completed, it is said, by the end of this year. They are covered in by arching over, in 15 feet spans, soiled on top, and seeded, so as to form a lawn. The outer side walls, which batter, are faced with Staffordshire blue bricks. The arching and cross walls are built of stock brick, in Portland cement: the arching or inverts are of malm bricks. The size of each reservoir is 273 feet long by 209 feet wide, and 24 feet deep. The division walls between the reservoirs are 20 feet wide, filled with clay puddle between. Behind the walls, at 6 to 8 feet deep from the surface, was found a bed of cement stone and fossils, which the company are selling at 16*s.* per ton or load to the cement manufacturers. More than 200 tons have been already obtained. The water will be forced from Newington in 4-feet pipes, a distance of from four to five miles from the filter beds. The contractors are Messrs. G. Mansfield and Son.

CAMPANILE, TRINITY COLLEGE, DUBLIN.



OUR view represents the Campanile which has been put up at Trinity College, Dublin. The complete design comprehended the connection of this by an arched open cloister, with the arcade under present library, and with proposed new buildings on the other two sides of the square, thus forming a continuous cloister round the ground. The Campanile itself is, however, the only portion of the design at present carried out.

The lower portion as high as the top of the circular steps, is executed in Wicklow granite: all the rest of the building is of Portland stone. The height from the ground to the top of the cross is about 100 feet. It was erected at the sole expense of his grace the Archbishop of Armagh, Lord Primate of Ireland, and Chancellor of the University of Dublin, and the total cost was about 3,500*l.* The four figures on pedestals represent respectively—Divinity, Physic, Science, and Law.

The openings in the bell chamber are to be filled in as shown, with ornamental iron work, to conceal the framing for the bell. The stones of the cupola are dowelled together; and there are iron tie-bars at the springing of the cupola secured to a circular cramp running all the way round in the walls.

Mr. Charles Lanyon, of Belfast, was the architect; and Mr. Kingsmill, of Dublin, the contractor. Mr. Robert Kirke, of Dublin, designed and executed the figures on the pedestals.

THE FINE ARTS AT BRIGHTON.—It has been resolved to hold an Exhibition of the Fine Arts at Brighton in the autumn.

NEW CAMPANILE, TRINITY COLLEGE, DUBLIN.—Mr. Lanyon, Architect.

"HENRY THE EIGHTH" AT THE PRINCESS'S THEATRE.

THE production on Wednesday night at the Princess's theatre, of Shakspeare's "King Henry the Eighth," may be said, almost, to have inaugurated a new era in the history of dramatic decoration; not only as regards strict adherence generally to style and period, but more especially to the observance of that detail, which after all constitutes the great value of every work of art, be its ease what it may. Particular attention to propriety and correctness of costume, has long marked the managerial career of Mr. Kean, and conferred a value upon his productions, independent of their intrinsic merits as vehicles for the portraiture of character, which may be said to have become a proverb amongst the patrons of the stage.

But although well aware of the general adherence to architectural correctness which has long distinguished the historical representations consecutively presented to the public at this theatre, the public were scarcely prepared for the gorgeous display of scenic illustration, the strict observance of style to period, and the still more valuable addition of studied detail to style, which characterised the production on Wednesday night of this favourite effort of our great dramatist.

The events of this "ower true tale," ranging from 1521 to 1533, gave great scope for elaborate ornament both of costume and architectural decoration, and this opportunity has been amply embraced by the spirited manager. A handsome expression of acknowledgment to the authors of the "Ancient Costume of Great Britain and Ireland," the "Dresses and Decoration of the Middle Ages," and the heraldic devices employed, is paid by Mr. Kean in his introductory address.

For the architectural portion of the undertaking, and which is more within the province of this journal to comment upon, the thanks of Mr. Kean are accorded to Mr. George Godwin, F.R.S. a reason why this notice may find a place in your columns, in lieu of the ordinary editorial comment. Expense seems not to have been considered in the undertaking, for in some of the principal scenes, as the Festival, and the Christening, the blaze of gold, jewels, velvet, and satin, enhanced by the most elaborate arrangement and detail of architecture, brought out by gold and rich colours, and lit by innumerable chandeliers, was such as to dazzle and astonish with the magnificent profusion.

The house was a bumper, in its most extended sense, for every nook whence a view could by possibility be obtained was crowded, whilst the passages were filled with disappointed applicants, and the reception of Mr. and Mrs. Kean (the latter after a retirement of eighteen months) was such as must have satisfied to their hearts' content those eminent performers, and convince them how well the public can appreciate efforts such as theirs to amuse and instruct. Their acting was admirable. The remorse of Wolsey, on learning the discovery of his ambitious schemes, and its fatal results to himself, was masterly to a degree, and the audience were alternately fettered in breathless and tearful interest by his agonised soliloquies, and roused to excitement by the vehemence of his retorts to his time-serving accusers.

The great points of Mrs. Kean's acting were of course the defence at her trial, her angry rejection of the proffered comfort of the two cardinals, and her deeply affecting death; but, throughout, her impersonation was marked by a noble appreciation of the character, and was deservedly received with enthusiasm by the audience.

Good use has been made of such authorities as could be procured, in the design of the scenes, arranging the points of views, altering the groupings, and making good the deficiencies with great judgment, and antiquarian knowledge. The first scene, Old Palace-yard, for instance, is from an old drawing, by Wynyrede, A.D. 1543, in the Bodleian Library, Oxford. The gabled half-timbered houses, with their projecting one-pairs and eaves, introduce you at once to the *genius loci* of the play; while the gateway on the right, and the old abbey in subdued tints in the background, respectively initiate you in the mysteries of Tudor and Pointed.

Scene 2, "The Council Chamber," by Fenton, is remarkable as a restoration of the "Painted Chamber," from the "*Vetusta Monumenta*." The walls are covered with paintings, in rows. The tapestry, which covers the lower part of the room, passing behind the throne in centre, increases the apparent size of the room.

The fourth scene, "Presence Chamber in York-place," admirably painted by Lloyds, is the most elaborate scene in the piece. The great distance shown by the perspective, the rich mouldings and tracery of the piers and windows, the panelled ceiling, with its elaborate ornaments, mouldings, roses, pendants, and chandeliers—the whole enriched with gold and polychromatic adornments, would form a perfect study of style were the eye allowed to rest upon it; but the enactment of a pageant of unexampled brilliancy within the walls of this right regal apartment, allows no time for study at all, but leads eye and sense captive to the intoxication produced by such a *tout ensemble*.

In Act 2, the Hall at Blackfriars, where the trial takes place, demands notice for its open roof and general proportions, which give due solemnity to the sad scene enacted in it. In Act 3 is a room in the Palace of Bridewell, painted by Fenton, and introducing a magnificent Revival Chimneypieee, designed by Holland,—a fine specimen of the style.

Scene 2, that of Wolsey's downfall, shows a staircase leading from the apartment, with paintings on each side, wherein the receding steps are excellently expressed by judicious effect of light and shade. Scene 2 of Act 4 shows the room in Kimbolton Castle, where Katherine sees the vision and dies. The management of this beautiful scene is beyond all praise: the apparently opaque walls liquidizing, as it were, to disclose the seraphic forms that claim the dying queen for their own.

Act 5, and last, after the display of an admirable panorama of the Thames from Bridewell to Greenwich, ends with the brilliant "spectacle" of the Christening of the Princess Elizabeth in the church of the Grey Friars, an Early English interior with Purbeck columns, and a carved screen, most cleverly painted and built by Gordon.

Great praise for the general superintendence is due to Mr. T. Grieve, who has himself painted the panorama. A. F. ASHTON.

FORM OF WROUGHT-IRON BEAMS.

INSTITUTION OF CIVIL ENGINEERS.

ON May 1st, the discussion was renewed on Mr. Barton's paper "On the Economic Distribution of Material in the Sides, or Vertical Portion, of Wrought-Iron Beams." Attention was directed to the recent erection of a suspension bridge for carrying railway trains across the river, immediately above the Falls, at Niagara, already described in our pages.

Allusion was made to a paper recently read before the Royal Society by Mr. W. H. Barlow, wherein it was shown, that under the existing theory of beams, in which only two elements of resistance,—tension and compression,—were recognised, the strength of a beam of cast-iron could not be reconciled with the results of experiments on the direct tensile strength, if the neutral axis was in the centre of the beam. A series of experiments had been made, with the view of determining the position of the neutral axis, and the results showed that the extensions and compressions proceeded in an arithmetical ratio, from the centre to the upper and the lower sides of the beam; and that at any given distance on either side of the centre, the amount of extension was equal to the amount of compression.

The position of the neutral axis being thus ascertained to be in the centre, it was shown, that not only the ultimate strength, but also the amount of extension and compression with a given strain, indicated the existence of another element of resistance, in addition to the resistances to extension and compression. Further consideration of these results, and investigation of the action of the fibres under different degrees of extension and compression, induced the conviction, that the affect of the lateral action, tending to modify the affect of the unequal and opposite strains in a beam, constituted, in effect, a "resistance to flexure" acting in addition to the resistances of tension and compression.

The questions raised by Mr. Barton's paper were shown to be, the practical value of different modes of constructing the middle rib of any beam, and the mathematical principles upon which its proportions depended.

It was contended, that the simplest mode of ascertaining the amount of strain on the middle rib of any form of beam, was to ascertain that which was acting in compression and in tension at the top and the bottom, and then to consider, that exactly the same was transmitted through the rib, from the centre to each end, tending to tear through the connection of it with the top and the bottom. This aggregate amount of strain, as compared with that on the top and the bottom, never varied; but the distribution of it, over the length of the rib, varied according to the position of the load.

For a beam supported at the ends and loaded between, the formulæ, $S = \frac{W L}{4 D}$ and $S = \frac{W L}{8 D}$ gave the horizontal strain, at the centre of the top and the bottom, for a central, and an uniform load respectively: where W = total load, L = clear bearing, and D = effective depth, these also gave the horizontal strains upon one-half of the middle rib, which in the former were uniform throughout the length, and in the latter increasing from zero, at the centre, in the ratio of the ordinate of two diverging lines, to the points of support, where they were greatest.

Both these formulæ, applied to the same beam, also included every case of a moving load.

In ordinary cast-iron beams, where there was, of necessity, a great excess of material in the middle rib, beyond the theoretical amount, the additional strength supplied by it was frequently so important that it could not be omitted from the calculation

Particular attention was called to this by some experiments, made in 1847, upon large beams, having a clear bearing of 19 feet, a bottom flange of 9 inches by 1¼ inch,—a middle rib of 19¾ inches by 1¼ inch, and a top flange of 3¼ inches by 1¼ inch.: these two girders broke with 50 and 54 tons respectively, laid on the centre. The ordinary rule then in use, which did not take the middle rib into the calculation of strength, gave as the breaking weight of these beams 26 tons on the centre.

A long investigation, and a great number of experiments induced the following conclusions:—That when the top flange was not of a less section than one-seventh that of the whole beam, the middle rib affected the strength, to the extent of one-half the value of its material, as if placed in the bottom flange; that when a beam was loaded on one side of the bottom flange only, it became necessary to increase the section of the top flange to about one-third the whole section of the beam; and, that when these proportions were attended to, the following rule would be found correct:—

Area of bottom flange.
\+ Half the area of the middle rib.
× Depth between the centres of the top and bottom flanges.
× Constant number 28.
÷ Length of bearing (all in inches).
= Breaking weight on the centre, in tons.

This rule gave 54 tons for the beams above mentioned, and it would be found to apply, with equal correctness, to any other proportion of beam, provided the top flange was large enough.

Investigations of the principle of the "Warren" girder, with a view of adapting it to positions, similar to the Conway and Britannia bridges, demonstrated the inapplicability of the system, beyond a certain span. Such beams did not present greater facilities for transport, or for construction, than plate girders; and, so far as might be judged from the information laid before the meeting, if the same official rules had been adhered to as had for so long prevented the use of the Torksey-bridge, the Boyne girders would have required considerable strengthening, and the bow and string trussed beam bridge, which had a deflection of 3 inches, would never have been permitted to be used at all. Still it was contended, that by employing the proper system for the various situations and spans, and adopting proper proportions for the material, excellent bridges had been and could be constructed, both on the "Warren" and the trellis principles, but better than either by using the plate system.

In reply to objections urged against the positions assumed in the paper, respecting a saving of 33 per cent. in the sides of trellis beams, the statements in the paper, were not in any way modified, or withdrawn, and the angle of 45 deg. which was assumed for the investigation of the plate beam, had been so assumed, because it was the angle which gave the plate beam most advantage; and it was contended that the saving, in practice, was over that per centage.

It was contended, that the tubular beams, now being constructed for the "Victoria" bridge, over

the St. Lawrence, which had been adduced as examples of excellent proportions of material, might be used, for demonstrating the saving which would have been effected by the adoption of trellis sides.

THE CAMP AT ALDERSHOTT.

I WENT to the camp last Tuesday, and I had much conversation with working men, foremen of works, and some who live close to it. No one had a good word to say of either the huts or other management: in fact, the people seem to be working without heart, feeling that what they are doing can neither be creditable nor useful. The low ceiling has been left without any grating, or other means of ventilation, except a small orifice round the chimney of the stove. The windows and sides of the huts are left without any perforated zinc or glass, very low, as you have already said.

In the kitchen for the use of a general officer, the stove is so large as to occupy a considerable portion of this apartment. A gentleman who is connected with one of the contracts, said, "*This is the cooking stove;* but whether it is intended to roast the beef or to roast the cook I cannot say."

In one of the ordinary cooking-houses for the men, which has a roof exactly the same as the other huts, I counted nine stoves and other apparatus, which will generate both heat and steam. This, together with the assistance of the heated cock-loft, will be trying to the cooks, who, no doubt, will, before July is past, be seen following their avocations in a similar costume, and with as much difficulty, as some of the workmen seen in glass manufactories and other warm places.

The combustible nature of the camp causes great danger from fire: even already some of the pitched felt roofs have become blistered by the sun; and in two or three weeks' time it is likely that the camp will be as dry as touchwood; and yet at the present moment no provision has been made against fire.

It is true that the canal supplies water in one direction, but I cannot see how that can be made available over the great extent of the camp.

They are now sinking wells, and have got to a depth of about twenty-five feet, and have not yet come to spring water, or any adequate supply of water of even an indifferent description, and it seems very uncertain when they may reach the springs.

I asked an engineer if they had consulted any practical geologist as to the depth of the clay and chalk in the district, and he assured me such a thing had not been thought of, but that it was an idea worth considering.

In the hard frost of winter, unskilled men, such as you have described, were set to work, some of whom would complete a *yard a day* of the necessary preparation for planting the huts. Some of the huts were put in their place, when the ground was as hard as a stone with the frost, without any brick or concrete foundation—when the thaw came the consequence may be judged—and many of them have been raised since by machinery, until a brick foundation could be put below. Most of the huts are now placed upon a thin wall of brickwork, two or three courses high, which the workmen think will be a snug retreat for the adders at certain seasons, and at others will be a stagnant pool.

The canal proprietors have refused to allow anything except the surface drainage to pass into their stream; and, in consequence, conveniences on a large scale have been put up: one, for a battalion of men, contains accommodation for fifty-three persons. It is proposed to deodorise these places with charcoal. This is an important experiment: for, if this can be effectually done, and at a moderate cost, it might be usefully employed in the Borough and other ill-drained places. VIDI.

OLD BUILDINGS.

Leominster Town-hall.—The old market-house at Leominster, though sold by auction for removal, to make way for the new building, will not be destroyed, as Mr. J. Arkwright has purchased it from the local druggist who had it knocked down to him for 95*l.* and intends to have it re-erected at Hampton Court.

Cromwell's old Guardhouse, in the market-place of Carlisle, which was constructed out of the ruins of the nave of Carlisle cathedral, and which has been long used as a fish-market, is now, according to the *Gateshead Observer*, in process of demolition.

Old House at Greenwich.—Our attention has been drawn to an interesting old house (the materials of which have been advertised for sale at Greenwich, facing the river, and near the College, beyond the "Crown and Sceptre." It is a capital example of an old merchant's house, and some say it is the work of *Inigo Jones*. It has reverted to Morden College, and they are clearing the ground, either to add it to the adjoining establishment, or for building.

ECCLESIOLOGICAL SOCIETY.

IN the annual report, read on May 2, it was stated that "a committee of Mr. Carpenter's friends has been formed to raise a fund for commemorating him, by filling with stained glass the west window of S. Mary Magdalene, Munster-square, London,—a church, it is needless to observe, built from his designs, and under his superintendence. So warm has been the response which has been already made to their appeal, that we understand that the committee in question entertain a confident hope that a surplus will remain—after the accomplishment of the immediate object—for the foundation of a periodical architectural prize." It announced, too, "that some ladies, already known for their remarkable success in ecclesiastical embroidery, have united themselves for the purpose of executing church needlework, from ancient examples, or from good modern designs, on terms sufficient merely to pay for the expense of the materials. The cost is thus rendered exceedingly trifling when compared with the charges made by the ordinary church-decorators." Speaking of European competitions, the report said,—"It may be in the recollection of the society, that it was decided to devote the large sums raised in Austria to commemorate the escape of the emperor from assassination to the erection of a magnificent church in Pointed architecture, open (your committee think) to competition: it regrets not being in possession of later and more detailed particulars of this interesting undertaking." "To the coming Paris Exhibition the committee look with great interest, as being likely to have vast influence on the prospects of art in every branch. But they fear greatly, from the list of English architectural drawings (lately published in the *Builder*), that the architecture of our country, and especially that of the revived Pointed school, will be but inadequately represented. This is a matter deeply to be regretted, for many reasons." The committee report "with satisfaction that a national encouragement has at length been given to mediæval art by the establishment of the Marlborough House Museum, the opening of a distinct mediæval department in the British Museum, already enriched by several valuable specimens, and by the purchase on the part of the trustees of the National Gallery, under the judicious advice of Mr. Dyce, of an important collection of early German paintings."

Notices of Books.

VARIORUM.

The "Reports and Papers read at the meetings of the Architectural Societies of the Archdeaconry of Northampton, the county of York, the dioceses of Lincoln and Worcester, and the Architectural and Archæological Society of the county of Bedford, during the year 1854," have just been printed for distribution amongst the members of these societies. The volume, however, is also sold by Masters, of New Bond-street, and other publishers. It contains, besides reports, illustrations, &c. papers on "The Churches of Leicester," "The Repairing and Refitting of Old Churches," "The Churches in North Craven," "The Priory of St. Mary, at Bridlington," "The Excavation at Fountains Abbey," on "Monumental Sculpture," "The Churches of East and West Retford," "The Church and College of Sibthorpe," in Notts, "The Church of the Blessed Mary the Virgin, of Southwell," on "Babington Church," on "The Ecclesiastical Architecture of England," on "The Guesten Hall at Worcester," on "Risinghoe Castle in Goldington, and Howbury in Renhold;" also "Suggestions for a more beautiful Period of Gothic Architecture than any preceding," by Mr. W. P. Griffith; and other interesting matter.——"Velasquez and his Works," is one of those charming books which one feels inclined to congratulate oneself on having got hold of. To say that Mr. Wm. Stirling is the author, is to say enough in its favour. Parker, of West Strand, is the publisher. —— Messrs. Longman's "Travellers' Library," gets on as steadily as ever. No. 78 is "The Autobiography of Francis Arago," a good shilling translation from the French, by the Rev. Baden Powell, V.P.R.S. No. 82 is another shilling treatise, and relates to "Printing, its Antecedents, Origin, and Results," by Adam Stark. N.B. Why does Mr. Stark, in treating of polytype, stereotype, &c. say nothing of the very promising gutta-percha-type, exhibited in the Crystal Palace of 1851?——"A Treatise on the Calculus of Operations, designed to facilitate the processes of the differential and integral calculus, and the calculus of finite differences, by the Rev. R. Carmichael, of Trinity College, Dublin, will be useful to a select few. The want of a text-book on the calculus of operations has long been felt by mathematicians. Messrs. Longman and Co. are the publishers.——Bogue, of Fleet-street, has brought out a very good railway companion, and substitute for intelligent and topographic old "Coachee,"—now vanished like a dream, "osses," whip cracks, and all. The title of the volume alluded to, is "Sharpe's Road-book for the Rail," and it forms a Guide-book or Gazeteer of the rail, as well as a compendium of stations, mileage, &c. The volume now before us is that for the "Western Division, including the lines south of the Thames."

Miscellanea.

PATENT BARREL BOLT. — This improvement, patented by John Phillips, and manufactured by the Patent Bolt and Latch Company, Birmingham, differs from the ordinary bolt in its being manufactured without a single rivet. The barrel is pressed to the form of the bolt itself from the plate, by which means the whole is made from one piece of metal. A great increase over the strength of the riveted bolt is thus secured, and it is not necessary to cut away the wood for fixing the bolt.

ORDNANCE COMMITTEE ON INVENTIONS. — It is not generally known that the public are indebted to the late War Minister, the Duke of Newcastle, for having remodelled and popularized the old and objectionable *ex officio* Committee of the Ordnance, on war appliances, inventions, and suggestions. The committee has been greatly increased in number, and now includes many civilians of eminence, in mechanical, mathematical, chemical, and other science. It meets twice a week, and there is a sub-committee, whose duty it is to select from the enormous mass of inventions and suggestions sent in, and prepare them for further consideration by the general committee.

PEST-HOUSE, NEAR GOLDEN-SQUARE.—I have not forgotten the letter signed "Inhabitant," that appeared in your excellent paper last autumn, while the cholera raged so fearfully in and around Broad-street, Golden-square. That witness was true, and every person thanked their unknown friend for thus bringing before your attention and the public such a "pest-house" as that in Marshall-street. As the nuisance still exists, I wish to add my testimony. There are two cow-sheds, two bullock-pounds, where dung lies until it is "rich," one large and two small slaughterhouses, three stables, one blood-hole, one grain-pit, and one dung-hole. The dung is taken away daily from ten to twelve, and the blood much less frequently: grains are allowed to remain until they become sour; and when these three things are being removed, the stench is terrible, and the very atmosphere becomes poisoned. But this is not all: nearly contiguous to it is a tripe-house, where feet, intestines, &c. are boiled, and the effluvium from this place also is very bad. People whose back windows overlook these places very rarely are enabled to open them, to get a change of atmosphere in their overcrowded dwellings. It may seem a stretch of expression, but it is a fact, we are scarcely ever without some smell from these places, and during the last few days it has been overpowering. Complaint has been loud and general. The authorities have had removed the sour grains that were the main cause: a fresh supply has arrived, and when the bottom of the pit is nearly reached again, the same pestilential breath will again have to be inhaled, producing loss of appetite, pains in the stomach, &c. It is certainly very creditable to one of the owners to say, he laughs at and treats with contempt all complainants, and asserts that tripe boiling, sour grains, &c. never yet did any one harm, but tended to health. It may perhaps console that "gentleman" to know, the neighbours are moving in this matter, really to ascertain if some steps cannot be taken to put a stop to that which produces sickness, and sends many a worthy individual to a premature grave. Looking to the coming summer, the inhabitants feel alarmed, and, where they can, intend removing from the neighbourhood, much to the annoyance of housekeepers, who pay around here heavy rents, rates, and taxes. I have been living in the midst of it all some years, and I confess I never saw my neighbours' indignation rise so high before. Something, sir, ought to be done, and something must be done, to rid us of this fearful place, which has been and still is bringing in its train desolation, misery, and death.—TRUTH.

*** A clause in the Act to abate nuisance from smoke (16 and 17 Vict. cap. 128), gives a remedy against "noxious or offensive effluvia."

THE OFFICERS OF THE NATIONAL GALLERY.—A paragraph has taken its course through the various papers of the day, to the effect that "no appointments will be made, nor has Lord Palmerston any desire to fill up the appointments to the National Gallery, &c." We are informed, by one who professes to know, that the appointments alluded to (Sir Chas. Eastlake and Mr. R. N. Wornum, to the offices of director and secretary) have been for some time ratified by Lord Palmerston, and through him sanctioned by her Majesty, and that the delays of the routine of office alone bar the entrance of those gentlemen on their onerous duties.

TESTIMONIALS.—A correspondent complains, and with justice, that having sent his testimonials to an architect who had replied to an advertisement inserted by the complainant, he is unable to get them back. We have often warned applicants that they should send copies only. Persons advertising for assistants, sometimes receive a very large number of replies, and it would be a hardship if they were to be forced to return testimonials to each. In the case, however, at this moment complained of, no such excuse for retaining the papers can be urged.

THE LATE DISTRICT SURVEYOR OF LEWISHAM.—On Tuesday last, in the Bail Court, before Mr. Justice Coleridge, Mr. Horn moved for a rule calling upon the justices of Kent to show cause why a *certiorari* should not be issued to bring up the order, made by them at Quarter Sessions, dismissing Mr. Badger from his office of district surveyor for Lewisham, under the Building Act. By the 7th and 8th Vict. c. 84, s. 79, it was enacted that if any surveyor should demand and receive a fee for any act or omission in respect of which he was not entitled to receive any fee, the magistrates might fine or dismiss. The offence for which they were entitled to dismiss was his receiving a fee for an act in respect of which he was not entitled to receive any remuneration. They had dismissed him on the ground that he had wilfully received a fee to which he was not entitled under the Act. For all that appeared he had received a fee to which he would have been entitled after the expiration of a certain time, and that would not be an offence. There was another objection, which he submitted was perfectly decisive. It was necessary there should be a complaint in writing, which was to state the particulars and nature of the offence. The complaint was that Mr. Badger delivered another account, claiming a fee of 10s. in respect of each of the buildings, and did wilfully receive the same, not being entitled thereto—it did not state knowingly.—Rule granted.—*South-Eastern Gazette.*

VICTORIA-PARK.—The work of preparation for reducing the area of this park is beginning, notwithstanding the remonstrances that have been made on the subject. These are not times to give the lower classes a handle for the Chartist outcry, "The rich have no sympathy with the sons of labour,"—"The West end, in its luxury, has no sympathy with the East end." Such phrases as these were rife in 1848, and such cases as the diminution of the only park at the East end of London would really give a colouring to such complaints. The last census showed 260,275 inhabitants in three adjacent parishes, viz. Bethnal-green, Mile-end, and Shoreditch, and out of this vast number what a large proportion are confined to factories, and the like, all day. The simple question is,—Ought the present area of the park to be reduced (merely to save some ground-rents) considering the vast population of the immediately surrounding parishes?

LONDON THOROUGHFARES.—Any one passing over London-bridge and proceeding thence to Bishopsgate-street, must be struck by the very bad approach to the bridge from the north side of London, and also may be very often jammed in among the carts and swarm of standing and moving omnibuses in Grace-church-street and the junction with Bishopsgate-street, Cornhill, and Leadenhall-street. The proper approach it is obvious would be direct from London-bride by George-yard and St. Michael's Church, and on through Threadneedle-street, by an easy bend into Bishopsgate-street, which would relieve many over-crowded streets, throw open a handsome church, and, by a short street, the eastern end of the Exchange, and make a noble and proper approach to London-bridge. Houses are being pulled down by St. Michael's, Cornhill, also by Threadneedle-street, opposite to the South Sea House, which is also being demolished, so that the time to speak is most opportune. If any very strong recommendation is wanted for the improvement, say that the glorious old Duke of Wellington is reported to have proposed this opening, and let it be a fit offering to his memory, and to the convenience and comfort of many. Pray urge them to put the clock higher than is proposed in the tower at the south end of London Bridge, or we poor railway travellers, who would profit by it most, will have no benefit. It is hardly seen thirty yards off.

ONE OF THE PUBLIC.

THE PROPER USE OF BUILDING MATERIALS.—Various writers on the above subject remark on the praiseworthy manner in which our forefathers adapted their materials to their wants, and, by force of intellect, compelled them to serve their purpose. Thus, where stone or marble abounded, it was invariably employed; but in situations less favoured by nature, clay was moulded with considerable skill into ornamental bricks, for string courses, cornices, diapers, &c. The brick house, at Trèport, illustrated in your number for the 14th inst. is no doubt a clever modern adaptation of this principle; but I would respectfully inquire why architects and builders of the present day are to be compelled to ignore the possession of valuable materials unknown to our ancestors. Can any one doubt that if the builders of the brick palaces of Verona, or of the cathedral of Bruges, had been supplied with good Portland cement, they would have employed so durable and useful a material for some portions of the ornamental detail of their works, in preference to moulded bricks? I am not an architect nor a builder, nor yet a cement manufacturer, and may therefore be allowed to give what appears to me a common-sense opinion on this subject. There is a general tendency with architectural critics to condemn the use of *compo*, and justly so, in many instances we could all point out: it is no doubt a sham, and is too often used to conceal bad work and worse materials. But in combination with good bricklayers' work, and as a relief to its excessive plainness, the use of sound cement for string courses, cornices, &c. appears to me as worthy of praise now-a-days as was the employment of moulded bricks in similar situations formerly. The outline of a moulded brick cornice, or moulding of any kind, is, and never can be, perfectly true, from the nature of the material; the contraction and distortion of each brick in the baking, and the numerous joints, breaking up into small portions what should be a continuous line,—a defect from which cement is free. These opinions are sadly heterodox, I know, but appear to me not altogether devoid of reason.—A. S.

SCULPTORS' REWARDS. — The widely informed writer of the pleasant column of "Town Talk," in the *Illustrated News*, says:—"The poor pay which Mr. Marshall has received for his statue of the poet Campbell, to which we directed attention last week, will be better understood by the public when the price is contrasted with the sums received by other sculptors for statues of the same size and material. Chantrey's usual charge for a standing statue, a little larger than life, was two thousand guineas. For the large Watt, in Westminster Abbey, he received six thousand pounds. The elder Bacon had thirteen hundred guineas for his statue of John Howard, and the late Mr. Joseph had eighteen hundred pounds for his statue of Wilkie in the National Gallery. The smallest sum ever given for a statue in marble of any excellence—before this unexpected small pay to Mr. Marshall—was six hundred guineas, the sum (minus a few pounds we believe) which the elder Bacon received for his fine statue of Dr. Johnson. Only the other day, Mr. Gibson received five thousand pounds for the statue of Sir Robert Peel, in Westminster Abbey. But the Peel pay was a vote of the House, while the Campbell pay was the poor produce of a starved subscription.

ERICCSON AND THE CALORIC SHIP.—The Ericcson experiment appears to be not only at an end, but poor Ericcson, it is said, has spent all his fortune and that of his wife on it, and is ruined. Ericcson had a noble object in view, and that he is a man of really inventive mind, we believe, is not doubted. Had he been successful, his name would have stood side by side with that of Watt; and, even as it is, the world is indebted to him for his endeavours in its behalf, not only in this instance, but in others, and particularly in regard to the adaptation of the screw to steamers. Ericcson, if we mistake not, was even before Smith in inducing our Admiralty to give their attention to the subject; and had he persevered a little longer he might have superseded all other claimants; for, if we recollect rightly, one opportunity was actually afforded him of trying the screw in presence of an Admiralty agent, but being dissatisfied with the treatment he received, he was said to have left this country in disgust, and went to America, where all his caloric ship experiments were tried.

CHURCHES STRUCK BY LIGHTNING.—On the 11th inst. the cupola which surmounts the steeple of Trinity church, Trinity-square, Southwark, was struck by lightning, and a piece of masonry of at least 1 cwt. thrown against the north-east angle of the church. ——About three o'clock on the same day, St. Mark's, Myddleton-square, was struck by lightning during the thunder-storm. The electricity struck first the vane, and rending off the upper portion of the flagstaff, passed down it to the lead on the roof of the tower, and by it the water-pipe to the earth, which it entered at the base of the tower, breaking and throwing up a flag-stone.

IRON SHIP-BUILDING IN THE CLYDE.—There are now, it is said, thirty iron ship-building establishments on the Clyde, employing an aggregate capital of about two millions, and about 50,000 skilled workmen. There are at present thirty-five iron vessels in course of construction, and only three of wood. Recently, as we have before noted, an iron steamer was lengthened thirty feet, and her capacity for carrying increased 200 tons in fourteen days. Another steamer was cut open in two places to avoid removing the engines and boilers, and thirty-five feet added to her length in twenty-one days.

PUBLIC WORKS IN INDIA.—A paper, by Colonel Cotton, on this subject, was lately read at the Society of Arts, and was followed by a discussion, which was continued at an extra-ordinary meeting held on the 7th inst. when Mr. W. Bridges Adams opened the proceedings by reading a paper on canals and railways in India. Colonel Cotton appears to have maintained that no railways should be made till canal power was exhausted. Mr. Adams urged the advantages of carrying out both simultaneously, the one in aid of the other.

KILKENNY ARCHÆOLOGICAL SOICETY.—The May meeting of the Kilkenny and South-east of Ireland Archæological Society was held in the Assembly-rooms, Tholsel, on Wednesday before last, the Mayor in the chair. The secretary exhibited copies of the proceedings of the Society, in continuation of the January Part, and stated that the March Part was now nearly ready for delivery. He also reported that the last sheet of the Volume of Transactions for 1853, was now in the press, so that all arrears in the Society's publications would be immediately cleared off. Twenty-five new members were elected, and various donations were announced. Several papers on subjects of archæological and historical interest were then read, including one on the Irish Inscriptions at Lismore, by Mr. E. Fitzgerald; another on Sepulchral Vestiges in a Stone Circle, by Mr. Hitchcock; and a continuation of one on the Ecclesiastical Antiquities of Youghal, by the Rev. Samuel Hayman.

PREPARED PEAT AS A SMELTING FUEL.—A week or two since we incidentally expressed a wish that the quality of British iron could be improved, as it would probably be by the use of vegetable fuel instead of mineral, to which the superiority of Swedish and Russian iron is in great measure attributed. Our attention has since been drawn to the importance of the peat bogs of Ireland and Britain, and the compressed fuel thence preparable. Messrs. Gwynne have constructed a powerful turf-pressing machine, which is now at work in their engineering and patent centrifugal pump works at Essex Wharf, Strand. The peat, it appears, can now be taken from the bog, instantly operated on in the drying cylinders, passed to the compressing machine, and turned out a thoroughly dry and perfected fuel of great specific gravity, in the form of a brick, by one continuous and rapid process. This fuel is believed to be effective and economical not only for metallurgic but for steam-engine, domestic, and other uses.

MANCHESTER SCHOOL OF ART.—The annual meeting of the subscribers to this school was held at the Royal Institution, Manchester, on Monday before last. Mr. Thomas Bazley, the president, occupied the chair. The chairman said he had the satisfaction of stating that during the past year the proceedings of the school had been exceedingly gratifying. Differences continued to exist between the Department of Art in London and the committee of this school, but at present were in abeyance. The committee were endeavouring to carry out the suggestions of the Department, being perfectly willing, if any improvement in the affairs of the school could be effected, such should be the result of these suggestions. He could not avoid expressing a wish that instead of requiring elementary knowledge to be given immediately by this school, the Department in London had required that elementary knowledge should be inculcated in other and inferior schools. From the report they would perceive that the school was in a state of financial embarrassment, arising from the changes effected in improving its general state, and consequent, very much, on having removed from unsafe and inadequate premises to that commodious and elegant building. They should require some effort to be made for the purpose of reducing the debt, which now amounted to something like 400*l.* as the prospect of the Government funds which they had been in the habit of receiving was diminished, and they should be dependent much more upon voluntary support than they had hitherto been. The total of the receipts for the past year was 1,309*l.* odd. The total number of students entered on the books had been 721, among whom were 19 architects and builders, 30 house-decorators, 24 artists, 86 designers, &c.; 155 schoolmasters and pupil-teachers, 199 schoolboys and girls, &c. The number of works of art produced had been 3,725, or about six for each pupil.

THE SCOTTISH NATIONAL GALLERIES.—A correspondent of the *Warder* says of the new galleries in Edinburgh,—"There are two suites of rooms internally, with porticoes at either end. The saloons are all of an octagonal form, the central one, which is rather larger than the others, being 43 feet diameter. They are lighted wholly from the roof by cupolas in plain coved ceilings, and communicate with each other by lofty arched openings; so that from the entrance the *coup d'œil* is very striking. Externally, the Ionic order is employed in the four end porticoes of four columns each, and also in the two lateral porticoes of six columns each. There is of course an almost total absence of windows, the bareness of the walls being relieved by antæ, resting on a stylobate of steps, and crowned with a balustrade." The architect is Mr. Playfair. The cost has been about 40,000*l.* exclusive of the site, which the town council of Edinburgh gave gratuitously. The position on the mound, immediately behind the Royal Institution, is not a good one, as we said at the time it was selected. "Looking westward from the North-bridge and the eastern half of Prince's-street, the building in question does interfere very considerably with the view of the rugged Castle-rock, and the vista beyond it, over the west Prince's-street Gardens. And the site is not only objectionable in this respect, but the building itself appears to advantage upon it only from one or two points of view, from the high ground at the head of the Mound it appears quite buried, and its fine southern porticoes are all but unrecognisable."

HYDROSTATIC RAILWAY BREAK.—This invention has been tested on the Hereford and Shrewsbury Railway. To every carriage in the train was appended ordinary breaks. Under each carriage and van was placed a small cylinder, of 4½ inches diameter, with a solid plug or piston, having a stroke of 3 inches. Under the carriage a tube, of one-inch bore, was securely fixed, one end of which entered one side of the cylinder beneath the piston, and the other end the opposite side, so that the cylinder and tube formed one continuous chamber. The termination of the tube at each end of every carriage was enlarged so as to form the matrix of a joint for connecting the separate vehicles. The necessary power for moving the pistons attached to the break-levers is obtained by a tube connected with the boiler. The train was stopped, it is said, when going at the rate of forty miles an hour, in 300 yards; the distance required when the common break apparatus is used being 1,600 yards. It was thought that, by increasing the area of the cylinder under the tender, any train going forty miles an hour might be stopped in 120 yards.

SUBMARINE EXPLORATIONS. — Some long-headed Yankees have been literally shovelling dollars from the bottom of the sea! They have formed an association called the "Nautilus Submarine Company," with machines for submarine exploration, and are now engaged in exploring the wreck of a ship on the coast of Venezuela, where some two to three millions of dollars were lost. The "Nautilus Submarine Company" has a vast and profitable field to work upon. The wreck alluded to lies in 66 feet depth of water, and near it are two other wrecks of vessels, which contained one 50,000 dollars and the other 15,000.

A PANORAMA OF CREATION. — Mr. Atkins, of Oxford, C.E. has prepared for exhibition in the Town Hall, Oxford, a "Panorama of Creation," the materials of which he has long been collecting, and indeed to which allusion, if we mistake not, was some years since made in the journals of the day. Mr. Atkins is said to have taken great care to have the numerous representations of celestial and terrestrial objects faithfully represented, according to the works of the most eminent astronomers, geologists, zoologists, botanists, travellers, and circumnavigators of every age and country. The projector of this new idea was originally, it seems, a factory boy, but by force of character he has elevated himself most meritoriously to a respectable position in society. After acquiring a general knowledge of mechanics, chemistry, and other branches of science, he appears to have chosen the profession of a gas engineer, and is said to have lighted upwards of thirty towns with gas.

INTERCOMMUNICATION IN RAILWAY TRAINS.—On Saturday week a trial of Wickens's invention for effecting a communication between the driver and the guard on a railway train was made on the Windsor train of the South-Western line, in the presence of Lieutenant-Colonel Wynne, railway inspector from the Board of Trade, Mr. E. R. Williams, of the Board of Trade, Mr. J. Beattie, engineer of the line, Dr. Spurgin, Mr. Wickens, and others. The invention is remarkable for its simplicity. The result of the trial was entirely satisfactory. The public will learn with satisfaction that the Government are about to bring in a Bill compelling railway companies to adopt a communication along the trains, by which security from danger may in future be afforded to passengers.

JOINT MEETING OF ARCHITECTURAL AND ARCHÆOLOGICAL SOCIETIES.—The Architectural and Archæological Societies of the Archdeaconry of Northampton, the Diocese of Lincoln, the County of Leicester, and the University of Cambridge, are to hold a public meeting at Peterborough, on Wednesday, May 23rd, when papers will be read "On the History of Croyland Abbey, Saxon Period," by the Ven. Archdeacon Churton; "On Peterborough Cathedral," by the Rev. G. A. Poole; and "On the West Fronts of English Churches, with especial reference to that of Peterborough," by the Rev. Owen W. Davys. Mr. Poole will illustrate his paper within the cathedral. At an evening meeting will be read a paper "On Photography, as applicable to Architecture," by the Rev. F. A. S. Marshall. On Thursday, the 24th, an excursion party will proceed to Peterborough, Thorney, Croyland, &c. and a public meeting will be held at Peterborough in the evening.

SANITARY NOTIFICATION.—Sir Benjamin Hall has very properly issued a circular to the various local authorities, reminding them of the powers they have for the removal of nuisances, and earnestly impresses upon them "that sanitary measures can be more beneficially and more effectually taken now than in the heat of summer, when, perhaps, the epidemic may have reached this country."

THE MANCHESTER WELLINGTON STATUE.—The casting of Mr. Noble's colossal statue of the late Duke of Wellington, to be erected at Manchester, took place lately in London, in the presence of many patrons of art and scientific persons. The weight of metal used was about four tons, and the casting was successfully performed.

ECONOMY IN STREET PAVEMENT.—The Hartlepool Board of Health are about to try artificial stone blocks for stones, prepared under the direction of Mr. F. Morris, the borough surveyor. The composition is the same as that of the blocks used in building the new pier at Hartlepool, the cement being that of Messrs. Aspdin, Ord, and Co. of Gateshead. The blocks are made nine inches in depth by six in thickness. They are chiefly composed of cement and gravel.

THE STUDY OF MOULDINGS.—At a meeting of the Oxford Architectural Society last week, the Hon. H. C. Forbes, M.A. of Oriel College, read a paper "On the Study of Mouldings," in which, after acknowledging the improvement that has recently taken place in church building and restorations, when compared with the churches built twenty or thirty years ago, he desired to impress upon all present the great importance of acquiring a correct knowledge of the details of ecclesiastical workmanship, and urged upon those who were beginning this study to make themselves familiar in the first place with the mouldings of the different styles, inasmuch as they have been rightly called "The Grammar of Architecture," and are by far the most certain, and frequently the only guides in ascertaining the date of a building. Mouldings in use in church architecture are of two kinds,—first, those which are usually called *ornamental* mouldings, as the zig-zag and cable mouldings of Norman churches, the dog-tooth of early English, or the ball flower of decorated; and secondly, those which were alone alluded to in this paper, which also become ornamental from the circumstance of their being used to relieve flat surfaces of masonry by contrasts of light and shade, and were formed by chamfering or cutting off sharp edges, by sinking hollows and so leaving other portions of the stone-work standing out in relief.

"HOME-MADE CHLORIDE OF LIME."— In reference to a paragraph on this subject describing a composition recommended by Professor Nash, "an analytic chemist," states that he has tried the mixture recommended by Professor Nash, but has found that "it is of less value than quicklime alone for sanitary purposes," remarking, that "when lime and chloride of sodium (common salt) are brought together in the presence of water, the chlorine of the latter and the oxygen of the lime mutually change places, with the production of chloride of calcium and caustic soda (Na. O.), the latter immediately attracting water, to form hydrate of soda (H. O. Na. O.), in an equation, thus—Na. Cl. + Ca. O. + H. O. = Ca. Cl. + H. O. Na. O. Neither soda nor chloride of calcium," he adds, "are of the slightest use for deodorising or disinfecting purposes, nor is a mixture of the two of any more value. If sulphuric acid be added to the 'home-made chloride of lime,' it neutralizes the soda, combines with the lime, and disengages hydrochloric acid, which *alone* will not answer the purpose required."

NEW VENTILATOR.—A simple invention by a Mr. Locker, has been placed in the Panopticon of Science, Leicester-square, for regulating the supply of pure air in dwelling-houses. It consists of a double, or telescopic tube, the inner perforated with small apertures, and the external end closed, so that the amount of air is regulated by partially increasing or diminishing the length of the slide.

LINLITHGOW PALACE IMPROVEMENTS.—The plans of Mr. M'Nab, curator of the Edinburgh Botanic Gardens, for the improvement of the grounds belonging to Linlithgow Palace, are now in progress of being carried out under the superintendence of Mr. Smith, a gentleman who, according to the *Falkirk Herald*, is said to have had great experience in such works. Walks have been formed, or are in course of formation, to afford a comfortable promenade to the inhabitants of the town or to visitors. Unsightly hollows have been filled up. A portion of the lake has been cleared of its weeds, thus converting an unsightly marsh into clear water. The margin of the loch, which was irregular without being picturesque, has been smoothed down, and a harbour formed for the boats. A broad walk is being formed round the palace, and a portion of the basement of the most recent wing of the building has been unearthed. A considerable breadth of ground in the south-west corner of the palace park has been trenched and is to be planted, and a broad belt of planting is to be formed round the south-east side of the palace, with the view of ultimately shutting out unsightly backlying portions of the town. Several relics, although none of very great importance, have been discovered in the course of the trenching and excavations which have been made.

A WORD AT THE RIGHT MOMENT. — It is said that when the siege of Sebastopol was commenced, Prince Menschikoff asked the then head engineer how long it would take to put the place in a state of defence? He answered, "Two months." A young captain, named Todleben, whose parents are poor shopkeepers, stepped forward, and said he would undertake to do it, if he had as many men as he required, in two weeks. He did it in twelve days, and is now general, and aide-de-camp to the emperor.

IMPROVEMENTS IN SHIPBUILDING.—There is now upon the stocks at the Navy Yard, Brooklyn, U.S. the frame of a war frigate, the *Niagara*, intended by her builder, Mr. George Steers, to be the strongest and the fleetest of her size and class afloat. She is sharp at the bows, and it is expected that she will sail seventeen miles an hour, under an ordinary press of canvass. Her extreme length is 345 feet, breadth 56 feet, and 31 feet depth of hold from the floor to the under side of spar deck. She is diagonally braced on the outside of her timbers, instead of the inside, with iron, which mode Mr. Steers says will add fifty per cent. to her strength. This way of bracing is said to be entirely new, and the idea original with the builder of the *Niagara*, who says, that inasmuch as a barrel iron-hooped inside is not so strong as one hooped upon the outside, it occurred to him that a vessel upon the principle acting in the case of a barrel must be stronger braced upon the outside of her timbers. The iron braces are 5 inches wide, and ⅝ of an inch thick, running diagonally at an angle of 45° each way, from the port sill over the hull down to within 5 feet of the keel, with all the crossings bolted through and through with large iron bolts. All the clamps, ceilings, and bilge-streaks are coned and bolted edgewise between every timber of the frame.

SLIPPERY PAVEMENT.—Would we, while opportunity admits, use forethought, the public paths of our capital would be without the reproach of being here and there dangerous. Departure from plane where continuousness should be is among the neglects that beset the pedestrian. It may arise from unequal wear of varying species; say, granite and York flag. Dressings of basement windows, or their grated areas, cellars, &c. formed of granite, wear not equally with the less hard York. Attention should timely be paid to the inequality. As example, the finger of warning is pointed to the western exit from the groined passage out of Lincoln's-inn-fields into Great Queen-street, and to some curves in Bow-street, near Long-acre. In winter these little differences, with rounded edges, are frequently the cause of sprain, fall, and fracture. —VINDEX VIARUM.

TENDERS

For the People's Institute, Belper; Mr. W. Wigginton, architect. Quantities supplied:—

Nelson, Dudley	£1,870 0 0
Freeman, Belper (accepted)	1,346 0 0

TO CORRESPONDENTS.

"C. E."—"R. L. S." (thanks)—"C. B."—"J. T."—"B. S. S."—"T. G."—"Messrs. D."—"S. B. H."—"Ratepayer."—"C. P. R."—"J. H."—"Excelsior."—"H. J. B. N."—"S. F."—"B. B."—"W. P."—"Holders of Small Houses."—"R. S."—"C. M."—"A. F. A."—"J. S." (the charge must depend on circumstances: above a certain amount, five per cent is not an unusual charge).

ERRATUM. By an accident at press, the engraving of one of the baluster columns in St. Alban's Abbey Church, in our last, p. 217, was reversed, as the majority of our readers have doubtless observed for themselves.

"*Books and Addresses.*"—We are forced to decline pointing out books or finding addresses.

NOTICE. — All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the EDITOR, and not to the Publisher.

ADVERTISEMENTS.

TO BUILDERS, CARPENTERS, COACH BUILDERS, PIANOFORTE MAKERS, and Others.

MR. LEREW will SELL by AUCTION, on the PREMISES, No. 42, Union-street, Somers Town, on MONDAY, MAY 22, at TWELVE precisely, about 3,000 PLANKS, DEALS, and BATTENS, 12feet wide pine board, mahogany in planks and board, prepared flooring, scantling, dry cut stuff, scaffolding, folders, harrows, and other useful stock. May be viewed on Saturday prior to the sale, and catalogues had on the Premises, and of the Auctioneer, Cardington-street, Hampstead-road, near the Euston-station.

TO BUILDERS AND OTHERS—FINSBURY.

MR. F. G. DEBENHAM will SELL by AUCTION, on the PREMISES Crown-street, Finsbury, on TUESDAY next, MAY 23rd, at TWELVE o'clock, in lots, the MATERIALS of FIVE HOUSES, known as the "Parish Almshouses," including good stock bricks, plain tiles, timber in roofs and floors, lead gutters and pipes, doors and sashes, wainscot panelling, and valuable oak carving in the hall; a large quantity of excellent Purbeck squares, 170 feet run of ornamental iron palisading with Portland-stone coping, and numerous useful lots. May be viewed, and Catalogues had on the Premises, and at Mr. DEBENHAM'S Auction and Estate Agency Offices, 90, Cheapside.

Superior Chimney-pieces of Statuary Marble; some richly sculptured, and of Dove and Vein Marble, in great variety.

MESSRS. ROBINS will SELL by AUCTION at their ROOMS, Great Pierrepoint, Covent Garden, on TUESDAY next, MAY 23, at TWELVE, STATUARY MARBLE CHIMNEY-PIECES, some richly sculptured, suitable for first-class drawing rooms; others of a less expensive character, with trusses, Black and Sicily Marble, for dining-rooms and libraries. Several of Dove and Sienna Marble, and a great variety of Vein Marble, of smaller size. Now on view, at the Auction Rooms in Covent Garden.

CAMP, ALDERSHOTT.—Freehold and Tithe-free valuable Building Land, intersecting the Camping Ground, in the parish of Ash, in the county of Surrey, will be SOLD by AUCTION, by

MR. BOULTER, at the ROW-BARGE INN, Aldershott, on THURSDAY, the 7th day of JUNE, 1855, at THREE o'clock in the Afternoon, in Forty-two Lots. The lots have frontages to good roads, are situate within two miles of the Farnborough station, and a mile of the Ash station of the Reading and Reigate Railway, and of the Guildford, Farnham, and Alton Branch of the London and South-Western Railway, and abutting upon the Basingstoke-canal.—Printed particulars, with Lithographic plans, may be obtained on application to Mr. BOULTER, 4, Beaufort buildings, Strand, and of the Auctioneer, at Frimley, and the British Flag Refreshment Hut, the Camp, Aldershott.

TO WORKING ENGINEERS AND MACHINISTS, SMITHS, AND OTHERS.

MR. SITGRAVE will SELL by AUCTION, on TUESDAY, MAY 22, at TWELVE, at his Rooms, 28, Lendenhall-street, the TOOLS, IMPLEMENTS, &c. of a WORKING ENGINEER and MACHINIST, comprising one four-feet six-inch and one two-feet six-inch iron-bed lathes, a twelve-feet and a six-feet wood-bed ditto, boring-machine and bits, four feet slide-rest, stocks and dies, screw-in-block, portable forge, pair of bellows, grindstone, in iron frame, vices, anvils, forge tools, and a variety of other useful tools and effects.—May be viewed on Monday, and Catalogues had at the Rooms.

A CIVIL ENGINEER in the country, with an extensive practice in Engineering and Architectural Works, consisting of railways, water-works, sewerage, public buildings, large surveys, valuations, &c. &c. has a VACANCY for TWO PUPILS. Young gentlemen having a knowledge of architectural or engineering drawing, will be taken on very moderate terms.—Applications to be addressed to F. B. L. care of Mr. Baker, 244, High Holborn.

AN ARCHITECT wishes for an ASSISTANT who is acquainted with Church Details and Practical Architecture. References are required on these points, and none need apply who are not prepared to give them.—Address, stating terms and references, to V. N. care of Messrs. Cartwright, Law Stationers, Brownlow-street, Bedford-row.

TO PARENTS AND GUARDIANS.

AN opportunity presents itself of apprenticing a YOUTH (outdoor), to a Grainer. A moderate premium required.—Address, C. WILLIAMS, 8, Palace-row, St Pancras.

TO PARENTS AND GUARDIANS.

A VACANCY occurs in a Surveyor's Office for a well-educated YOUTH as PUPIL (if required, he could board with the family). A moderate premium required.—Apply, J. S at Mr Benetfink's, 89, Cheapside, City.

PUPIL WANTED.—A Sculptor and Carver in Marble, Stone, and Wood, in the country. Author of Two Works on Design, is desirous of taking a respectable Youth as an APPRENTICE. Premium moderate, and progressive salary after the second year.—Apply to ALPHA, care of Mr. Batsford, 52, High Holborn, London.

STOVE-GRATE TRADE.—WANTED, a SALESMAN of first-rate ability, who has had experience with and to call upon respectable builders and ironmongers. Good salary will be paid to a gentlemanly man of sterling character and ability; preference given to one who knows the trade.—Address, post paid, stating age and previous employers, to R F. and CO. care of Mr. Jones, 17, Clement's-lane, City.

TO PLUMBERS AND GRAINERS.

WANTED, for a constant situation, a THREE-BRANCH HAND. One who can undertake graining preferred Also wanted, a Grainer and Writer.—Address R. L. care of Mr. Canburn, 4, Essex-place, Camberwell.

TO CLERKS OF WORKS.

WANTED, immediately, a CLERK of the WORKS, to Superintend the Erection of Spring Hill College, Birmingham None need apply who are not thoroughly conversant with Gothic detail.—Apply, by letter only, to the Architect, Mr. JOSEPH JAMES, 15, Furnival's-inn, London.

WANTED, by a Builder in the Country, a WORKING FOREMAN, who can make plain and working drawings, and take out quantities. Apply to Mr. BUSH, Architect and Surveyor, 13, Clifford-street, Bond-street.

TO GRAINERS AND WRITERS.

WANTED for a permanency, a superior WORKMAN in the above branches, a married man preferred; good references required.—Apply to A. Z. Post-office, Warminster.

TO ARCHITECTURAL DRAUGHTSMEN.

WANTED, an experienced ASSISTANT, for a permanency, one with a good knowledge of design, perspective, and the general routine of provincial practice. State salary expected, reference, and address, THOMAS W. PENSON, The Bars, Chester.

BOROUGH OF BOLTON.—TO PAVIORS.

WANTED immediately, a WORKING FOREMAN of PAVIORS None but a first rate, steady workman, who can read and write, need apply. Wages, five shillings per diem.—Address, in applicant's own writing, to HENRY HAYLIS, Borough Surveyor, Bolton. May 12-b, 1855.

WANTED immediately, a Practical Shop FOREMAN. Unexceptionable references required.—Address, stating full particulars, and salary expected, to D. C. Office of "The Builder." No applications received after TUESDAY, the 22nd instant.

WANTED, a FOREMAN, in a Plumbing, Glazing, and Gas-Fitting establishment. None need apply unless they are practically acquainted with the trade.—Apply, by letter, or personally, to Mr. W. F. GIBSON, Long-row No. Ilngham.

TO BUILDERS AND PLUMBERS.

WANTED, by the Advertiser, a Permanent SITUATION as PLUMBER and GASFITTER, who also has a good knowledge of fixing up hot-water apparatus for heating baths and houses.—Direct to C. W. Office of "The Builder."

TO HOUSE-PAINTERS, BUILDERS, AND OTHERS.

WANTED, constant employment, by an experienced WRITER and GRAINER.—For further particulars address to E. Y. care of Messrs. Woodward and Whiting, Star Coffee-house, St. George's-circus, Blackfriars-road, South wark.

TO ARCHITECTS AND BUILDERS.

WANTED, by a middle-aged person, a SITUATION as SUPERINTENDENT of WORKS, or GENERAL FOREMAN, who has been many years engaged in carving out ex ensive works: no objection to the country; can furnish the first of testimonials, &c.—Address, X. Y. Post-office, Stoke Newington.

TO BUILDERS AND OTHERS.

WANTED, by a respectable Young Man, a Carpenter, a SITUATION as TIME KEEPER, or constant employment as carpenter; is willing to make himself useful. Address, W. C. L. 13, Friern-place, Friern Barnet, Middlesex.

WANTED, by a Man about 40, constant EMPLOYMENT as CARPENTER and JOINER, used to Jobbing and Packing.—Address to A. B. No. 11, Charlotte-terrace, Islington.

TO BUILDERS, SURVEYORS, &c.

WANTED, EMPLOYMENT, by a Young Man, as Clerk, Timekeeper or Yardsman, who has worked three years at the bench, and is willing to make himself useful.—Address W. T. H. 14, Harp-alley, Farringdon-street, City.

TO ARCHITECTS AND BUILDERS.

WANTED, by the Advertiser, a SITUATION in an Office of the above; can make fair and working drawings, measure works, take out quantities, &c. Age, 21 years. Address, H. P. S. 40, Hampton-street, Walworth-road, London.

WANTED, by a Man of experience, a SITUATION as FOREMAN to a CARPENTER. Address, A. S. 11, Draycott-street, Chelsea.

TO BUILDERS AND OTHERS.

WANTED, by a Respectable Young Man, who has been some years in a Builder's Office, a SITUATION as CLERK in a Builder's, or any other office connected with the building trade. Can be well recommended by his late employers. Salary not so much an object as a benefitting engagement.—Address, D. E. No. 35, Felix-terrace, Liverpool-road, Islington.

TO BUILDERS AND OTHERS.

WANTED, an ENGAGEMENT, by a young Man, 23 years of age, who has been accustomed to take out quantities, measure off works, and the general routine of the Office. The Advertiser has been brought up at the carpentry business, and is a neat draughtsman. Salary not a primary consideration. The Country not objected to.—Address, L. B. O office of "The Builder."

TO BUILDERS, CARPENTERS, AND JOINERS, &c.

WANTED to place an active, well-educated Youth, as INDOOR APPRENTICE. A moderate premium will be given.—Address, T. B. 33, Bath-street, City-road.

TO MASTER PLUMBERS, &c.

WANTED, a PLACE for IMPROVEMENT. Has been used to Painting and Glazing. Amount of wages no object.—Address, G. K. Jones's, Marlbo rough-road, Chelsea.

TO ARCHITECTS AND SURVEYORS.

THE Advertiser, who will shortly complete his articles with an Architect and Surveyor in the country, wishes for an ENGAGEMENT in a London office. Good references can be given.—Apply by letter, addressed NEMO, Office of "The Builder."

TO BUILDERS, &c.

THE Advertiser, a first-rate Hand-railist, superintending iron cores and capping the same, together with stairs and best joiner's work, is desirous of taking any quantity of the above work, in town or country. Respectable reference can be given.—Address (prepaid), to A. B. 20, Stevenson-terrace, Caledonian road.

TO CARPENTERS, &c.

A YOUTH, aged 16, strong and healthy; has been two years in the above line; his parents wish to put him to a master for four or five years, to perfect him in all the branches of the building trade, as an IN-DOOR APPRENTICE. A small premium only will be given. The country preferred.—Address, A. B. Lovelace's Library, New Bexley, Kent.

TO CARPENTERS AND BUILDERS IN TOWN OR COUNTRY.

A YOUNG MAN, of steady habits, wants EMPLOYMENT. Wages not of so much import as constant work.—Address, B. Shoe Warehouse, 1, Queen's Head-row, Newington-butts.

TO BUILDERS AND CARPENTERS.

A YOUNG MAN, 21 years of age, who has served part of his time to the carpentering and joining, wishes to IMPROVE HIMSELF for a year or two longer. Address, W. S. 6, Little Windmill-street, Golden-square.

TO BUILDERS.

A RESPECTABLE YOUNG MAN will require a SITUATION in a Builder's Office at Midsummer. He served his time to a builder and surveyor in the country and the last eighteen months in a builder's office in town. Salary required, 35s. per week.—Address to J. L. J. 1, York-street, Covent-garden.

A YOUNG MAN, a good writer, with a knowledge of builders' accounts, and who has served his time with an architect and surveyor, is desirous of obtaining EMPLOYMENT in a Builder's Office.—Apply to A. C. 5, Nottingham-street, New-road.

A PRACTICAL BUILDER seeks an ENGAGEMENT as Clerk of Works; has been employed in extensive Railway Buildings, and other works of magnitude. Can produce excellent testimonials. No objection to any part of the country, or to go abroad.—Address, A. J. S. 16, Down-terrace, Clarence-road, Hackney.

A LAND SURVEYOR wishes to meet with an ENGAGEMENT. References given.—Address, X. Mechanics' Institution, Derby.

TO CARPENTERS AND BUILDERS.

A YOUNG MAN, who has been four years in the Trade, wishes for IMPROVEMENT in a Shop. Town preferred.—Address, S. Y. 21, Edward-street, Wenlock-road, City-road.

TO ARCHITECTS.

A DRAUGHTSMAN is open to an ENGAGEMENT, permanent or otherwise; has had the management of an office the last three years.—Address, W. C. care of Mr. Amiss, 74, St. Martin's-lane.

A GENTLEMAN, a C. E. well acquainted with the Practical and Mathematical requirements of an Engineer's Office, tenders his SERVICES to a C. E. or Contractor executing Engineering Works, as General ASSISTANT. Immediate active employment is the advertiser's main object.—Address, H. S. 1, Grenville-street, Brunswick-square, London.

TO ARCHITECTS.

A PRACTICAL CLERK of WORKS wishes a RE-ENGAGEMENT.—Address to J. C, Office of "The Builder."

TO ARCHITECTS.

A GOOD and Expeditious Draughtsman, who is perfectly capable of getting up working and finished Drawings, Perspectives, &c. is a good colourist, and understands the routine of an office, is desirous of meeting with an ENGAGEMENT.—Terms moderate.—Address, C. B. R. 107, Stanhope-street, Regent's-park.

TO ARCHITECTS OR CONTRACTORS.

A QUALIFIED SUPERINTENDENT of WORKS is desirous of an ENGAGEMENT. Good reference.—Address, L. C. Post-office, Leigh-street, Burton-crescent.

TO SURVEYORS AND BUILDERS.

A SITUATION as CLERK, &c. wanted, by the Advertiser, who is practically acquainted with the Building business, Measuring, Drawing, Bookkeeping, &c. Terms moderate, and unexceptionable references.—Address, A. B. 3, Goswell-road, Islington.

TO ARCHITECTS.

A GENTLEMAN, thoroughly versed in ITALIAN ARCHITECTURE, is desirous of a RE-ENGAGEMENT in town.—Address, EXCELSIOR, Mr. Elmslie's, Post-office, Brixton-road.

TO CARPENTERS AND BUILDERS.

A YOUNG MAN, aged 24, is desirous of IMPROVEMENT in a good shop; has had three years at the bench, and understands sashes and plain framing. Wages not so much an object as good improvement. The neighbourhood of Pimlico, Chelsea, or Brompton preferred.—Address, post paid, G. Y. Office of "The Builder."

TO ARCHITECTS.

A GENTLEMAN, of considerable practice, is desirous of an ENGAGEMENT, temporary or otherwise. Terms, one and a half to two guineas per week.—Apply to S. P. Office of "The Builder."

TO CIVIL ENGINEERS AND CONTRACTORS ON FOREIGN AND COLONIAL RAILWAYS.

A SURVEYOR, a good and expeditious Draughtsman, understanding taking out quantities, measuring, the setting out and general superintendence of works, together with the method of keeping builders' accounts, and of energetic business habits, wishes for an ENGAGEMENT. India or the Colonies preferred.—Address, B. H. Mr. Samuel's Library, Kandolph-street, Camden Town.

TO ARCHITECTS.—PARTNERSHIP.

AN Architect in the Country, with an extending practice, is desirous of taking a PARTNER who can manage an Office.—For particulars, apply to A. B 22, Johnstreet, Sunderland.

PARTNER WANTED.—A MANAGING PARTNER is WANTED, in a Sculpture and Marble-cutting establishment in Scotland. The business is one of long standing, and presents an excellent opening for any qualified party. Apply to T. and R. LANDALE, 18, Forth-street, Edinburgh.

TO ARCHITECTS AND SURVEYORS.

TO BE DISPOSED OF, upon moderate terms, a small but increasing PRACTICE, in a rising and beautiful watering-place.—For particulars, address, S. S. 9, Studley-terrace, Larkhall-lane, Stockwell, Surrey.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 3s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Elevations, with prices and discounts to builders and the trade, forwarded on application, post free.

IMPROVED WINDOW BLINDS.—SAXBY'S PATENT ECCENTRIC CLEAT, manufactured solely by THOMAS PEMBERTON and SONS, and may be had of all ironmongers. It is the only perfect method yet introduced, of sustaining a Venetian blind, on releasing the cord, and avoiding winding on hooks. For calico blinds its action is perfectly noiseless, as it works on centre pins, and the blind is raised and lowered by a single line without a centre cord.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at 1s. per foot superficial, together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 3, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

WOOD'S PORTABLE ASPHALTE CALDRON, highly commended by the Royal Agricultural Society, to prepare a cheap and durable Flooring for every description of Agricultural Buildings, also Malting Floors, Warehouses, Cellars, Workshops, Yards, Paths, &c. &c. The judges of the Royal Agricultural society of England, at the Lincoln and Gloucester meeting, highly commended this caldron.

Directions for use, and illustrated circulars, with prices, will be sent post-free, on application to JAMES WOODS, Agricultural Engineer, Stowmarket, or Implement Depot, Bury St. Edmund's.

BUILDING MATERIALS.

BECK'S WHARF, ISLEWORTH.—Builders having works to execute south-west of London, will find a good supply upon this wharf, on reasonable terms, with every convenience for speedy loading by travelling cranes, either into barges or carriages. Portland, Caen, Bath, and Yorkshire Block Stone, always in stock; Landings, Paving, &c. Also, Marble in Slab, Chimney-pieces, &c. Slab and Roofing Slates from the Penrhyn Quarries. Timber, Deals, Limes, Cements, Clay Goods, &c.—N.B. This wharf is very near the St. Margaret's estate.

THE LONDON AND MANCHESTER PLATE GLASS COMPANY

Beg to inform the TRADE, that the EXTENSION OF THEIR WORKS being now completed, they are enabled to execute orders to any extent at immediate notice The Company also beg to intimate that owing to improvements effected in the reconstruction of their Works, the COLOUR and QUALITY of their GLASS will be found to be considerably improved, and that they can guarantee the maintenance of these essential requirements They further beg to invite attention to their reduced List of Prices, which may be obtained on application at their London Warehouse, or at the Works

For the convenience of the LONDON TRADE, a large stock of POLISHED PLATE is now kept at the COMPANY'S WAREHOUSE, BARRAUD'S WHARF, WHITEFRIARS.

The Works, Sutton, St. Helen's, January, 1855.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

LOOKER'S PATENT VENTILATORS,

FOR FACTORIES, WORKSHOPS, GREENHOUSES, STABLES, FARM BUILDINGS, &c. &c.

The Inventor solicits an inspection of the above at his POTTERY and DRAIN PIPE WORKS, Kingston-Hill, where orders to any extent can now be received. The Ventilators are extremely simple in construction, and can be made of any size or shape, in Pottery, Metal, or other Material. They admit fresh air without the slightest draught, can be regulated with perfect ease, and are not a third the cost of any other arrangement for the purpose hitherto introduced.

Full particulars, with prices, forwarded to any part of the United Kingdom, on application to the Inventor, Patentee, and Manufacturer, BENJAMIN LOOKER, JUN. Kingston-on-Thames.

ANCIENT HOUSE FURNITURE

In order to supply the deficiency which has hitherto existed in Furniture suitable for the many Mansions that have been erected or restored in the MEDIÆVAL STYLES, Messrs. CRACE have directed their particular attention to this subject, in addition to their other works, and have prepared appropriate specimens in the various branches of Furnishing.

STUFFS for HANGINGS, in simple Worsted Damask, in Silk; also in Tapestry of Bauderkin.
CARPETS, plain or in rich Velvet pile, with appropriate Borders.
PAPER HANGINGS of various kinds.
OAK CABINETS, Buffets, Octagon Library and Occasional Tables, Benches, Chairs, and other useful and appropriate Furniture

The whole of the above-mentioned Furniture, &c is designed by the late Mr A. W. PUGIN, Architect.

To render this Furniture generally available, a considerable portion has been arranged in the simplest manner, consistent with it ancient character.

14, Wigmore-street, January, 1855.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 6 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths Price ONE PENNY per Square Foot.

CROGGON and CO.'s PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c. and

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers of White Zinc Paint on a large scale in this country, are enabled, by a process, which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Those direful maladies, paralysis and painters' colic, will be entirely avoided. It is entirely free from any poisonous or pernicious property. Neither exposure to heat, nor tropical climates act upon it. The Powdered White Zinc may be had for grinding in oil; also for Plaster Decorations, and where it is used with PATENT. And if not so married, the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers in this country. Paint and Varnish Works, Upper East Smithfield, opposite the London Docks.

DAMP WALLS.

STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,

Is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 2s. 6d.

Prepared only by W. J. STENT, Warminster.

London Agents: Messrs. GEO. and THOS. WALLIS, 64, Long-acre. Agent for Ireland: Mr. S. BOYD, 46, Mary-street, Dublin

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and Co.; when ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agents. In London, Messrs CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street, City; FREDERICK BRABY, Wholesale and Retail Agent, 8, Tottenham court, New-road. In Manchester and Liverpool by R. CLAY, S, Merrey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting shins, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and Co. Timber-bush; and in Southampton, by Mr. H J. BUCHAN. Dry OXIDES & d PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract

For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—6, South Wharf, Paddington. CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality,—a desideratum never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which, its unrivalled hydraulic properties stamp it at once as the first Cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly. This Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in use market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Plastic Cements, English and French Plaster, &c.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. ACCURATE COMPARATIVE EXPERIMENTS on the strength of this and other Cements to be seen at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no coloring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seed-street, Liverpool.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days, FRANCIS, BROTHERS, Manufacturers of Roman, Parian under patent, and all other Cements in use for building purposes, Pine Rims, London.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with special reference to its destination, whether for stuccoing, brick work, blocks for breakwaters, tidal work, or otherwise. London Wharf, Belvedere-road, Lambeth.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Baths, Slates and Slate Slabs Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

FRONTS of HOUSES.—GREENE and CO.'S PORTLAND CEMENT WASH, equal to oil paint for durability in stucks, 1 cwt. for 10s.

DAMP WALLS.—GREENE and CO.'S OXIDE SOLUTION PAINT, a sure and effectual remedy for damp, salt, or spotted walls, 1 gallon per gallon, which will cover 200 square feet.—Prepared only by GREENE and CO Original Inventors, 22, Norfolk-street, Islington.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. D. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent—N B. These Cements supplied for shipment, on advantageous terms.

ROMAN and PORTLAND CEMENT of the first quality manufactured at the ELMLEY CEMENT WORKS, Isle of Sheppey, Kent; also, STOCK and KILN BURNT BRICKS, hand-moulded, and machine, made for shipping or otherwise.—Apply to G. BOOTH, Agent, 11, George-yard, Lombard-street, City.

BATH CEMENT.—This Cement is equal to Portland in strength and durability, does not vegetate in damp situations, is perfectly hydraulic, of a regular and warm colour, resembling the Bath stone.—CHARLES RICHARDSON, 6, South Wharf, Paddington.

SOUTHAM.—BLUE LIAS LIME, and CEMENT WORKS.—OLDHAM and TATHAM'S Blue Lias Lime, Portland, Roman, and Lias Cements.

CHARLES RICHARDSON, 6 South Wharf, Paddington.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire floors.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, TAVERS', STOCKS, and other BRICKS.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 20, 1855. CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or along-side rivers, canals, or railway stations, should be given a few days before required.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF-ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns Woulfham-hall Grey Stone Lime Works, on the Medway, near Rochester, March 31, 1855.

KENNARD, BROTHERS, beg to submit to Builders and Others, their cash prices for Lime of best quality:—Grey Stone Lime, 9s. per yard; Do. delivered four miles, 11s. do.; Chalk Lime, 8s. do.; Do. delivered one mile, 9s. do.; Do. delivered four miles, 10s. do.; White Flare Lime, very superior for plastering and gas works, 9s. do.; Do. delivered one mile, 10s. do.; Do. four miles, 11s. do.—A fresh supply by London and Brighton Railway daily. Office, Swan-place, Old Kent-road.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT. L. B PEARSE and CO Brick, Tile, Lime, and Cement Merchants Builders, contractors, and others supplied with every description of building material at the lowest market prices

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D earnestly requests purchasers to favour him with a visit, in order to inspect his stock and to judge for themselves

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton

N.B. Light-coloured Pitband of approved quality, constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand

STONE-COLOUR BRICKS, moulded to any pattern, for cornices, copings, labels, &c.; at about one third the cost of stone; also ornamental ridge and other tiles; may be had to order of Messrs. HOOPER and CO. 2, Portland-street, Southampton.—Illustrated list of prices or samples forwarded on application.

TO BUILDERS AND CONTRACTORS.

A LARGE quantity of superior quality GREY STOCK BRICKS on SALE, from Higgin's Crown Quay Fields Sittingbourne, Kent, delivered alongside in the river Thames, or into vessels for the West Coast, on low terms. Apply to Mr. W. ALLAWAY, 4, Catherine-court, Tower-hill.

Depôt, Agar Wharf, King's-road, St. Pancras.

VITRIFIED STAFFORDSHIRE BLUE BRICKS, Paving, Roofing, and Rise Tiles, Sanitary Pipes, & Staffordshire Fire Bricks, &c. of all descriptions, and of best quality.—Would and Nash, Manufacturers, Portway, Oldbury, near Birmingham. Agent—Mr. J. UNWIN, Private Residence, 59, Nelson square, Blackfriars-road.

BRICK MOULDS (Improved) steel-faced stocks and plates with regulating screw pegs, used three seasons by the leading brickmakers. References where in use. Bowls, Hoes, Curkholds, Pug Mills, Millwork, &c.—J LEACH, Millwright and Manufacturer, 26, Critchill-place, New North-road, Hoxton—N B. Moulds of various sizes kept on hand.

WHITE SUFFOLK and RED FACING BRICKS COWLEY, KENT, and ESSEX BRICKS. Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c. KENTISH RAG-STONE of the FINEST QUALITY. MILLS and PRICE (successors to Mr. Benjamin Gough), 3, ADELAIDE-PLACE, LONDON-BRIDGE.

TO BUILDERS and OTHERS.—BRICKS delivered at any part of the River up to Battersea-bridge, at the following prices, viz.: Grey Stocks, 24s. per thousand; Gravesies, 28s. per thousand; Rough Stocks, 20s.; Place, 16s. Terms, cash on delivery.—Apply to Mr. G. SMEED, Sittingbourne, Kent.

600,000 BRICKS.—For SALE, a first-rate quantity of kiln-made BRICKS.—For price, &c apply to Mr. CHANDLER, North Brick Yard, Turner's-hill, near Crawley, Sussex.

350,000 hard-burnt, RED TUBULAR BRICKS, in one or more lots. They are stronger than the ordinary bricks, and for fire-proof or other buildings requiring strong and dry walls, they will be found worthy of early attention. To be SOLD at a very moderate price. Apply to J. S NORTON, Brick and Tile Machine Maker, Union-Works, New Park street, near Southwark-bridge.

PERFORATED SUFFOLK BRICKS.—THOMAS FOX and BROTHERS, Brick Depôt, Devonshire-street Station, Eastern Counties Railway.—Perforated Bricks, mixed, 30s.; best White, 38s. per thousand. Solid White and Cutters, 45s. to 60s. per thousand. T. F. and Brothers direct particular attention to their Patent Perforated Bricks, which are full sized (9x4½x3 inches), perfectly sound, and allowed to be the best in the London market.

TO BRICKLAYERS, GAS COMPANIES, WORKING CHEMISTS, AND OTHERS.

FIRE BRICKS, LUMP, TILE, CLAYS, &c. in Stourbridge, Welsh, Newcastle, &c. at COST PRICES; the remaining Stock at Hondurus Wharf, Bankside, Southwark, WILL BE SOLD, to clear the premises by Midsummer.

A large quantity of Best Dutch Clinkers.

TO BUILDERS, SPECULATORS, and OTHERS.—TO BE SOLD for cash or approved bills, ONE MILLION of STOCK BRICKS. They are situate three miles west of the Marble Arch.—Apply to Mr. JAMES TOLEMAN, 170, Goswell street.

TO BUILDERS, CONTRACTORS, &c.

THE LONDON PATENT BRICK COMPANY have a STOCK of BRICKS for SALE.—For price and particulars apply at the Office, No. 8, Old Jewry.

JOHN A F. DUFF, Secretary.

Contracts entered into for a regular supply of Bricks.

GLOBE-TOWN BRICKFIELDS, within one minute's walk of Bethnal-green.—A large quantity of light coloured PIT SAND, of excellent quality, on SALE, ready for use. Apply to SAM EMSLEY, for large quantities; or to the Foreman, JOHN SARGENT, on the Premises.

BRICK-MAKING MACHINES.—TO CONTRACTORS, BRICK AND TILE MAKERS, AND EXPORTERS.

ATLAS WORKS.

CLAYTON'S PATENTS, patronized by H.R.H. Prince Albert.

CLAYTON'S PATENT BRICK-MAKING MACHINES offer a most important and profitable investment.

CLAYTON'S PATENT BRICK MACHINE (of which there are now upwards of forty in use) is worked by one horse, by steam or water power, and combines the whole process of pugging the clay and making the bricks at one time. Awarded the prize medal at the Great Exhibition at Amsterdam, Nov. 1853.

CLAYTON'S PATENT CLAY SCREENS, for cleansing clay from stones, roots, &c.

CLAYTON'S PATENT TILE, PIPE, and HOLLOW-BRICK MACHINES, of various sizes and construction.

CLAYTON'S PATENT BRICK or TILE-PRESSING or MOULDING MACHINES.

CLAYTON'S PATENT DIES, for the manufacture of socketing sewerage pipes

CLAYTON'S PUGGING MILLS, of various sizes and construction, for tile clay, brick earth, mortar, &c.

And every article connected with the brick, tile, and pottery trades.

The above machines may be inspected, and illustrated catalogues obtained, at the Manufactory, Atlas Works, Upper Park-place, Dorset-square, London.

TESTIMONIAL.

"Haslingden, near Manchester, Dec. 8, 1854.

"SIR,—Several kilns of bricks made by your machines have been burnt, and I have great pleasure in informing you that they are as good as can be desired. They are in all respects superior to hand-made bricks, and command a much better price. Your machines are simple and efficient implements. I have sent you a few bricks for a sample, which I hope you have received.—I remain, yours very truly,

"Mr Clayton, London." "RAWSTHORNE."

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c; Antique, Geometrical, and Alhambric Mosaics, manufactures of a highly decorative character, and extreme durability, Slabs and Tiles for Fireplaces and Hearths, Cornices for Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had in great variety at the Warehouses, 9, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES" of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 65s. 6d. per 1,000; 9-inch paving, at 60s. per 1,000; 8-inch paving, at 72s. 6d. per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties Railway.

ONE THOUSAND BEDSTEADS to CHOOSE FROM.—HEAL & SON have just erected extensive Premises, which enable them to keep upwards of One Thousand Bedsteads in stock. One Hundred and Fifty of which are fitted for fireproof, comprise every variety of Brass, Wood, and Iron, with Chintz and Damask Furnitures, complete. Their new warerooms also contain an assortment of BED-ROOM FURNITURE, which comprises every requisite, from the plainest Japanned Deal for Servants' Rooms, to the newest and most tasteful designs in Mahogany and other Woods. The whole warranted of the soundest and best manufacture. HEAL & SON'S ILLUSTRATED CATALOGUE of BEDSTEADS and PRICED LIST of BEDDING, sent free by post.—HEAL & SON, 196, Tottenham Court-road.

Crown Glass, 18 tables, 30s. per Crate.

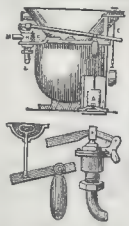
COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES, BENDS, JUNCTIONS, and SYPHONS. The wares allowed by all to be of the best manufacture, by the unparalled quality, combined with cheapness, as will be found to meet the approbation of consumers.—Sole Agents, L. B. PEARSE and Co, Great Northern-wharf, York-road, Kings-cross.

VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,

MANUFACTURER of superior GLAZED STONE WARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet pans, Jars, Bottles, and every article in fine Ware on advantageous terms. Also MANUFACTURER of Portland Roman Cement and Plaster of Paris at Orchard House, Bishopsgate-street. Orders executed from the above places, from Falcon-wharf, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stepney.

SUPERIOR GLAZED STONEWARE



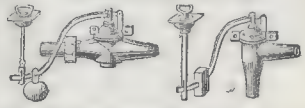
DRAIN PIPES, as wanted and manufactured by
WILLIAM NORTHEN, UNION POTTERY, No. 14,
VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has competed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON-TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the dies being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and rendering it impossible in the drains to absorb.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse shoe Wharf, No. 6, Upper Thames-street. Millwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith. —J. Corbet's Depôt, Britten-street, Chelsea: and at the Pottery.



UNDERHAY'S PATENT REGULATOR CLOSETS, for constant or intermitting supply, dispense with Cisterns, Service Boxes, Valves, Levers, Cranks, Wires, &c. &c.; much time is saved in fixing, and a better flush of water obtained in use.

Pan, Valve, Self-acting, and Servants' Closets on this principle, may be seen at the Works. They are very cheap, their efficiency is guaranteed. 5,000 of them have been sold, and no instance of failure has occurred.

These Stool-valves are cheaper, stronger, and more ornamental, than any other. Many thousands are in use, and greatly approved of.

Manufactured by
CHARLES BOTTEN and SON,
Brass Founders, Crawford passage, Clerkenwell, London.

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET VALVE

Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 50 to 200 feet: they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured (solely by the Patentees,
THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short street, New Cut, Lambeth.

PURE WATER, for manufacturing purposes,

May be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the stone and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 50, 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, Whitehall Wharf, Cannon-row, Westminster.

COMPETITIONS.

PREMIUMS for DESIGNS.—The Berwick-upon-Tweed Burial Board offers a PREMIUM of 15l. to the Architect or other person whose DESIGNS shall be accepted for Two Chapels, an entrance Lodge and Gates, and for fencing, turning, planting, and draining, under the Burials Beyond the Metropolis Act, 20 acres of land for a new BURIAL-GROUND at Berwick-upon-Tweed, the cost of the whole not to exceed 1,500l. The Premium will be increased to 25l. if the approved designs be accompanied by a guaranteed estimate of the expense and by detailed working plans and specifications sufficiently comprehensive as to enable the Board forthwith to enter into contracts for the works. The Designs Plans, &c to be sent to me prepaid on or before the 6th JUNE next.
By order, JAMES C. WEDDELL, Clerk to the Board.
Berwick-upon-Tweed, 14th May, 1855.
N.B.—The Burial Board does not pledge itself to employ as Architect the party whose designs may be accepted.

COMPETITIONS.

TO ARCHITECTS.—LEAMINGTON NATIONAL SCHOOLS.—The Trustees are desirous of receiving DESIGNS and GUARANTEED ESTIMATES with a view to Contract for the ERECTION of the above SCHOOLS, together with separate Dwellings for the Master and Mistress, each house to contain not less than four rooms. The Schools to be of sufficient dimensions to accommodate at least 250 boys and 150 girls. The cost of the whole not to exceed 1,350l. All designs are required to be on the same scale of 1/8 of an inch to a foot. A Premium of Ten Guineas will be given for the most approved plans, such plans to become the property of the Trustees, but the Committee do not bind themselves to employ the successful competitor. The designs to be sent in under seal, on or before MONDAY, JUNE 11th, and directed to the Trustees of the Leamington National Schools. Any further information as to site, &c. may be obtained, on application to the Churchwardens, and a Plan of the Ground had, if required, on payment of 2s. 6d.—Signed, by order of the Committee,
WALTER WATSON, Chairman.
Leamington, May 22nd, 1855.

TO ARCHITECTS AND OTHERS.
THE BURIAL BOARD for the Parishes of ST. THOMAS, ST. EDMUND, and ST. MARTIN, Salisbury, in the county of Wilts, is desirous of receiving DESIGNS, to comprise Plans, Elevations, Sections, and Specifications, with Estimates for laying out a New BURIAL GROUND of Eight Acres, enclosing the Ground, building a Lodge with Entrance-gates, and building TWO CHAPELS, one consecrated, and the other not. The party whose plans, &c. may be approved will be paid a premium of 5l. for the plans, designs, estimates, and specifications, which must be delivered at my office, High-street, Salisbury, free of expense, without the author's name, but with a motto, on or before the 4th day of JUNE next. A sealed letter, containing name and address, should accompany each design, which will be opened after selection made, and the plans not approved will be returned.
Further particulars, together with a plan of the site, may be obtained, on application to me,
G. SMITH, Clerk of the Board.
Salisbury, May 11, 1855

BENNETT-PARK ESTATE, BLACKHEATH.—TO SURVEYORS—The Proprietors beg to give notice that the Plans for laying out the above Park WILL BE RECEIVABLE up TO THE 14th JUNE. The lithograph of the new survey, showing levels, &c. can now be obtained from Mr. JOHN BENNETT, Watchmaker, &c. Cheapside; or of Mr. GEORGE BENNETT, Osborne-place, Blackheath N.B.—Surveyors cannot obtain admission to the Park grounds after the 31st instant.

CONTRACTS.

Sundays excepted. The person whose Tender may be accepted will be required to enter into a bond, with two eligible securities, jointly and separately to be bound, under a penalty of 1,000l for the due performance of the Contract. Tenders to be addressed to the Secretary to the Board of Ordnance, Ordnance Office, Pall-mall, London, and to be delivered free, endorsed, "Tender for Works at Chatham" No Tender can be admitted after the said 18th day of JUNE, 1855. The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

NOTICE to BUILDERS.—ORDNANCE WORKS.—The Commanding Royal Engineer of the Dover District hereby gives Notice, that sealed TENDERS will be received at the Ordnance Office, Pall mall, London, on or before the 29th day of JUNE, 1855, from persons desirous of CONTRACTING with the Honourable Board of Ordnance for WORKS and REPAIRS at the CITADEL, DOVER. Plans and specifications of the works may be seen, and forms of Tender obtained at the Royal Engineer Office, Dover, between the hours of TEN and FOUR o'clock, from the 11th to the 25th JUNE, Sundays excepted. The party whose Tender may be accepted for the works will be required to enter into a bond, with two eligible securities, jointly and separately to be bound, under a penalty of 2,000l. for the due performance of the contract. Tenders for the above works to be addressed to the "Secretary to the Board of Ordnance, Ordnance Office, Pall-mall, London, and endorsed "Tender for Works at the Citadel, Dover."
N.B. The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.
Royal Engineer Office, Dover, May 4, 1855.

TO BUILDERS.
PERSONS desirous of TENDERING for the ALTERATIONS to the VICARAGE-HOUSE of MILTON, by Sittingbourne, can inspect the plans, either upon the Premises or at Mr. Hall's Office, London, where sealed Tenders will be received on SATURDAY, JUNE 9th, by WILLIAM WHITE, Architect.

[For remainder of Contracts see next page.

CONTRACTS.

WIGAN LOCAL BOARD of HEALTH.—WATERWORKS.—To ENGINEERS, IRONFOUNDERS, BRASS-FOUNDERS, CONTRACTORS, EXCAVATORS, and OTHERS.—The Local Board hereby give Notice that they are prepared to receive TENDERS from parties willing to undertake the following CONTRACTS.

CONTRACT No. 1.—For the supply of about 1,500 tons of CAST IRON WATER-PIPES, and other CASTINGS.

CONTRACT No. 2.—For the supply of SLUICE VALVES, HYDRANTS, and STREET FITTINGS.

CONTRACT No. 3.—For the supply and erection of Duplicate STEAM-ENGINES, BOILERS, PUMPS, and RISING MAIN from the Engine-house to the Service Reservoir, ONE MILLION GALLONS of Water, ONE HUNDRED FEET high, at TWELFTH, &c.

CONTRACT No. 4.—For the construction of a COVERED SERVICE RESERVOIR.

CONTRACT No. 5.—For the Formation of a TUNNEL, about 500 yards in length, and 18 feet internal diameter, with SHAFTS, and TUNNEL ENTRANCES.

CONTRACT No. 6.—For Masonry and other work in STONE IMPOUNDING WALL for STORAGE RESERVOIR.

CONTRACT No. 7.—For EARTHWORK, PUDDLING, &c. EMBANKMENT for STORAGE RESERVOIR, including MASONRY, BRICKWORK, &c. in VALVE and OUTLET WELLS, CATCH BASINS, and RETAINING WALLS; also a TUNNEL under side of Piston-road.

The Drawings and Specifications may be seen and after the 4th day of JUNE, on application at the Office of the Local Board (Heath, Wigan); or at the Offices of ROBERT HAWKSLEY, C.E. of Parliament-street, Westminster.

Specifications and Duplicates of Forms of Tender, Schedules, and Bills of Quantities, for Contracts Nos. 1 and 2, may be had on payment of the cost, and for Contracts 3, 5, 6, and 7, on payment of £1 each. Quantities supplied to Tenders for the above, at the Office of the Local Board, Wigan, before TWELVE o'clock on MONDAY, the 20th day of JUNE next.

Tenders for Contract No. 1, 2, 3, 4, 5, 6, or 7, to the amount to be stated therein, must be delivered at the Office of the Local Board on or before TEN o'clock on MONDAY, the 27th day of JUNE next, and the Local Board do not bind themselves to accept the lowest or any Tender.

Signed WILLIAM ACKERLEY,
Wigan, 14th May, 1855. Solicitor to the Local Board.

WOOLWICH BURIAL-GROUND.—Notice is hereby given, that the WOOLWICH BURIAL BOARD are prepared to receive TENDERS for PERFORMING the ROADS and PATHS, and PLANTING the LAND, in lots of the new Burial-Ground contiguous to Shooter's-hill-road, in the PARISH of CHARLTON, and POBJECTS DUE thereon. Further particulars may be obtained on application to the Architects, Messrs. CHURCH and SON, Woolwich; and Tenders addressed to the Board, and endorsed "Tender for Planting and Roads," and directed to Mr. H. BLAND, Clerk to the Board, at the Vestry-room, Town-hall, Woolwich, on WEDNESDAY, the 13th day of JUNE, 1855. The Board do not bind themselves to accept the lowest or any Tender.

Woolwich, May 24, 1855. HENRY BLAND, Clerk.

WOOLWICH BURIAL-GROUND.—Notice is hereby given, that the WOOLWICH BURIAL BOARD are prepared to receive TENDERS for the ERECTION of about 80 feet of PALISADE and 80 feet of IRON RAILING, with CARRIAGE and FOOT ENTRANCE GATES thereto, to form the front enclosure of the land selected for the New Burial-ground.

Further particulars may be obtained on application to the Architects, Messrs. CHURCH and SON, Woolwich; and Tenders addressed to the Board, and endorsed "Tender for Iron Palisading and Entrance Gates," to be delivered at the Vestry-room, Town-hall, Woolwich, on WEDNESDAY, the 13th day of JUNE, 1855.—The Board do not bind themselves to accept the lowest or any Tender.

By order of the Board,
Woolwich, 24th May, 1855. HENRY BLAND, Clerk.

WOOLWICH BURIAL-GROUND.—Notice is hereby given, that the WOOLWICH BURIAL BOARD are prepared to receive TENDERS for the LAYING out and PLANTING the last Portion of the Land selected for the new Burial-Ground, on Plumstead-common near Woolwich. The enclosure will consist of upwards of 800 feet of Oak post and rail fencing, with oak rails, 4 feet high, and about 1,050 feet of ditto, 6 feet high. Further particulars may be obtained on application to the Architects, Messrs. CHURCH and SON, Woolwich, where a plan of the land and specifications may be seen on and after MONDAY next, the 28th instant. Sealed Tenders, addressed to Mr. H. BLAND, Clerk to the Board, and endorsed "Tender for the Land to be delivered at the Town-hall, Woolwich, on WEDNESDAY, the 13th day of JUNE, 1855. The Board do not bind themselves to accept the lowest or any Tender.

By order of the Board,
Woolwich, 24th May, 1855. HENRY BLAND, Clerk.

WHITTLESEA GAS-WORKS.—The Directors of the above Company are desirous of receiving TENDERS for the following ALTERATIONS required to be executed at their Works, viz.—

For new BRICK HOLDER and COLUMNS, about 90 feet in diameter, and 8 feet deep, with the necessary Tie-rods, &c. and all Brickwork required and to ALTER the present GAS HOLDER.

For new WORK of EIGHT IRON RETORTS, including Brickwork, &c. and the requisite Mouth-pieces, Ascension, Dip, and other Pipe-connexions.

For a CAST-IRON CONDENSER, and fixing of same, complete.

Specifications and plans of the above works may be seen, on application to the Secretary, Mr. JOHN BAKER, Jun. Whittlesea, of whom also the Tenders are to be sent not later than MONDAY, the 4th of JUNE. The Directors do not in any case bind themselves to accept the lowest or any Tenders.

Whittlesea, May 23, 1855.

TO BUILDERS.

PERSONS desirous of giving in TENDERS for the proposed new SCHOOL ROOMS, CLASS-ROOMS, and LECTURE ROOM, adjoining Manvers Congregational Church, Stocksport, may see the plans and specifications on application to Mr. JOHN ANDREW of Stockport, on and after MONDAY, the 28th of MAY next, between the hours of TEN a.m. and SIX p.m. until further notice. The Committee do not pledge themselves to accept the lowest Tender.

Nottingham, May 23, 1855. J. C. GILBERT, Architect.

SHIPLEY LOCAL BOARD of HEALTH.—WATERWORKS.—CONTRACTS 4 and 5.—The Local Board hereby give Notice, that they are prepared to receive TENDERS for the following Works:—

CONTRACT No. 4.—For MAKING a SERVICE RESERVOIR, near West-lane, in the township of Baildon.

CONTRACT No. 5.—For EXCAVATING the GROUND, LAYING and JOINING CAST-IRON MAINS, also for FIXING SLUICE COCKS, HYDRANTS, &c.

Plans, sections, detail drawings, and specifications may be inspected on and after the 10th inst. at the Offices of Mr. J. M'LANDSBOROUGH, Civil Engineer, 24, Queen-gate, Bradford, from whom forms of Tender and any further information may be obtained. Sealed Tenders to be delivered to me, at my Offices, in Bradford, Yorkshire, on or before MONDAY, the 28th inst. endorsed "Shipley Waterworks—Tender for Contract No. 4," or 5, as the case may be. The Local Board do not bind themselves to accept the lowest or other Tender.

JOHN THOMPSON, Clerk to the Local Board.

Bradford, May 3rd, 1855.

CONTRACTS.

TO SCAVENGERS and OTHERS.—Sewers' Office, Guildhall, May 18th, 1855. The Commissioners of Sewers of the City of London hereby give notice, that they will meet at the GUILDHALL aforesaid, on TUESDAY, the 5th day of JUNE next, at TWELVE o'clock at noon precisely, to receive PROPOSALS for CLEANSING the Streets, and REMOVING the INDUST from the Houses therein, for the term of one year from Midsummer-day next, according to the provisions of a specification, a copy of which may be had upon application to the Office. The City solicitor will be attended at the Office on Tuesday, Each Contractor will be required to enter into six sufficient sureties, for the due performance of his bond, with two approved sureties, for the due performance of his contract. The Commissioners do not pledge themselves to accept the lowest Tender, nor any unless deemed satisfactory. No Tender will be received after TWELVE o'clock on the day aforesaid, nor will more than Tender be received from one person, nor a Tender of a joint note as an evidence that the same is made bona fide; which sum will be immediately returned to the other cases Tenders is not accepted, and will be returned in the other cases until the contract and bond are duly executed.

JOSEPH DAW, Principal Clerk.

CONTRACT for TUNNELLING.—THE CREGE CANAL, CATALONIA, SPAIN.—MONCLAR TUNNEL.—The shafts of the tunnel of Moncla having reached a depth from wheel, an opinion may be formed of the nature and character of the ground, which will have to be bored in the construction of the tunnel, 4,000 metres in length. The Board of Administration will award the CONTRACT for the execution of the said tunnel at a meeting of the Board, at the office of the Company, at Barcelona, No. 2, Rue de la Boveria, first floor, at TWELVE o'clock precisely, on the 20th JUNE next, according to the plan and model in the possession of the Board, which may be seen in the aforesaid office; and in London, at Mr. G. C. REWS's, No. 4, Bank-chambers. All proposals must be presented, sealed, in conformity with the form contained in the regulations, to the undersigned, two hours at least before the time above mentioned.

(Signed) FRAY FERRER Y BUSQUETS, Secretary.

Barcelona, April 1855.

TO BUILDERS.

TENDERS are invited for certain ALTERATIONS and ADDITIONS to the HOUSE at CROW HURST PARK, near BATTLE, Sussex. Plans and specifications may be seen there, on and after the 28th instant, and the Tenders must be delivered on or before WEDNESDAY, the 6th of JUNE, at TWELVE o'clock, addressed to the Architect, Mr. WILFORD TEULON, Crowhurst-park, Battle, where they will be opened in the presence of those Builders who wish to be present. The lowest Tender will not necessarily be accepted. Particulars may be obtained at the Architect's, 32, Guildford-street, Russell-square, London.

MERTHYR TYDFIL LOCAL BOARD of HEALTH WATERWORKS.—TO IRONFOUNDERS. Parties desirous of TENDERING for the Manufacture and Delivery of the whole or any portion of the CAST-IRON SERVICE PIPES, are to be furnished with particulars on application to J. W. RUSSELL, Esq., Merthyr Tydfil, the Clerk to the Local Board; or to J. G. LYNDE, Esq., the Engineer, 27, Great Ormond-street, London. Tenders to be delivered on or before MONDAY, the 4th JUNE next, at ELEVEN o'clock in the forenoon.

Merthyr Tydfil, 21st May, 1855.

THE MERTHYR TYDFIL LOCAL BOARD of HEALTH are desirous of BORROWING the sum of EIGHT THOUSAND POUNDS, on the security of the Rates of the District, under the powers of the Health of Towns Act, 1848, and with the sanction of the General Board of Health. Persons willing to advance the same, or any portion thereof, are requested to send sealed Tenders, addressed to the Chairman of the said Local Board, and endorsed "Tender for Pipes," to or before the 4th day of JUNE next, stating the amount they are prepared to advance, the rate of interest they require, and the terms of repayment.

Merthyr Tydfil, 21st May, 1855.

TO BUILDERS.—STRATFORD-UPON-AVON CORN EXCHANGE.—Persons desirous of CONTRACTING for the ERECTION of the same, are informed that the Drawings, Specification, and Form of Tender will be ready for inspection on and after THURSDAY, the 31st inst. at the Office of EDWARD GUEST, Architect, Edgware, and Surveyor, of Corn Exchange, Stratford-upon-Avon. The Tenders are required to be delivered to the Architect on or before the 14th day of JUNE, 1855. The Directors do not bind themselves to accept the lowest or any Tender.—By order, HENRY BEST SOWDON, Solicitor.

WORTHING LOCAL BOARD of HEALTH, WATERWORKS.—To IRONFOUNDERS, BUILDERS, CONTRACTORS, and OTHERS.—The LOCAL BOARD hereby give NOTICE, that they are prepared to receive TENDERS from parties willing to undertake either of the following CONTRACTS:—

CONTRACT No. 11.—For the supply and erection of a CAST-IRON WATER-TANK, 40 feet square, and 12 feet deep.

CONTRACT No. 12.—For the construction of a WATER TOWER.

CONTRACT No. 13.—For the construction of an ENGINE and BOILER HOUSE, CHIMNEY, and other works connected therewith.

The drawings and specifications may be examined on and after the 31st instant; and any further information may be obtained on application, at the Office of the Local Board, Worthing; or at the Offices of ROBERT HAWKSLEY, C.E. 24, Parliament-street, Westminster. Sealed Tenders to be delivered at the Office of the Local Board, Worthing, before TWELVE o'clock, on TUESDAY, the 12th day of JUNE next, endorsed "Tender for Contract No. 11, 12, or 13, as the case may be.

Signed WM. HUGH BENNETT,
Worthing, May 22, 1855. Clerk to the Local Board.

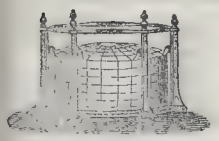
STUART AND SMITH'S
PATENT GILL STOVE,
FOR
HEATING CHURCHES AND OTHER PUBLIC AND PRIVATE BUILDINGS.

The constant failures, and enormous expense, consequent upon the endless variety of experiments to warm buildings has left the public in doubt as to whether there exists any certain, economical, and safe mode of effecting that object or not.

STUART AND SMITH,
ROSCOE-PLACE, SHEFFIELD,



confidently assert, that the Air-Warmer they recommend, possesses the desired qualifications, and respectfully request Gentlemen interested in the question, to ascertain the fact from the actual working of the invention.

It has been fixed in the following, besides a great many other private and public buildings:—St. Stephen's, Longsight, Manchester; Grassendale Church, Aigburth, Liverpool; St. Ann's, Aigburth, Liverpool; North Wootton, near Lynn, Norfolk; St. Paul's, Alnwick, Northumberland; Bettesanger Church, Sandwich, Kent; St. Mary's, Pitsmoor, and Grimesthorpe, Sheffield; County Lunatic Asylum, Derby, &c. &c. &c.
Prospectuses, and every information, sent on application.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,
IS AS
CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.
Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to
THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.
ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.
THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.
Many roofs covered with zinc thirty-five years ago have never required repairs.

STEVENS AND SON,
ENGINEERS,
IRON AND BRASS FOUNDERS AND MANUFACTURERS;

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.
Signals for communication between Guard and Engine Driver Railway Stores and Library of every description
DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

MOREWOOD & ROGERS'S PATENT PLUMBIC ZINC,
A SUBSTITUTE FOR SHEET-LEAD FOR
ROOFING, RIDGES, GUTTERS, FLOORING,
AND ALL OTHER PURPOSES TO WHICH SHEET LEAD IS APPLICABLE.

This Metal consists of distinct layers of Lead and Zinc, perfectly united in the process of Manufacture, one side of each sheet being pure Lead and the other pure Zinc; it therefore combines the Stiffness of Zinc with the Durable Qualities of Lead. The Lead side of the sheet being laid outward, effectually protects the Zinc below from those atmospheric influences which so rapidly cause its destruction; the Zinc so stiffens and supports the Lead as to make a sheet of Plumbic Zinc equal in strength to one of Lead of several times its thickness and weight.

Plumbic Zinc not requiring to be more than one-fourth or one-fifth as thick as Sheet-Lead, is consequently much cheaper than that material.

For covering Terraces, Flats, Floors, Stairs, Passages, &c. it is well suited, being like Lead to the tread, whilst the Zinc on the under side of the sheet prevents it from treading out of shape.

The Size of the Sheets is 7 feet by 2 feet 8 inches.

No. 11 Gauge weighs about	18 oz.	per foot-super.		
No. 12	"	"	20 oz.	do. do.
No. 13	"	"	23 oz.	do. do.
No. 14	"	"	26 oz.	do. do.

For further particulars, apply to
A. MOREWOOD and CO. GALVANIZED TINNED IRON WAREHOUSE,
DOWGATE DOCK, UPPER THAMES-STREET, LONDON.

IRON ROOFS.
Patent Corrugated, Galvanized, and Painted, Wrought-iron, principal, Glass and Slated Roofs, to any span.
Wrought and Cast-Iron Bridges, Girders, Fire-proof Floorings, Shutters, Doors, &c
Engineers' and Builders' Castings of all kinds manufactured by
JOHN WALKER,
Builder, Contractor, and Ironfounder, Millwall, Poplar.
Offices—Arthur-street West, London-bridge, where experienced draughtsmen are kept to furnish designs and estimates, which may be obtained on application.
N.B. Galvanized and painted Sheet Iron, both plain and corrugated, supplied at the lowest possible prices, and a considerable allowance made to the trade.

SKAIFE'S GALVANIZING WORKS,
Commercial-road, Limehouse, London
Skaife's process is the most effectual preventive against rust, and is extensively used for all purposes where Iron not liable to rust is required.
Patent Galvanized Iron supplied in every form.
Sheets plain and corrugated.—Roofs fixed complete.
J. Skaife is also agent for Morewood and Rogers's Patent Galvanized Tinned Iron, Plumbic Zink, and Tubes.
An Allowance to the Trade.

SAMUEL HEMMING'S PATENT much approved PORTABLE BUILDING and ROOFING MANUFACTORY REMOVED from BRISTOL to BOW, near London, close to the Bow Railway Station. A large variety of buildings always on view, churches, chapels, shooting boxes, lodges, bazaars, ornamental villas, dwelling-houses, farm buildings, and fire proof stores. Also, railway stations, trunks, and carriages made to any plan on the shortest notice.

JACKSON and COOK, Ironfounders and Manufacturers of CORRUGATED and GALVANIZED IRON ROOFS and BUILDINGS, beg to call the attention of Architects, Builders, and others, requiring roofing, to the superiority of iron as manufactured by them for that purpose, in point of lightness, cleanliness, durability, cheapness of construction, and being fire-proof. Drawings and estimates furnished.
Island Foundry and Ironworks, Millwall, London.
Offices: 13, Fenchurch-street, City.

TO ARCHITECTS AND BUILDERS.
PATENT CLIMAX DOOR-SPRINGS.—The attention of architects, builders, and ironmongers is particularly directed to the above patented improvements in door-springs, being the most perfect and durable yet invented. Their power is equal to doors of any size and weight, and they are warranted to stand the wear and tear of any bank, public building, or business establishment in the kingdom.—Drawings, with full particulars, may be had from the manufacturers, WEBB and GREENWAY, Steelhouse-lane, Birmingham.

LOSH, WILSON, and BELL,
NEWCASTLE-ON-TYNE,
Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Goods, and
STEWART'S PATENT CAST IRON GAS and WATER PIPES.
Office, No. 7, Sise-lane, London.

HOBBS'S PATENT AMERICAN and ENGLISH LOCKS.

Messrs. HOBBS, ASHLEY, and CO. are now manufacturing their celebrated American and English Locks, on the premises, 97, Cheapside, and 33, Lawrence-lane, London; where, by the introduction of their patent steam machinery, they are enabled to guarantee superior workmanship, combined with greater security, at a moderate price, than in any locks produced either in town or country.

EVERY LOCK being MADE and FINISHED at the MANUFACTORY, is warranted, and bears their OWN STAMP, without which none are genuine.

These Locks can be procured by order through any respectable Ironmonger in the United Kingdom; or at the Warehouse, as above, Wholesale and Retail.

PATENT FIRE and BURGLAR-PROOF SAFES (MILNER'S PATENT), fitted with HOBBS'S PATENT POWDER-PROOF LOCKS, form the Strongest Safeguards against Fire and Robbery; they are made of various dimensions, adapted for the security of Money, Plate, and important Documents, Parish Registers, &c. Lists of prices and dimensions can be had on application to HOBBS, ASHLEY, and CO.—Wholesale and Retail Warehouses, 97, Cheapside, and 33, Lawrence-lane, London.

TUCKER and REEVE'S LOCKS afford absolute security at a moderate price.

"The novel and evidently effective principle of security on which these locks are constructed, places them at once in the foremost rank of inventions; in the present state of the art, picking them would seem to be impracticable."—*Standard*.

Depôt: 181, FLEET-STREET; where also may be had PRICE'S FIREPROOF SAFES, &c.

COPYING PRESSES, CASH AND DEED BOXES.

Lists and Prospectuses free.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails wrought and cut, Copper and Zinc; Patent Locks of all descriptions; Chuns, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles, Dr. Arnott's Ventilator, and the new registered Venetian Ventilator, so much admired, &c. 6s. 6d. each.

J. H. BOOBBYER late STURCH and BOOBBYER), established nearly 300 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

No. 1704, BRITISH SECTION, HARDWARE DEPARTMENT, PARIS EXHIBITION, 1855.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent,—Mr. BARRETT, 13, York-buildings, Adelphi.

DESTRUCTION of WAREHOUSES at MANCHESTER, by FIRE.—Messrs. Rylands and Sons' Books, Papers, and Bank-notes preserved in one of CHUBB'S SAFES, after fourteen hours' exposure to intense heat.

COPY OF MESSRS. RYLANDS AND SONS' TESTIMONIAL.

"84, High-street, Manchester, March 6th, 1854.

"Messrs. Chubb and Son,

"GENTLEMEN,—We have great pleasure in communicating to you, that the large 'Patent Fire-proof Safe' that we purchased from you 12 years ago, for our late offices in New High street, has been the means of preserving our books, cash, notes, &c., enclosed therein, on the evening of the 1st of March, when our entire premises were destroyed by fire. The safe, after being subject to fourteen hours' intense heat, was unlocked on the morning of the 3rd of March; the locks all answered to their respective keys, and all the damage the contents received (after excepted) was that only some of the books were slightly singed at the edge.

"You are at liberty to make what use of this communication you may think proper.

"We are, Gentlemen, yours respectfully,

"RYLANDS and SONS."

CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock. Complete Illustrated Lists, with prices and sizes, will be sent on application.

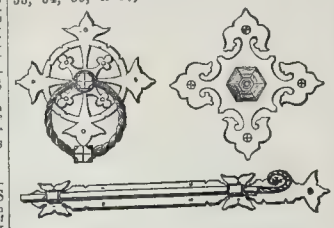
CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Hornsey-fields, Wolverhampton.

VALUABLE PATENT MACHINES FOR WORKING IN WOOD.

SASH AND MOULDING MACHINE.

PRIZE MEDALS have been awarded to these celebrated machines, both by the Great Exhibition in London, and many scientific institutions. They are extensively used throughout the United Kingdom, by joiners, contractors, coach and railway makers, railway carriage and wagon builders, machinists, agricultural implement makers, shipbuilders: and also by the British and French Governments, for planing and squaring up, moulding, tenoning, mortising, grooving, rebating, sawing, and boring. Their operations are in every respect perfect, either in hard or soft wood, and will perform all the ordinary descriptions of work required in the above trades in a very rapid and superior manner, and at a greatly reduced cost. Sold only by WILLIAM FURNESS, Patentee, 24, Lawton street, Liverpool, from whom full particulars may be obtained.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON. House and Coach Builders, Joiners, Cabinet Makers, and others, doing similar work, are invited to call at the Patentees', POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongers' Establishment, 38, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing by three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.



P.S. Steam Engines and Machinery contracted for.

SAWING, PLANING and MOULDING, MACHINERY.—SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in York-road, Lambeth, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use.

HART AND SON,

IRONMONGERS AND MANUFACTURERS,

53, 54, 55, & 57, WYCH-STREET, STRAND.

An Illustrated Catalogue on receipt of six postage-stamps.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.

JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trade to the inspection of his immense stock of ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.

Elliptic Stoves, double backs, 3d. per inch, and upwards.

Register Stoves, 5d. 6d. 7d. 8d. and 9d. per inch.

Self-acting Ranges, with circular ovens and back boilers, best wrought bars and bright fittings:—

3 ft., 3l. 18s.; 3 ft. 6 in., 3l. 5s.; 4 ft., 3l. 18s.

3-feet Cottage Ranges, with ovens and back boilers, 35s. each.

3-feet self-acting ditto, ditto, 30s. each.

Air Bricks, 4s. per doz.

Best Town Glue, 56s. Ditto, Scotch, 66s. per cwt.

Best Patent Sash Line.

1	2	3	4	5	6
4s. 6d.	5s.	6s.	7s. 6d.	8s. 6d.	11s. per gross.

And every material required in the building, bell-hanging, upholstery, and brass-foundry trades on the most reasonable terms.

List of Prices had on application at the Warehouse, or by letter prepaid.

STEPHENSON and PEILL, 61, Gracechurch-street, London, and 17, New Park-street, Southwark, Manufacturers of COPPER CYLINDRICAL and improved CONICAL IRON BOILERS, and Conservatory and Hot-house Builders, either in wood or iron, respectfully call the attention of the nobility, gentry, and nurserymen to their simple but efficacious method of warming horticultural and other buildings by Hot Water. From the extensive works they have executed, references of the highest respectability can be given, and full particulars furnished on application.

WARMING and VENTILATING.—COTTAM and HALLEN, 2, Winsley-street, Oxford-street, having had many years' experience, and having warmed by the circulation of hot water upwards of 4 000 buildings, consisting of churches, prisons, lunatic asylums, halls, and staircases, galleries, conservatories, forcing-houses, &c. can with confidence recommend their system, which, by the various improvements they have made, has perfected the construction and economised the expense. Gre.ahouses, conservatories, verandahs constructed entirely of iron or wood, and of iron and wood combined. Estimates upon application. COTTAM and HALLEN, Engineers and Ironfounders, 2, Winsley-street, Oxford-street.

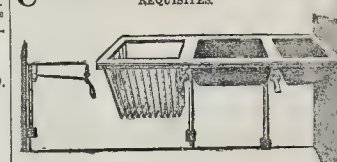
ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co's establishment; where may also be obtained engravings with prices, or forwarded free by post. -DEANE, DRAY, and CO. opening to the Monument, London-bridge. Established A.D. 1700.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation. To be seen in action at DEFRIES'S Office, 143, Regent-street, London.

THE PATENT PRIZE KITCHENER, with Boiler to supply Bath, Scullery, Hot and Steam Closet, is Manufactured, with all its recent improvements, by THOMAS RADCLYFFE, Leamington, Warwickshire, of whom plans, prices, and testimonials may be had on application. It is made from three feet to twenty, all worked by one small fire. A great saving in fuel is effected by having this kitchener, and it effectually cures smoky chimneys, and is the best cooking range extant.

HEATING BY HOT WATER.

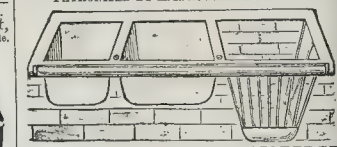
JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with the boiler can be seen daily in full operation, heating buildings measuring 1,000 feet in length, at the small expense per day in fuel and labour of 3s. 8d. This achievement in heating by hot water is unprecedented.



DR. ARNOTT'S SMOKE-CONSUMING FIRE-GRATE is manufactured by F. EDWARDS, SON, and Co. 42 Poland street, Oxford-street, where one may be seen in daily use. The advantages of this grate consist in the smoke being perfectly consumed, no chimney sweeping being required, and a saving of from 40 t. 50 per cent. being effected in the cost of fuel. Prospectuses, with testimonials, sent on application.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace-grates, soot-doors for the same, hot-water pipes, elbows, tees, syphons, throttle-valves, stop cocks, flange and socket elbows, &c.; also, trough-pipes. Drawings and prices of the above, on application to J. JONES, Iron-bridge-wharf No. 6, Bankside, London, near the Southwark-iron-bridge.

TO IRONMONGERS AND THE TRADE GENERALLY.



D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show—every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete pattern-book and price list, 10s.—55 and 56, High Holborn.

COTTAM'S NEW PATENT for STABLE REQUISITES.

COTTAM and HALLEN, of Winsley-street, are the ORIGINAL INVENTORS of this arrangement of MANGER, RACK, and WATER-TROUGH as ONE FIXTURE; they are universally approved of, and obtained the Great Exhibition Prize Medal. The New Patent embodies all the improvements which, from practical experience, have been found desirable. No well-managed stable should be without these fittings. Economy, durability, appearance, cleanliness, safety, comfort to the horse whilst feeding, and being rendered impervious to infection, are some of the advantages of Cottam's Improved Fitments. May be had either plain, galvanized, or enamelled. Every article for the harness-room and stable kept in stock.—Descriptive catalogues and estimates on application to COTTAM and HALLEN, 2, Winsley-street, Oxford-street.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled.

Castings Warehouse removed from 81 to 68, Upper Thames-street.

LARK'S PATENT SMOKE-BURNER: an improved means of perfecting Combustion, and thereby destroying Smoke.

This invention is now in operation upon Steam-engine Furnaces, of Cornish and Waggon Boilers, and upon Ovens. It is adapted to other descriptions of Furnace, such as Marine Boilers, Coppers, Coke Ovens, Bakers' Ovens, Potteries, Chemical Works, &c. Its effect is acknowledged by Government Inspectors to be amongst the most perfect of the inventions extant in abolishing the Smoke Nuisance, and in many instances with a diminished consumption of fuel.

Ten furnaces, of various construction, to which it has been successfully applied, may be seen in operation at the Cement Works of Messrs. FRANCIS' BROTHERS, Nine Elms, London.

Address, THE SMOKE-BURNER COMPANY, Nine Elms, London.

IRON FOUNDRY, HARROW-STREET, LANT-STREET, SOUTHWARK.

W. R. BARTLETT, manufacturer of Girders, Columns, Cantilevers, Newel and Railing Bars, Panels, Iron Coping, Hot Plates, Back Plates, Gratings, Sash Weights, Fly and other Wheels, Riggers, Pinions, Engine and Lathe Castings, Forge Backs, Furnace Bars, Kilns, Pans, and other castings, to patterns or drawings.

REDMUND'S PATENT HINGE MANUFACTORY, WELLINGTON FOUNDRY, Charles-street, City-road, near the Canal-bridge. Established thirty years.—E. GOLLOP, widow of the late J. Gollop, sole manufacturer of REDMUND'S and GOLLOP'S PATENT, rising and not rising spring, swing, double acting, gate, and other Hinges, Floor Centres, &c. &c. Orders for Hinges only, addressed to Mr. J. WALBY, sole Agent, at the Warehouse, 59, Greek-street, Soho; or at the Foundry, will be promptly attended to.—Every description of Small, Soft, and Malleable Iron Castings.

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

CLARK and HUNT'S IRONMONGERY, STOVE, and METAL WAREHOUSE, 159, Shoreditch.

A great variety of Elliptic, Register, and other Stoves, Cottage and best Ranges fitted, always in stock.

Improved Self acting Cottage Ranges, with Large Oven and Boiler,

	4½d.	5d.	7d.	9d.	1s. per knot.

6-inch Rd. Ward Mortise, with best Furniture and Patent Spindles, 3s. 6d. each. Light Elliptic and Register Metal, 14s. per cwt.

Dr. Arnott's Ventilators, 4s. 6d. each.

An extensive stock of bar, rod, hoop, and sheet iron.

Brick Moulds kept in stock. Any size made to order.

THE BUILDER.

FOR SALE, TWO TURNING LATHES, viz.; One TURNING LATHE, Heads 4½ inches high; one TURNING LATHE, Heads 5½ inches high; in first-rate condition. Town made, suitable for brass, iron, or wood turning. Price very moderate. For particulars, apply at No. 13, Salisbury-place, New-road, St. Marylebone.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY at PEEIL and STEDALLS, Nos. 5 and 6, BROAD-STREET, BLOOMSBURY. The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

TO CARPENTERS, CABINET MAKERS, &c.

SAMUEL BLYTHE, Saw Manufacturer (late Howell), King's-road, Chelsea, London, the only foreman Mr. Joseph Howell ever had, will serve the BEST LONDON MANUFACTURED SAWS at 20 per cent. off List Prices, warranted.—May 18, 1853.

FOR SALE, a five-ton WHARF-CRANE, cast-iron post, oak jib and brace, treble purchase gear, with chain, complete. Terms very reasonable. Also, a powerful cast-iron TALLOW-PRESS and B-X, 4½ inch wrought-iron screw and gun-metal nut, complete, equal to new.—Apply to H. FILLINER, 4, Harold-street, Blackfriars-road.

WANTED, for a fire-proof room, a PAIR of strong second-hand IRON DOORS, in a frame 7 feet 1 inch high, 5 feet 6½ inches wide, with fastenings complete (hinges preferred to sliding).—Particulars and price addressed, A B Post-office, Chipping Norton.

SERPENTINE.—THE LIZARD SERPENTINE COMPANY manufacture Chimney-pieces, Tables, and all Architectural, Ecclesiastical, and Ornamental Works, from their beautiful stone, at prices in competition with coil ored marbles. The stone from the lower beds of their quarries is superior to any hitherto brought into the market. Stone supplied in block or slab. Offices and Show Rooms, 3*, Surrey-street, Strand.

MARBLE.—Mr. B. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, his own extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO BUILDERS, MASONS, AND OTHERS.

THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Sicilian, dove, black, black and gold, Sienna, St. Ann's, statuary, serpentine, verd antique, &c. Portland, Harehill, Park Spring, and other stone, in the slab. Landings, and hearthstones. Yorkshire paving, granite curb, &c. All goods carefully packed and forwarded to any part of England. THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London.

TO THE MARBLE TRADE.

MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent terrace, Millbank, to his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account. Mr. Thompson being no longer his agent.

Mr. B Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quicker than any one else.

N B The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

PIMLICO MARBLE WORKS,
BELGRAVE-WHARF,
LOWER BELGRAVE-PLACE.

SAMUEL CUNDY,

THE STOCK OF LOW PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL,

PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors, and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their STOCK of MARBLE is received direct from the principal quarry-owners in Italy and Belgium, for SALE on COMMISSION ONLY, and that they can consequently supply the Trade with the finest marbles at the lowest prices. Sawn Slab, Mantels, Vases, &c; Yorkshire and Portland Stone for sale on commission.

The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MARBLE WORKS.—In consequence of a DISSOLUTION OF PARTNERSHIP at Midsummer next, the whole of the superior manufactured and well selected Stock of Marble Chimney-pieces, Monuments, Pedestals, Tombs, &c. will be sold at very reduced prices. HOUKES and PEARCE, 1 and 2, South-row, New-road, St. Pancras.

YORKSHIRE STONE.

GEO. VINT and BROTHERS beg respectfully to inform Architects, Surveyors, Contractors, Builders, Masons, &c. that they can supply to any extent all kinds of YORKSHIRE STONE of the very best quality direct from their Quarries, to all Railway Stations and Ports in the Kingdom, on the most reasonable terms. GEO. VINT and BROTHERS will quickly forward prices by post on application.—Addi ess, Hunslet, near Leeds.

By Her Majesty's — Royal Letters Patent.

SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in this most durable material. A large Stock kept of Mantel-pieces, Tazzas, Vases, Tombs, Fonts, &c. at the new premises, Whitehall Wharf, Cannon-row, Westminster.

HAYTOR GRANITE COMPANY.—Incorporated by Royal Charter.—London Agent, C. HOAR, 4, Millbank-row, Westminster.—This Granite was used exclusively in the Nelson Monument, Trafalgar-square; King William Monument, City; and extensively for the plinth and steps at the Royal Exchange, and terraces at the Crystal Palace, &c.

TO FURNACE, OVEN BUILDERS AND OTHERS.

THE GODSTONE STONE COMPANY will supply the best description of FIRE STONE in large or small blocks, Oven Tiles, Backs of Grates, and all descriptions of Furnace work, at prices lower than those quoted for other goods of the same description offered to the public. The price of this Fire Stone is erroneously stated in Builders' Price Books for 1853, at 5s. per foot cube, whereas any quantity can be supplied at the Brickmayer's Arms Station, at 1s. 2d. per foot cube.—Apply at the Offices of the Company, 21, New Bridge-street, Blackfriars.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

Lists of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late LUARD, BEEDHAM, and CO.) Caen Wharf, Rotherhithe, London, General Stone Merchants and Quarrymen, continue to deliver from their Wharf and Depôts CAEN STONE, AUBIGNY, PORTLAND, ANCASTER, GODSTONE IN, BUILDING, BLOCK, and RUBBLE STONE; BLOCK and BURR HEARTH STONE; also RUBBLE BUILDING STONE, direct from the Caen and Aubigny quarries, at very moderate charges, to compete with the prices of Brickwork.—For information, direct to Caen Wharf, Rotherhithe; or to Hibernia-chambers, London-bridge, Borough.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Waterloo-bridge. Offices: 345, High-street, Southwark, near the Townhall.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents, TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard.
This Granite is selected for the New Westminster-bridge

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

BATH STONE DEPOT, BOX STATION. ROBERT STRONG, STONE MERCHANT, Box, Wilts.—Box Ground Stone, Scalleit Block, Ashlar, Rangework, &c. &c. supplied direct from the Quarries; also every description of Stone-work for Building purposes, both plain and ornamental, prepared ready for fixing, and forwarded to any part of the kingdom. Vases in an elegant variety always on view; Urns, Fountains, Chimney-pieces, Tombs, &c. &c.

TO BUILDERS and Others in Town or Country.—For PRICES of BANGOR SLATES, apply to SCOLES and WOOD, Market Wharf, Regent's park

ENAMELLED SLATE.—REDUCTION in PRICE.—Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in price in the shape of a large and increased discount to the TRADE. His best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work.—PIMLICO SLATE WORKS, 39 and 40, Upper Belgrave place, Pimlico

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prisons, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Ashtoon, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

BOW-BRIDGE SLATE WORKS, Stratford, near London.—A. A. ROBINSON begs to inform Architects, Contractors, Builders, and others, that his PRICE LISTS for SLATES and SLAB WORK are NOW READY, and can be had on application, inclosing a postage-stamp.
N.B. A liberal discount to the trade.

NORTH-WESTERN STONE DEPOT, Hampstead-road Bridge, Camden-town.—W. ASPINALL begs to call the attention of Contractors, Builders, and Masons, to his Stock of Portland, Park Spring, Potternewton, Newton, Harehill, Bath, Caen, and other Block Stone; York Paving, Landings, Steps, Sinks, Sills, &c.; Park Spring, Robin Hood, Hare-hill Landings and Slabs. Also, Aberdeen, Guernsey, and Haytor Granite Curb and Pitching, all at the very lowest prices.
N B. Estimates given for Masons' Work.

IMPORTANT to ARCHITECTS, BUILDERS, and OTHERS.—E. ROBBINS, Scagliolist, Modeller, and Plasterer, 31, Camden-street, Islington, invites the attention of Architects, Builders, Decorators, and others, to his New and Improved system of Manufacturing SCAGLIOLA, whereby he produces a more marble-like appearance than can be obtained by any other system; the great obstacle in the execution of INLAID WORK is completely obviated, and the simplicity of his system enables him to produce it at a greatly reduced scale of charges. E. R. having a thorough knowledge of its nature, use, and application, as well as of Cements and Plaster Compositions, is content to execute the most elaborate designs in every variety of marble, which for softness and brilliancy of colours, cannot possibly be surpassed

First-class specimens of the old and new systems can be seen on application as above.

TO BUILDERS AND OTHERS

AT the LOWEST PRICES.—TIMBER, DEALS, MAHOGANY, and WAINSCOT. A large assortment of seasoned prepared FLOORING and MATCH-BOARDING of all descriptions. Also an extensive stock of Dry White, Yellow, and Pine Cut Stuff, Slating, Battens, Panel Ends, Oak Plank, Scantlings, &c. Number of Planing Machines, Deals, and Battens, fetched from the Docks, sawn by patent machinery in the best manner, and delivered at the shortest notice.—THOMAS JACKSON, Sawing and Planing Mills, Commercial-road, Pimlico, London

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, begs to acquaint Builders and the Trade that he has now on hand at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¾ inch to 1¼ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Bills, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings.—A large stock of dry flooring at low prices.—Southwark-bridge Wharf, Bankside.

FURTHER REDUCTION of PRICES.—SAMUEL PUTNEY respectfully solicits the attention of buyers to the still further reduction, owing to the recent fluctuations.

Fine Planks, 19 ft. 3 in. by 11 in.	from 3s. 6d.	each.
Spruce Deals	„ 2s. 9d.	„
Yellow ditto	„ 4s. 0d.	„
Honduras Mahogany	„ 0s. 6d.	per foot.
Spanish ditto	„ 0s. 7d.	„
Oak Staves	„ 2s. 0d.	each.

Prepared Flooring, Veneers, &c. at equally low prices.
Borough-road, Southwark, and Elm-street, Gray's-inn-lane.

IMPROVEMENT in WOOD MOULDINGS. J. SIMMONS'S improved WOOD MOULDINGS are acknowledged by all who have tried them to be the best ever produced by machinery. J. S. in returning thanks to his friends and customers for the liberal patronage already bestowed upon him, begs to call their attention to his large stock of Mouldings now on hand, feeling assured that one trial will insure a continuance of their favours. Price lists can be obtained on personal application, or by letter, enclosing six postage stamps, the cost of postage.—Steam Works, 30, North Wharf-road, Paddington.
N.B. Builders supplied with all kinds of Marble and Stone Chimney-pieces, at prices lower than any house in London.

TIMBER and DEAL YARD.—A large CONSIGNMENT of PREPARED FLOORS (dry), DEALS, BATTENS, &c. for SALE on COMMISSION, at very low prices for cash. Timber Deals, &c. received for Sale on Commission.—THOMPSON and HOLMES, Wood and Stone Brokers, the Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

ACORN TIMBER WHARF and SAW-MILLS,
GRAND SURREY CANAL, OLD KENT-ROAD.—The extensive Waterside Premises Improved Sawing Machinery and Drying Warehouses, with a supply of all kinds of Foreign Wood direct from the importers, enable consumers to select from one of the largest stocks in London, at the lowest prices, for cash.
The Monthly Price Current forwarded on application.—RICHARD MAY informs the building public that American Pine and Spruce are cheaper, and Baltic goods are scarce.

VENEER SAWS.—For SALE by PRIVATE CONTRACT, 6 feet, 10 feet, and 16 feet diameter.—Apply to Messrs. FULLER and HORSEY, Bulter-street, City.

TO THE CLERGY, AND TO ARCHITECTS, BUILDERS, &c.

STEPHENS'S WOOD STAINS as a SUBSTITUTE for PAINT, and at less than half the cost, and without the disagreeable smell and deleterious consequences of paint, well adapted for Churches, Chapels, Schools, or other public buildings, as well as private dwellings, giving the effect of Oak, Mahogany, or Satin Wood. Those who noticed the Entrance Doors of the Crystal Palace of 1851, which were coloured with these stains, would be struck with their beautiful effect.—Prospectuses, giving full particulars, and specimens sent free to any part of the kingdom.
HENRY STEPHENS, 54, Stamford-street, London.

STEPHENS'S STAINS for WOOD. Testimonial to the value of:—
"Northgate, Colchester, February 5, 1855.
"Sir,—I have just finished a new church with your oak stain, and I consider it the best adapted for the purpose, being the nearest approach to the real rich wood of any I have ever used.
"I am, sir, your obedient servant,
"SAMUEL GRIMES, Builder.
"To Mr. Hy. Stephens, 54, Stamford-street, London."

THE LONDON PARQUETRY beg to inform Architects, that having just completed five extensive orders at

Hillingdon—P. HARDWICK, Esq. Architect;
Colesbourne—D. BRANDON, Esq. Architect;

which have kept them incessantly engaged during the last four months; they are now again prepared to accept and execute orders for PARQUET FLOORS or BORDERS to any extent.
The LONDON PARQUETRY have recently added to their works machinery, by the aid of which they can execute the most elaborate designs in spiral lines, at the prices of ordinary geometrical patterns, and will be glad to forward sketches and estimates, on application to
The LONDON PARQUETRY, 8 Whitehart-street.

ST. PANCRAS SAWING, PLANING, and MOULDING MILLS, Cambridge-street, near the Great Northern Railway Station, King's-cross.
GEORGE WORKS and CO. (late Archbutt and Atkinson) beg to acquaint architects, builders, carpenters, and others, that they have opened the above premises with superior machinery for manufacturing architrave mouldings of any size and design, sashbars, match-boarding skirtings, flooring, &c. and have always on hand a large stock of seasoned flooring at reduced prices; also, timber, deals, scantling, sash sills, mahogany mantels, &c. Goods sawn at the mills fetched and delivered free of charge.
May 19, 1853.

TO STOVE GRATE MANUFACTURERS, FOUNDERS, ENGINEERS, BUILDERS, SMITHS, and OTHERS.—TO BE DISPOSED OF, spacious MANUFACTURING PREMISES, most desirably situate in a central part of London, and in a leading thoroughfare. The freehold may be purchased, if desired. The tools and stock may be reduced to about 3,000*. For further particulars, apply to Messrs FULLER and HORSEY, Bulter-street, City

TO IRONFOUNDERS, ENGINEERS, MANUFACTURERS, &c. requiring strong roomy Premises, with powerful Cranes, Steam engine, &c. TO BE LET or SOLD, by PRIVATE CONTRACT, the LEASE of an IRONFOUNDRY (in work), sixty-six years unexpired, situate in Kinnaird-street, 9 lamp-street, near the South-Western Railway station, Waterloo-road, London. A plan and particulars may be had of WM. ELKIN, Lessee, on the Premises. The Premises are well adapted for a warehouse; three waggons could be loading or unloading under cover at the same time; the distance from the bridges convenient.

TO BUILDERS, CARPENTERS, AND JOINERS.

TO BE DISPOSED OF, a first-rate old-established BUSINESS, in a flourishing Market-town in the Eastern Counties. For particulars in care of Mr. W. SMITH, Post-office Union, Beds.

TYLOR'S improved METAL-BOUND PAINTING BRUSHES.—These are the lightest metal-bound painting brushes hitherto introduced; the bristles are perfectly secure against the action of all kinds of vehicles and colours, the caps will not burst or rust when the brushes are placed in water, and the handles cannot come loose. Price lists forwarded, post free, on application to the Manufacturer, J. B. TYLOR, 2, Bury-court, St. Mary-axe, London.

TO MEN HAVING TO LIFT HEAVY WEIGHTS.

AN INVALUABLE SHIRT, made from Linen Check, and sewn with Whitey-Brown Thread (price 3s. 6d.) Shirts the only article sold—22, OAKLEY-STREET, Wes minster.

WORKING MEN'S COLLEGE,

31, Red Lion square.

PRINCIPAL.—The Rev F. D. Maurice, M.A. Chaplain of Lincoln's Inn.

The FOURTH TERM will COMMENCE on MONDAY, JUNE 4th, and terminate July 31st.

A Class for Modelling (after Nature and Casts from Nature) will be commenced this term, to be conducted by Alexander Munro, Esq. and Thomas Woolner, Esq. Sculptors; on Tuesday Evenings from Half-past Seven to Half past Nine, and on Thursday Evenings from Eight to Ten; and the rooms will be open for practice every evening from Seven till Ten o'clock. Fee, 5s. the term; and an entrance fee to the college of 2s. 6d.

Prospectuses, containing a list of the classes (in Algebra, Geometry, Geography, History, English, French, Latin, Law, &c.), may be had of the Secretary, at the College.

ROYAL MANCHESTER INSTITUTION.

The Annual Exhibition of Modern Pictures in Oil and Water Colours, and Sculpture, Casts, &c. will open immediately after the close of the Royal Academy. The Council beg to notify that they have an accumulated fund of upwards of 600l applicable to the purchase of approved Works of Art, which may be exhibited at the Institution.

RICHARD ASPDEN, Assistant Secretary

WHITSUN HOLIDAYS.

ROYAL POLYTECHNIC INSTITUTION.

The Lectures and Exhibitions, as delivered before her Most Gracious Majesty and his Royal Highness Prince Albert, for Parties of Visitors, will be continued, consisting of the Telephonic Concert, Dissolving Views of Sinbad the Sailor, Dubosc's Illuminated Cascade, the Diorama illustrating the Voyage across the Atlantic, and the Cities in the United States. Lectures in Music, by George Buckland, Esq. with Vocal illustrations. Dissolving Views of the War, &c. Monday Evening, the 28th inst.—Lecture to be Juvenile Classes, by Dr. Lankester, F.R.S. &c.; on Plants and Animals, their differences and resemblances. Whitehouse's Electric Harmoniograph and Rhumkoff's Coil, explained daily.

MONTI'S LECTURES on ANCIENT and MODERN SCULPTURE. The first of these Lectures, in connexion with the Royal Academy of the Subscribers, is POSTPONED till WEDNESDAY, MAY 30. Tickets to be had at Messrs. P. and D. COLNAGHI'S, Pall-mall East

TO PARENTS AND GUARDIANS.

INSCRIPTIVE WRITING, PLAIN and ORNAMENTAL.—WANTED, a respectable YOUTH, about 16 years of age (one who has a desire to learn the above business), as Out-door apprentice. He will have an opportunity of acquiring a thorough knowledge of the business, and will be under the constant care of a kind and steady master, who has been established 20 years. A premium required. A progress ve salary after the first year will be given.—Apply, R. S. Mr. WETTON'S, 213, Oxford-street.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds per square foot, 9d.; best holland blinds, on rollers, 9d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 8s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped or fig. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

IMPROVED WINDOW BLINDS.—SAXBY'S PATENT ECCENTRIC CLEAT, manufactured solely by THOMAS PEMBERTON and SONS, and may be had of all ironmongers. It is the only perfect method yet introduced, of sustaining a Venetian blind, on releasing the cord, and avoiding winding on hooks. For calico blinds its action is perfectly noiseless, as it works on centre pins, and the blind is raised and lowered by a single line without a double cord

PATENT SOLID SWISS PARQUETERIE.

This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimen and patterns commencing at 8s. per 10 ft. super. together with every particular of its cost and adaptation, can be obtained of Mr. HURT, 2, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO, 59, New Bond-street.

WOOD'S PORTABLE ASPHALTE CALDRON, highly commended by the Royal Agricultural Society, to prepare a cheap and durable Flooring for every description of Agricultural Buildings, also Malting Floors, Warehouses, Cellars, Workshops, Yards, Paths, &c. &c. The judges of the Royal Agricultural Society of England, at the Lincoln and Gloucester meeting, highly commended the caldron.

Directions for use, and illustrated circulars, with prices, will be sent post free, on application to JAMES WOODS, Agricultural Engineer, Stowmarket, or Implement Depot, Bury St. Edmund's.

The Builder.

SATURDAY, MAY 26, 1855.

SOME of our metropolitan readers express themselves as anxious to be kept informed of the proceedings in respect of the proposed Bill to amend the Laws relating to the Construction of Buildings in the metropolis and its neighbourhood: nor is it strange that they should be so, seeing how much depends on obtaining a clear, sufficient, reasonable, and workable Act. The Builders' Society, at a special meeting on the 17th inst. came to the following resolutions:—

"1. That the duties of the district surveyor could not be as well fulfilled by any but competent professional men, and that the interests of the public could not be protected efficiently by any arrangement which would throw these duties on a less educated class of men.

2. That in the opinion of this society, the Court of Official Referees divested of any legal member, would be the best tribunal for appeal in such cases as could not be settled with the district surveyor.

3. That inasmuch as the only public matters that have to be regarded are *the safety of the public, as against insecure construction, and the spread of fire*, it is desirable that the stipulations of the Bill should be as few and short as possible, and avoid as far as may be all interference with internal structure and arrangement.

4. That the payment by fees to be paid by the person building is the most equitable method of meeting the expense of their superintendence.

5. That the scale of fees requires revision, as it appears that under the existing Act, 7 and 8 Vict. cap. 84, as well as by the new Bill, that the smaller classes of buildings pay a much higher rate in proportion as compared with those of a larger class; and

6. That the districts should be equalised so as to make them worth the attention of competent professional men."

In discussing the fifth resolution it was shown, by an analysis of the last Parliamentary Report (No. 83), "Metropolitan Buildings Bill," that out of every 100 buildings, seven were of the first rate, fourteen of the second, twenty-seven of the third, and fifty-two of the fourth rate; and that the fee chargeable under the existing Act on fourth-rate houses, viewed as a per centage on the value, was much greater than that chargeable on a first-rate. It ought not to be forgotten, however, in discussing this question, that the district surveyor has often more trouble in dealing with small houses than with large.

As to the payment of the district surveyor *by fees*, the Select Committee of the Commons have decided that it is to be so, and there is much to be said in favour of the mode. It is very desirable, nevertheless, that arrangements should be made in the Bill for the collection of these fees by a proper officer, so as to avoid bringing the builder and the surveyor into collision on that point. The difficulty of obtaining payment under the present Act is very great in many cases, and much time and attention is thus wasted, which should be otherwise employed.

Amongst the movements on the subject out of doors, we must mention that a deputation from the parish of St. Pancras had an interview with Sir William Molesworth on Saturday last, to point out certain clauses in the Bill as requiring revision, but found, as we said last week, that so many alterations had been made in the Bill, and were still pending, that discussion would be useless: they would be fighting giants already slain. Sir William Molesworth said the whole of the original clauses with respect to construction had been struck out of the Bill; that no decision had yet been come to by the select committee, and that it was impossible for him to state what rules would be inserted in the schedule of the Bill in the place of those which had been struck out. The deputation suggested, amongst other things, the propriety of introducing some limitation as to the time in which penalties might be recovered under the provisions of the Bill, and called attention to the annoyances which frequently arose in consequence of the Act rendering it necessary to call in the assistance and advice of a surveyor for trifling and immaterial improvements. Sir W. Molesworth stated, in reply, that there was considerable difficulty in drawing the line between various descriptions of works, and it would be necessary to have examiners to decide in some form as to what was really a material alteration. If the deputation would send him any amendments to the clause, he would give them his best consideration.

At Blackheath a meeting has been held, whereat it was resolved to lodge a petition against the Bill, and to oppose it by counsel if practicable. Until the amended Bill is printed, however, it is impossible to say what there is to object to.

The select committee did not meet on Tuesday, as at first arranged, but on Thursday, the 24th, when they determined on various other alterations, and adjourned till the next day. They will then probably adjourn over the holidays, so as to give time for the discussion out of doors of the Bill as it now stands.

In lieu of the recondite rules for determining the thickness of external and party walls, proposed in the original Bill, and set forth by us p. 205, *ante*, the following was at first substituted:—

"In cases where neither the height nor the length exceeds 36 feet, the thickness of every such wall at its base shall be 13 inches.

In cases where either the height or the length exceeds 36 feet, the thickness of every such wall at its base shall be determined by multiplying together the length and height of the wall, and dividing the product by 22 times the length of a diagonal line drawn from the top of the footings at one end to the top of the wall at the other end thereof; but if the length of any wall is less than one-half of its height, the thickness of such wall at its base shall be one-fiftieth part of the height of the wall; and no such wall as aforesaid shall at its base be less than 13 inches thick," &c.

Other suggestions were made, but what the committee will ultimately decide on we cannot yet say. It is proposed that the Bill, if passed, shall come into operation on the 1st of January, 1856. Nine-inch walls will probably be permitted for buildings covering a less area than 5 squares.

ON THE EMPLOYMENT OF PAINTED GLASS.*

IT is not my intention to enter into any antiquarian disquisition respecting the subject of glass painting, but, as briefly as I can, to call your attention to certain points connected with the practical application of the art. In so doing, it will be necessary for me to repeat much that I have often already repeated, but which I have less hesitation in doing since I find my views are now pretty generally sanctioned by persons to whose opinions I, as an amateur, feel bound to defer. Indeed, were it worth my while to inquire, it would be difficult to discover why the enunciation of such views should have exposed me to the wrath of a certain set of critics possessing unbounded admiration for the thirteenth century, and for everything connected with it. For if any one more than another has striven to vindicate the common sense of the mediæval artists, and those of this period in particular, it is myself. But as I know that these gentlemen are always ready to come round to views which have become popular, even in spite of their own opposition, and to claim them as their own, I shall not be deterred from again submitting my views to the judgment of practical men.

But there is another class of writers whose opinions are not to be so lightly passed over; for by the mere effect of reaction, if from no other cause, they certainly will gather strength as people get tired of mediævalism. I mean those, principally foreigners, who advocate the Munich school of glass painting.

It must be admitted that the German glass painters, as a body, surpass ours in nearly every artistic quality. This was painfully apparent to all unprejudiced eyes in the Exhibition of 1851. And I doubt if we could even now reckon half a dozen glass paintings, by native artists, which, in point of drawing and composition, can compare with the works at Munich or Cologne. I apprehend that this is attributable less to our present fondness for mediæval pursuits, than to the spirit in which we conduct them, though both no doubt have their influence.

Whether it is that the Gothic style of architecture is incapable of being adapted to the wants of modern civilization, or that we have been unable to find out its principles, certain it is, that the most successful specimens of modern Gothic are those which are the most faithful copies of old work,—a reflection which, united to the abundance of mediæval examples, has tended to reduce the practice of modern Gothic architecture, and of its accessorial arts, to a simple system of copying. I do not pretend to deny that, in this country, architecture, during the last 100 years, has been, for the most part, a system of copying. But there is this difference in copying the Classical and the Gothic styles,—that the one is the style of a sculptor, even in its most purely architectural parts, and is associated with ideas of the utmost perfection in all branches of accessorial embellishment, whilst the other is the style of a stonemason, even in its statues and reliefs, and is associated with ideas of art in its infancy, rather than in its mature development. Hence, the imitation of Classical architecture has always necessitated a degree of excellence in its accessories, such as pictures and the like, demanding from the critic some knowledge of the ordinary rules of art, and requiring artistic qualities in the designer; whilst the imitation of Gothic architecture has been the raising up of critics, to whom, knowing the men, we should hardly think of entrusting the selection of a tea-pot, and the conversion into artists of persons who, forty years ago, would have been laughed at for venturing to assume that title.

The Germans, on the contrary, at least as regards glass painting, under the able guidance of the late King of Bavaria, a man of refined and matured taste, seem to have regarded the art of the Middle Age in the same spirit as Sir Walter Scott regarded its literature,—as a mine full of ore, rich indeed, but which before it could be rendered available, required to be purged of its dross,—"the repulsive dryness of mere antiquity." A German writer thus expresses himself:—"How it is possible even to name the works of the old glass painters beside those of modern artists, far less to give them the preference, is to me inconceivable. That we should take all possible care of the old painted windows of our churches—that we should attribute to them a certain historical value as specimens of the beginnings of art—that the antiquary should rejoice over them,—all this I understand. But, when I hear of people falling into ecstasies at their beauty, it is really impossible for me to give them credit for candour. Form is entirely wanting in these old glass paintings: the drawing is monstrous, and composition, grouping, and perspective, cannot be looked for at all. Go and look at a window in the Cathedral of Ulm, or the Sebald's Church at Nuremberg, and you will not, for a quarter of an hour, be able even to make out the subject of the picture, or the relation of parts to each other. But it has been decreed, once for all, that the old glass paintings are very admirable. So, out of twenty visitors to the cathedral, nineteen make it a point of conscience to brighten up at the sight of them, and give utterance to half-suppressed exclamations of emotion and admiration. It is one of the many

* The following paper was read by Mr. Charles Winston, at the Architectural Museum, on the 21st inst.

conventional lies which we are accustomed nowadays to impose on ourselves and others, from various motives,—sometimes for the justification of our claims to refinement—sometimes from mere habit—sometimes from politeness—and sometimes (Heaven save the mark!) for the sake of morality and religion." I have heard precisely similar sentiments expressed at Munich. And there is no question but that there is a good deal of truth in them, and that it is to the practical carrying out of such sentiments, that the Munich school of glass painting owes much of its well-deserved popularity.

After this panegyric it may seem almost ungracious to except to the practice of the Munich school; and, indeed, such is my respect for the artists of that school, that I should not do so if I did not feel very sure of my ground.

The practice of this school to which I object is, the profuse employment of enamel colours.

I need hardly remind you, that there are three ways of producing a painting on glass;—the first, in which the local colours are obtained by using glass coloured in its manufacture, and by means of the yellow stain; the outlines and shadows only being painted with an enamel colour;—the second, in which the local colours are produced on white glass, by the application of enamel colours, and the yellow stain;—the third, in which both the former methods are combined.

This last is the method pursued by the Munich school. It has over the first method the advantage of affording greater facilities for the application of colour, and of largely increasing the power of graduating the colour, which, in glass painting, with every help, has not nearly so wide a range as that of fresco painting! and, of course, is very limited indeed, in comparison with the scale of colouring in oil painting, or water-colour painting. But it is attended with this advantage, that all glass paintings so executed have a deadness of effect, proportionate to the extent to which the glass has been overlaid with the enamel. Hence it is that the Munich glass paintings, collectively, want that brilliant vivacity which all old glass paintings, up to the middle of the sixteenth century, possess, and which often makes these old works superior in general effect to the modern, though they are in many other respects so inferior to them. This defect is still more apparent in the works of those artists who have exaggerated the practice of the German school. I have noticed that interiors, lighted by such works, as the church of St. Germain l'Auxerrois, at Paris, have none of that dim, subdued light which is so charming at Chartres and elsewhere, but a sort of dull obscurity, as if they were filled with smoke or dust; the impression produced upon the eye by the glass, no doubt, being the cause of the apparent difference in the gloom.

The German artists, I am aware, justify the use of enamel colours, as an expedient to make up for the flimsiness of the ordinary material, and which in this respect, as they assert, contrasts unfavourably with the old, even with that of the fifteenth and sixteenth centuries; a discovery which, being perfectly true, is perhaps, on that very account, as yet unrecognised by our critics; for, only the other day, I saw it asserted, as a profound personal conviction, that there was no difference whatever between the texture of old glass and new. But, I cannot help thinking that the ease with which enamel colour can be applied has tempted the Germans rather to transgress the limits of glass painting, and to seek to impart to their works a degree of finish and refinement which contrasts but unfavourably with the harsh lines produced by the lead work and saddle-bars, without which, as you all know, no glass painting, except it be of very small dimensions, can be constructed. I think that this was exemplified in the "Dante window," in the Exhibition of 1851, a work which certainly eclipsed everything else there. It is true that, with some other really fine things, it escaped all notice in the jury's report; but then, as a foreign artist remarked to me, considering the way in which they accorded their medals and praises, this was the greatest compliment that they could have conferred. I repeatedly examined this window, which was executed in the manner of the German school, with feelings of admiration at the masterly way in which technical difficulties, of no ordinary nature, had been overcome; but I felt, more strongly than I can now express, the contrast between the exquisite softness and finish of the painting and the cutting harsh lines to which I have alluded.

It would be well perhaps if the glass-painters of this country could succeed in painting glass as badly as the Germans do. But as we are beginners, and certainly have nothing to unlearn in the way of art, there seems no reason why we should not at least endeavour to avoid some of the errors into which they have fallen, by adopting a different practice in the outset; especially as a difficulty with which they have had to contend has been overcome, by reviving the manufacture of the ancient material. As I have had something to do with this revival, I shall not allude to it further than to state, that if Mr. Powell, to whom the receipts have been given in consideration of the great facilities he afforded of carrying on the experiments at his works, does not continue to make glass like the old, of all dates, it is his own fault entirely, since he has made from the receipts glass exactly like the old, and which, it is only fair to tell you, is very different from the spurious imitations of it which, now that the example has been set them, other glass-makers have brought into the market.

I would strongly advocate the universal adoption of the mosaic method of glass-painting, in which, as I have said before, coloured glass is used instead of enamel. And I certainly would not advise any attempt to be made to render glass-paintings much, if at all, more pictorial than the best glass-paintings of the sixteenth century are. And when I speak of the best works of that period, I will put first and foremost the windows of the Chapel of the Miraculous Sacrament, in Brussels Cathedral; which for power and effect, and as evincing a thorough knowledge of the material in its treatment, far surpass any other glass-paintings of the period that I have seen; though some of these may be more picturesque, or exhibit better figure-drawing. Nor am I singular in my liking, for though some persons, not very conversant with the subject, have sought to decry these windows, I have heard them awarded the highest praise by some of our best artists and architects. Yet these windows, though apparently not wanting in finish, are extremely coarse in execution, compared with a specimen of the modern German school. I have been told that, technically speaking, they are not more highly finished than a finished cartoon. But, however this may be, there is here no unpleasing contrast between shading and lead lines. The paint and lead unite, and form one harmonious whole: even the saddle-bars are forgotten in the sharp, crisp, brilliant effect of the window. This seems the perfection of glass-painting.

If, therefore, designs of the nature of the Brussels windows are capable of being represented in this comparatively simple manner, without the aid of an enamel colour, except for the purpose of shading, it follows that the same style of execution will apply easily to less complicated pictures.

Many additional reasons for preferring the mosaic style of glass painting to any other could be adduced, but the limits, and the nature of an address such as the present, preclude my going fully into details; and I embrace this opportunity to apologize for having elsewhere, for the sake of brevity, omitted certain qualifications,—immaterial, it is true, but which would have rendered some of my statements more strictly accurate.

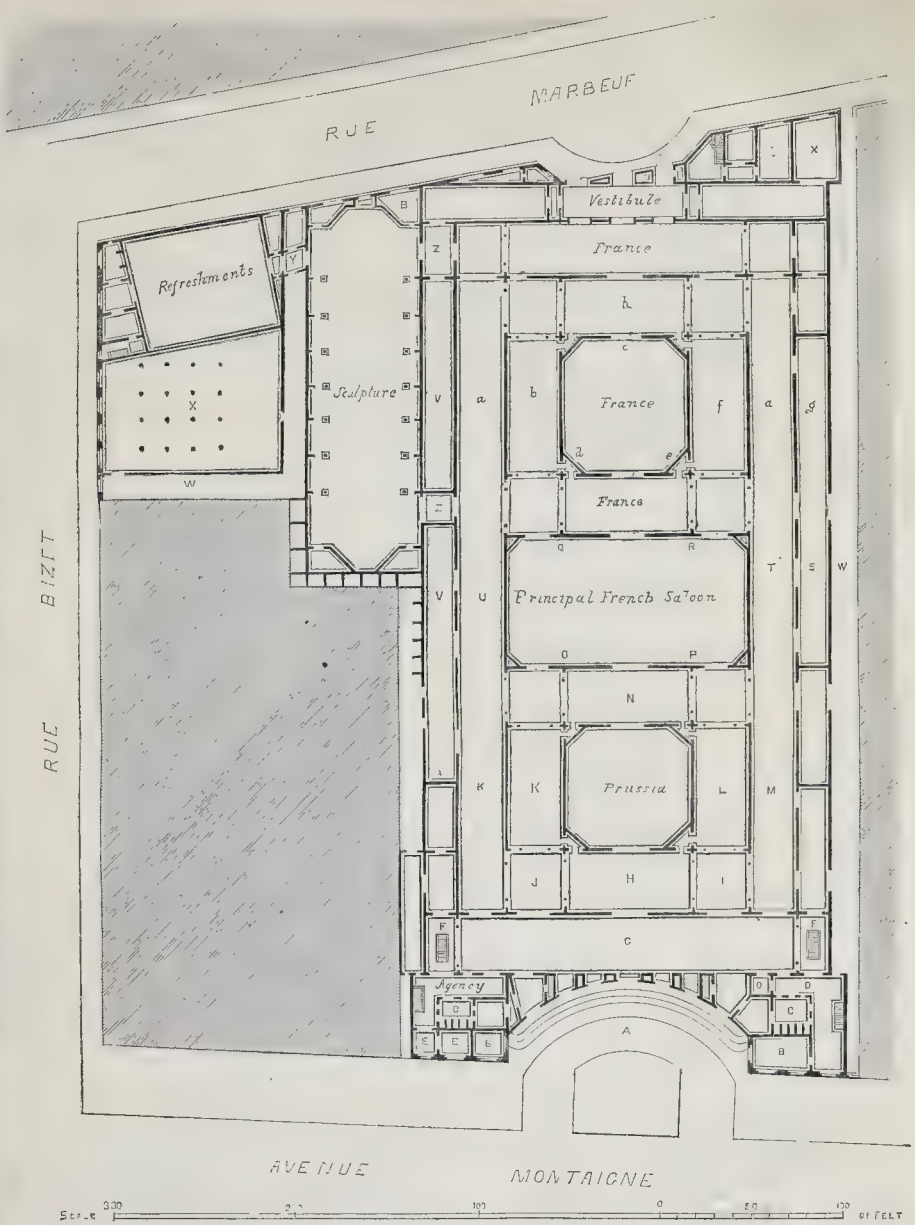
I now propose to offer a few remarks on the composition and execution of painted windows, assuming the adoption of the mosaic system to be conceded. And here I would impress upon your minds, as practical men, the paramount necessity for carefully studying the remains of ancient painted glass, from the earliest period to the middle of the sixteenth century. These remains constitute our best guides for the future: the vast majority of them are by no means objects to be copied or re-produced, but they all demand such an examination as those only can make whose eyes have been educated by the habit of drawing and colouring. It is, I believe, from not possessing this essential qualification that our critics fall into such otherwise inconceivable blunders whenever they attempt to enlighten the world on the subject of glass-painting, and that they are so readily cajoled by those whose interest it is to cajole them. And I am sure that, when you shall have completed such an examination as I have recommended, and compared the results of your own experience with the precepts and practices of our friends, you will find that my animadversions on them are fully made out.

I shall not dwell on the variety of texture in glass of different dates, the existence of which, by the way, was to be inferred from the sense of vision; because this fact has been established, beyond dispute, by recent chemical research. But you will find it equally true that the execution of ancient glass paintings varied with the nature of their material. When the glass was rich and solid, the execution of the painting was simple: when the glass was thinner and poorer in appearance, the execution of the painting became more elaborate. And, to a certain extent, their composition follows the same law,—a circumstance which affords the best proof of the common sense and originality of the mediæval artists, and a significant commentary on the opposite practice of our critics, who, up to the present day, have sanctioned works executed in the flimsiest possible material, without any greater pictorial manipulation than is to be seen in ancient works composed of the richest possible material.

These considerations should never be lost sight of in designing a painted window.*

THE PALACE OF THE FINE ARTS, PARIS.

The Palace of the Fine Arts, constructed for the Universal Exhibition of 1855, is situated between the *Avenue Montaigne* and the *Rue Marbeuf*, and covers a large extent of ground. We have engraved a plan of the building, which first appeared in the *Revue des Beaux Arts*, and our readers will thus get a better idea of the arrangement than could be conveyed in words. It will be seen that some of the principal masters of the French school have each an apartment to themselves. The number of works sent in by French artists was very large, much larger than the jury could have found room for, even if they had deserved it. Many of the artists consider themselves greatly injured by the decision of the jury against the admission of their pictures. The ordinary annual exhibition has not been held, and they find themselves without the means of bringing their works before the public. The gallery where the refused works, not already reclaimed, are placed, has acquired the title of the Necropolis, or Field of the Dead!



A statement of the number of works contributed by the different countries will be found in our last number (p. 231).

The postponement and other causes have acted very prejudicially against the Exhibition up to this time. It will need a strong effort on the part of the management to reawaken that enthusiasm which has been quenched.

PLAN OF THE PALACE OF THE FINE ARTS, FOR THE PARIS UNIVERSAL EXHIBITION.

NOTES ON THE USE OF TURPENTINE IN HOUSE-PAINTERS' WORK.

IF we have not found means to *remove* obstacles to improvement in methods for the preservation and embellishment of buildings, our pages have already presented to English readers,* in as few words as were necessary, a portion of the groundwork to the discovery of any process calculated to ensure durability, and to raise the standard of art in interior decoration. Definite knowledge of the materials and operations with which the house-painter is concerned—simple as these may be deemed by some—can scarcely be considered as having been established, prior to the elaborate experiments of which we have given some results.

M. Chevreul's next subject of inquiry—though not undertaken with all the objects referred to in the opening remarks of our first article—is by no means to be disconnected from the desired end of durability, and that of deadness of surface. The question proposed is,—Does the essence of turpentine augment the siccative property of pure linseed oil, and of the same oi mixed with white of zinc?

The relative proportions of oil and turpentine employed in painting, will vary according to the nature of the surface, the desired solidity of the coat of paint, the colours, and the character of brilliancy, or deadness, desired. The difficulty of our own object of inquiry will shortly be seen.—The chief uses that our author discovers in the turpentine are these. It facilitates the application, by diminishing the

* See pp. 109 and 193.

viscidity of the oily mixture; and it allows the appearance of the surface as to deadness or otherwise, to be regulated. It is also of importance when the work has to be varnished, in preventing cracks which would otherwise be seen; and in such cases, it is said the proportion of turpentine can hardly be too great. But, if the work is to have the *maximum* of durability, and be neither "dead" nor varnished, then the turpentine should be reduced to the smallest possible quantity,—because, as we have tried to keep in view throughout, in the oil is the principle of stability. The *rationale* is this:—the work *without* turpentine dries by absorbing oxygen, but without losing anything; the work with turpentine dries, indeed, partly in a similar manner—but, also by evaporation—losing nearly all the turpentine. The less the turpentine, the more oil will be retained after drying, and consequently the greater will be the durability. The greater also will be the time required for the drying. As regards the prevention of cracks in future varnishing by previous addition of turpentine to the paint, the turpentine is required because it is essential that first coats should be perfectly dry to work upon. For, if the work be merely dry on the surface, the drying of the varnish will separate the outer surface of the paint from the inner,—producing the result that has been mentioned.

Our author endeavours to ascertain whether, independent of the effects already alluded to, turpentine has siccative properties of the ordinary kind—or those of absorbing oxygen,—and he compares also those of some other substances. The latter are first considered. In experiments commenced in January, 1850, on oils and vehicles, laid on surfaces of oak, he finds the white of zinc siccative relatively to the manganesed oil. Thus, in one case, we find results as here stated:—

	Manganesed Oil.
First coat dried in	18 days.
Second ditto	7 ,,
Third ditto	8 ,,
Total	33 ,,

whilst, admixture of white of zinc added to the properties of the oil, thus:—

	Manganesed Oil, 34 Parts by Weight; White of Zinc ... 40 ditto
First coat dried in	12 days.
Second ditto	3 ,,
Third ditto	3 ,,
Total	18 ,,

The same effects are produced upon a mixture of pure oil and manganesed oil. Thus, whilst in the following case,—

	Pure Linseed Oil, 36 Grammes; Manganesed Oil, 16 ditto.
First coat dried in	37 days.
Second ditto	3 ,,
Third ditto	3 ,,
Total	43 ,,

the addition of white of zinc gave these results:—

	Linseed Oil, Pure, 36 Grammes; Manganesed Oil... 16 ditto; White of Zinc ... 56 ditto.
First coat dried in	25 days.
Second ditto	4 ,,
Third ditto	4 ,,
Total	33 ,,

The white of zinc, again, is siccative relatively to the linseed oil pure, mixed with the manganesed oil and turpentine. Thus, with—

	Pure Linseed Oil, 1 Part by Measure; Turpentine..... 1 ditto; Manganesed Oil, 0½ ditto.
First coat dried in	36 days.
Second ditto	3 ,,
Third ditto	2 ,,
Total	41 ,,

but, with—

	Linseed Oil, Pure, 1 Part by Measure; Turpentine ..... 1 ditto; Manganesed Oil... 0½ ditto; White of Zinc..... 2½ ditto.
First coat dried in	27 days.
Second ditto	3 ,,
Third ditto	1 ,,
Total	29 ,,

He then proceeds with the question of the influence of turpentine on the drying of pure linseed oil, and on a mixture of that oil with white of zinc. The experiments were tried in April and May, 1850, and were now on glass. They showed that whilst three coats of pure oil required 25 days, the same oil, mixed with half its volume of turpentine, would dry in 20 days. Linseed oil dried more quickly mixed with white of zinc, than the same oil with turpentine,—in the proportion of 11 to the number 20 just mentioned. It may here be remarked that whilst a single coat of the oil, with its weight of white of zinc, required 3 days for drying on glass, 30 days were required on oak. But whether on glass or on oak, the mixture of linseed oil and white of zinc is rendered more siccative by the addition of turpentine. Thus, the record of experiments is as under:—

	Linseed Oil and White of Zinc.
First coat required to dry (on glass)	3 days.
Second ditto	4 ,,
Third ditto	4 ,,
Total	11 ,,

whilst, in the case of—

	Linseed Oil, Turpentine, and White of Zinc.
First coat required to dry (on glass)	2 days.
Second ditto	3 ,,
Third ditto	2 ,,
Total	6 ,,

It might be thought unnecessary to inquire further into the question whether pure oil—or rather, oil mixed with turpentine—would become more siccative by time. M. Chevreul, however, thought a number of experiments necessary. As to pure linseed oil, he found that exposure to the air was of more importance than mere lapse of time, in developing the siccative properties. For, oil that had been exposed forty-four days to the air, would dry in half the time of that which had been kept from the air. On the other hand, after turpentine has been exposed to the air, the residue, if applied, may be said not to dry at all: whilst the turpentine which has been kept from the air, dries rapidly, leaving the slight residue as before.—He proceeds to test the value of exposure to the air, as regards a mixture of oil and turpentine. As to the separate liquids, the advantage and disadvantage of exposure had been what might have been inferred. The experimentalist did not, however, try, as might have been expected, with a mixture of oil that had been exposed, and turpentine that had been kept close; but he mixed liquids which had been under the same circumstances. As it was, he did find that the influence of the air was very sensible on his mixtures.—Would not this, then, manifest the existence of siccative properties, from exposure to the air, as regards the oil in the mixture, greater than what are to be derived from addition of turpentine in such cases? For, results of experiments in May to July, 1850, on the drying of portions of the mixtures applied, were as under:—

	Oil which had been kept close 44 days, 2 Parts by Measure; Turpentine ditto, 1 ditto.
First coat required to dry	8 days.
Second ditto	8 ,,
Third ditto	6 ,,
Total	22 ,,

whilst, the result of exposure was the following:—

	Oil which had been exposed 44 days, 20* Parts by Measure; Turpentine ditto, 1 ditto.
First coat required to dry	4 days.
Second ditto	5 ,,
Third ditto	6 ,,
Total	15 ,,

Similar results were observed on the liquids mixed, thus:—

	Oil..... 2 Parts by Measure; Turpentine, 1 ditto. The Mixture kept close; not the Liquids separately.
First coat required to dry	4 days.
Second ditto	5 ,,
Third ditto	7 ,,
Total	16 ,,

whilst,—

	Oil..... 2 Parts; Turpentine, 1 ditto. The Mixture exposed.
First coat required to dry	3 days.
Second ditto	2½ ,,
Third ditto	4 ,,
Total	9½ ,,

The influence of the air was found to be of equal importance in the case of combination with the white of zinc. Thus:—

	Oil, kept close 44 days, 1 Part by Weight; White of Zinc, 1 ditto.
First coat required to dry	3 days.
Second ditto	6 ,,
Third ditto	4 ,,
Total	13 ,,

whilst,—

	Oil, exposed 44 days, 1 Part by Weight; White of Zinc, 1 ditto.
First coat required to dry	2 days.
Second ditto	2 ,,
Third ditto	3 ,,
Total	7 ,,

Again, with turpentine,—

	Oil ..... 2 } { The mixture kept Turpentine..... 1 } { close 44 days. White of Zinc... 3
First coat required to dry	3 days.
Second ditto	2½ ,,
Third ditto	2 ,,
Total	7½ ,,

whilst the time was lessened, where the mixture had been previously exposed, thus:—

	Oil ..... 2 } { The mixture Turpentine..... 1 } { exposed 44 days. White of Zinc... 3
First coat required to dry	1½ days.
Second ditto	2 ,,
Third ditto	2 ,,
Total	5½ ,,

The influence of the essence upon oil which had not been exposed to the air, in hastening the drying, is therefore matter of fact. But, since the drying is more rapid when the mixture had been made, and then exposed,—whilst the author regards the turpentine as a siccative, he finds that it acts so, feebly. The following *résumé* shows what may be expected from the use of oil which has been exposed to the air, whether pure, or previously mingled with half its volume of turpentine. The experiments were made from May to July, 1850, and the coats were applied on glass:—

Oil, or Vehicle, &c.:—	Linseed Oil, Pure.	Parts by Weight. Linseed Oil, Pure..... 100 White of Zinc 100	Parts by Weight. Linseed Oil..... 90 White of Zinc ..... 100 Linseed Oil, exposed to the air 60 days..... 10	Parts by Weight. Linseed Oil..... 90 White of Zinc ..... 100 Linseed Oil, 2 Turpentine, 1 } Exposed to the air (60 days..... 10	Parts by Weight. Linseed Oil..... 90 White of Zinc ..... 100 Oil kept uncovered 10	Parts by Weight. Linseed Oil..... 90 White of Zinc ..... 100 Manganesed Oil 10	Parts by Weight. Linseed Oil, exposed to the air..... 100 White of Zinc 100	Parts by Weight. Oil, 2 Turpentine, 1 } Exposed to the air. White of Zinc..... 100
Days occupied in Drying, &c.:—								
First coat	5	3	3	3	3	1½	1½	1¼
Second coat	6	3	2	2	2	1	1	1
Third coat	5	3	2	2	2	1	1	1
Total,—Days...	16	9	7	7	7	3½	3½	3¼

It is thus shown that white of zinc is siccative relatively to the pure oil, or to the mixture of oil and white of zinc, applied on glass; that oil exposed to the air, pure or mixed with turpentine, becomes decidedly siccative; and that manganesed oil has the properties in a still higher degree. But, if the ordinary oil be exposed to the air until a pellicle begins to form upon it, ten parts of it will be found as effectual as ten of the manganesed oil.

M. Chevreul found that the work executed wholly with the white of zinc and oil exposed to the air, had the appearance of a varnish, in contradistinction to that where marks of the

* This number in M. Chevreul's large table is perhaps a misprint for the number 2.

brush are left. The pigments of the two last columns of the table showed none of those marks. Hence, it is suggested that effect might be gained in work, by the contrast of different kinds of oils. The absence of the marks would be an argument in favour of the white of zinc. Yet, in the course of inquiries into which we have been led by the direction that this subject has taken, an impression has been conveyed to us, somewhat different from that which would be inferred from the statements of M. Chevreul,—although these may be not incorrect. On the authority of an experienced foreman—in the employ of painters who are recommended by some of the chief parties interested in the article—we might say, that roughness at least, of the surface is so considerable, at all events in English works, as to interfere much with the chances of durability,—having regard to the frequent cleansing which the best kind of surface will require. Were we to judge from such attempts as happen to have come before us, we could not make exception even as to marks of the brush. It is right, however, to state that the use of white of zinc over previous coats, especially where little labour is given in "rubbing down," does not give the material a fair chance in any respect. That kind of work of course forms the greater part of what is at at any time being done. Another practical man declares that the roughness can be due only to improper mixing, or want of skill in laying. It should further be understood—and it may perhaps assist in explaining these marks of the brush,—that it is a mistake to say that zinc "covers" better than any other pigment, in the sense in which the words would be generally understood. The specific gravity of the white of zinc is less than that of the white of lead; therefore, where there are equal quantities by weight, the zinc will suffice for more work than the lead. It is also said to take up a larger quantity of oil. This property, notwithstanding the injunction of some manufacturers,—to use even more of white of zinc than white of lead,—no doubt leads to the common fault of transparency in the coats. We apprehend, however, that under the best conditions, four coats of white of zinc colour would not be worth more than three coats of white of lead. Of course there might be, and no doubt are, some great advantages in the zinc. But, should there be inevitably, great roughness of surface, that will go far to explain the prejudice against the paint,—the accumulation of dirt being sufficient to give the appearance, though possibly removable, which on the white of lead, would result from chemical action.

Though M. Chevreul's attention, at the date of our latest information, was still directed to the question as to white of zinc, it does not appear that he has had the opportunity of considering the desirableness of a substitute for turpentine. The poisonous effects of white of lead are chiefly operative in the process of manufacture; though serious injury also results in the "rubbing down" of old work. Many workmen, indeed, suffer from inattention to personal cleanliness at meal times,—and were we to consider the nature of some of the colouring substances used, such as the arseniate of copper, this alone would be found to be no trifling matter. But the chief source of inconvenience, if not of injury to health, to the inhabitants of a newly-painted house, we really believe, arises from the turpentine. One invention at least has been put forward, professing to obviate this; but it has not been generally adopted.

We took up the present subject, rather with the view of showing *for what* objects progress was needed, and to present *a few steps* for our practical readers to make the advance, than with the idea of accomplishing a perfect system ourselves. The experiments on turpentine, and other "vehicles," of which we have compiled an abstract, cannot but prove of value to those who would pursue the subject; and it is only to be regretted, that the help which they afford in regard to the question of durability, is to be deduced from them, instead of being directly given. Such assistance, however—as will have been apparent—they may afford, and the next branch of inquiry, which bears upon the use and manufacture of "driers," will, we think, be perhaps even more important to our readers.

AN ARCHITECTURAL SCAMPER IN FLANDERS AND BRABANT.*

LIEGE—MALINES.

OUR attention will now be directed to the city of Liége, one of the most ancient and attractive of the many interesting places in the kingdom of Belgium. Long the metropolis of the dominions of its prince-bishop, the fruits of its ecclesiastical wealth have descended to us in the many venerable churches which remain after many have been destroyed, whilst its mineral riches worked up in its iron foundries, its manufactories of cutlery and firearms, have upheld its prosperity through every revolution and change of government.

The site of the town is picturesque. The lower portion is situated on a level flat, occupying both sides of the rapid Meuse at its junction with the Ourthe. Between this and the higher town extends a boulevard planted with trees, above which rise terraces of houses intermixed with trees, overtopping each other, crowned on the summit by the venerable churches of St. Martin and St. Croix.

The ecclesiastical architecture of Liége differs in many essential points from that of Western Flanders, which latter has much in common with the architecture of Northern France and England. That of Liége approaches nearer the German Gothic, particularly that application of the Lombardic type which prevails at Cologne and along the Rhine.

St. Jacques is the most celebrated of its churches. Its architecture has been greatly admired and praised, much more, I conceive, than it deserves; but it is curious, as giving, perhaps, the best illustration extant of the latest period of Continental Gothic just before it was swamped by the Renaissance. Its date is said to be 1513-28, or about the same period as our Henry VII.'s Chapel. The general character of the building is that of richness, but when more closely examined, the details appear flat and poor.

The construction is in many respects singular. The nave has a narrow gallery below the clerestory windows, faced with an open tracery parapet, but there is no proper triforium. The tracery of the windows has flowing lines, but possesses notwithstanding something of the English perpendicular character.

The vaulting appears complicated, but is in reality poor and crippled, showing a decline in the geometrical knowledge which distinguished the best age of mediæval art. The springers built in the wall, and the ribs arising from them, do not abut fairly, or correspond the one with the other; the original design probably having been changed. The awkward junction between the two is attempted to be hidden by the introduction of shields to cover them. The bosses, at the intersections of the vaulting, are almost Italian in character. The pictorial ornamentation of this vaulting is somewhat celebrated, and probably furnished the idea for the similar style of decoration at the Templa church of London. The forms of the ornaments are graceful, and cover the spaces well, but the prevailing tone is too grey: the general effect lacks brilliancy.

There is a magnificent entrance porch on the north side of the nave, lighted by three large windows on each side, with wall shafts and rich groined vaulting.

Externally the aspect of the building is somewhat flat, with thin meagre details. A curious external open gallery, with arcaded front, runs along the clerestory walls under the eaves, apparently a reminiscence of the arcaded galleries which abound in the Lombardic churches on the Rhine. The west end exhibits the remains of a much older building in the Romanesque style.

The cathedral of St. Paul is a large cross church. The piers and arches of the nave appear early thirteenth-century work; the remainder probably fourteenth-century. This church contains a beautiful modern pulpit richly carved in the Gothic style, with marble statues of life-size by Geefs.

St. John's is a church in the modern Italian style built on an old site. The nave is octagonal, with side aisles carried round, and is covered by a dome. The choir extends eastward the width of one plane of the octagon, with apsidal end. Adjoining this church are the dilapidated remains of the ancient cloisters, which have been vaulted with fan-groining; the ribs stone filled in with brick. These are now undergoing reparation.

The church of Sainte Croix, standing on an eminence overlooking the town, is highly interesting, from its admixture of styles, its peculiarities of construction, and its excellence of workmanship. The part west of the transept is Lombardo-Romanesque of early date.* The plan of this portion is very complicated. From the four massive piers which carry the superstructure, radiate three semicircular lobes, north, south, and west, forming when carried up *une figure trilobée*, as the French would call it. These are ornamented externally with arcaded galleries. Above the centre piers rises an octagonal tower, with subordinate circular turrets at the angles. This part of the building is now undergoing restoration. The building immediately eastward of this is a parallelogram, having three aisles of equal height with two small transepts at the *west* end. This is properly the body of the church, and is of late thirteenth or early fourteenth century work. The chancel is a prolongation of the centre aisle, with apsidal termination, and appears of earlier date than the nave. The window tracery is geometrical. The form of the aisle windows is the spherical triangle. The chancel walls are covered with blank arcades. Similar arcades are worked under the windows of the aisles and transepts. The spandrels of these are sunk in panels, filled with sculptures of great beauty of execution. For grace, expression, and delicacy, these are most remarkable works. I know of nothing in England, except it may be the Percy shrine, in Beverley Minster, at all to compare with them. The undercutting of the figures in the complicated groups is most remarkable. There are a few remains in these panels of polychromic decoration. This interior has undergone most careful restoration. There is some good modern stained glass in the chancel windows.

St. Martin's is a large cross church. The greater part of the edifice is of late thirteenth-century work, but portions are of much later date, approximating to that of St. Jacques. The choir vaulting is painted and ornamented in bright colours. This part is of late workmanship, and, by numerous indications, it would seem that about the same time there has been an interference with the older work in many parts, modifying it to the taste of the period.

St. Servais presents nothing remarkable externally, except some good early fourteenth-century tracery in the windows.

The Redemptorist Church, in the Rue Hors Château, has a west front of Florid Renaissance architecture. This and the previous one were closed at the time of my visit, and I did not attempt to procure admission.

The Church of St. Barthélemy is very ancient, the date of its erection being ascribed to the year 1000, with which its style of architecture corresponds. It is a cross church, the choir rather short, with multangular apse.

The nave has double side aisles. The exterior is frayed by the weather to such an extent that great part of its detail is destroyed, though it never appears to have been very rich. The west front has three heights of round arches, and is flanked by twin towers, carried up two stages above the roof, where the old work terminates with the remains of a corbel table. The part above this is brick, finished with a truncated pyramidal slated spire.

The clerestory of the nave retains its original small Romanesque windows, flat buttresses, and corbel table. The side aisles have been modernised.

Contrary to what is usually found, the interest attaching to this church is confined to the outside. The interior has been completely modernised, and every vestige of antiquity destroyed. The solid Romanesque piers have been transformed into Ionic columns, with straight entablature over the arches.

An inscription on the ceiling gives the date

* See p. 181, *ante*.

* M. Schayes, quoting Anselm and the *Chronicon Episcop* ascribes it to the year 979 A.D. with which its style appears to correspond.

of this transformation as the year of grace 1705.

St. Denis is of Romanesque foundation, but contains at present a mixture of styles. It is a cross church in plan. The nave has double aisles. This part of the building has been transformed into the Renaissance style, and presents nothing remarkable. The choir is probably of fifteenth-century architecture. It is very lofty in itself, and its height is much increased by the floor being elevated above that of the nave, from which it is approached by two flights of steps. The east end is multangular. The vaulting is elaborate, the ribs meeting in a sort of coronal in the centre. The choir and transepts have recently been carefully restored, and the vaulting ornamented in the style of St. Jacques, but in brighter tints. The choir windows have been filled with modern stained glass, of good design and colour. The north transept contains a most elaborate piece of sculpture in wood, of Late Gothic design, in eleven compartments, representing passages from the life of Christ and the saints. The figures are in alto relievo, and display a wonderful amount of patient elaboration.

Of the secular buildings, the most remarkable is the ancient palace of the bishop, now the Palais de Justice, public offices, &c. It is a very large building, containing two interior quadrangles, surrounded with cloisters. The largest of these is occupied as a market-place. The date of the building is the early part of the sixteenth century, and it contains the usual admixture of Gothic and Italian, peculiar to the period.

The pillars of the cloisters are baluster-shaped, grotesquely carved in different designs, supporting pointed arches, with panelling and pointed windows in the walls above.

The university buildings are extensive, occupying three sides of two open quadrangles: these are of brick. A central building within the larger quadrangle is of stone, with an Ionic portico in front; but the design is low, squat, and clumsy. In front stands a recent statue of Grétry, the composer, who was a native of the town.

The street architecture of Liége is worthy of notice. Although the town is much modernized, yet a good deal that is curious and interesting still remains. Many of the houses on the Quai de la Batte and the adjacent streets, remain in all the original quaintness of their wood-carving and grotesque enrichments, and in other parts of the town fragments may be sketched here and there which will well repay the trouble. The Rue de la Regence and the Rue de l'Université, are modern; and several buildings on the Place Verte and the central parts, are large and handsome, and display some originality of design, with many of the features before remarked on, as peculiar to the Flemish school. Although a manufacturing town, Liége is remarkable for the number of its open places and the intermixture of verdure and foliage with its buildings and streets.

We will now shift the scene to the ancient city of Mechlin or Malines, which, though passed on the railway by multitudes of travellers, is not visited as frequently as it deserves. Its ecclesiastical architecture is fine, and its streets and quays present many rich morsels for the sketcher's pencil. The great architectural feature of Mechlin is its noble cathedral church, dedicated to St. Rombaut. In the boldness of its design, the magnificence of its proportions, and the excellence of its workmanship, it ranks in the very first class of Flemish churches. Its plan is the usual Latin cross, with apsidal east end, the aisles continued round, with octagonal chapels projected out between the buttresses. Octagonal chapels are also thrown out on the north side of the nave. The perspective of the interior is very fine, owing to the clear, uninterrupted view from the west wall of the tower to the extreme east end.

The style of the architecture is somewhat mixed, and has the appearance of a carcase of thirteenth or early fourteenth century building raised upon, decorated, and completed, in the fifteenth century. The side chapels of the nave are evidently a subsequent addition, being later in style and more highly enriched. The vaulting especially is more complex in design with bosses at the intersections. In one of the chapels, which is larger than the rest, the old buttresses have been cut away, carved into bosses and worked into the vaulting in a very ingenious manner.

The tracery of the choir windows and the finish of the choir generally is of a somewhat later date than the finish of the nave. The mullions and tracery are more delicate with the *fleur-de-lys* pattern in the window-heads of the apse. The walls are covered with light panelling. The piers of the side chapels of choir are shafted, the mouldings running round the arches without capitals.

The tower is at the west end,—a splendid specimen of late fifteenth-century architecture. Its height is stated by one authority to be 348 feet, by another, 316 feet. The original design is said to have included an open work spire, which would have raised the entire height to 600 feet. The inside of the tower, with a noble daring, is entirely thrown open to the church, the east wall being carried on an arch about 100 feet high and 30 feet wide. The design of the exterior of the tower is very fine, and the workmanship admirable. The plan of the structure, as in most similar cases, is very simple. Massive square set buttresses rise from the ground, diminishing as they ascend, and break at each stage into finials, crockets, and tabernacle work. The deep recesses are occupied by richly traceried windows still further recessed. Semi-octagonal stair-turrets are projected on the north and south sides. The depth of the shadow and the massiveness thus obtained, are finely relieved by the grace and elegance of the decorations. Had the spire been erected on its summit, it would have been the finest thing of its kind in the world. As it exists, its beautiful proportions, and the judicious tempering of verticality by occasional horizontal lines, bring it as near perfection as can be conceived. In this particular, I consider it superior to the west end of either Antwerp or Cologne Minster.

The whole of the exterior is characteristic and fine, the east end being the richest in panelling, open parapets, gables, and decorations. The gables of the transepts have recessed galleries, faced with a pierced arcade of long slender arches following the slopes of the roof. The pulpit of this church, representing the Conversion of St. Paul, displays boldness and action, and is very effective.

Notre Dame is a large cross church, with the usual Flemish arrangements,—the east end apsidal with the aisles continued round and side chapels to choir. The aisles of the choir have been modernised. The general style of the work is late fourteenth century, running into the fifteenth. This church contains a fine carved pulpit, supported by statues of the four evangelists, with their emblems. The balustrade consists of rich scroll-work, with statues of Moses and John the Baptist at the foot of the stairs. The organ is a good Renaissance composition, placed on the east side of the south transept, opposite the south aisle of the nave. Externally, the boldly projecting buttresses and the deeply recessed windows present more of the character of English Pointed than is usual on the continent. The tower is at the west end, lofty and massive, with enormous angle buttresses (12 feet projection), and two stair turrets. It is surmounted by a low wooden slated spire. The principal entrance to the church is under the tower, which is a more usual arrangement in England than on the continent.

St. John's church is rather a rude construction of early date, with a plain solid tower. The interior is spoiled by modern alterations of the seventeenth or eighteenth century. The pulpit consists of a group illustrative of Christ's Charge to Peter, the figures very good; some carving under the organ at each side of the western entrance of Christ Feeding the Multitudes, and an allegorical subject are very beautifully executed.

The Grande Place and Market-place are lined with quaint and characteristic specimens of Flemish architecture. The buildings on the Quais also present some fine specimens, both in wood and stone. One of these, at the corner of Kraam Straat, has curious painted bas-reliefs in the tympana of the windows, exhibiting our first parents *in puris naturalibus*, with the tree of knowledge, and in another part the angel driving them out of Paradise. Adjoining this is a curious wooden gable, with finely-carved brackets and figures.

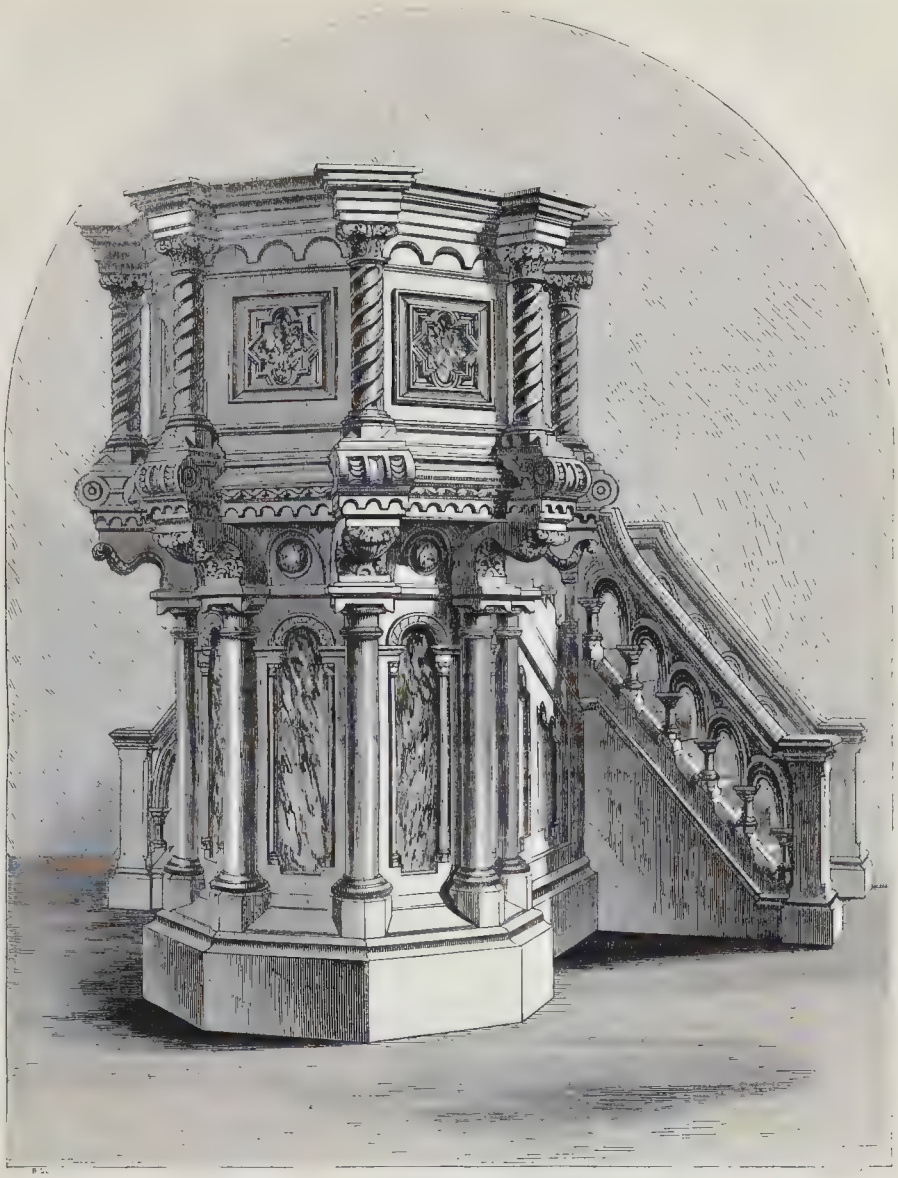
Our architectural notes for the present must terminate here. I will close with a single remark. If any one wishes to enjoy travelling, let him sally forth with a definite object in view: I do not much care what the object is, whether geological, antiquarian, artistic, botanic, or what not, provided it be innocent. Ignorant people might suppose that it would be a sort of slavery and constraint, and might prefer a listless vacancy, or a break-neck scamper, but they are greatly mistaken. It is wonderful, when you set up an idea as a central one, how everything else groups around it, and falls into its proper place, and how it adds ever-increasing interest to everything which is seen.

A little labour spent in the study of architecture and archæology would be repaid a hundred-fold, in these railway days, by the additional zest and interest communicated to the scenes passed through by the traveller. Every "Grande Place" contains a history in itself.

"Could we observantly but seek it out," every venerable church preaches "sermons" from its "stones" to those who can rightly understand their language. Add to this a little facility in sketching, which may be easily acquired, and there are few modes of spending a few weeks agreeably and instructively at the time, and which will be looked back upon with greater satisfaction, than an architectural and archæological tour. J. A. PICTON.

ARCHITECTURAL PUBLICATION SOCIETY.

THE annual meeting of this society was held on Thursday evening, the 10th instant; Mr. Ashpitel, F.S.A. in the chair. The report of the committee was read, setting forth the progress which had been made, and calling on the profession for such an addition of members as might enable the committee to complete the Dictionary forthwith.



From the year 1852-53, there is a balance of 26*l.* 15s. 10d. which, added to the total income, amounts to 470*l.* 8s. 4d. for the year 1853-54: of this sum 237*l.* 19s. 8d. only is expended, leaving a balance of 232*l.* 8s. 8d. for further publications. The probable income for the year 1854-55, is anticipated to be at least 420*l.* for which the Works consisting of illustrations are now in hand.

The chairman drew the attention of the meeting to the various subjects of the report, more especially adverting to the greater number of illustrations given in the last part; and to the quantity of matter for the year's proportion of which double could be given if there were twice the number of subscribers, and urged upon the members to use their best efforts in increasing the list. He was pleased to find that there was great difficulty in obtaining copies of the early numbers of the publications, which were now being purchased by the secretary for the purpose of supplying complete sets to new members.

The usual votes of thanks were prefaced by remarks in favour of the society's operations, by Messrs. C. Mayhew, C. C. Nelson, G. B. Williams, H. B. Garling, &c. Messrs. G. Aitchison, jun. Octavius Hansard, and H. R. Newton, were elected new members of the committee. The meeting then adjourned.

We would remind the profession of the great importance of completing properly the dictionary in question; and again urge those of our brethren who do not at present belong to the society, to help the committee in this (no ordinary) undertaking, not only by themselves subscribing, but by obtaining the assistance of their friends practising engineering and building, so that a successful termination may be given to a work which promises to be honourable and useful to us all. Our readers in the colonies, and other distant parts of the British dominions who interest themselves in architecture should support this work, as one which will be of great practical benefit to themselves.

BURNING OF A CONTINENTAL CHURCH.—A letter from Lille reports the burning of the church of La Basée, remarkable for the magnificence of its spire.

PULPIT, REGENT'S-PARK CHAPEL.

PULPIT, REGENT'S-PARK CHAPEL.

We add to our illustrations of the chapel recently fitted up on the site of the Diorama, in the Regent's-park (p. 210, *ante*), under the direction of Mr. John Thomas, a view of the pulpit. It is constructed of Caen stone, and has a panel of alabaster in each of the sides.

Reward for Smoke Prevention.—The Steam Collieries Association, at Newcastle-upon-Tyne, advertise, in the *Newcastle Chronicle*, their offer of a premium of 500*l.* upon certain conditions, for the invention of an effectual method of preventing the emission of smoke from the chimneys of multitubular boilers.

THE UNITED STATES AND CANADA.

About fifty-five years since a remarkable book was published by a gentleman still in life, and titled "Weld's Travels in America." These travels extended over a large portion of the United States and Canada, and the book was translated into various European languages, and not only was it looked on at the time, it appears, as a great authority on American subjects, but to its influence the promotion of colonization in Canada has been mainly attributed. We have a volume now before us,* written by a half-brother of the preceding author, the esteemed assistant secretary of the Royal Society,—and the contrast between the two books is a very curious one in many respects, as every reader may readily conceive. The present volume may be regarded as a sort of cursory report of progress made since the visit in 1795-7. It is pleasantly written, though light and tripping, as a mere vacation tour must necessarily be, however observant or reflective the author.

Mr. Weld's recent route, from Boston, where he landed from one of the magnificent Cunard steamers, ran through Massachusetts northwards by Montpellier to the Lakes, through which, after a trip down the river to Montreal and Quebec, he took his course as far as Detroit, New Buffalo and Chicago, whence he passed southward by Cincinnati and Cambridge to

* "A Vacation Tour in the United States and Canada." By C. R. Weld, Barrister-at-Law. London: Longman and Co. 1855.

Washington and Gosport, his southern extreme point, thence returning to Boston by Baltimore, Philadelphia, and New York. A better route for a three months' trip, perhaps, could not well be devised for seeing as much as possible of both the United States and Canada in so short a time. We shall follow the author through his own pages, noting any little particulars as to buildings or other objects of interest to our readers which our limits may allow of.

Speaking of the new theatre at Boston as a magnificent structure, capable of containing 4,000 persons, Mr. Weld says,—"I examined this building in detail, and was much struck by the method employed to render it as perfect as possible. The seats are disposed in such a manner that each commands the stage; and the latter embraces all modern improvements, including a curtain of sheet-iron to cut off communication with the audience."

He gives an interesting account of one of the gigantic backwoods lumber-trade saw-mills, near Peterborough, in Canada:—

"The machinery is on a gigantic scale. 136 saws were working with tremendous velocity, reducing huge logs to planks at the rate of nearly fifty an hour. Instead of using files to sharpen the saws, a powerful punching-machine is employed, which cuts fresh faces on the teeth; a process combining greater efficiency with saving of time.

A portion of the machinery is employed for making laths, besides plank-sawing. This mill, in common with others in Canada, works day and night, devouring 70,000 logs in the season of nine months; but, though the quantity of planks produced is prodigious, the demand generally exceeds the supply. Indeed, such is the increase of the lumber trade, that new mills on a gigantic scale are being erected, not only on the Ottonabee, but on other rivers favourably situated for the purpose.

During last summer a block of mills was completed on the St. Francis river, in Canada East, exclusively for the lumber trade. At a low estimate, these mills will saw in a season 20,000,000 feet of long lumber, and two trains will be in requisition to carry the planks to Portland, from whence they will be shipped to all parts of the world.

To feed such establishments from the northern forests involves an enormous amount of capital and labour. The firm of Egan and Co. who are at the head of the lumber trade on the Ottawa, employ in the forests through which that noble river passes, 1,700 horses, 200 bullocks, besides 400 double teams on the road, engaged in the conveyance of food and forage. During the winter 1854-5 (the timber is cut in this season), they had 3,800 men in their service, and 100 lumbering establishments in various parts of the country. Their consumption of pork amounts to 1,000 barrels annually, with other provisions in proportion. The cash transactions to keep this enormous machinery in motion exceed 2,000,000 dollars a year.

The returns of the exports of white pine alone from Quebec during the last six years show a vast increase; 17,400,000 cubic feet having been exported in 1853, and only 9,626,000 cubic feet in 1847.

The question naturally arises, how long will the Canadian forests continue to meet the enormous demand for timber. With a view of obtaining some information on this point, Government recently instituted an inquiry as to the probable duration of the supply in various districts; and it was ascertained that in the Ottawa forest-region alone there was timber sufficient to feed the mills on that noble river, at their present rate of consumption, for 600 years."

Mr. Weld paid a visit to the Victoria Railway-bridge works, at Montreal, of which Mr. R. Stephenson is the engineer. The bridge, as our readers already know, is to be on the plan of the Britannia-bridge in Wales.

"It will be constructed on twenty-four piers, with spaces for navigation exclusive of the two abutments, whence the tubes spring on either side. The centre span will be 330 feet, and each of the others 220 feet wide. The length of the bridge will be 10,284 feet, or about 50 yards less than two English miles. The clear distance between the under surface of the centre tube and the average summer level of the river will be 60 feet, diminishing towards each side. 210,000 tons of stone will be used in the construction of the piers, and 10,400 tons of iron on the tube, girders, &c. It is proposed to complete the bridge in 1860. At the present rate of progress, the expenditure will average 250,000*l.* annually. The Colossus of Rhodes, under which the pigmy shallops of former ages sailed, was esteemed a wonder of the Old World. But an iron bridge, spanning a river two miles in width, giving safe passage to burdens of hundreds of tons on its rivetted floor, and permitting ships of large tonnage to sail beneath it, is an achievement still more remarkable for the New World, and is worthy of the young giant rising in the West."

Perhaps no greater contrast between the state of things in Canada at the present day, and that at the opening of the present century exists than that which relates to the respective means of traversing the lakes at these different epochs. The author of the new volume took the lake route to Detroit, in one of the mammoth steam-ships, which now regularly traverse the lakes of Canada, and gives an account of it.

Between Cambridge and Wheeling, in the Western United State of Ohio, the author, strolling about after dinner, came upon a kind of van inscribed, "Daguerrean Car," in which really very good daguerreotyped portraits were produced, at the rate of 25 cents each; and he observed such cars in many small towns. There must be some truth in the gossip as to the fancy of the United States fashionables in favour of daguerreotyped visiting cards, since they are such "great patronizers of daguerreotypes," as Mr. Weld intimates they are.

At Washington the tourist visited the Smithsonian Institute, where, amongst other interesting matters, he saw "Mr. Warner's invention of gutta-percha stereotype, employed in carrying out Professor Jewett's method for printing catalogues by means of separate titles." The titles of the books being set up, a matrix is made therefrom, and a stereotype plate cast in gutta-percha. This is sawn into the number of titles of which it is composed, and the alphabetising is accomplished by the simple assortment and arrangement of these titles, which are fixed together in the requisite pages. By this means the books added to any library may be inserted in their proper places, and an annual catalogue published at a comparatively small cost. The catalogue of the Congress Library is printed in this manner.

The bold attempt which is being made at Washington to raise a monument to its founder that shall surpass all others in the magnitude of its dimensions, is of course alluded to:—

"According to the printed description, it will be 'the loftiest monument on earth to a nation's greatest benefactor,' and it gives the following measurements:—Base of the Pantheon, 250 feet diameter; height, 100 feet; height of the obelisk, 500 feet. The original plan contemplated the erection of a vast Pantheon temple, surmounted by a colossal statue of Washington, 30 feet high, standing in a chariot drawn by six horses, driven by Victory. But, as the funds drawn from voluntary contributions are not equal to defray the cost of this portion of the proposed structure, the works are at present confined to the obelisk, which has attained a height of 150 feet. It stands in the centre of the mall, opposite the President's house. Various states, public bodies, and individuals, have contributed blocks of stone bearing their names and emblematic devices. It is intended that the entire monument shall be cased with white marble. The blocks, which are very large, are raised to the summit by steam power."

At the Crystal Palace in New York, the first thing the author beheld on entering was "a huge mountain-like object swelling beneath the dome. It proved to be a balloon in a semi-collapsed state, typical of the fortunes of the Exhibition." Having already said enough as to the Exhibition itself, however, we shall pass on to the Astor Library, recently completed.

"The building is of Byzantine architecture. The interior consists of a noble apartment 100 feet long, 64 feet wide, and 50 feet high, at present containing 80,000 volumes. This number will soon be increased to 100,000. The books are very accessible. Any person above fourteen years of age is allowed to visit the library daily (excepting Sundays) between ten and five. There are other public libraries, but that founded by the munificence of Mr. Astor bids fair to become the largest in the city."

Mr. Weld has produced a very entertaining volume.

CAMBRIDGE ARCHITECTURAL SOCIETY. — At a meeting held on Wednesday, May 9th, Mr. A. Hallen read a paper on Deerhurst Church, accompanied by plans and drawings; and the Rev. A. Hutchinson exhibited a singular brass from Nivelles, in Brabant, and read a short account of it.

PROVINCIAL NEWS.

Grantham.—The subscriptions now in hand for the Newton monument amount to 1,335*l.* and there is talk of commencing proceedings at once towards the realization of the monument.

Colchester.—The district commanding-officer of engineers has made a minute inspection of the Government ground in the vicinity of this town (similarly employed during the last war), with a view to the erection of barracks for 5,000 men. The Ordnance field, about 30 acres in extent, will, it is believed, be occupied by wood huts in blocks, each calculated to accommodate a battalion of 500, and will thus provide for 3,000 of the total force. The huts for the remainder will occupy the old barrack ground, about 14 acres, which is still surrounded by the high oak pale fence as when the site of the barracks. The contracts for the erection of the huts will, it is said, be offered to the tradesmen of the town.

Dudley.—The contracts in connection with the South-Staffordshire Water-works Company for conveying water through the entire district from Lichfield to Dudley, were let on Tuesday week, it is said, several thousand pounds below the engineer's estimate. The Lichfield reservoir was let to Mr. Welton, of London; the Walsall reservoir to Mr. J. Boys, also of London; and the pipes and laying to Messrs. Cochrane and Co. of Dudley. The works will be commenced as speedily as possible.

Liverpool.—The pile of buildings in High-street, formerly used for the post-offices, having been purchased by the Liverpool Assurance Company, says the *Journal*, a handsome structure, of which Mr. Cockerell is to furnish the designs, will shortly, it is understood, be reared on that site.

Weston.—On the 10th inst. the schools recently erected at Weston were opened by the Bishop of Lichfield. The building consists of one room, about 60 feet long, to be used jointly by boys and girls, and divided by curtains. This opens into a class-room, furnished with a gallery. The infant school is beyond, and is adapted to the use of 100 children. There are residences for the master and mistress, slightly detached. The whole, with play-ground and gardens, occupies one acre. Mr. R. Hesketh was the architect, and the work has been executed by Mr. Jervis, of Hitchin. The entire cost of the erection was 1,800*l.* of which sum the committee of council contributed 680*l.*

Shorncliff.—The erection of the huts for the encampment progresses rapidly, under the direction of the contractors, Messrs. Myers, and Messrs. Lucas and J. Edwards. Upwards of forty are in the course of completion. The wells formerly used have been found to be nearly dry; but near the camp, at Black-rocks, an abundant supply can be obtained.

Manchester.—Various improvements are in progress in this city. The most important are the alterations in front of the Infirmary, which are being carried out under the combined efforts of the corporation and a committee appointed by the trustees of the charity. The fountain basins have been ready some time, and all the iron railings in front of Piccadilly removed. The improvement also contemplated by the extension of Portland-street to Oxford-road is in progress. The new line of street from Oxford-road commences nearly opposite the end of Chepstow-street, through the site of the timber-yard of Messrs. Hay, Nish, and M'Kean, builders: in its course it crosses the small branch of the Rochdale Canal, which will be filled up, passing the ends of Bond-street and David-street, on the site of Mr. Clegg's old saw-mill, where it joins Portland-street. There is now a clear view from Oxford-road to the bottom of Portland-street. It will be a broad street, to correspond in width to Portland-street. The Lancashire and Yorkshire Railway Company are now engaged in making extensive alterations at the Victoria station, on the Ducie-bridge side, with the view of forming a branch line of rails for further passenger station accommodation. To carry out this object it has been found necessary to erect a bridge of considerable span over the river Irk, and an arched way beneath Cheetham-hill-road. The company have also erected a large stable for the horses employed at

the station. Amongst the new buildings in course of erection in this city, is the new Public-hall, on the site of the Free-Trade-hall, in Peter-street. A large number of men are now engaged in the work, but it is not likely to be completed in less time than eighteen months. Messrs. S. and J. Watts, of Fountain-street, according to the local *Courier*, are about to erect a warehouse, of immense proportions, on a site bounded by Portland-street, Minshull-street, Silver-street, and Chorlton-street. It will have a frontage of ninety-eight yards to Portland-street, and will be one of the largest warehouses in Manchester.

Preston. — On Thursday before last, the Town-hall committee met to receive the tenders for the re-erection of the Town-hall property. There were four tenders sent in for the whole work, and several for the different branches of it. It was agreed to recommend to the council to accept Mr. Armstead, as the contractor for the whole. His estimate for the entire work was 11,715*l*. Messrs. Cooper and Tullis's for the whole was 11,723*l*. 11s. 6d.

Blackburn.—On Thursday before last, a meeting of the local Highway and General Drainage Committee was held, for the purpose of appointing a borough surveyor. The number of applications was thirty-eight. The committee reduced the number to five, as follows:—Mr. P. M. Coogan, C.E. of Liverpool; Mr. W. Smith, of Buxton; Mr. John M'Manus, of St. Helen's; Mr. John Hanney, resident engineer, of Penrith; and Mr. Hugh Wilson, formerly of Liverpool, and latterly provisional engineer at Caraccas, Venezuela, South America. The committee then reduced the number to two, viz. Mr. Wilson and Mr. Hanney. These gentlemen having been examined, it was unanimously resolved that Mr. Wilson be recommended to the council to fill the office of corporation surveyor. The committee determined to defer the appointment of an assistant-surveyor until the sanction of the council had been given to the appointment of surveyor. Mr. Wilson has been for a short time in the service of Mr. Hopwood, of Blackburn, surveyor.

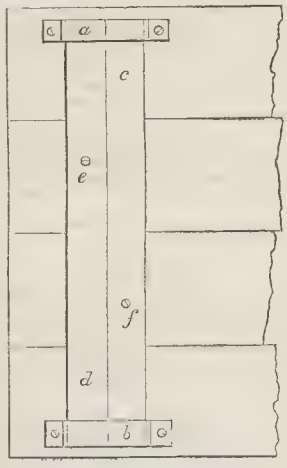
Leeds.—The ceremony of laying the foundation-stone of the Arthington Extension Scheme, for supplying Leeds with water, was performed on Friday before last. The scheme will cost 40,000*l*. and is intended to convey water from the river Wharf, across the estates of Lord Harewood and Mr. W. Sheepshanks, to the Eccup reservoir of the Leeds corporation. The 3½ miles of 23-inch iron tubing have been contracted for by Messrs. Stuart, of Glasgow, for 11,200*l*. The engines for pumping the water, 2,500,000 gallons daily, are to be supplied by Messrs. Witham, of Leeds, the cost being 10,000*l*. The engine-house and buildings are undertaken by Mr. Buxton, of Leeds, at 6,000*l*.; and the land (11¼ acres) for the engine-houses and filtering beds, and the right of way across Lord Harewood's estate to the reservoir, are agreed for, the sum paid being about 7,000*l*. with 50*l*. per annum. The water will have to be lifted 275 feet. Mr. Hawksley is the engineer.

Jarrow.—The contract for the execution of Jarrow Docks, says the *Gateshead Observer*, has been let—the directors of the North-Eastern Railway having accepted the tender of Messrs. Jackson, Bean, and Gow, of London, who will execute the whole of the works. The sum is believed to be somewhere about 400,000*l*. The area of the dock is forty-eight acres, and of the basin nine. The principal entrance will be 80 feet wide, and the dock-gates 60. The gates will be wholly of malleable iron.

Glasgow.—An ironfounder has recently contracted to put up a cast-iron building in one of the principal streets of this city—to be four stories high, and to be used as shops and warehouses.

HOME FOR INDIGENT GENTLEWOMEN.—In aid of this very excellent object, Mr. Henry Leslie's oratorio will be presented, by first-rate artists, on Wednesday, the 30th, at St. Martin's-hall, the able composer himself conducting. Those of our readers who are fond of fine music may aid an excellent charity, and give themselves pleasure at the same time, by attending this performance.

TO MAKE A DRAWING-BOARD.



I KNOW nothing about carpentry; but having many years ago been called upon to supply some drawing-boards for Africa, I found myself in a difficulty, as the demand was accompanied by a remark that all the boards that had been sent out or made there soon split and warped, and became useless.

As wood will shrink laterally, I set myself the task of making with my own hands a model board that should leave the wood free to contract or expand in the hottest climate, and at the same time be firmly held down to clamps of wood across the back.

To prove this board, I all but burnt it before a fire for many days; and being sure that the principle of construction was good, I ordered boards to be made like it, and was informed years after that they kept their figure perfectly, in defiance of the torrid zone.

Within the last few months I have, in like manner, been called upon to supply eight boards the sizes of large drawing-paper, upon which are now being schemed works of great importance; and as these are found to be all that can be desired as drawing-boards, probably a description of the principle upon which they are made may be worth the notice of some of the readers of the *Builder*.

The board itself is of good seasoned pine, without knots, planed smooth and true, as usual, and the joints may be either simply glued together, or they may be grooved and tongued with cross stuff. The diagram shows one end of the back of the board, and of course the other end is similar.

a and *b* are iron straps (which I made out of hoop-iron), and these are screwed to the board very securely, at about one-third inch from the edge. The straps should be smooth on the corners, so as not to cut the table.

c and *d* are two pieces of straight wood, made so as to slide rather tight through the straps, but not so tight as that they will not move freely with a little pressure.

Now, at the points *e* and *f*, the cross-pieces *c* and *d*, are screwed immovably to the board, at distances obtained by dividing the length of the pieces into three equal parts.

All this is very simple indeed, but simple as it is, we see that the board at each end is held to the cross clamps at four points; and yet it is left free to shrink or expand, just as was wanted.

I have just examined one of these eight boards, and, though made of good dry wood, its state, after only a few weeks is this:—it has shrunk half an inch in the whole width, causing the upper end of the piece *c* to obtrude, two-thirds of this half-inch, beyond the strap *a*, and the lower end to obtrude the other third beyond the strap *b*; and, in like manner, the ends of the cross-piece, *d*, obtrude beyond the straps, only in contrary directions to the other piece.

Notwithstanding all this shrinking, the board is accurately true, as proved by placing a straight edge across it in any direction, and trying it by a square.

S. B. HOWLETT.

CHURCH-BUILDING NEWS.

Groton (*Suffolk*).—Some memorial windows are about to be placed in the church of Groton, by the Hon. R. C. Winthrop, of Massachusetts, U.S. one of the descendants of John Winthrop, the first governor of New England, who went from Groton, where his ancestors had long been lords of the soil.

Tetsworth (*Oxon*).—The architect of the rebuilding of the parish church here was Mr. John Billing, and not as stated.

Mereworth.—A monument has just been erected in the old church here, in memory of a child of Viscount Torrington. The work was executed by a London firm, and the cost estimated at 200*l*.

Bromsgrove.—In the Lickey district a new church is in course of erection, not far from the new school and the Lickey Obelisk. The chief stone of the new church was laid on Wednesday before last, by Mr. R. Clive, M.P. The site and 400*l*. were given by Lady Harriet Clive. The whole cost of the building will, it is said, be about 1,600*l*. The dimensions of the edifice are:—Nave: length, 58 feet 9 inches; width, 33 feet; height, 20 feet to wall-plate. Chancel: length, 26 feet; width, 15 feet; height, 18 feet. Aisles: 9 feet high. The materials are Alvechurch grey stone, drawn chiefly by the farmers gratuitously, and bricks for the lining. The architect is Mr. H. Day, of Worcester; the builder, Mr. G. Robinson, of Redditch. The building is in the early English style, and consists of chancel, nave, vestry, and porch. In place of tower it has at the west an ornamental gable, fitted with two bells. The walls are rubble, and the windows and dressings generally, of rubbed stone. The west end has a window divided into five lancet lights; the east a three-light window with cusped heads. The side walls of the aisles and chancel are perforated with two-light lancet windows, and buttresses between. The clerestory has five trefoil windows on each side. The roof is tiled. In the interior the nave is divided from the aisles by four pointed arches which support the clerestory, whilst the arches themselves are supported by circular columns with moulded capitals and bases. The roof is open, and the timbers are shaped and ornamentally disposed. The seats are open benches with square ends; those in the nave of deal, stained; those in the chancel, of oak. Beneath the chancel is a crypt. Near the church is a residence for the curate in charge of the district.

Devonport.—The foundation-stone of a new Congregational Church at Morice Town, Devonport, was laid on Monday before last. The church, which it is calculated will seat 580 persons, will be in the Early Decorated style, and will consist of a nave and side aisles, with entrance porch at the north; the length of building within the walls being 65 feet, and the width 44 feet. There will be a vestry at the south, from which the pulpit will be approached; and in front of the pulpit (agreeably to the rites of the denomination) will be the communion inclosure, raised 2 feet above the floor of passages, and surrounded with a rail and ornamental ironwork. A small end gallery will be provided for children. The roofs will be open, of stained red pine; the walls of dark limestone, with freestone doorways, windows, pillars, and arches. It is proposed to fill the two south windows with stained glass. Below the church there will be a large school-room, two class-rooms, rooms for the church-keepers, &c.; and adjoining the main building a parsonage will be erected to contain ten rooms. The total cost, including boundary-walls, railing, and drains, will be rather less than 2,000*l*. The architect is Mr. James Hine, of Plymouth.

Handley.—The church here, which has been nearly rebuilt, was opened on Ascension-day. The original church was built in the Norman period. The tower is of the Perpendicular date, of large proportion to the size of the church, and contains four bells. The tower archway, which was blocked up with unsightly boarding,

has been opened to the nave, bringing into view the western window. The walls of the nave have been entirely rebuilt. The roof of oak, renewed in 1611, has been preserved, by taking one side wall down, and rebuilding it before the other was disturbed. The whole of the work has been carried out in the Decorated style of church architecture. The nave has been rebuilt with faced stone inside, the roof decorated and new slated, the porch erected, the chancel new roofed and raised, new windows and door inserted, all the seats new (open), with framed ends and moulded capping, the floors new, the tower repaired, the pulpit, &c. carved, the whole, including the furnishing and architect's commission, at an expenditure of about 500*l*. The tradesmen employed resided in the neighbourhood: they were, Mr. J. Dutton, carpenter, Coddington; Mr. W. Faulkner, mason, Handley; Mr. Spencer, plumber, glazier, and painter, Tattenhall. The chairs, furniture, and fittings were by Mr. Gardner, of Chester; and the whole of the works have been carried out from designs and by direction of Mr. Harrison, of Chester, architect. A stained glass window of three lights, by Mr. Wailes, has been placed in one of the north windows, to the memory of the late Mr. S. Sandbach, erected by his widow: the subject is Samuel brought before Eli, and his ministry.

Coventry.—The bells of Trinity Church, in this city, are now in process of removal from the tower, several architects having pronounced an opinion that the bells could not be rung without endangering the tower and spire. They are about to be removed to a temporary bell-tower, to be erected in the new burial-ground adjoining the church-yard, which will allow of the whole peal being rung when recast. The groined stone roof in the church tower, which has been cut away, will now be rebuilt.

Willenhall.—The foundation-stone of the new episcopal chapel of St. Ann, in the parish of Holy Trinity, Willenhall, was laid by Miss Thorneycroft, of Wolverhampton, on Tuesday before last. The site is given, and the expense of erecting the structure guaranteed, by Mr. H. Jevons.

Leeds.—On Tuesday before last, the foundation-stone of a Presbyterian church, to be called Saint Columba's, was laid. A considerable portion of the edifice, which is situated near Woodhouse-lane, is already erected.

ENGRAVINGS AND ILLUSTRATIONS.

The Britannia-bridge.—An interesting picture by Mr. Lucas of the conference previous to the floating of one of the tubes of the Britannia-bridge, about to be engraved, is now on view at Messrs. Graves's, Pall-mall. It includes portraits of Mr. Stephenson, Mr. C. H. Wild (both good likenesses), Admiral Moorson, Mr. Latimer Clark, Mr. Edwin Clark, Mr. Frank Forster, Mr. G. P. Bidder, Mr. Hemingway, contractor for the masonry, and others concerned in the erection of the bridge. Mr. Joseph Locke, M.P.; and Mr. I. K. Brunel, friendly volunteer assistants on the occasion, are also introduced.

The Royal Gallery of Art.—The sixth part of this interesting work, now issued,* contains a characteristic picture by W. Collins, R. A. "Fisher-boys, Coast of Norfolk;" with Mr. A. Willmore's name to it as the engraver; Sir Thomas Lawrence's "Princess Amelia," very cleverly translated by R. Graves, A.R.A.; and the well-known Canaletti, "The Dogana, Venice," engraved by J. B. Allen. We know of no finer collection of Canaletti's works than that at Windsor. His industry, with due allowance for the counterfeits palmed off on an "enlightened British public," must have been continuous. Mr. S. C. Hall, in his notice of this engraving, mentions a house still standing at Richmond, "which, scarcely twenty years ago, was known to us, and to many more, as the 'Canaletti manufactory;' scores, we may almost say hundreds, of copies were circulated from its workshops; some of which reappear even now in the auction-rooms of the metropolis and of the provinces, where counterfeits are as highly 'valued as genuine copies.'" Every Canaletti in private hands may be looked at with suspicion. "The Royal Gallery of Art" will be a beautiful work.

* P. and D. Colnaghi and Son.

The Seat of War in the East.—Colnaghi's "authentic series" of lithographs, from drawings taken on the spot by Mr. William Simpson, will serve to recall hereafter many of the minutest incidents of the siege. Sixteen additional views are now before us, including "Commissariat Difficulties" (the road from Balaklava!); "The Embarkation of the Sick at Balaklava;" "Sebastopol, from the 26-gun Battery;" "The Charge of the Light Cavalry on the 25th of October," which gives a very clear notion of that extraordinary act; and "A Quiet Day in the Diamond Battery, with a monster Lancaster for a play-thing."

Mulready's Vicar of Wakefield.—Mr. Van Voorst has just now issued a beautiful edition of a beautiful book, "The Vicar of Wakefield, with Thirty-two Illustrations by W. Mulready, R.A." These illustrations, on wood, are too well known to need praise. Although not amongst those who pronounced them perfect on the first appearance of the work, we must consider the series the finest work of its kind as a whole that has been produced in our times. Fine paper, good printing, and a handsome cover, concur to render this a "luxurious" edition.

HINTS ON STYLE.

I WAS reading last Sunday an interesting memoir by the late Mr. Jay, of Bath, and some remarks of his on composition and style in preaching seemed to bear almost with equal force on Architecture and Architectural Design; and although it may have been often said before, we cannot, I think, dwell upon sound principles too frequently, and if you will give them currency through the length and breadth of the land by means of your widely read Journal,—some of the Compo decorators may take a hint. R. S.

"If we follow what is natural, though it may not render us popular, it will keep us from being ridiculous. It is better to effect well what is within our grasp, than to beckon people together to see us fall into a ditch by reaching after fruit that requires longer arms.

'Elegance is minute beauty pleasing propriety: simplicity is essential to it.

Hence Cowper's line—

——'Elegant as is simplicity.'

"It is the same in style as what is called chasteness in painting, and which is the opposite to exuberance and glare. An indiscriminate and usurping application of florid colours may daub a signpost, but will not be admitted into a gallery. It is the same as gracefulness in apparel, which is inconsistent not only with slovenliness, but also with gaudery. A well-dressed gentleman is very distinguishable from an harlequin. See a lady of taste enter a garden: from the profusion of the borders she seeks an assortment of beauty: her eye guides her hand: she gathers, but not all that comes in her way: she selects, and the choice discovers her taste: she arranges, and the order equally displays it.

"The several parts aid each other by their hue and by their position: though brought together there is no crowding: though diverse, there is no confusion; though adjusted, no formality: they open and wave, and retain a natural appearance, even in this artificial state. But another runs on—gathers—and because they are flowers, thinks she can never have enough; and only leaves off, because the hand can squeeze no more: she binds it—it is a *bundle* of flowers—but the other's is a *nosegay*."

"RESTORATIONS" AND THE SOCIETY OF ANTIQUARIES.

SOME time ago Mr. Ruskin proposed that the Society of Antiquaries should undertake the management and disposal of a fund to be subscribed for the preservation of Mediæval Buildings, offering himself to contribute the annual sum of 25*l*. towards the proposed object, and expressing his belief that his friends would be likely to subscribe a considerable further amount.

Ultimately the Society undertook the management of a fund to be raised for such a purpose; and recently the council have circulated the following memorandum:—

"The numerous instances of the destruction of the character of ancient monuments which are taking place under the pretence of restoration, induce the executive committee, to which the Society of Antiquaries has entrusted the management of its 'conservation fund,' to call the special attention of the Society to the subject, in the hope that its influence may be exerted to stop, or at least moderate, the pernicious practice.

The evil is an increasing one; and it is to be feared that, unless a strong and immediate protest be made against it, the monumental remains of England will, before long, cease to exist as truthful records of the past.

Much as these monuments have necessarily suffered from time, and much as their decay is to be attributed to the neglect of their owners, the members of the committee have no hesitation in expressing their conviction that these two causes combined have inflicted less injury than the indiscreet zeal for restoration.

Though time and neglect may impair, and eventually destroy, they do not add to a building; nor do they pervert the truthfulness of monuments. Restoration may possibly, indeed, produce a good imitation of an ancient work of art; but the original is thus falsified, and in its renovated state it is no longer an example of the art of the period to which it belonged. Unfortunately, too, the more exact the imitation, the more it is adapted to mislead posterity; and even the best imitation must unavoidably impair the historical interest and artistic value of the prototype, so that, in truth, a monument restored is frequently a monument destroyed.

Did the public at large really know how imperfectly, the principle and practice of ancient art are understood, and how very few of the so-called restorations have any just pretensions to fidelity, or could they appreciate the rash presumption of those who in general recommend and undertake such work, much less would be heard of money being lavishly spent in thus perpetrating irreparable mischief with the best intentions.

The committee strongly urge that, except where restoration is called for in churches, by the requirements of Divine service, or in other cases of manifest public utility, no restoration should ever be attempted, otherwise than as the word 'restoration' may be understood in the sense of preservation from further injuries by time or negligence: they contend that anything beyond this is untrue in art, unjustifiable in taste, destructive in practice, and wholly opposed to the judgment of the best archæologists.

(Signed) STANHOPE, President.
J. Y. AKERMAN, Secretary."

AN ARTISTIC OLIO.

As the upholders of art, in whatever shape it appear, so as it be genuine, we feel we should scarcely fulfil our conditions, still less satisfy our inclinations, did we not devote a few lines of approbation to Mr. Woodin's "Olio of Oddities."

Mr. Woodin is no common artist: his sketches are neither the startling crudities of ultra-originality, nor a series of *rifacimenti* of well-known portraits, touched up and redressed to suit modern tastes; but there is a freshness of conception and vigour of execution about them which indicate undoubted ability, and effectually disarm the slightest suspicion of plagiarism.

Apart from the individual merits, more or less, of the numerous portraitures which constitute the structure of this very entertaining monologue, the number of the characters and extreme rapidity of their changes are something quite marvellous to witness.

In the space of two hours, he presents you with thirty or forty portraits, all drawn from the life, and some of them so true to their originals that the most obstinate stickler for likeness cannot fail to recognise their strong resemblance to the type whence they are derived.

The first character, "An Animated Sandwich," makes his audience as completely "at home" as himself, and proves his touch to be masterly; and his subsequent impersonations more and more illustrate the value of first impressions.

A piece of comic vocalisation introduces a "Chapter of Critics," from the sententious and pouderous Dr. Johnson to the off-hand, fragmentary, ejaculatory critic of the shilling gallery.

"Travelling and Travellers" next introduce you to Mr. Woodin's Sketch-book, a series of well-painted views of the Lakes of Cumberland. The numerous characters encountered in this tour form the staple of the entertainment, allowing no breathing time to the versatile actor, and scarcely more to the beholder.

Some accurate impersonations of a few of our best known evening entertainers conclude the performance with *éclat*. Evidence of good taste pervades the whole arrangements. The stage is separated from the audience by a refreshing mass of green rock-work, lit by coloured lamps, and the fittings are very elegant. It is, as we said before, an artistic exhibition, and as such we warmly recommend it to the patrons of art in general.

"WANTED! A WASH."—I have some small houses that I want to do up, but what am I to do to the walls? Paint is expensive: paper is also dear, easily soiled and torn, and harbours insects: colouring looks very beggarly, and rubs off. What I consider is wanted is a new material, combining in some degree the cheapness of whitewash, and the durability of paint, the following qualities being essential;—easily laid on with a stock brush, good body, bear washing, and take any cheerful tinge.

A HOLDER OF HOUSES.

ROTHERHITHE AND ITS NUISANCE.

A CORRESPONDENT, B. S. S. writes again on the subject of the large tidal ditch which divides the parishes of Rotherhithe and Bermondsey. He says it is in reality an enormous elongated cesspool, nearly a mile in length, and varying in width from 6 feet to 30 feet; is the receptacle of every description of filth and refuse, both animal and vegetable; and is as offensive to the sight as it is injurious to the health.

It is now twenty-five years since this ditch was used as a mill-stream; and since that period the mud and filth have been allowed so to accumulate that they are above the surface of the adjoining ground, and during last summer it frequently occurred that the tides were not high enough to flow into these ditches for days, so that this vast surface of putrefaction and decay lay rotting and festering, exposed to the full action of the sun, generating those poisonous gases and noxious effluvia which have destroyed so many valuable lives, and have caused such an indescribable and incredible amount of misery and suffering throughout the neighbourhood.

When the cholera raged in Rotherhithe in 1849, its first appearance was in Gilham's-court, adjoining this ditch, where it proved fatal to three persons in one house; and its ravages along its course are but too well known.

Lord Palmerston was memorialised to use his influence to get these places filled in. Mr. Rawlinson and Dr. Milroy inspected them, and were both horrified.

The cholera came, and I hope, says our correspondent, I shall never again be an eye-witness to such scenes of grief and misery as came so suddenly and unexpectedly upon these unfortunate people. The Commissioners of Sewers filled in similar ditches in Bermondsey, and why should not they do the same in this instance, and that speedily, before cholera again commits such frightful ravages as on two previous occasions?

COMPETITIONS.

Dudley.—The first premium for the Dudley Workhouse has fallen to Mr. G. B. Nicholls, of Westbromwich. The second to Messrs. Bidlake and Lovatt. The Architectural Society of Birmingham met on Friday in last week, when the Dudley workhouse business was discussed. It was considered too late, however, to do anything in the matter, but they resolved to open the society to the Midland Counties, and try by that means to counteract any future proposition of "not exceeding 4 per cent." in competitions.

Edinburgh Meadows.—We are informed that at a meeting of the committee held on Saturday last, the first premium (50*l.*) was awarded to the plan No. 8, bearing the motto "Dum Vivimus Vivamus," and the second to that marked No. 1, with the superscription "Auld Callan." Upon opening the sealed envelopes which accompanied the plans, it was found that the successful competitors were Mr. Thomas Davies, Edinburgh, and Mr. Geo. M'Ewen, gardener, Arundel Castle, Sussex.

ST. ALBAN'S ABBEY.

IN the notice of the plan of St. Alban's abbey in the *Builder*, p. 217, *ante*, it is stated that "there are remains at the extreme west end of the nave of western towers *appertaining to the Norman building*." It is true that the foundations of the Early English work at the west end are of Roman brick: as the Norman walling throughout is of the same material, it has led to the supposition that the extreme western foundations must have been part of Abbot Paul's original plan, and that consequently the Early English portion of the nave is but a *re-edification* upon a Norman substructure. The mere presence of Roman brick discoverable below the surface at the west end hardly warrants the inference that the foundations are therefore Norman; for the adjacent city of Verulam continued to furnish this material for several centuries later, as may be seen in those portions of the church contiguous to the Lady Chapel, these being of Decorated date. An attentive examination of the Abbey Church would lead to the conclusion that the western termination of the original nave fell short of the existing one; that it was taken down during the abbacy of John de Cella; and that the Early English work was an entirely new addition—a lengthening of the old nave, in fact—by that abbot. For this supposition the following reason may be given, but it is not the only one that might be adduced. If we suppose the lines of the original Norman plan to be continued westward, they would not fall upon those of the later work at the west end: in other words, the Early English walling stands rather obliquely to the Norman. Now, although it is easy to conceive that an aberration of this nature might arise in the lengthening of a building (and several examples could be referred to in which the like sort of obliquity exists between later and more ancient work); yet, if the foundations of any separate division of a church, such as the Norman nave of St. Alban's Abbey, had been cast simultaneously, there is no apparent cause for such irregularity in the lines. If the extreme western foundations are parts of the original plan, we shall have to suppose that the Norman builders carried their walling in unbroken lines from the transept to the points at which the Early English work begins, and gave the remaining length of the plan a turn to the northward. I should be disposed to think that the Norman nave extended no farther west than one compartment beyond the last pillar of that date on the north side, and that the bricks forming the Early English foundations are the materials of the original west front, pulled down when Abbot John de Cella made his addition.

G. E. LAING.

FORM OF WROUGHT-IRON BEAMS.

INSTITUTION OF CIVIL ENGINEERS.

ON the 8th the discussion was renewed on Mr. Barton's Paper "On the Economic Distribution of Material in the Sides, or Vertical Portion, of Wrought Iron Beams." The opinions expressed were very various. Reported without the names of the speakers they would simply serve to mislead. By one speaker, after recapitulating the leading features of the paper submitted to the Royal Society by Mr. W. H. Barlow, and which had been quoted from at the last meeting, it was argued, that the actual position of the neutral axis being there established, the resistance at the outer fibre of a beam could be estimated, from the weight required to break it, when applied transversely. In cast iron, the resistance at the outer fibre was 40,000 lbs. while the tensile strength was only 17,000 lbs. A bar broken by direct tensile strain was broken without flexure; whilst a bar broken by transverse strain must first be bent.

The experiments showed, that of the 40,000 lbs. total resistance at the outer fibre, 23,000 lbs. were required to bend the beam, and 17,000 lbs. to overcome the tensile strength of the metal. In open girders the ultimate resistance was between 17,000 lbs. and 40,000 lbs. and it was found by experiment to increase as the ratio of the depth of metal to the total depth of the beam increased.

In an open girder, in which the depth of the metal was half the depth of the beam, the resistance at the outer fibre was 28,000 lbs. and the experiments traced the resistance gradually up to 40,000 lbs. in the solid beam.

In wrought iron, the resistance to flexure was less in proportion to tensile strength than in cast iron. Nevertheless it was an important element of strength, even in wrought iron; the resistance at the outer fibres in a solid beam being 50 per cent. greater than in an open girder, depending for its strength solely on the resistance to extension and compression.

Mathematicians had applied the axiom, "ut tensio sic vis," in the case of transverse strains, in which continuous fibres were unequally strained, without considering the lateral action arising from the cohesion of the particles: this, it was argued, required modification.

Drawings were exhibited of the bridge designed in 1850, by Captain Moorsom, and for which he obtained the engineering prize, from the Prussian Government, for the proposed great bridge intended to have been erected over the Rhine, at Cologne.

The bridge was intended to have been on the lattice principle and constructed of wrought iron,—with three openings, two of 600 feet span each, and one, an opening arch, of 100 feet span.

The total length of the beams was about 1,380 feet, and that of the bridge, from end to end of the arched approaches, was upwards of 2,000 feet. The width was to be 50 feet, and the soffits of the beams were to be 45 feet above the high-water line, and about 65 feet above the bottom of the river. The ultimate strength of the large beams, of 600 feet span, was calculated at 11,500 tons, distributed over the two. The quantity of metal in each of the large beams was 13,514 cubic feet of wrought iron, or about 2,865 tons, being about 4·83 tons per running foot, for a width of 50 feet.

It was contended, that this trellis bridge, would have been a more advantageous employment of the material, than if disposed as tubular beams for the same span.

The rule for calculating the strength of cast iron beams, given at the last meeting, was taken exception to, as not being so correct as the old rule, known as Professor Barlow's formula:—

7,600 constant for cast iron,
× sectional area,
× 4 times the depth,
÷ the clear span,
} all in inches,

gave the breaking weight on the centre in lbs. By this rule the breaking weight of the beams, stated to have been 26 tons, would have been 47 tons.

In reply it was stated, that the rule referred to was in effect nearly the same as that which had been given previously: both would give nearly the same results, provided the top flange was sufficiently large to act as the fulcrum upon which the remainder of the beam must be broken in tension.

Another edition of the rule referred to was,—

Total area of beam;

× Depth from top of beam to centre of gravity of the section;

× Constant number of 25;

÷ Length of bearing (in inches), gave the breaking weight on the centre, in tons, when supported at each end. This rule was approximately correct, but would be found to give sometimes too low and at others too high a result, whereas the rule given at the last meeting would be found correct for all cases.

It was contended, in closing the discussion, that the question resolved itself entirely into the relative value of the vertical middle rib, whether of the trellis form, the "Warren" truss, or the plate beam,—the top and bottom remaining the same in all cases. Practically the principal saving, in using the trellis system, must arise from the opportunity of employing merchant bars instead of plates, and in the truss, in introducing a certain quantity of cast iron; against which, independent of all other advantages, must be put the facility of construction and of being raised entire to its position possessed by the plate beam.

As to the so-called neutral axis, if by that term was meant a portion of material not performing any duty, it must be admitted that though there might be a point of reduced action, yet that all the particles in a plate beam were doing more or less duty at all times, and in that sense there was no neutral axis.

Many practical considerations, it was argued, induced the employment of the tubular plate beams, and the result had shown, on all the occasions of their use, their peculiar efficiency, especially as they had chiefly been employed in situations where it would have been impracticable to have established the scaffolding indispensable for the construction of the trellis beams; therefore any attempt to draw comparisons between the systems failed in the essential point of identity of situation and circumstances.

Miscellanea.

BRIDGEWATER CHURCH AND THE ARCHITECT'S CHARGES.—The architect's charges for the works done in the restoration of Bridgewater Church have been the subject of local animadversion, and we have been invited by the *Bridgewater Times*, and by private letters, to express an opinion on the subject. The charges amount to 570*l.* 7s. 4d. on an outlay of, according to the architect, 3,946*l.* and on the face, certainly, look larger than architects usually have the good fortune to obtain. There is this peculiarity about the matter, that the architect, by special arrangement, acted also as clerk of the works, at a weekly salary, by which means, as he sets forth, the parish were saved a large sum of money through the re-use of the old materials. There may have been other special circumstances, and we might commit an injustice if we made any adverse observations.

PROPOSED WIDENING OF HUNGERFORD-BRIDGE, AND NEW LONDON RAILWAY.—At a meeting of the Parliamentary Committee on Metropolitan Communications last week, plans were produced for the purpose of forming a tunnel railway from the London and North-Western Railway to effect a junction with Hungerford-bridge, over which it would pass on to the South-Western Railway. From this point it was proposed to carry on arches a branch line of railway to London-bridge, which would completely unite all the railways on the south side of the river with those of the north. It was proposed to widen Hungerford-bridge 50 feet, and by two girders in the centre to strengthen the bridge.

REMOVAL OF AN OLD MANSION IN THE MARKET-PLACE AT PRESTON.—Almost the last relic in Preston of a bygone age is now being rapidly dismantled. It is the last of a cluster, built in the reign of the first Charles, and bearing the date 1629. They were wooden ones, known by the name of "postern painted," and rose in successive tiers of curiously carved projections, that made each house appear like the stern of a modern ship of the line. The various projections were supported by grotesque figures, carved *in alto*. Many of the houses facing Cheapside, Preston, and connected with these buildings, were after the same style, and had points supported by wooden maintainers, under which the old dames of Preston were wont to spin linen with their distaffs.

THE IRON TRADE.—Collapse has entirely superseded the past high-price fever in this trade. Depression and heavy failures are the chief subjects of talk in the midland districts of the trade; and in South Wales also many of the works are said to be making iron at a loss.

Ancient Obelisk or Cross in Leek Churchyard.—At the last "Chapter of the Order of Rosicrucians" (a society of antiquarians in Manchester), one of the members gave an oral communication on the subject of a reputed Danish and mortuary cross, in the churchyard of Leek, in Staffordshire. This stone was described, and a drawing of it compared with others in Staffordshire and Cheshire, especially Clulow Cross, near Winkle; a cross between Upton and Fallibroome; a similar cross in the yard of the old (fourteenth century) grange of the Monks of Combermere Abbey, at Winkle; the Bow Stones near Lyme Park; and the Jordan Law Crosses, now deposited in the chapel at Lyme Hall. The chief features of resemblance in these various old obelisks (for they have no cross-arms, like the Calvary cross, but are simply pillars of stone) are, 1st, that at about two-thirds of their total height, they are encircled by a fillet; 2nd, that they have the upper third squared; and, 3rd, that those (too few) which do remain in their entirety, like the Leek cross, have a small ornamental head, like the pomegranate terminal of church stalls and seats. The opinion of the speaker was, that the cross at Leek was neither Danish nor Saxon (as some had supposed from its rope or chain tracery), but Norman. He believed these "crosses" chiefly (perhaps all) to be mere boundary stones, erected by the monks of Combermere and other religious houses, to indicate the extent and limits of their lands.

White Lead obtained by Precipitation.—Mr. Richard Baker, of Newark, New Jersey, has patented an improved method of producing the white carbonate of lead of commerce, consisting of a combined arrangement of apparatus, constructed so as to produce the carbonate by precipitation, more expeditiously and economically than by the usual methods. The apparatus consists in connecting with an air-pump a series of a great number of distribution pipes, descending vertically from a main horizontal tube, and passing down through the head of the precipitating vessel into a solution of sub-acetate of lead,—one pipe at least for every square foot of surface of the top of the vessel, thereby traversing the solution with a great number of small jets of carbonic acid gas, causing a rapid decomposition of the sub-acetate in solution, and a deposition of carbonate of lead, and as the vertical tubes cannot choke up with the ponderous precipitate, a constant blast is secured.

Waterproof Mineral Paint.—A peculiar substance was, a few years since, discovered in the Bridgewater Mountains, New Jersey (U.S.), composed of silica, alumina, and peroxide of iron, in chemical combination, which is stated by the proprietors to form a valuable and perfectly fire and water-proof mineral paint, and has recently been introduced into England. Its properties are said to be adhesiveness, flexibility, and great durability, being an effectual protection against rain, sea-water, and damp, becoming, after a few months' exposure, hard and lasting as stone, and perfectly fire-proof, its dark red colour never changing, even in the hottest climate, and neither cracking, blistering, nor decaying. It is said to require a smaller quantity of oil, too, than other paint, to cover well, work easily, and emit no unhealthy effluvium.

Originality in Architecture.—The regret expressed by yourself and your correspondent, Mr. Tarbuck, respecting the present state of architecture, may be almost as deeply appreciated by your non-professional as by your professional readers; and we, who want to be taught by the earnest and the truthful, feel that we must look to your pages for the visible action of that spirit which is to teach. But what are the errors which have to be swept away before truth can come? Each department of life possesses its own Augean stable. If we commence with that error which inspired the Egyptian, the Greek, the Roman, in the erection of their stately temples, where, we may ask, shall we find it now? Fortunately for the future, past errors are being swept away; and we cannot resuscitate the dry bones of dead religions; and the time is coming when metaphysics and philosophy will have completed their work for the present cycle, and when architects will be duly inspired with their truthful teaching. Then, and not till then, shall we have architects worthy to be compared with those of Egypt, Greece, and Rome. In domestic architecture no improvement of any importance can take place till those who design and build are more fully impressed with the importance of their profession in relation to the health and lives of their fellow-men. But this age may claim to itself a new mode of architecture for public buildings, although it be not applicable to many purposes, and the same kind of genius which inspired it would, if it had scope, suggest more graceful structures, for the more permanent wants of the time. Let architects continue to write and talk and then the public may hope to see some of the good results from such as your obedient servant,

Tyro.

Dover Harbour and the New Concrete Machine.—In connection with the works for the harbour of refuge and new pier at Dover, a correspondent informs us that a machine has been made by Messrs. Gilbert, for Messrs. Lee, the contractors, which mixes a large quantity of concrete almost instantaneously. It consists of an iron cistern, which is half-filled overhead from a hopper: the cistern revolves diagonally on an iron shaft, and the contents are then shot out ready mixed.

The Sewer Question at Brecon.—The Local Board of Health at Brecon, after a long and learned discussion, have come to the conclusion that there is nothing like an open sewer for sanitary welfare, a conclusion up to which they have, in fact, resolved practically to act, inasmuch as they have decided that an offensive open sewer called the Madrel shall *not* be covered over, as covered sewers concentrate the offensive effluvia, and render them more pernicious. It seems pretty clear that the Brecon sanitarians calculate discreetly on stagnation in their sewers; but we fear that even then they have overlooked the slight circumstance that the summer sun (or even sometimes the winter one) beaming all along an open sewer will convert it into something scarcely so delicious as a bed of roses. As it is, we should like to know whether the Central Board of Health has given its sanction to the new principle in sanitary science thus evolved by certain of the natives of that picturesque province to which the president of the Board belongs, and as it were under his very nose, considering the proximity of Brecon to Llanover. It is but justice to the minority of the Brecon board to state that such a minority has an actual existence, although the medical authority who voted for the open sewer plainly does not belong to it.

The Paris Lodging-houses.—From a letter in "The Labourer's Friend," written by Mr. G. Clark, of Paris, director of an Anglo-French Association for the erection of model lodging-houses in Paris, under the patronage of the French Government, it appears that the habit of unmarried French workmen of depending on their landlords for cooking their victuals, together with the desirability of adhering as much as possible to such habits, where otherwise unobjectionable, suggested to Mr. Clark the advantage of so disposing of the model lodging-houses, that, in place of paid managers and servants, occupying unrentable spaces, there would be one chief tenant, paying rent for the street floor as a shop suitable for a "traiteur," a "restaurant," or a coffee-housekeeper, baker, or other tradesman, depending much on the consumption of the working-classes, and who should engage to provide cooked meals for the other tenants, besides carrying on a more general business. Thus, the lodgers and the ground-floor tenant are mutually useful, while otherwise independent of each other, and the speculation is not burdened with expenses of management, as in salaries for housekeepers and servants, or curtailed in available profits from rents for the spaces so occupied. Mr. Clark suggests the adoption of some such plan in London, especially with the street floor let as a coffee-house to the principal tenant, as affording the speculation a better prospect of success in a good return on the capital laid out in the erection.

New Heating Apparatus, by means of Fluids.—General H. Dembinski, of Paris, has patented in this country, as well as in France and Belgium, new arrangements for heating rooms, large buildings, and hothouses, and for cooking and other purposes. The general principle is such an arrangement of fluted or plain tubes, with tufts of wire passing through them, to be heated in any convenient manner, as, while hot, can have water continually to flow over or through them. This heated surface being extensive, in proportion to the water to be heated, keeps the latter in a constant state of ebullition, and by passing it in that state through other pipes, so as to re-circulate over the heated surface, great economy of fuel is estimated to be the result. Ornamental vases, pillars, plinths, and other architectural and fanciful designs, may be made the heating medium in halls, staircases, single apartments, &c. One peculiar arrangement is adapted to camp purposes, combining a heating apparatus with a large cauldron for cooking the mess for the troops.

Smokeless Furnace.—In a steam-boiler furnace in action, on a 25-horse power boiler, at granaries and flour-mills at Winchester-wharf, Southwark, every alternate bar is so connected with a cross-piece at each end as to form one entire moveable frame, which is connected by gearing with the motive-power. The motion given to it is angular. What are termed the stationary bars are not fixed as usual, but hung so as to balance the vibrating frame with the load of fuel which it has to move. The fuel is fed through a hopper and regulating incline plane, and the whole is self-acting, requiring, it is said, but little attention from the stoker. The saving of fuel is estimated at about 10 per cent.

Scottish Society of Antiquaries.—At the seventh meeting of the session, held at Edinburgh, on Monday before last, Mr. A. H. Rhind read a paper on "British Primeval Antiquities; their present Treatment and their real Claims." Mr. Rhind concluded his paper by urging on the society the propriety of impressing on landowners the value of existing remains. Mr. Stuart entered into details as to the destruction going on, more especially of the sculptured stone monuments of Scotland. It was resolved that steps be taken for impressing on landowners the desirableness of taking better care of these interesting remains.

Sand Drainage.—By observing and imitating nature, says a Fife correspondent of the Notts *Guardian*, a drain can be formed cheaply to last for ever, that roots of any description shall not choke. Where natural drainage takes place it is by seams of sand or gravel: now, by cutting a drain in the usual fashion, and filling in six or eight inches of pure sand, river sand if possible, and covering in over this, you have a drain that is permanent—in fact, everlasting if undisturbed; for although tree or other roots may run through it, the sand can never be so displaced as to affect the drainage in any sensible degree. I have often wondered why sand-drainage is never used, being so cheap and so permanent.

Rancid Oil.—Dr. Griseler, a French gentleman, has discovered that by adding a few drops of nitric ether (known as spirits of nitre) to the most rancid oils, all the disagreeable smell is removed, and that by afterwards warming the oil, to separate the spirit from it, it becomes as clear and limpid as though it had never been otherwise than sweet. He says that a few drops of ether in a bottle of oil will prevent it from ever becoming rancid. The ether is based on hydrogen, which doubtless neutralizes the oxygen to which the rancidity of the oil may be attributed. Would not naphtha or turpentine act in a similar way on rancid oil?

Iron Beams.—With reference to a question raised during the recent discussion on wrought-iron beams, I have tried some experiments, and find that on the upper surface of a loaded beam the longitudinal lines are *compressed*, and the transverse lines *extended*: at the same time on the under surface the longitudinal lines are *extended*, and the transverse lines *compressed*. In my experiments the beam was loaded on the upper side, and the vertical lines became *compressed*. It is probable that in a compound or trussed and framed beam, loaded on the *lower* part, the vertical lines may be subject to extension and diagonal lines to compression.—Robt. Sheppard.

Chloride of Lime.—The "Analytical Chemist" who lately addressed us on the subject of "home-made chloride of lime," writes again to state that the following mixture will be found about the best for disinfecting purposes:—Commercial chloride of lime, 4 lbs.; peroxide of manganese, 1 lb.; powdered charcoal, 5 lbs. The whole cost of 10 lbs. of this mixture will, he says, be 1s. 3d. retail. In cases of cholera, fever, &c. he fills, with this mixture, a large flower-pot (the hole stopped with the porous plaster of Paris), and sets it in a vessel containing vinegar and water. In reference to his previous communications, our correspondent states that in practice he finds that the chloride of sodium and lime of the "home-made chloride," mixed with water in the way indicated, do not even produce chloride of calcium until the lime gradually absorbs carbonic acid from the air.

"Highbury,—Return."—Dear Mr. Editor,—I beg to call your attention to the bad policy on the part of the directors of the North London Railway, who have ceased issuing return day tickets on this line since the 1st of April. The sixpenny return tickets for the short journeys—say from Hackney to Highbury—were all very well, but the extra twopence few will pay, but will prefer either walking one way or taking the omnibus. There are many who have taken houses on this line, and travel to Fenchurch-street and back daily: the extra twopence a day would be 2*l.* 12*s.* 2*d.* a year, which a poor clerk with a family could ill afford; and, moreover, it is well known to all that this line of rail has paid better than any in London. Myself and many of my friends, not liking to be imposed upon, now walk twice a week from Hackney to Highbury: no doubt many do the same, and the directors will find, if they have not found it already, that they will lose instead of gain by the change.

Marie.

TENDERS

For a House in Surbiton Park, Kingston-on-Thames, for Wm. Watkins, Esq.; Mr. W. Harriss, architect:—

Hayward and Nixon (London ...	£7,987 0 0
Patman (Kingston)	7,979 0 0
Nye (Ealing).....	7,363 0 0
Fisher (London)	7,350 0 0

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the EDITOR, and not to the Publisher.

ADVERTISEMENTS.

TO PARENTS AND GUARDIANS.

AN Eminent Architectural Firm, in a large manufacturing district, in one of the midland counties, have now a VACANCY in their Offices for an OUT-DOOR ARTICLED PUPIL, possessing a good address, and having a taste for drawing; to whom will be afforded peculiar opportunities and advantages.—Address to A. & B. Office of "The Builder."

A LAD WANTED, in the Office of an Architect and Surveyor, who can write fairly. &c. a week given only at first, with opportunities for instruction.—Address in own handwriting, stating age, &c. to B. H. at Warren's Library, London-street, Piccadilly square

TO PLUMBERS.

WANTED, an experienced PLUMBER. No person need apply unless he is thoroughly acquainted with the business, and his character will bear the strictest investigation. The situation would be permanent, and at liberal wages.—Apply to JOHN JOHNSON, Holyhead-road, Coventry.

TO GRAINERS, PAINTERS &c

WANTED, a first-class OAK GRAINER, for the country.—Address to W. B., J. C. Dunn's, 122, Bishopsgate street, London.

TO DECORATIVE ARTISTS, &c.

WANTED, a Person competent to PAINT GREEK and ETRUSCAN VASES, after the manner of the antique.—Address, stating terms required, &c. to A. B. Office of "The Builder"

WANTED, a YOUTH of good address, and with a knowledge of DRAWING, to assist in a manufacturer's counting-house and show-room in a branch of fine-art manufacture.—Address, X Y. Office of "The Builder."

WANTED, a FOREMAN of JOINERS, capable to make WORKING DRAWINGS for the men. Apply, with references, to JOHN DICKS'N and CO. Shrop-hire Works, Wellington.

WANTED, in a Builder's Office, a JUNIOR CLERK; one who has filled a similar situation before would be preferred.—Apply, stating salary required, by letter only, to A. B. 34, Dartmouth street, Westminster.

WANTED, a responsible PERSON, qualified to execute plans and specifications (principally for shop-fronts, &c.), and get out quantities; he must understand book-keeping.—Apply by letter, stating salary required, &c. to A. B. 9, Bath-street, Newgate-street.

WANTED, good BENCH HANDS and FIXERS; also a WORKING SHOP FOREMAN and OUT-DOOR FOREMAN.—Apply to Messrs. J. and C. W. TODD, Milner-street, Brompton, before ten in the morning, or after six in the evening

WOOD PLANING and MOULDING.—WANTED, a competent MAN, to WORK PARS NS PLANING MACHINE, and also a MOULDING MACHINE.—Apply, by letter, addressed Wood Sawing, Planing, and Moulding Mills, Commercial road, Wolverhampton.

WANTED, EXCAVATORS, WELL-SINKERS, and BRICKLAYERS, at the Temporary Barracks, Storn lffe near Folkestone, Kent.—Apply to the Contractor, Mr. J EDWARDS, on the works None need apply without tools.

WANTED, by an Engineer, an ENGAGEMENT as OUT-DOOR SUPERINTENDENT, either abroad or in this country; he has had the charge of several Iron Bridges during their construction and erection, and also of other works of importance, and is well acquainted with constructions in iron and wood. Good testimonials given.—Address, H L Q care of W. Conn, Bookseller, Pa'ndre

TO BUILDERS AND OTHERS.

WANTED, by a respectable Young Man, a Carpenter, a SITUATION as TIMEKEEPER and CLERK, or assistant employment as CARPENTER; is willing to make himself useful. Wages not such an object as employment.—Address, A.B Post-office Colney Hatch.

WANTED, by a Draughtsman, EMPLOYMENT in a Civil Engineer's Office.—Address, F. S. H. 54, Brudenell-place, New North road, Hoxton.

WANTED, by a Young Married Man, a SITUATION as Secretary, Rent Collector, Superintendent to a gentleman's estate, or as Foreman to a Builder The Advertiser has received an excellent education, being a good accountant, well versed in Mensuration, with a knowledge of the French and Latin languages. Unexceptionable testimonials for strict integrity, steady business habits, general good moral character, and can give satisfactory security if required.—Address, G. P. Mr Webb's Mineral Water Works, Islington-green.

TO MASTER PLUMBERS

WANTED, by a respectable Young Man, sober, and of good character, a permanent SITUATION in a PLUMBER'S SHOP, to attend on the Plumbers, or to make himself useful to his Employer; has a small knowledge of the business; wages, 18s.—Address, to DAVIS, 4, Red Lion-passage, Fleet-street.

WANTED, by a Young Man, who is a good colourist and perspective draughtsman, a SITUATION in a London Architect's Office, at a moderate weekly salary. A week's trial will be given.—Address, H. S. V. Springwell Cottage, Hayes, near Uxbridge, Middlesex

WANTED to APPRENTICE a YOUTH, aged 17, to the CARPENTERING and JOINING, he having served two years at the above business.—Apply to W. O. 12, Dover-street, Piccadilly.

TO ARCHITECTS, BUILDERS, AND OTHERS

WANTED, a SITUATION, as OUT-DOOR SUPERINTENDENT of WORKS, by one having a thorough practical knowledge of building in detail, also measuring up works, and taking out quantities; can make working drawings.—R eferences to London and Provincial Architects, by whom he has been employed for several years.—Address, J. B. 207 Albany-road, Kent-road, London.

TO WHARFINGERS AND OTHERS.

WANTED, by a married Man, aged 30, a SITUATION to assist in, or to superintend, the business of a Wharf, or place of a similar description. Very moderate wages only expected. Satisfactory reference, &c can be given.—Address prepaid, Z. 6, Randall-street, Erith

TO ARCHITECTS, BUILDERS, AND OTHERS.

WANTED, by a respectable married Young Man, a thoroughly good Accountant, and a Practical Book-keeper the GENERAL MANAGEMENT of an OFFICE, or to KEEP the BOOKS of an ESTATE; can produce good testimonials.—Address, C.S. Post-office, Ring William-street, City.

TO ARCHITECTS AND SURVEYORS, OR CIVIL ENGINEERS

WANTED, a SITUATION in an ARCHITECTS and SURVEYOR'S, or CIVIL ENGINEER'S OFFICE, by a Youth, who understands Railway and Land Surveying, Levelling, Mapping, &c. and can draw plans and sections. Moderate salary required.—Address, post-paid, to A. G. B. 39, Warwick street, Regent-street, London.

TO PLUMBERS, PAINTERS, GLAZIERS, BUILDERS, &c.

WANTED, by a good practical Tradesman, with a small knowledge of gas-fitting, a SITUATION as Foreman, or constant Hand No objection to go abroad.—Address to J. L. Office of "The Builder."

TO BUILDERS AND OTHERS.

WANTED, an ENGAGEMENT (in town or country), by an ACCOUNTANT, well acquainted with the office duties, of experience in getting out prime cost, pricing the various trades' charges, quantities, &c. No objection to render temporary assistance.—Address A. Z at Mr. Watkins's, Plumber, Southville, Wandsworth-road, Surrey.

TO BUILDERS, PLUMBERS, AND OTHERS

WANTED, by an experienced young Man, a SITUATION as PLUMBER, PAINTER, GLAZIER, &c.—Address, 7, James street, Oxford-street.

WANTED, by a Stonemason (married man) a SITUATION as Estate Mason, Lodge or Gatekeeper, or to attend and keep in repair a small Estate of Houses, or would make himself otherwise useful to his employers.—Address T. W. Mr. Forrest, 3, Yeate's-court, Lincoln's-inn, London.

TO BUILDERS AND OTHERS.

WANTED, an ENGAGEMENT, by a Young Man, 27 years of age, who has been accustomed to measure off works, take out quantities, and to general routine of the office. The Advertiser has been brought up at the Carpentery Business, and is a neat Draughtsman. The country not objected to.—Address, L. M. O. Office of "The Builder."

TO ARCHITECTURAL ASSISTANTS.

WANTED, an ASSISTANT, who has had some experience in Mediæval Architecture; can execute finished and working drawings, can take out quantities.—Address, stating age, amount and kind of experience, salary required and enclosing copies of test mounts, to MIDDLETON and PRITCHETT, 85, Bondstate, Darlington.

THE Advertiser, a Young Man, aged 24, is desirous of an ENGAGEMENT. He has been brought up on railway and public works generally. Thoroughly understands levelling, setting out, and measuring up work. Is practically acquainted with, and competent to undertake the entire duties of an Assistant Engineer. Unexceptionable references.—Address, P. W. 34, Luard-street, Caledonian-road, Islington.

TO BUILDERS, PAINTERS, DECORATORS, AND PAPER-HANGERS

THE Advertiser, a thorough practical Painter, Grainer, and Paperhanger, wishes to ENGAGE for a permanency, as GENERAL HAND or WORKING FOREMAN First rate reference.—Direct to P. N. No. 11, Durham-street, Vauxhall.

TO ARCHITECTS, &c.

THE Advertiser, who is a first-rate Draughtsman, and has a thorough knowledge of construction is open to a RE-ENGAGEMENT Unexceptionable testimonials can be given Ad ress, H. R. M. 9, Harpur-street, Red Lion-square, Holborn.

TO ARCHITECTS.

THE Advertiser, who is a first-rate draughtsman, and has had great experience in detail and construction, is open to an ENGAGEMENT.—Address to W. W. 39, Michael's-place, Brompton.

TO ARCHITECTS AND SURVEYORS.

THE Advertiser who has just completed his Articles with an Architect and Surveyor, in the country wishes for an ENGAGEMENT in a London Office. Salary not so much a consideration as improvement. Good references will be given.—Address, R. R Office of "The Builder."

TO GAS COMPANIES.

THE Advertiser, having for a period of years had the management of a provincial Gas Company's works and business, from which he has recently retired, is open to a similar ENGAGEMENT, or any sectional department, where the establishment is on a large scale would have no objection to engage for commencing duty on the 1st July next, or sooner, if required. The Advertiser is prepared to give unquestionable reference as to his capability and respectability.—Address, A. D. M care of Witham Neely, Stationer, St. Swithin's-lane, City.

TO CIVIL ENGINEERS AND ARCHITECTS.

A LAND and Engineering SURVEYOR and Architectural Draughtsman conversant with Town Surveys as required by the Public Health Act, will shortly be OPEN to an ENGAGEMENT. Has also been upwards of two years in a Town Surveyor's Office.—Address, C. E. Elm-cottage, Emanuel-road, Cambridge.

TO GLASS MANUFACTURERS.

A GENTLEMAN who is the owner of a Cone, with twelve workmen's Cottages, at Newcastle, is desirous of taking a PARTNER who can command Capital and will personally exert himself in the trade Further particulars may be learned on application to Mr. WOODMAN Solicitor, Morpeth

TO SURVEYORS, BUILDERS, &c.

A SITUATION WANTED, by a Young Man, practically acquainted with the Building business, Drawing, Measuring, Book keeping, &c. No objection to fill up time at the bench, if required. Terms moderate; good references.—E. B. Post-office, Slough, Bucks.

TO BUILDERS AND OTHERS.

A PRACTICAL STAIRCASE HAND is open to a RE-ENGAGEMENT. Piecework preferred.—Satisfactory reference can be given — Address, J. K. at Mr. Boyton's, 25, Frederick street, Portland-town, St. John's-wood.

TO SURVEYORS BUILDERS, &c

A YOUNG MAN, aged 21, who has a good knowledge of building, can trace drawings, take out quantities, and measure work, is desirous of a SITUATION in either a Builder's or Surveyor's Office. Salary not so much an object as improvement.—Address, care of Messrs. Land and Co. Law Stationers, George-street, Plymouth

TO ARCHITECTS.

A DRAUGHTSMAN, who has been seven years in the profession, and can get out perspective, finished, and working drawings, and has a knowledge of Gothic detail, and the usual routine of an office, wishes for an ENGAGEMENT.—Address S. J. 6, George-street, Old Kent-road

A YOUNG MAN desires a RE-ENGAGEMENT. He is a fair architectural draughtsman, a good accountant, can map, plan, and take out quantities, and is thoroughly acquainted with bookkeeping, and the prime pals of levelling and surveying. Salary, 1l. a per week, as the advertiser's object is improvement.—Address X Y. at Mr. Lowe's, Law Stationer, Bell-yard, Temple-bar.

TO MECHANICAL AND ARCHITECTURAL DRAUGHTSMEN, SURVEYORS, &c.

A GENTLEMAN, who has occasionally a surplus amount of work to perform, will be glad to treat with another similarly circumstanced on amicable terms.—Full particulars at an interview.—Address to R. A. 18, Baker-street, Clerkenwell.

LAND opposite the Elephant and Castle.—50 feet frontage of LAND, by 123 deep, TO BE LET, on lease, for about 33 years.—Apply to Mr. TRIMEN, 9, Adam-street, Adelphi

NORWOOD, near BEULAH SPA.—Eligible FREEHOLD BUILDING LAND, in Allotments of 20 to 200 feet frontage each, and 180 to 220 feet depth, at 3l. to 3l. per foot frontage, conveyances included Two-thirds can be paid by instalments.—Apply to Mr. HOULDER, 18, Upper Thames-street

FREEHOLD BUILDING GROUND.—TO BE LET, or SOLD, on advantageous terms, TWO PLOTS of GROUND, situate in the most preferable part of St John's Wood.—For particulars apply, by letter, post-paid, to W. L. No. 8, Craven-terrace, Paddington.

AUGUSTUS SMITH, Auctioneer to Engineers, Machinists, and the Metal Trades, 285, Blackfriars-road, near the bridge, respectfully invites all persons having Engines, Machinery, Foundries, Plant or Ironmongery Business to dispose of, to forward the particulars thereof for insertion in his REGISTRY-BOOK, for which NO CHARGE will be made unless sale be effected.

TO ENGINEERS, MACHINISTS, and OTHERS. A first-rate PREMISES in the above line, on the Surrey side, TO LET, fitted up with an excellent 8-horse engine boiler, 3 furnaces and fans, screw-cutting and other lathes, benches, blocks, tools, &c. The forgoing spacious premises are in full work, and will be sought, and may be had on advantageous terms Apply to AUGUSTUS SMITH, Auctioneer to Engineers, Machinists, and the Metal Trades, 285, Blackfriars-road, near the bridge.

BUILDING LAND TO BE LET, at HALLSVILLE, Term, 1,000 years, for small cottages.
CANNING TOWN " 1,000 " for small cottages.
NORWOOD " 1,000 " for villas and cottages.
STRATFORD " 100 " for small cottages.
POPLAR " 60 " for forth-rate houses.
Advances, 7d. to 10d. on each cottage Apply to Mr. WM. ELLISON, Architect, Stainsby road, Limehouse.

VALUABLE BUILDING SITE TO BE LET on Lease, situate in the High-street, Camberwell, having two frontages, making together about 468, having a large quantity of old materials in buildings on the ground —For particulars apply to W. C REED, Architect and Surveyor, 64, Old Broad-street, City, where a plan of the estate can be seen.

BUILDING GROUND.—Desirable PLOTS TO BE LET for fourth-rate Houses Four and Six Rooms, situate in Kentish Town, at low Ground Rents. Bricks supplied. Apply to Mr KELLY, 15, Gower-place; or Mr. LAWFORD, Slate Works, 15, New-road, St. Pancras

TO BUILDERS AND OTHERS

BUILDING FRONTAGES TO BE LET, for detached or semi-detached VILLAS, in BLESSINGTON-ROAD, Belmont, Lee, Kent, close by the church. This is the most attractive, picturesque, and respectable locality on any side of London, from which it is only distant one quarter of an hour by railway, and five minutes' walk from the Blackheath Station of the North Kent Railway. Accommodation will be afforded to respectable men For particulars, apply to Messrs J. and C. W. TODD, Milner-street, Brompton; or at their Office in Church lane, Lee; or to Messrs NELSON and INNES, 6, Whitehall; or to Mr. TYERMAN, Wellington-chambers, Strand.

CROWN LANDS, WINDSOR.—By order of the Commissioner in charge of Her Majesty's Land Revenue, TO BE LET, for the erection of villas and detached rows of houses, BUILDING LAND, most eligibly situate in Windsor-park, near the Great-park, having frontage to new roads, with ample provision for good drainage.—For particular apply to Mr. JOHN CLUTTON, 5, Whitehall-place, Westminster.

CASSLAND ESTATE, South Hackney.—FREEHOLD LAND TO BE LET, on Building Leases, in Victoria-park-road, Gascoyne-road, Kenton-road, &c. for second, third, or fourth-rate houses. The roads are well formed and sewered.—For particulars apply to Mr. WALES, of the Estate Office, Cassland-road, or at 8, Great St. Helen's, City.

GREENWICH.—BUILDING GROUND TO LET, in the most commanding part of the town, nearly opposite the Railway Station, adjoining the Blue Coat Boy Institutions, suitable either for public institutions, first-class shops (much wanted), or dwellings. There is a great depth, and a frontage of nearly 100 feet. A part or the whole may be taken on a long lease.—Further particulars of Mr. DOWSON, Auctioneer, London-street; or at the Portland Hotel, Greenwich.

TO MANUFACTURERS, MERCHANTS, and OTHERS.—TO BE LET, a HOUSE, well and substantially built, and in excellent condition, with extensive premises, a finite in the western part of the City, and well adapted to any business requiring light and space, with many other advantages.—For particulars, apply to Mr. H PALMER, Solicitor Mitre Court chambers, Temple.

MAITLAND-PARK, HAVERSTOCK-HILL, Hampstead road.—LAND TAX REDEEMED.—TO BE LET, upon Building Leases, for ninety-nine years, desirable BUILDING SITES upon the above Estate. The continued demand for houses in this locality, and the picturesque portion of the property adjoining the grounds of the Orphan Working School, render this a desirable opportunity for builders or gentlemen wishing to erect villas for themselves.—For terms and to view plans, apply to the Secretary of the Orphan Working School, 32, Ludgate-hill; Messrs. TERRELL and CHAMBERLAIN, 30a, Basinghall-street; the Architects, Messrs. WEHNERT and ASHDOWN, 42, Charing cross; or at the Porter's Lodge, on the Premises.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

THE LONDON AND MANCHESTER PLATE GLASS COMPANY

Beg to inform the TRADE, that the EXTENSION OF THEIR WORKS being now completed, they are enabled to execute orders to any extent at immediate notice. The Company also beg to intimate that owing to improvements effected in the reconstruction of their Works, the COLOUR and QUALITY of their GLASS will be found to be considerably improved, and that they can guarantee the maintenance of these essential requirements. They further beg to invite attention to their reduced List of Prices, which may be obtained on application at their London Warehouse, or at the Works

For the convenience of the LONDON TRADE, a large stock of POLISHED PLATE is now kept at the COMPANY'S WAREHOUSE, BARRAUD'S WHARF, WHITEFRIARS.

The Works, Sutton, St. Helen's, January, 1855.

SOMERSET.—TO BE LET, with immediate possession, a remarkably compact and convenient DWELLING-HOUSE, called Brook House with all suitable Offices and excellent garden and shrubbery, situated in the midst of the beautiful scenery of Stourhead, within easy distances of the towns of Wincanton, Mere, and Bruton, at which last place there will be a station of the Wilts, Somerset, and Weymouth Railway.—Further particulars may be obtained of JOHN SWAYNE Esq. Wilton, near Salisbury; or of Mr. COOPER, Solicitor, Wincanton.

HIGHBURY NEW PARK.—FREEHOLD BUILDING GROUND TO BE LET, in this desirable locality, commanding extensive views. To gentlemen desirous of selective a site for the erection of villa residences, this affords an excellent opportunity. Money advanced to responsible persons, if required.—For particulars apply to Mr. C. HAMBRIDGE, Architect, 73, Coleman street, City.

CAMDEN TOWN CEMETERY. BUILDING ESTATE TO BE LET on Building Leases for ninety-nine years, very eligible SITES upon the above estate, having good frontages into Camden-street, Pratt street, and Bayham-street. There is a great demand for houses and shops of the third-rate in this locality, which is enhanced by its near proximity to the North-Western and North London railway stations, and the Hampstead-road.—Plans may be seen, and particulars obtained by application to H. E. KENDALL, Esq., Architect, 17, Suffolk-street Pall-mall East; or to JOHN DANGERFIELD, Esq. Solicitor, 20, Craven street, Charing-cross.

LAMBETH and PROVINCIAL FREEHOLD LAND SOCIETY. Enrolled as the "Borough of Lambeth Benefit Building Society."

PRESIDENT.
The Hon. JOHN LOCKE KING, M.P.
TRUSTEES.
George Singer, Esq., James Smee, Esq., S. Etches, Esq.
Offices, 311, High-street, Borough.

SUPERIOR BRITISH PLATE-GLASS AT VERY LOW RATES.

THE UNION PLATE-GLASS COMPANY
Having recently completed very considerable improvements and additions to their works, take the opportunity of informing their friends that they will now be able to supply orders without delay; and respectfully invite the attention of the trade generally to the low rates at which their now much esteemed manufacture is sold.
Lists of prices may be obtained on application at
The Works, Pocket Nook, St. Helen's, Lancashire.
The Warehouse, 90, Hatton-garden, London.
" 45, Piccadilly, Manchester.
Messrs. C. and J. Malloch, 30, Turner's-court, Glasgow.
" John Dix and Co. Bath-street, Bristol.
" R. Sibthorpe and Son, Cork-hill, Dublin.
ROUGH PLATE-GLASS from ¼ to ½ in. thick, suitable for the windows and roofs of mills, mechanics' shops, market halls, railway stations, &c.
Beautiful and highly finished POLISHED PLATE GLASS, for shop-fronts and all superior glazing purposes, and for silvering.
Superior silvered Plate glass, Mirrors of all sizes.

E. and W. H. JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and for glazing, of unrivalled quality and finish. ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration.—All applications for estimates and lists of prices to be made at their warehouse, 215, OXFORD-STREET.

STAINED GLASS WORKS, 32, Allsop-terrace, New-road, near Baker-street, London.—Messrs. GIBBS beg to announce to Architects and Builders, that they have removed their old-established Stained Glass Works, from No. 9, Harrington-place, Camden town, to the above address, where business will be continued the same as usual.—N.B. Stained Glass Designs and Estimates given for Ecclesiastical and Domestic purposes.

FOREIGN and English Sheet, Crown, Plate, Patent Plate, Patent Rolled, and Cast Glass of all sorts. Sheet lead, Pipe, White-lead, Lead, Iron and Brass Pumps Water-closet Cocks and Plumbers' Brasswork, Paints, Colours, Oil, and Turpentines of the finest quality, at wholesale prices. Lists on application at THOS. MILLINGTON'S Warehouse, 87, Bishopsgate-street, London. Established more than 100 years.

WHOLESALE BRITISH and FOREIGN WINDOW GLASS WAREHOUSE, established upwards of Sixty Years.—ROBERT METTAM begs to call the attention of builders and the trade in general to his prices of British and Patent Plate Rough Plate, Crown, Sheet, and Ornamental Window Glass of every description. Good 15 oz. Sheet Glass in crates, from 21s. per foot; CCC Crown, 18 tables, 32s. per crate; Foreign Sheet Glass, in cases of 200 feet each, large sizes 32s. 6s. and 40s. per case; Ground ditto, 3½ per foot. Extra size sheet glass of all qualities for shop-fronts, &c. Estimates and price-lists forwarded, cost free, on application at the Warehouse, 30, Princes-street, Leicester-square, London.

CRYSTAL WHITE SHEET GLASS, first, second, and third quality, in cases of 200 feet, at 4d 6d and 8d per foot. Price lists of squares out to order forwarded on application. ROBERT METTAM and CO. Wholesale British and Foreign Window Glass Warehouse, 30, Princes-street, Leicester square, London.

CRYSTAL WHITE GLASS, first, second, and third quality, particularly adapted for pictures and the best description of glazing, being far superior in colour to patent plate. In cases of 200 and 100 feet each, at 4d, 6d and 8d per foot; sizes varying from 24 by 16 to 40 by 28. Also Foreign Glass of various tints made expressly for CATHEDRAL and CHURCH purposes.—G. FARMILOE and SON, 118, St. John-street, West Smithfield, London.

PATENT and BRITISH PLATE GLASS.—JAMES BETLEY and CO. beg to inform Architects, Builders and the Trade generally, that their new Tariff of Prices for the above will be sent on application; they will also on receipt of particulars, furnish estimates for any description of Glass now manufactured.—Patent Plate, Sheet, Crown, and Ornamental Window Glass Warehouse, 35, Soho-square, London.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers of White Zinc Paint on a large scale in this country, are enabled, by a process, which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Those direful maladies, paralysis and painters' colic, will be entirely avoided. It is entirely free from any poisonous or pernicious property. Neither exposure to heat, nor tropical climates act upon it. The Powdered White of Colour, may be had, for grinding in Oil; also for Plaster Decorations, and when it is mixed with Size, Varnish, &c. To be had of the Wholesale Paint-dealers in Original Packages, each cask stamped HUBBUCK LONDON—PATENT. And if not so marked, the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers in this country. Paint and Varnish Works, Upper East Smithfield, opposite the London Docks.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, body, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innoxious and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agents. In London, Messrs CHARLES DEVAUX and CO. Wholesale Agents, 68, King William-street, City; FREDERICK BRADY, Wholesale and Retail Agent, 8, Tottenham-court, New-road. In Manchester and Liverpool, by R. CLAY, 8, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-hush; and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality,—a desideratum never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which, its eminent hydraulic properties stamp it at once as the first Cement of the day for the work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cements, now manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parret.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat and cold. The time used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary manner.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or at Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality for the London and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise. London Wharf, Belvedere-road, Lambeth.

FRONTS of HOUSES.—GREENE and CO.'s PORTLAND CEMENT WASH, equal to oil paint for durability: in casks, 1 cwt. for 10s.

DAMP WALLS. GREENE and CO.'S OXIDE SOLUTION PAINT, a sure and effectual remedy for damp, salt, or spotted walls, 10s. 6d. per gallon, which will cover 25 square feet.—Prepared only by GREENE and CO. Original Inventors, &c., Norfolk-street, Islington.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent. N.B. These Cements supplied for shipment, on advantageous terms.

ROMAN and PORTLAND CEMENT of the first quality, manufactured at the ELMLEY CEMENT WORKS, Isle of Sheppey, Kent; also, STOCK and KILN BURNT BRICKS, hand-moulded and machine, made for shipping or otherwise.—Apply to G. BOOTH, Agent, 11, George-yard, Lombard-street, City.

BATH CEMENT.—This Cement is equal to Portland in strength and durability, does not vegetate in damp situations, is perfectly hydraulic, of a regular and warm colour, resembling the Path stone.—CHARLES RICHARDSON, 6, South Wharf, Paddington.

SOUTHAM.—BLUE LIAS LIME, and CEMENT WORKS—OLDHAM and TATHAM'S Blue Lias Lime, Portland, Roman, and Lias Cements.
CHARLES RICHARDSON, 6, South Wharf, Paddington.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfactory quantity expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS', STOCKS, and other BRICKS.
CHARLES RICHARDSON, 6, South Wharf, Paddington.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 20, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken on their Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

GREY STONE LIME WHARFS, 12, UPPER GROUND STREET, Blackfriars (Surrey side), and NORTH WHARF ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Woodham-hall Grey Stone Lime Works, on the Medway, near Rochester, March 31, 1855.

KENNARD, BROTHERS, beg to submit to Builders and others, their cash prices for Lime of best quality:—Grey Stone Lime, 2s. per yard; Do. delivered four miles, 11s. do.; Chalk Lime, 8s. do.; Do. delivered one mile, 9s. do.; Do. delivered four miles, 11s. do.; Hydraulic Lime, very superior for plastering and gas works, 9s. do.; Do. delivered one mile, 10s. do.; Do. four miles, 11s. do.—A fresh supply by London and Brighton Railway daily. Office, Swan-place, Old Kent-road.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for the WARE is REMOVED to No. 2, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietors; and, thirdly, that the "REPORTS OF THE JURIES," page 581, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 32s. 6d. per 1,000; floor bricks and 4 inch pavings, at 40s. per 1,000; 3-inch pavings, at 60s. per 1,000; 2½-inch pavings, at 72s. 6d. per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties Railway.

GREAT NORTHERN WHARF, York-road, King's cross.—WHITE BRICK and TILE DEPOT.—L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants. Builders, contractors, and others supplied with every description of building material at the lowest market prices.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brick-fields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Lias-ground Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

STONE-COLOUR BRICKS, moulded to any pattern, for cornices, copings, labels, &c. at about one-third the cost of stone; also ornamental ridge and other tiles; may be had to order of Messrs. HOUPER and CO. 2, Portland-street, Southampton.—Illustrated list of prices or samples forwarded on application.

TO BUILDERS AND CONTRACTORS.

A LARGE quantity of superior quality GREY STOCK BRICKS on SALE, from Hoggrin's Crown Quay Fields Sittingbourne, Kent, delivered alongside in the river Thames, or into vessels for the West Coast, on low terms.—Apply to Mr. W. ALLAWAY, 4, Catherine-court, Tower-hill.

WHITE SUFFOLK and RED FACING BRICKS
COWLEY, KENT, and ESSEX BRICKS.
Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.
KENTISH RAG STONE of the FINEST QUALITY.
MILLS and PRICE (successors to Mr. Benjamin Gough), 5, ADELAIDE-PLACE, LONDON-BRIDGE.

TO BRICKLAYERS, GAS COMPANIES, WORKING CHEMISTS, AND OTHERS.

FIRE BRICKS, LUMP, TILE, CLAYS, &c. in Stourbridge, Welch, Newcastle, &c. at COST PRICES; the remaining Stock at Honduras Wharf, Bankside, Southwark, WILL BE SOLD, to clear the premises by Midsummer.
A large quantity of Best Dutch Clinkers.

TO BUILDERS and OTHERS.—BRICKS delivered at any part of the River up to Battersea-bridge, at the following prices, viz.:—Grey Stocks, 25s. per thousand; Grizzles, 20s. per thousand; Rough Stocks, 20s.; Place, 16s.—Terms, cash on delivery.—Apply to Mr. G. SMEED, Sittingbourne, Kent.

Depôt, Acar Wharf, King's road, St. Pancras.

VITRIFIED STAFFORDSHIRE BLUE BRICKS, Paving, Roofing, and Ridge Tiles, Sanitary Pipes, &c. Stourbridge Fire Goods, &c. of all descriptions, and of best quality.—WOOD and SON, Manufacturers, Portway, Oldbury, near Birmingham. Agent—Mr. J. UNWIN, Private Residence, 59 Nelson-square, Blackfriars-road.

TO BUILDERS, CONTRACTORS, &c.

THE LONDON PATENT BRICK COMPANY have a STOCK of BRICKS for SALE.—For price and particulars apply at the Office, No. 8, Old Jewry.
JOHN A. F. DUFF, Secretary.

"Railway Contractor's Office, Wellington, Salop.
"December 1, 1853

"DEAR SIR,—We have much pleasure in bearing testimony of the value of your Patent Portable Engine that you fitted for us, for the construction of the tunnels on the Bacup Branch of the East Lancashire Railway in 1851, and have since used for sawing timber, and driving other machinery up to the present time, during which period, although for weeks the fire has never been out, we have no stoppage for repairs.

"We remain, dear sir, yours most faithfully.

"Mr. Gough." "DICKSON and McKENZIE."

TO CONTRACTORS.

PORTABLE STEAM-ENGINES TO BE LET, on HIRE, by the WEEK, MONTH, or for any period, of 8-horse, 10-horse, 12-horse, 16-horse, 20-horse, and 25-horse power, adapted for Contract work generally. N.B. Country Agents and Railway Engineers and Contractors supplied with the best Bitumen for covering Bridges and Arches.

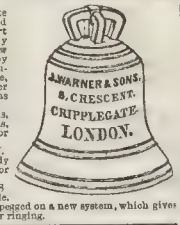
JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS



J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals

TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, cast, hung, and pegged on a new system, which gives a superior tone and facility for ringing.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is CROSSS'S WHOLESALE WAREHOUSE, 22 GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

THE PERMANENT WAY COMPANY, 26, Great George-street, Westminster, beg to call the attention of Civil Engineers, Contractors, and others interested in the construction of railways, to their patent rails, sleepers, fish-joints, and other important improvements now in use on upwards of 2,500 miles of railways.—Every information can be obtained on application to CHARLES MAY, F.R.S. Manager; or WILLIAM ROWDEN, Secretary.

HOSE PIPING.—To ENGINEERS, AGRICULTURISTS, GARDENERS, SHIP CHANDLERS, and FIRE BRIGADES.—WAITHMAN'S PATENT FLAX TUBING (1 inch to 3 inches in diameter) will sustain a greater pressure, is lighter, less bulky, will wear longer, and is about 50 per cent. cheaper than the leather hose-pipe. Manufactured only by WAITHMAN and CO. Benthall, Lancaster.

Inches in diameter and price per yard :—						
¾	1	1½	2	2½	3
1l. 1s 1l	1s. 3l	1s. 7l	1s. 9l.	2s.	2s 3d.	2s. 6d.	2s. 9d.

Testimonial from Mr. WRIGHT, Lancaster:—

"I beg to inform you that I yesterday tested your piece of 2½-inch Patent Flax Tubing, connected with the Lancaster Waterworks, in the presence of the Mayor, Mr Rawlinson, Government Inspector, Professor Owen, &c. The column of water at which the Tubing was tried, was equal to 240 feet in height, or about 106 pounds on the square inch, and I have pleasure in stating that the hose sustained this pressure most admirably."

Testimonial of Capt. MARTIN, of the Great Britain Steam-ship:—

"I have much pleasure in being able to tell you that your hose supplied to the Great Britain and other ships, is well worth the attention of shipowners. It gives us great satisfaction."

Testimonial from FAIRBAIRN and Co., Leeds:—

"We have tested your hose, 2½ inches in diameter, with the pressure of the Leeds Waterworks, and found it highly satisfactory."

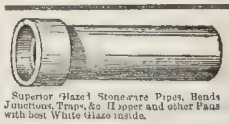
VENTILATION.

D. and E. BAILEY beg to call the attention of Architects and others to their improved CIRCULAR ARNOTT VENTILATORS, which are more sightly than the square ones in general use, much less liable to get out of order, as the flaps, being hung from the top, do not admit any smoke caused by down draught.

Price, bronzed, from 6s. 6d.

D and E. BAILEY, 373, Holborn.

SMOKE CONSUMER.—A Patent Smoke Consuming Apparatus supplied for 2l. 2s. and upwards, by Mr JAMES CARTER, 21, New Bridge-street, Blackfriars.



HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE-PACKING, both round and flat, and SOCKET-RINGS, for Hot-water-pipes. Vulcanized Rubber Springs, and Solid Round Rubber Cord of all sizes of length. Billiard Cushions and Rubber Strips cut to any pattern for bagatelle nets.

Driving dresses of superior make, and improved Vulcanized Rubber soles, for damp feet.

Vulcanized Rubber, in sheets, from three to four feet wide, and of any thickness. Air-beds, Pillows, and Cushions inflating Portable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order.

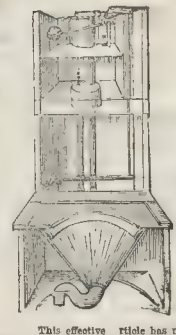
N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell mews, Goswell-road, London.

GUTTA PERCHA TUBING.—May be buried for years, without injury, and it is therefore valuable for conveying water, chemicals, &c. It is peculiarly valuable for liquid manure, drain, and soil pipes. Being a non-conductor, it is not affected by the heat or wonter or drought of summer, like metal or leather. Its strength is extraordinary; the small half-inch diameter tubing having resisted a pressure of 30 cwts. on the square inch, without bursting. The smaller sizes may be had in 100 feet, and the larger in 50 feet lengths. The joints are easily made. As a conductor of sound it is most valuable for conveying messages in bells. ELECTRIC TELEGRAPH WIRES INSULATED WITH GUTTA PERCHA. The GUTTA PERCHA COMPANY, Patentees, 18, Wharf-road, City-road, London.

Superior Glazed Stoneware Pipes, Bends Junctions, Trays, &c. Hopper and other Pans with best White Glaze inside.

Pan, 3s. 6d.

Trap, 2s.



Syphon Pan, with or without STEPHEN GREEN'S Patent Air-tight Valve.

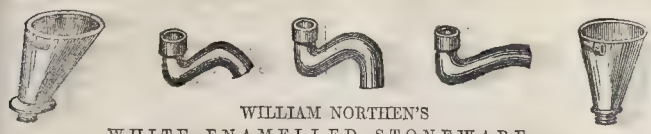
Registered Flushing Basin, the most effective Syphon-trap yet offered to the public.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.

IMPORTANT TESTIMONIALS
TO THE EFFICIENT WORKING OF
STEPHEN GREEN'S
PATENT SYPHON FLUSHING BASIN,
AND
SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.



HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective Article has not any Crank or Wire to get out of order, and is all complete and ready to use, as I may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

WILLIAM NORTHEN'S

HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 350 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c

THOMAS LAMBERT and SON,

Brass and Iron Founders, Short-street, New-cut, Lambeth.

THE BUILDER.

SALES BY AUCTION.

The commodious Family Residence known as Leyton-house, surrounded by its own Pleasure Grounds, and conveniently situate about five miles from London, and less than one mile from the Leabridge Station, also about 20 acres of beautifully timbered park like land; a few acres of Building Ground adjoining the house, and Land in Leyton marsh; the whole comprising about 45 acres.

MESSRS. WINSTANLEY are instructed by Mr. Alderman Sidney to SELL, by AUCTION, at the MART, near the Bank of England, on WEDNESDAY, the 19th day of JUNE, in six lots, the following important FREEHOLD and PART COPYHOLD PROPERTY (the latter subject only to a small fine certain), viz.:—

Lot 1.—Leyton-house, adapted in every respect for the requirements of a large establishment, the reception rooms being of excellent proportions, the principal and secondary bed chambers numerous and well arranged, and the offices are convenient and abundantly supplied with water. The approach is through a quadrangle, on the north and south sides of which is capital stabling, servants' rooms, harness-house, and other domestic offices. The pleasure grounds are beautifully laid out, and ornamented with choice American and other shrubs, lawn, terrace walks, fish pond, &c. comprising also, other about six acres.

Lot 2.—About three acres of land, suitable for building, having a very considerable frontage to the high-road, and adjoining lot 1.

Lot 3. The farmyard and buildings, and about twenty acres of productive meadow land, of parklike appearance, ornamented with fine timber-trees, in the rear of lots 1 and 2.

Lots 4, 5, and 6, will comprise about sixteen acres of land in Leyton-marsh.

To be viewed by cards, which, with printed particulars, may be obtained of Mr. Taylor, Surveyor, Parliament-street; Mr. Winstanley, Solicitor, London-street, Fenchurch-street; and of Messrs. Winstanley, 10, Paternoster-row.—Particular also at the Inns at Leyton, Woodford, Woodford-wells, Snaresbrook, Hackney, and Place of Sale.

TO IRONMONGERS, STOVE GRATE MAKERS, BUILDERS, AND OTHERS.—By

MESSRS. FULLER and HORSEY, on the PREMISES, 130, Fleet-street, on THURSDAY, MAY 31, at ELEVEN, in lots, without reserve, the STOCK of STOVES and RANGES, IRONMONGERY, and BRASS-FOUNDERY, principally manufactured by Messrs. Burbidge and Healy, who are relinquishing the retail branch of their business, including seventy register stoves, fine cast, bright, and polished steel, many of elegant designs, and richly mounted in or-moulu; seven Sylvester's patent enclosed kitchen ranges, from 3 feet 2 to 6 feet in width, hot-plate, and oven-flues; 100 polished steel and bronzed iron fenders, many of the most expensive description; fifty sets of polished steel fire-irons, bronzed and metal goods, lamps, cutlery, tin and BLACK hollow ware; fifty sets japanned trays and waiters, japanned toilet services, 100 dozen files and rasps, an assortment of builders' and cabinet ironmongery and brass work, ten logs wrought and cut nails, six printers' iron imposing tables, with planed surfaces; thirty Sylvester's patent fire and fine doors, shop fixtures, counting-house fittings, iron repository, fixtures, and other useful effects. To be viewed on Wednesday previous to the Sale, when catalogues may be had on the Premises; and of Messrs. FULLER and HORSEY, Billiter-street, City.

TO ENGINEERS, SAW-MILL PROPRIETORS, BUILDERS AND OTHERS.—By

MESSRS. FULLER and HORSEY, on WEDNESDAY, MAY 30, at TWELVE, at the SAW-MILL, Charles-street, Blackfriars-road, in lots, without reserve, by order of the Trustee, a double-cylinder STEAM-ENGINE, of 12-horse power in early new, an ELEPHANT BOILER, by Cater nearly new; 30 feet turn of wrought-iron shafting, 6 feet mortise driving-wheel and pinion, five riggers, from 2 feet to 6 feet diameter, three circular saw-benches and saws, two large wrought iron tanks, sixteen work benches, quantity quartering and laths, 2 cwt. nails, iron safes, and other effects.—To be viewed (the engine in motion), on the morning of sale, when catalogues may be had on the Premises; of Messrs. Jones and Lovell, Solicitors, Albernia-chambers, London-bridge; and of Messrs. FULLER and HORSEY, Billiter-street, City.

TO TIMBER MERCHANTS, BUILDERS, Cabinet-makers, Pianoforte Manufacturers, Coach Builders, Organ Builders, Carpenters, &c. &c.—For SALE by AUCTION on the PREMISES, Waterloo-bridge Wharf, Lambeth, on MONDAY and TUESDAY, the 2nd and 3rd of JUNE, at TEN for ELEVEN each day precisely, the very superior and well-seasoned STOCK of Messrs. T. R. and W. Browning and Co. consisting of about

14,000 Quebec and Sequenay yellow pine planks.
12,000 St. John pine planks.
1,000 Red pine planks
5,000 Spruce deals and battens.
1,000 Oregon and Archangel deals
7,000 Christiania white and white deals and battens.
5,000 Gothenberg and Swedish deals and battens.
1,000 squares prepared flooring and match boards.
2 & 3 Pieces Rice, Baltic, and Swede timber.
200 Pieces Norway die square timber.
400 Norway poles.
50+ Riga and Memel wainey-cut logs.

With sundry birch, ash and pine boards, put-logs, &c. also Spanish, Honduras, and Cuba MAHOGANY in logs, planks, and boards, cedar, walnut wood, &c. &c.

To be viewed two days previous to and on the mornings of Sale. Catalogues may be had on the Premises, and of Cruickshank and Son, 38, Old Broad-street; C. Leary and Co. 75, Old Broad-street, London, Brokers.

SUTTON, SURREY.—Highly attractive Freehold Land, nearly adjoining the Railway Station.

MESSRS. BLAKE will SELL by AUCTION, at GARRAWAY'S COFFEE-HOUSE, Change-alley, on TUESDAY, MAY 29th, at TWELVE precisely, in one lot, THIRTY-THREE ACRES of valuable FREEHOLD BUILDING LAND, most delightfully situate on the west side of the turnpike road leading from London to Brighton, and having a most desirable frontage thereto of about 630 feet. The situation of the land is picturesque and salubrious; it has a substratum of chalk, and is at present in occupation, but possession of a small portion will be given on the completion of the purchase. Particulars may be had at the Inns at Sutton, Reigate, and Epsom; at Garraway's Coffee-house; of Mr. Russell, Solicitor, 69, Coleman-street, London; and of Messrs. Blake, Croydon.

Sixty Acres of Beautiful Freehold Land, about 3 miles west of London, in 21 lots of about 2½ acres each, worthy the attention of speculators, gentlemen desirous of erecting a country-house, with sufficient land for enjoyment, or of Freehold Land Societies.

MR. MOXON will SELL by AUCTION, at the MART, on WEDNESDAY, MAY 30, at TWELVE, unless an acceptable offer be previously made by private contract, 60 acres of very valuable MEADOW and PASTURE LAND, delightfully situate, about half a mile from the railway station of Hanwell, adjoining Hanwell park and the residence of G. Baillie, esq. forming a portion of the beautiful hilly ground sloping towards the valley of the river Brent, and an extensive panorama of rich vale and wooded scenery. The land is remarkably well adapted for the erection of villa residences, having a very excellent frontage to the very beautiful road leading to Greenford, Perivale, and Harrow, but will be divided into only three lots, each lot offering a most desirable opportunity for any person to build a residence with sufficient land for parklike paddocks.—Particulars and Plans may be obtained at the Auction Mart; of Alexander Bassett, Esq. Solicitor, Bedford-street; and at Mr. Moxon's Offices, 5, West Strand, Charing-cross.

A very old established Plumbing, Painting, Glazing, and Gas-Fitting Business, situated in the suburbs.

MR. LEMM is directed to SELL this profitable business. A sacrifice, on account of ill health. The returns have been 1,000*l.* There is a capital house moderately rented, and part let off. Showy shop and spacious light and convenient premises in the rear. The situation is both commanding for business, and remarkably healthy.—Satisfactory particulars of Mr. LEMM, 4, St. George's-circus, near the Surrey Theatre.

SALES BY AUCTION.

WEST PLUMSTEAD, near Woolwich, Kent.—Valuable FREEHOLD BUILDING LAND (Eleven Acres), adjoining the grounds of Bramley-bury House, and situated between the Barrage and Park Estates, where extensive building operations are now in progress, and a detached RESIDENCE, with gravel subsoil, and studded with ornamental timber; it commands a splendid view of the Thames, county of Essex, Royal Arsenal &c. and is within a short distance of the Arsenal Station of the North and Kent Railway, with access from Broad-lane-alone on the North, and Plumstead-common on the South. The COTTAGE RESIDENCE, known as Bramley-bury Cottage, pleasantly situated on Plumstead-common, and at the southern extremity of the grounds of Bramley-bury House, surrounded by about two acres of ornamental land and garden ground, one and a half acre of which are freehold, and the residue held of the Lords of the Manor at a rental of 8*l.* per annum. Particulars and plans will shortly be published, and may be had at the Auction Mart; Long Lane; of W. H. Parrenas, Esq. Solicitor, 4, New Bridge-street, Blackfriars; and of the Auctioneer, Brewer-street, Woolwich.

REIGATE, SURREY, close to the Red-hill Station, on the London and Brighton and South Eastern Railways.

MESSRS. DAVIS and VIGERS are directed by the executors of the late Thomas Neale, Jun. Esq. to SELL by AUCTION, at the ANGEL INN, REIGATE, on FRIDAY, JUNE 1st, at TWELVE for ONE, desirable BUILDING LAND, suitable for the erection of mansions, villas, and shops, comprising nearly 30 acres, and embracing the most eligible spots of the high ground close to Wray-common, commanding extensive views of scenery, remarkable for its great beauty; also several TOWN PLOTS, on the station-road, suitable for the erection of cottage residences and business premises; and three valuable CLOSES of ARABLE, MEADOW, and WOOD LAND, fronting up the turnpike-road from London to Brighton. The whole property lately formed part of the Gatton Estate, and is held by leases from Lady Warwick, for sixteen years, from Midsummer, 1846, at nominal ground rents.—To be viewed by permission, with plans and conditions of sale, may be had of Messrs. Druce and Son, Solicitors, Billiter-square, London; at the Railway Junction Hotel, Reigate; the Crown Inn, Croydon; at the Railway Auctioneers' Offices, 3, Frederick's-place, Old Jewry, London.

TO BUILDERS, CARPENTERS, COACH-BUILDERS, PIANOFORTE-MAKERS, and Others.

MR. LEREW will SELL by AUCTION, on the PREMISES, No. 49, Union-street, Somers-town, on MONDAY, MAY 30, at TWELVE for ONE, about 250 PLANKS, DEALS, and BATTENS, 12,000 feet wide pine board, 500 feet American Ash, Spanish mahogany in planks and boards, cedar, oak, 150 pieces of prepared flooring, 5,000 feet seasoning, dry cut stuff, moulding, ladders, barrows, and other useful items. May be viewed on Saturday prior to the sale, when catalogues may be had on the Premises, and of the Auctioneer, Carlington-street, Hampstead-road, near the Euston-station.

To Ironmongers, Builders, Shippers, Smiths, and Others.

MR. BILLINGAY is instructed by Messrs. Cole and Co. of 8, Aldgate (in consequence of dissolution of their partnership), to SELL by AUCTION, at the Royal Mart, 28, Leadenhall-street, on WEDNESDAY, JUNE 8, and following days, at TWELVE, without the least reserve, all the STOCK in TRADE, comprising cabin-furniture, iron and other locks, latches, bolts, hinges, brass foundry goods, wrought, cut, and horse nails, carpenters' and other tools, screws, files, chain, register stoves, wire netting, desks and safes, fender trim, hollow ware, and numerous articles, forming the usual assortment of a general ironmongery stock. The whole will be removed to the above rooms for convenience of sale. May be viewed two days prior to the sale; and catalogues (which will be shortly ready) may be had at the Offices of J. W. Jewitt, Esq. Solicitor, 45, Lime-street; at the Premises, 8, Aldgate; and of the Auctioneer to the Metal Trades, 21, Coleman-street, City.

POPLAR, MIDDLESEX. TO STONEMASONS, BUILDERS, AND OTHERS.

MR. J. Y. GIBBS is favoured with instructions to offer for SALE by PUBLIC AUCTION, on WEDNESDAY, MAY 30, 1855, at ONE for TWO o'clock precisely, on the PREMISES, No. 243, East India-road, Poplar, corner of Spotted Dog, the valuable STOCK of a Stonemason, consisting of Portland scantlings, landings, steps, and curbs, window sills, slabs, &c. marble and Yorkstone chimney-pieces, black and veined marble grindstones, set of corn stock stones, tomb, head, foot, and grave stones, powerful jacks, saw-screws, blacksmith's tools, heavy purchase blocks and falls, a quantity of old iron, and various other effects.—May be viewed two days prior to sale, and catalogues had at the Britannia Tavern, Limehouse; the Green-gate, Plaistow; at the Place of Sale; and the Auctioneer's Offices, High-street, Poplar.

First portion of the valuable Stock of ARCHITECTURAL and SCIENTIFIC BOOKS and COPYRIGHTS of Mr. JOHN WEALE, of High Holborn, declining the retail trade.

SOUTHGATE and BARRETT will SELL by AUCTION, at their ROOMS, 29, Fleet-street, on MONDAY, JUNE 4, and two following days, at TWELVE, the first portion of the valuable stock of ANCIENT and MODERN BOOKS, consisting of the best standard works, in architecture and engineering, the fine arts, and other sciences, and a great variety in miscellaneous literature, together with the entire remaining stocks and copyrights of several important publications, including the Architectural Papers, edited and published by Mr. Weale, 4 vols.; Wood's various Works on Designs of Furniture; the copies and copyright of Chambers's Civil Architecture, by Gwilt, 2 vols.; Sydney Smirke's Architectural History; Acts of the Temple Church; Ancient Specimens of Goldsmith's Iron and Metal Work; Fergusson's "Principles of Beauty and Art;" Fergusson's "Rock-cut Temples of India;" the coloured, proof, and plain copies of the Ayasophia, Constantinople, most beautifully lithographed by Louis Haghe, &c. together with the author's copy of Welby Pugin's "Principles of Gothic Architecture," containing his numerous MS. additions and the original drawings; a superb and unique copy of all the original designs in manuscript and all the works of Albert Durer, with other drawings, and much additional manuscript correspondence, elegantly bound in 4 large vols. &c. &c.—Catalogues will be forwarded on receipt of six postage stamps.

TO BE SOLD by AUCTION, on WEDNESDAY, the 6th of JUNE, 1855, at TWELVE o'clock at noon, precisely, in the BROKERS' SALES ROOMS, Jesse's-walk and Toxteth Docks, Liverpool.

SALES BY AUCTION.

METROPOLIS IMPROVEMENTS.—Spitalfields Extension—Eighteenth Sale.—Materials of Twelve Houses.

MESSRS. EVERSFIELD and HORNE have received instructions from the Commissioners of her Majesty's Public Works and Buildings, to SELL by AUCTION, on the PREMISES, on WEDNESDAY, MAY 30th, 1855, at TEN for ELEVEN, the MATERIALS and FITTINGS, of the usual description, of TWELVE HOUSES, being 1, 2, 3, and 4, Brown's-lane; 4, 5, 7, and 8, Wheeler-street; and 1, 2, 3, and 4, small dwellings in Hatfield-place, Wheeler-street, Spitalfields.—May be viewed one day previous, and catalogues had on the Premises; at the Office of Messrs. Jones, Esq. 7, Whitehall-yard; of Mr. Bunn, Clerk of the Works, corner of Fashion-street, Spitalfields; and of the Auctioneers, 40, Parliament-street, Westminster.

EXTRA SALE.—An entire new Stock of upwards of 8,000 pieces of Paperhangings, and Veni Marble Chimney-pieces.

MR. BRAY, Jun. will SELL, at his ROOMS, 8, High Holborn, on WEDNESDAY, MAY 30th, at ONE for TWO, an entire new STOCK of PAPERHANGINGS, suitable for the drawing and dining rooms, parlours, secondary apartments, halls, and staircases.—May be viewed, and catalogues had

MARBLE.—To Sculptors, Masons, Builders, and Others.

MESSRS. THOMPSON and HOLMES will OFFER, by PUBLIC AUCTION, on MONDAY, the 4th day of JUNE next, at TWELVE for ONE o'clock, at their WHARF, the Marble Wharf, Thames Bank, Pimlico, at the foot of Vauxhall-bridge, about 600 SUPERFICIAL FEET of MARBLE, consisting of Statuary, Sicilian, Veined, Black and Gold, Dove, Berdilla, Emperor's Red, and St. Ann's and Irish Black, of the finest quality and shades. Also about 400 superficial feet of English and Foreign cut slab. May be viewed previous to the Sale. Catalogues and further particulars had of the Brokers, the Marble Wharf, Thames Bank, Pimlico, at the foot of Vauxhall-bridge.

GUILDHALL, London, 24th May, 1855.

BUILDING LEASES, NEWGATE-STREET. The Committee for letting the Bridge-House Estates, will meet at Guildhall, on FRIDAY, the 22nd day of JUNE next, at TWELVE precisely, to receive TENDERS for BUILDING LEASES of THREE PLOTS of GROUND, on the north side of Newgate-street, in the City of London, adjoining Christ Church-passage.—A plan of the ground and conditions for letting may be seen at the Architect's Office, Guildhall.

FERDINAND BRAND, Comptroller.

FREEHOLD LAND.—To Builders or Parties wishing to Build—Sydenham Residences.

FREEHOLD LAND TO BE SOLD on some of the most eligible building estates in the neighbourhood of London, viz.:—

Forest-hill, Croydon Railway.
St. Margaret's, near Richmond and South-western Railway.
Gattan's Grange, Weybridge, Surrey, ditto.
Tottenham-green, Eastern Counties Railway.
Putney, South-western Railway.
Rectory Estate, Ealing, Great Western Railway.
The Waddington Estate, Enfield, Eastern Counties Railway.
Wood-green, Green-lanes, Great Northern Railway.
Old Ford, Stratford, Eastern Counties Railway.

Each of the above estates offers its own peculiar advantages. Plots of land of any size, or for any class of houses, to the extent of One acre, can be obtained. On the two first estates, large pleasure gardens are allotted to the freehold lers or tenants of houses. Part of the purchase-money may remain at 5 per cent. interest. Parties assisted in the building of their own residences. Builders may obtain the freeholds of plots of land to build upon, and the greater portion of purchase-money remain, with other facilities, for a small charge (for about ten years' less in amount than the ground-rent of the same on the usual system. In addition, therefore, to the annual saving to be effected on the land by moderate purchase, they can sell the ground-rent created by themselves at a large profit. Several plots to be let on building lease. Money advanced to respectable parties. Apply to Mr. GEORGE MORGAN, Architect, 5, Chancery-lane.

WEYBRIDGE and PUTNEY, SURREY, and FOREST-HILL, SYDENHAM.—Several PLOTS of FREEHOLD LAND, close to these railway stations, TO BE SOLD, subject to a small chief rent, instead of purchase-money, for private villas. Also, a Plot for an Inn. Moderate advances if required. For further particulars apply to Mr. A. C. HOOK, Land Agent, 13A, Great George-street, Westminster. The railway companies issue season tickets to these places at reduced rates.

MANUFACTURING PREMISES.—Mr. JOS. SMITH, 48, Worship-street, Finsbury, has to DISPOSE OF the LEASE of some extensive PREMISES, comprising large room, 30 feet square, about 20 feet high; larger room over; house of four rooms at back; cellarage, and back entrance; in a good business thoroughfare.—For particulars and cards to view apply as above.

KENSINGTON GORE.—Valuable SITES for first-class MANSIONS, in the new (Prince Albert's) road, Kensington Gore; with frontages to the Park like property purchased by the Royal Commissioners for the Exhibition of 1851, as a site for institutions connected with science and art; may be obtained on 50 years' lease, by application at Mr. W. JACKSON'S Office, 10, Kensington Gore.

TO BE SOLD, within a few minutes' walk of the Kilburn Station, on the North-western Railway, and immediately adjacent to the intended line of the Hampstead Junction Railway, about EIGHT ACRES of COPYHOLD LAND, having a frontage next West-end-lane of more than 800 feet. The estate, which is beautifully situated, is at present let to a yearly tenant, and immediate possession may be had. The soil is capable of being made extremely productive, and a specimen of the earth may be seen at the Office of Mr. POWNALL, 3, Bloomsbury-square, where lithographed plans and further particulars may be obtained; or of R. R. ARMSTRONG, Esq. 8, Staple-inn.

HARGRAVE-PARK ESTATE, UPPER HOLLOWAY, commanding beautiful views of the surrounding country.—TO BE SOLD, or LET on LEASE for ninety-nine years, valuable PLOTS of FREEHOLD BUILDING GROUND, land-tax redeemed, on the east side of Highgate-hill, and the road from Upper Holloway to Kentish-town, in large or small plots, suitable for detached or semi-detached villas. A great variety of sites for houses, same in plots as small as 25 feet frontage by 80 feet deep. For further particulars and plans apply to R. L. ROUMIEU, Esq. Architect, 10, Lancaster-place, Waterloo-bridge; or to P. A. HANROTT, Jun. Esq. Solicitor, 20, Queen square, Bloomsbury.

PARTNERSHIP.—Wanted, a Gentleman, with about 3,000*l.* to 4,000*l.* to take a SHARE in a Builder's Business of long standing, and excellent connection. He will be necessary for the incoming partner to have a thorough knowledge of the business, and he will be required to take an active part in the management.—Principals or their solicitors may obtain particulars, by applying to Messrs. J. and G. BARNARD, Solicitors, 14, York-road, Lambeth.

PARTNER WANTED.—A MANAGING PARTNER is WANTED, in a Sculpture and Marble-cutting establishment in Scotland. The business is one of long standing, and presents an excellent opening for any qualified party.—Apply to T. and R. LANDALE, 18, Forth-street, Edinburgh.

LONDON: Printed by CHARLES WYMAN, of 14, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing office of COX Bros. & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the Fields, and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 1, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, May 26, 1855.

The Builder,

AND

Architect, Engineer, Operative & Artist.

Catalogue, 1d. each. To be had at the Museum, and at the Office of "The Builder."

HENRY CLUTTON, Hon. Secretary.

1st June, 1855.

CONTRACTS.

GREAT WESTERN RAILWAY.—CONTRACT for STATION BUILDINGS. The Directors of the Great Western Railway Company will receive TENDERS for the ERECTION of STATION BUILDINGS at Frampton, Maiden Newton, Evershot, Yeovil, Sparkford Bruton, and several intermediate places, on the Wilts, Somerset, and Weymouth line of this railway. Drawings and specifications may be seen, and forms of Tender with any further information obtained, at the Engineer's Office, Paddington, on and after THURSDAY, 31st instant, and Tenders are to be addressed to the Secretary, on or before WEDNESDAY, 13th JUNE. The Directors do not bind themselves to accept the lowest Tender.—May 26, 1855.

TO BUILDERS.

PARTIES willing to TENDER for the ERECTION of TWO HOUSES at Forest-hill, can see the drawings and specifications at the Offices of Mr. MATHEWS, Surveyor, 309, Upper Thames-street, City.—The lowest Tender will not necessarily be accepted.

TO BUILDERS.

PERSONS wishing to TENDER for the ERECTION of a NEW WESLEYAN CHAPEL, at Ilkeston, may see the plans and specifications from SATURDAY, JUNE 2nd, to WEDNESDAY, the 6th, at the house of the Rev. A. WAZMOUGH, Wesleyan Minister, Ilkeston, and from the following day to TUESDAY, 12th, at the house of the Rev. J. P. HASWELL, Wesleyan Minister, Nottingham. Tenders to be sent in, on or before THURSDAY, 14th of JUNE, to J. B. N. HASWELL, Architect, 1, Short-hill, Nottingham.

CONTRACTS.

TO BUILDERS.

PERSONS desirous of giving in TENDERS for the proposed new SCHOOL ROOMS, CLASS-ROOMS, and LECTURE ROOM, adjoining Hanover Congregational Church, Stockport, may see the plans and specifications on application to Mr. JOHN ANDREW, of Stockport, on and after MONDAY, the 4th of JUNE next, between the hours of TEN a.m. and SIX p.m. until further notice.—The Committee do not pledge themselves to accept the lowest Tender

Nottingham, May 23, 1855. J. C. GILBERT, Architect.

WIGAN LOCAL BOARD of HEALTH. WATERWORKS.—To ENGINEERS, IRONFOUNDERS, BRASS FOUNDERS, CONTRACTORS, EXCAVATORS, and OTHERS.—The Local Board hereby give Notice, that they are prepared to receive TENDERS from parties willing to undertake either of the following CONTRACTS:—

CONTRACT No. 1.—For the supply of about 1,500 tons of CAST IRON WATER-PIPES, and other CASTINGS.

CONTRACT No. 2.—For the supply of SLUICE VALVES, HYDRANTS, and STREET FITTINGS.

CONTRACT No. 3.—For the supply and erection of Duplicate STEAM-ENGINES, BOILERS, PUMPS, and RISING MAIN. Each Engine to be capable of raising ONE MILLION GALLONS of Water, ONE HUNDRED FEET high, in TWELVE hours.

CONTRACT No. 4.—For the construction of a COVERED SERVICE RESERVOIR.

CONTRACT No. 5.—For the formation of a TUNNEL about 500 yards in length, and 18 feet internal diameter, with SHAFTS, and TUNNEL ENTRANCES.

CONTRACT No. 6.—For Masonry and other work in STONE IMPOUNDING WALL for STORAGE RESERVOIR.

CONTRACT No. 7.—For EARTHWORK, PUDDLING, &c. in EMBANKMENT for STORAGE RESERVOIR, including MASONRY, BRICKWORK, &c. in VALVE and OUTLET WELLS, GAUGE BASINS, and RETAINING WALLS; also a TUNNEL under side of Embankment.

The drawings and specifications may be seen, and any further information may be obtained on and after the 4th day of JUNE, on application at the Office of the Local Board of Health, Wigan; or at the Office of ROBERT RAWLINSON, C.E. 31, Parliament-street, Westminster. Specifications and duplicate forms of Tender, Schedules, and Bills of Quantities, for Contracts Nos. 1 and 3, may be had on payment of 10s. each; and for Contracts 4, 5, 6, and 7, on payment of 1l. 1s. each. Quantities supplied. Sealed Tenders to be delivered at the Office of the Local Board, Wigan, before TWELVE o'clock, on MONDAY, the 18th day of JUNE, endorsed "Tender for Contract No. 1, 2, 3, 4, 5, 6, or 7," as the case may be. The Local Board do not bind themselves to accept the lowest or any Tender.

(Signed) WILLIAM ACKERLEY,
Wigan, 14th May, 1855. Solicitor to the Local Board.

WORTHING LOCAL BOARD of HEALTH.—WATERWORKS.—To IRONFOUNDERS, BUILDERS, CONTRACTORS, and OTHERS. The LOCAL BOARD hereby give NOTICE, that they are prepared to receive TENDERS from parties willing to undertake either of the following CONTRACTS:—

CONTRACT No. 11.—For the supply and erection of a CAST-IRON WATER-TANK, 42 feet square, and 17 feet deep.

CONTRACT No. 12.—For the construction of a WATER TOWER.

CONTRACT No. 13.—For the construction of an ENGINE and BOILER-HOUSE, CHIMNEY, and other works connected therewith.

The drawings and specifications may be examined on and after the 31st instant; and any further information may be obtained on application, at the Office of the Local Board, Worthing; or at the Offices of ROBERT RAWLINSON, C.E. 31, Parliament-street, Westminster.—Sealed Tenders to be delivered at the Office of the Local Board, Worthing, before TWELVE o'clock, on TUESDAY, the 12th day of JUNE next, endorsed "Tender for Contract No. 11, 12, or 13," as the case may be.

(Signed) WM. HUGH DENNETT,
Worthing, May 22, 1855. Clerk to the Local Board.

TO BUILDERS.

PERSONS willing to CONTRACT for the ERECTION of the CHURCH of St. MICHAEL'S, in the Coldfield, are informed that the Plans and Specifications may be seen, on application, on and after the 5th day of JUNE next, at the Town-hall or School-room, Sutton Coldfield, Warwickshire, or at the Office of Mr. J. F. WADMORE, Architect, 32, Great St. Helen's, Bishopsgate-street, London; of whom, also, quantities may be obtained. Tenders to be sent to the Church-Building Committee, at the Town-hall, on or before the 11th day of JUNE next.

SAINT ANNE, WESTMINSTER.—To PAVIORS, STONE MERCHANTS, SCAVENGERS, and OTHERS.—Notice is hereby given, that the Committee for Paving and Cleansing this Parish will meet in the Vestry-room, Dean street, Soho-square, on FRIDAY, the 8th day of JUNE next, at ELEVEN o'clock in the forenoon, to consider TENDERS from persons willing to CONTRACT for CARTING AWAY DAILY the SLOP, &c. from the streets in this parish; for CARRYING AWAY the DUST and ASHES; for REPAIRING the CARRIAGEWAYS; for SUPPLYING STONE for the FOOTWAYS, and for SUPPLYING GUERNSEY GRANITE, either broken, or as blown from the rock, for the Macadamized roads of this parish, for one year, from Midsummer next. Tenders will not be received after TEN o'clock on the said 8th of JUNE, nor unless they are in the printed form, which may be had at my Office, 17, Carlisle-street, Soho; and of Mr. EDMUND WARNE, 4, Lisle street, Leicester-square, the Surveyor of Pavements, where any further information may be obtained.—The Committee do not bind themselves to accept the lowest or any Tender.

May, 1855. [J. W. ALLEN, Clerk to the Committee.

CONTRACTS.

NOTICE to BUILDERS.—Sealed TENDERS, addressed to the "Secretary of the Board of Ordnance," will be received at the Ordnance Office, Pall-mall, on or before the 16th JUNE next, for the CONSTRUCTION of certain WORKS and BUILDINGS, at West Block Long's Point, Milford Haven. The specifications and plans for the above service may be seen, and the form of Tender to obtained, with every information, at the Royal Engineer's Office, Pembroke Dock. The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Pembroke Dock, May 19, 1855.

TO BUILDERS AND IRONMONGERS.

Royal Engineer Office, Portsmouth, 23rd May, 1855.

NOTICE is hereby given, that TENDERS will be received by the Honourable Board of Ordnance, at their Office, Pall-mall, London, on TUESDAY, the 5th day of JUNE next, from such persons as may be willing to undertake the ERECTION of THIRTY FOUR IRON COOKING-HOUSES at the Encampment on Aldershott-heath, in the county of Hants Persons desirous of Tendering will be shown a pattern button on the ground, and be furnished with every necessary information, on application at the Royal Engineer Office, at Aldershott, on and after MONDAY next, the 28th instant. Tenders to be sealed up and endorsed "Tender for Iron Cooking-houses at the Encampment at Aldershott."

Commanding Royal Engineer's Office, Dublin, May 21, 1855.

NOTICE to BUILDERS and FELT MANUFACTURERS.—ORDNANCE CONTRACT.—The Commanding Royal Engineer in Ireland hereby gives Notice, that he will receive PROPOSALS for the following CONTRACT, viz.:—For COVERING with ASPHALTED FELT the ROOFS of about SIX HUNDRED WOODEN BUILDINGS, averaging from Ten Squares in each, erecting at the CURRAGH of KILDARE, in the Dublin District. Persons desirous of Tendering for the same, will receive Letters of Tender and every information on application at the Command or Royal Engineer's Office, Lower Castle-yard, Dublin. The whole of the work to be completed within twenty five days after the acceptance of Tender, or notification of the buildings being ready for covering. Proper securities, under legal bond, will be required in a sum equal to 10 per cent. on the amount of Tender accepted, for the due performance of the Contract. The letter of Tender to be sealed and transmitted under cover to "The Commanding Royal Engineer in Ireland, Lower Castle-yard, Dublin," so as to be received on or before the 6th day of JUNE, 1855, and to be marked on the outside, "Tender for Work at the Curragh of Kildare." The buildings are to be in the square, or blocks, and it is to be understood that parties have the option of tendering for one or more, or for the whole.

TO CONTRACTORS.

Royal Engineer Office, Chatham, 24th May, 1855.

NOTICE is hereby given, that TENDERS will be received at the ORDNANCE OFFICE, Pall-mall, London, on or before MONDAY, the 18th day of JUNE next, from persons desirous of CONTRACTING with the Board of Ordnance, for ERECTING a BUILDING for the reception of lunatics of the Army, at Fort Pitt, near Chatham. Plans and specifications of the Work are to be seen, and forms of Tender obtained, on application at the Royal Engineer Office, Chatham, between the hours of TEN and FOUR, till the 16th of JUNE next, and not after. The person whose Tender may be accepted will be required to enter into a bond, with two eligible securities, jointly and separately to be bound, under a penalty of 1,000l. for the due performance of the Contract. Tenders to be addressed to the Secretary to the Board of Ordnance, Ordnance Office, Pall-mall, London, and to be delivered free, endorsed "Tender for Works at Chatham." No Tender can be admitted after the said 18th day of JUNE, 1855. The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

NOTICE to BUILDERS.—ORDNANCE WORKS.—The Commanding Royal Engineer of the Dover District hereby gives Notice that Sealed TENDERS will be received at the Ordnance Office, Pall mall, London, on or before the 25th day of JUNE, 1855, from persons desirous of CONTRACTING with the Honourable Board of Ordnance for the WORKS and REPAIRS at the CITADEL, DOVER. Plans and specifications of the works may be seen, and forms of Tender obtained, at the Royal Engineer Office, Dover, between the hours of TEN and FOUR o'clock, from the 14th to the 23rd JUNE, 1855, Sunday excepted. The party whose Tender may be accepted for the works will be required to enter into a bond, with two eligible securities, jointly and separately to be bound, under a penalty of 2,000l. for the due performance of the contract. Tenders for the above works to be addressed to the "Secretary to the Board of Ordnance, Ordnance Office, Pall-mall, London," and endorsed "Tender for Works at the Citadel, Dover."

N.B. The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Dover, May 23, 1855.

Commanding Royal Engineer's Office, Dublin, 23th May, 1855.

NOTICE to BUILDERS.—ORDNANCE CONTRACTS.—The Commanding Royal Engineer in Ireland hereby gives Notice, that he will receive proposals for the following CONTRACTS, viz.:—For the CONSTRUCTION and ERECTION of TWENTY WOODEN BUILDINGS to accommodate Troops, at Armagh, in the Belfast district. Persons desirous of Tendering for the same, will receive every information on application at the Commanding Royal Engineer's Office, Lower Castle-yard, Dublin, and at the Royal Engineer's Office at Belfast; or at the Barrack Master's Office at Armagh; and may obtain specifications, with the terms of Contract, upon making a deposit of 1l. for the same, which deposit will be repaid when the specifications are returned unsoiled. The whole of the Buildings to be completed within fifty days after the acceptance of the Tender. The letters of Tender to be sealed, and transmitted under cover, to "The Commanding Royal Engineer in Ireland, Lower Castle-yard, Dublin," so as to be received on or before the 5th day of JUNE, 1855; and to be marked on the outside "Tender for Work at Armagh."

[For remainder of Contracts see next page.

CONTRACTS.

TO BUILDERS.

PARTIES desirous of submitting TENDERS for the performance of certain Works connected with the DRAINAGE and VENTILATION of the BUCKINGHAM-SHIRE INFIRMARY, may see the Plans and Specification, by application at the Infirmary, on and after the 1st of MAY, and obtain the same on payment of 5s. Sealed Tenders to be sent in on or before Wednesday, the 6th SEPTEMBER, at Eleven o'clock, addressed to the Secretary. The Committee do not pledge themselves to accept the lowest or any Tender.

By order,
D. PRATCHARD, Secretary.

May 1, 1855.

BOROUGH of LEEDS.—To ENGINEERS, IRONFOUNDERS, SMITHS, JOINERS, MASONS, PLUMBERS, GLAZIERS, and PLASTERERS.—Persons qualified to execute the following WORKS required in the CONSTRUCTION of a COVERED MARKET proposed to be erected in the Kirkgate, Leeds, are desired to send in their Tenders, sealed and addressed to the Mayor, Leeds, on or before TUESDAY, the 15th day of MAY next, at which time and day the Tenders will be opened by the Mayor, in the presence of such Persons as may attend, at the Council Chamber, Leeds.

Tenders are to be delivered at the Town Clerk's Office, not later than ELEVEN o'clock, a.m., on MONDAY, the 14th day of MAY, and addressed to the "Chairman of the Market Committee." The Market Committee do not pledge themselves to accept the lowest or any Tender, and no Tender will be received after the time specified.

JOHN A. IRVIN, Town Clerk.

Town Clerk's Office, Leeds, May 1st, 1855.

TO PAINTERS AND OTHERS.

THE TRUSTEES for BUILDING NEW CHURCHES in the Parish of Saint Mary, Newington, Surrey, will meet in the COMMITTEE ROOM of the CHURCH HOUSE, in the Parish, on TUESDAY, the 15th day of JUNE next, at SEVEN o'clock in the Evening precisely, to receive SEALED TENDERS from any Person or Persons willing to undertake the PAINTING and other Works to be done at St. Matthew's, Kennington, according to the specifications and conditions of contract now lying at the office of the Architect, HENRY JARVIS, Esq., 29, Trinity-square, Newington-butts. The Trustees do not bind themselves to accept the lowest or any other Tender, but recommend every Tender to state the lowest price at which he will undertake the Works.

JOHN COLLETT, Clerk to the Trustees.

48, High-street, Southwark, 2nd May, 1855.

KING'S LYNN UNION.—NEW WORKHOUSE. To CONTRACTORS.—Notice is hereby given that the TIME for sending in TENDERS is EXTENDED from SATURDAY, JUNE 2nd, to SATURDAY, JUNE 9th, 1855, at TEN o'clock, Before.

JOHN JAMES COULTON, Clerk.

Lynn, May 1, 1855.

TO SCAVENGERS and OTHERS.—Sewers' Office, Guildhall, May 19th, 1855.—The Commissioners of Sewers of the City of London, hereby give notice that they will meet in the GUILDHALL aforesaid, on TUESDAY, the 6th day of JUNE next, at TWELVE o'clock at noon precisely, to receive PROPOSALS for CLEANSING the Streets, and REMOVING DUST & from the Houses of the City, for the term of one year from Midsummer next, according to the printed form of the specification, a copy of which may be had upon application to this office. The Committee do not pledge themselves to accept the lowest Tender, but the Contractor will be required to enter into bond, with two approved sureties, for the due performance of his contract. The Commissioners do not pledge themselves to accept the lowest Tender, but only such as they deem satisfactory. No Tender will be received after TWELVE o'clock on the day thereby noticed, and no Tender be read which does not contain an undertaking, as required by the specification, to enter into bond as aforesaid; which sum will be immediately returned to each person whose Tender is not accepted, and will be retained in the other cases until the contract and bond have been executed.

JOSEPH PAW, Principal Clerk.

CONTRACT for TUNNELLING.—ARGELL CANAL, CATALONIA, SPAIN. MONCLAR TUNNEL.—The shafts of the tunnel of Monclar, now reached a depth from which an opinion may be formed of the nature and consistency of the rock, have been ordered to be sunk the open section of the tunnel, two metres in length. The Board of Administration would direct the CONTRACT for the execution of the said tunnel to the right of the Bidder, at the office of the Company at Barcelona, No. 2, Rambla Bonanova, first-floor, at TWELVE o'clock precisely, on the 20th JUNE next, according to the conditions contained in the separate regulations, which, with the plan of the said tunnel, may be seen in the aforesaid offices, and in London, at Mr. G. F. BERWS' Nord, Rue Bourdon. All proposals must be presented sealed, in conformity with the form annexed to the regulations, to the undersigned, two hours at least before the time specified.

Signed FRAN. FERRER Y BUSQUETS, Secretary.

Barcelona, April 30, 1855.

TO BUILDERS.—STRATFORD-UPON-AVON CORN EXCHANGE.—Persons desirous of CONTRACTING for the ERECTION of the above, are invited to see the Drawings, Specification, and Form of Tender, on and after SATURDAY next, at the Office of EDWARD GIBBS, Architect, Leamington, and Surveyor, 1, Stratford-on-Avon. The Tenders are required to be delivered in the Architect on or before the 15th day of JUNE. The Directors do not bind themselves to accept the lowest or any Tender. By order,

HENRY BEST SOWDON, Solicitor.

TO BUILDERS, ENGINEERS, AND IRONFOUNDERS.

By order of the Town Council,
WILLIAM REES, Town Clerk.

Llandovery, May 22nd, 1855.

CONTRACTS.

THE BURIAL BOARD for the Parishes of the Borough of Chipping Wycombe and Chepping Wycombe, are desirous of having PLANS, comprising grounds, elevations, and Specifications for a CHAPEL to be built in the Gothic style for a new BURIAL GROUND, at a cost not exceeding £1,000. Drawings to include two Chapel-rooms, a sitting-room, a vestry, and other offices. The ground contains about four acres, and a plan of which may be seen at the Vestry-room, Church Lane, Chipping Wycombe, and further information obtained upon application to the Rev. J. MILLARD, Clerk to the Burial Board. The successful Architect will be paid the sum of 5l for the same. Plans to be sent in to the Board before FRIDAY, the 15th day of JUNE next, and read, "Plans for Consecration Ground," addressed to the Chairman of the Board, at the Porte's Lodge.—THOMAS J. REYNOLDS, Clerk to the Burial Board.

Chipping Wycombe, May 24th, 1855.

TO BUILDERS.

HUNTINGDON UNION WORKHOUSE.—Persons willing to CONTRACT for the ERECTION of the WORKS in the ENGLEMENT of the HUNTINGDON UNION WORKHOUSE, are desired to send in their Tenders, sealed and addressed, on or before the 4th day of JUNE next, at the office of Mr. LEWIS CUBITT, Architect, 52, Bedford-square, London, Tenders, which are to be delivered at the office in Huntingdon, addressed to the Chairman of the Board of Guardians by TWELVE o'clock on THURSDAY the 14th day of JUNE next. The Contractor will be required to enter into the usual bonds in the sum of £500 for the due performance of the contract. Plans, specifications, and forms of Tender may be seen at the office of the Clerk to the Guardians, on and after the 1st day of JUNE next. The Board do not bind themselves to accept the lowest or any Tender.

J. and C. HANSOM, Architects.

Clifton, Bristol, May 21, 1855.

CROWHURST HOUSE ALTERATIONS.—NOTICE to BUILDERS.—The time for receiving the TENDERS for the above WORKS is fixed for next Friday, Mr. CHARLES POLAND, 75, Margaret-street, Cavendish-square, from whom the quantity and specification may be obtained on application, upon payment of one guinea, after THURSDAY, the 7th of JUNE, which will be returned to the unsuccessful competitors, for the sending of the Tenders.

WM. WILDORED TELDON, Architect,
42, Guildford-street, Russell-square, London.

TO IRONFOUNDERS.

THE LOCAL BOARD of HEALTH at TOTTENHAM are prepared to receive TENDERS for a small quantity of 3 and 2½ width CAST IRON WATER PIPES. Further particulars may be obtained by application at the offices of the Board, High-cross, Tottenham.—To JOHN PILBROW, Esq., C.E. (Engineer to the said Board, Tottenham.—Tenders, properly sealed, and to be sent on or before FRIDAY morning, the 8th JUNE next. By order of the said Board,

WILLIAM HEATH, Clerk.

PARISH of ST. JOHN, at HACKNEY.—CONTRACT for GRANITE CURBING, YORK PAVING, &c.—Notice is hereby given, that the Board for Repair of the Highways, in this Parish, will, at their Meeting to be held at the PARISH-HOUSE, on TOWN HALL, in Church-street, Hackney, on THURSDAY, the 7th day of JUNE, 1855, at SEVEN o'clock in the Evening, CONTRACT for the SUPPLY of about 18,000 feet run, or more, of GRANITE CURBING, ABERDEEN, DEVON, GUERNSEY, or other GRANITE CURBING, as may be selected and ordered, of the following dimensions, or as near thereto as may be determined with the Surveyor, viz. 12 by 6 inches, squared and dressed on the working square), and be not less than 3 feet 6 inches in length, to be laid down and fixed in a proper and workmanlike manner, and to be of such lengths as may make the most advantageous use of the stone, and to be delivered at such places, or parts as the Board or Assistant-surveyor may require, by an order in writing only, prior to the last Board Meeting next, previous to such delivery.

Also for CIRCULAR CURBING, viz. 12 by 6 inches, and 3 feet 0 inches in length, quarry worked, of different radii, at per foot run.

Also for RELAYING OLD CURBING, at per foot run.

Also to receive Tenders for PAVING certain of the FOOTPATHS of this Parish with YORK PAVING, of the best quality, not less than 3 inches in thickness, as and where may be directed, at 1s. per superficial foot. The stone to be squared the usual and best manner, and to be laid upon a bed of concrete, composed of proportions of lime and sand. To be laid down in the several parts of the Parish, as and when may be directed.

Also for RELAYING UP, SQUARING, and RELAYING OLD YORK PAVING, at per foot super. for which a Tender is also to be set in.

Also for NEW 4 INCH ABERDEEN GRANITE PAVING, at per yard superficial.

Also for NEW HALF-SOVEREIGN ABERDEEN GRANITE PAVING, at per yard.

Also for RELAYING OLD PEBBLE PAVING at per yard.

The whole of the above-specified works to be done to the entire satisfaction of the Committee of the District and the Assistant Surveyor; and the work to be measured up in each district, and to be paid for as it is done and completed in such districts, at the end of the month, by the Committee of the District and the Assistant Surveyor of the Board; and the whole of the districts to be completed on or before the 1st day of SEPTEMBER next.

The Tenders, addressed to the Clerk, must be sealed and marked "Tender for Curbing," and "Tender for Paving," as the case may be, and state in words at length the prices, both in all respects as required to the Surveyor's specification, and be delivered to the Clerk the day before the meeting. The parties tendering, or their representatives, must attend at the time and place of meeting. The Board will not accept any Tender that is not on one of these printed forms, and in all respects in conformity therewith; nor will they bind themselves to accept the lowest or any Tender.

I, the undersigned, a surveyor, do hereby propose to the Board of Surveyors of the Highways of the Parish of St. John at Hackney, in the County of Middlesex, to supply, lay down, and fix, in a proper and workmanlike manner, the following granite Curbing and Paving, and relay old Curbing and Paving, in all respects and conformably to the foregoing terms and conditions, as follows, viz.—

Here set out the Tender and describe the works intended to be contracted for.)

Signed .....
Place of Abode .....
Date .....

A bond, in a penalty of 500l. with approved securities, to be entered into by the Contractor, for the performance of his Contract, and those named will have to be given with the Tender. Further particulars, if required, may be had of Mr. WOODWARD, the Assistant Surveyor, 19, Dalston-rise, Hackney; and at the Vestry House in Church-street, Hackney.

By order of the Board,
CHARLES HORTON PULLEY, Clerk.

Upper Homerton, May 25th, 1855.

The Market Committee do not pledge themselves to accept the lowest or any Tender, and no Tender will be received after the time specified.

JOHN A. IRVIN, Town Clerk.

Town Clerk's Office, Leeds, May 1st, 1855.

TO PAINTERS AND OTHERS.

THE TRUSTEES for BUILDING NEW CHURCHES in the Parish of Saint Mary, Newington, Surrey, will meet in the COMMITTEE ROOM of the CHURCH HOUSE, in the Parish, on TUESDAY, the 15th day of JUNE next, at SEVEN o'clock in the Evening precisely, to receive SEALED TENDERS from any Person or Persons willing to undertake the PAINTING and other Works to be done at St. Matthew's, Kennington, according to the specifications and conditions of contract now lying at the office of the Architect, HENRY JARVIS, Esq., 29, Trinity-square, Newington-butts. The Trustees do not bind themselves to accept the lowest or any other Tender, but recommend every Tender to state the lowest price at which he will undertake the Works.

JOHN COLLETT, Clerk to the Trustees.

48, High-street, Southwark, 2nd May, 1855.

KING'S LYNN UNION.—NEW WORKHOUSE. To CONTRACTORS.—Notice is hereby given that the TIME for sending in TENDERS is EXTENDED from SATURDAY, JUNE 2nd, to SATURDAY, JUNE 9th, 1855, at TEN o'clock, Before.

JOHN JAMES COULTON, Clerk.

Lynn, May 1, 1855.

TO SCAVENGERS and OTHERS.—Sewers' Office, Guildhall, May 19th, 1855.—The Commissioners of Sewers of the City of London, hereby give notice that they will meet in the GUILDHALL aforesaid, on TUESDAY, the 6th day of JUNE next, at TWELVE o'clock at noon precisely, to receive PROPOSALS for CLEANSING the Streets, and REMOVING DUST & from the Houses of the City, for the term of one year from Midsummer next, according to the printed form of the specification, a copy of which may be had upon application to this office. The Committee do not pledge themselves to accept the lowest Tender, but the Contractor will be required to enter into bond, with two approved sureties, for the due performance of his contract. The Commissioners do not pledge themselves to accept the lowest Tender, but only such as they deem satisfactory. No Tender will be received after TWELVE o'clock on the day thereby noticed, and no Tender be read which does not contain an undertaking, as required by the specification, to enter into bond as aforesaid; which sum will be immediately returned to each person whose Tender is not accepted, and will be retained in the other cases until the contract and bond have been executed.

JOSEPH PAW, Principal Clerk.

CONTRACT for TUNNELLING.—ARGELL CANAL, CATALONIA, SPAIN. MONCLAR TUNNEL.—The shafts of the tunnel of Monclar, now reached a depth from which an opinion may be formed of the nature and consistency of the rock, have been ordered to be sunk the open section of the tunnel, two metres in length. The Board of Administration would direct the CONTRACT for the execution of the said tunnel to the right of the Bidder, at the office of the Company at Barcelona, No. 2, Rambla Bonanova, first-floor, at TWELVE o'clock precisely, on the 20th JUNE next, according to the conditions contained in the separate regulations, which, with the plan of the said tunnel, may be seen in the aforesaid offices, and in London, at Mr. G. F. BERWS' Nord, Rue Bourdon. All proposals must be presented sealed, in conformity with the form annexed to the regulations, to the undersigned, two hours at least before the time specified.

Signed FRAN. FERRER Y BUSQUETS, Secretary.

Barcelona, April 30, 1855.

TO BUILDERS.—STRATFORD-UPON-AVON CORN EXCHANGE.—Persons desirous of CONTRACTING for the ERECTION of the above, are invited to see the Drawings, Specification, and Form of Tender, on and after SATURDAY next, at the Office of EDWARD GIBBS, Architect, Leamington, and Surveyor, 1, Stratford-on-Avon. The Tenders are required to be delivered in the Architect on or before the 15th day of JUNE. The Directors do not bind themselves to accept the lowest or any Tender. By order,

HENRY BEST SOWDON, Solicitor.

TO BUILDERS, ENGINEERS, AND IRONFOUNDERS.

THE DIRECTORS of the BANBURY WATER COMPANY require TENDERS for the following WORKS.—Contract A, a covered Brick Reservoir; B, Mains, Sluice Cocks, and Hydrants; C, two Filter Beds and Boundary Fence; D, Engine-house and Residence; E, Steam Engines and Pumps. The drawings, specification, and forms of Tender may be seen at the Offices of Mr. J. HODGSON JONES, the Company's Engineer, No. 1, Bow-street, Westminster; at the Secretary's Office, Warwick Bank, Banbury, between the hours of 12 and 3 o'clock; and Tenders are to be delivered addressed "Tenders for Waterworks," on or before FRIDAY, the 15th day of JUNE next. The Directors do not bind themselves to accept the lowest or any Tender. By order of the Directors,

Banbury, May 19, 1855.

T. A. HEDLEY, Sec.

BROKEN GRANITE.—To BUILDERS, SURVEYORS of HIGHWAYS, &c.—The Trustees of the Southend Road, Leytonstone, are desirous of receiving TENDERS for the PURCHASE of about 1,000 YARDS of best GUERNSEY GRANITE Broken, to be paid for on delivery, and carted away from the Steyning Union Workhouse, Middle-row, High-street, Hackney-road, by and at the expense of the purchaser. Tenders to be addressed to JAMES J. BLAKE, Clerk to the Guardians, 9, Bucklersbury, Southwark.

TO BUILDERS AND CONTRACTORS.

CHESTERFIELD MARKET HALL.—The Directors of the Chesterfield Market Company are prepared to receive TENDERS for the ERECTION of a MARKET-HALL and other Buildings on the Market Place, pursuant to Plans, Specifications, and Quantities prepared by Mr. HENRY DAVIES, Architect, of the Offices of Messrs. SHIPTON and ELLISWELL, Solicitors, Chesterfield; and any further particulars may be had on application to the Architect. Tenders will be received by TEN o'clock, a.m. on MONDAY, the 28th JUNE.

GEORGE WALLIS, Secretary.

Chesterfield, May 1, 1855.

LLANDOVERY TOWN-HALL.—TO BUILDERS and OTHERS.—TENDERS for the ERECTION of a new TOWN-HALL at Llandovery, according to the above plans, may be sent in to the undersigned, addressed to the above town, on or after the 31st instant, are requested to be sent in on or before MONDAY, the 11th day of JUNE next.

By order of the Town Council,
WILLIAM REES, Town Clerk.

Llandovery, May 22nd, 1855.

CONTRACTS.

THE BURIAL BOARD for the Parishes of the Borough of Chipping Wycombe and Chepping Wycombe, are desirous of having PLANS, comprising grounds, elevations, and Specifications for a CHAPEL to be built in the Gothic style for a new BURIAL GROUND, at a cost not exceeding £1,000. Drawings to include two Chapel-rooms, a sitting-room, a vestry, and other offices. The ground contains about four acres, and a plan of which may be seen at the Vestry-room, Church Lane, Chipping Wycombe, and further information obtained upon application to the Rev. J. MILLARD, Clerk to the Burial Board. The successful Architect will be paid the sum of 5l for the same. Plans to be sent in to the Board before FRIDAY, the 15th day of JUNE next, and read, "Plans for Consecration Ground," addressed to the Chairman of the Board, at the Porte's Lodge.—THOMAS J. REYNOLDS, Clerk to the Burial Board.

Chipping Wycombe, May 24th, 1855.

TO BUILDERS.

HUNTINGDON UNION WORKHOUSE.—Persons willing to CONTRACT for the ERECTION of the WORKS in the ENGLEMENT of the HUNTINGDON UNION WORKHOUSE, are desired to send in their Tenders, sealed and addressed, on or before the 4th day of JUNE next, at the office of Mr. LEWIS CUBITT, Architect, 52, Bedford-square, London, Tenders, which are to be delivered at the office in Huntingdon, addressed to the Chairman of the Board of Guardians by TWELVE o'clock on THURSDAY the 14th day of JUNE next. The Contractor will be required to enter into the usual bonds in the sum of £500 for the due performance of the contract. Plans, specifications, and forms of Tender may be seen at the office of the Clerk to the Guardians, on and after the 1st day of JUNE next. The Board do not bind themselves to accept the lowest or any Tender.

J. and C. HANSOM, Architects.

Clifton, Bristol, May 21, 1855.

CROWHURST HOUSE ALTERATIONS.—NOTICE to BUILDERS.—The time for receiving the TENDERS for the above WORKS is fixed for next Friday, Mr. CHARLES POLAND, 75, Margaret-street, Cavendish-square, from whom the quantity and specification may be obtained on application, upon payment of one guinea, after THURSDAY, the 7th of JUNE, which will be returned to the unsuccessful competitors, for the sending of the Tenders.

WM. WILDORED TELDON, Architect,
42, Guildford-street, Russell-square, London.

TO IRONFOUNDERS.

THE LOCAL BOARD of HEALTH at TOTTENHAM are prepared to receive TENDERS for a small quantity of 3 and 2½ width CAST IRON WATER PIPES. Further particulars may be obtained by application at the offices of the Board, High-cross, Tottenham.—To JOHN PILBROW, Esq., C.E. (Engineer to the said Board, Tottenham.—Tenders, properly sealed, and to be sent on or before FRIDAY morning, the 8th JUNE next. By order of the said Board,

WILLIAM HEATH, Clerk.

PARISH of ST. JOHN, at HACKNEY.—CONTRACT for GRANITE CURBING, YORK PAVING, &c.—Notice is hereby given, that the Board for Repair of the Highways, in this Parish, will, at their Meeting to be held at the PARISH-HOUSE, or TOWN HALL, in Church-street, Hackney, on THURSDAY, the 7th day of JUNE, 1855, at SEVEN o'clock in the Evening, CONTRACT for the SUPPLY of about 18,000 feet run, or more, of GRANITE CURBING, ABERDEEN, DEVON, GUERNSEY, or other GRANITE CURBING, as may be selected and ordered, of the following dimensions, or as near thereto as may be determined with the Surveyor, viz. 12 by 6 inches, squared and dressed on the working square), and be not less than 3 feet 6 inches in length, to be laid down and fixed in a proper and workmanlike manner, and to be of such lengths as may make the most advantageous use of the stone, and to be delivered at such places, or parts as the Board or Assistant-surveyor may require, by an order in writing only, prior to the last Board Meeting next, previous to such delivery.

Also for CIRCULAR CURBING, viz. 12 by 6 inches, and 3 feet 0 inches in length, quarry worked, of different radii, at per foot run.

Also for RELAYING OLD CURBING, at per foot run.

Also to receive Tenders for PAVING certain of the FOOTPATHS of this Parish with YORK PAVING, of the best quality, not less than 3 inches in thickness, as and where may be directed, at 1s. per superficial foot. The stone to be squared the usual and best manner, and to be laid upon a bed of concrete, composed of proportions of lime and sand. To be laid down in the several parts of the Parish, as and when may be directed.

Also for RELAYING UP, SQUARING, and RELAYING OLD YORK PAVING, at per foot super. for which a Tender is also to be set in.

Also for NEW 4 INCH ABERDEEN GRANITE PAVING, at per yard superficial.

Also for NEW HALF-SOVEREIGN ABERDEEN GRANITE PAVING, at per yard.

Also for RELAYING OLD PEBBLE PAVING at per yard.

The whole of the above-specified works to be done to the entire satisfaction of the Committee of the District and the Assistant Surveyor; and the work to be measured up in each district, and to be paid for as it is done and completed in such districts, at the end of the month, by the Committee of the District and the Assistant Surveyor of the Board; and the whole of the districts to be completed on or before the 1st day of SEPTEMBER next.

The Tenders, addressed to the Clerk, must be sealed and marked "Tender for Curbing," and "Tender for Paving," as the case may be, and state in words at length the prices, both in all respects as required to the Surveyor's specification, and be delivered to the Clerk the day before the meeting. The parties tendering, or their representatives, must attend at the time and place of meeting. The Board will not accept any Tender that is not on one of these printed forms, and in all respects in conformity therewith; nor will they bind themselves to accept the lowest or any Tender.

I, the undersigned, a surveyor, do hereby propose to the Board of Surveyors of the Highways of the Parish of St. John at Hackney, in the County of Middlesex, to supply, lay down, and fix, in a proper and workmanlike manner, the following granite Curbing and Paving, and relay old Curbing and Paving, in all respects and conformably to the foregoing terms and conditions, as follows, viz.—

Here set out the Tender and describe the works intended to be contracted for.)

Signed .....
Place of Abode .....
Date .....

A bond, in a penalty of 500l. with approved securities, to be entered into by the Contractor, for the performance of his Contract, and those named will have to be given with the Tender. Further particulars, if required, may be had of Mr. WOODWARD, the Assistant Surveyor, 19, Dalston-rise, Hackney; and at the Vestry House in Church-street, Hackney.

By order of the Board,
CHARLES HORTON PULLEY, Clerk.

Upper Homerton, May 25th, 1855.

TO BUILDERS AND OTHERS.

TENDERS will be received at the Steward's House, Knebworth, on or before WEDNESDAY the 20th of JUNE, from persons willing to CONTRACT for FARM BUILDINGS, at Knebworth Lodge, between Woolwyn and Stevenage. Plans and Specifications may be seen at the Golden Arms Public House, Knebworth, on and after THURSDAY, the 7th of JUNE next. The lowest Tender not necessarily accepted.

TO CARPENTERS, CABINET MAKERS, &c.

SAMUEL BLYTHE, Saw Manufacturer (late Howell), King's-road, Chelsea, London, begs to inform Mr. Joseph Howell's former friends, that he will serve them with BEST LONDON MANUFACTURED SAWS at 2d. per cent. off List Prices, warranted. May 18, 1855.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Sole Manufacturers and Patentees of the Improved Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Lead Chambers, or any leaden vessels made or repaired by their process, insuring them soundness, without the intervention of any solder.

PLUMBERS and BUILDERS can be supplied with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

CONTRACTS.

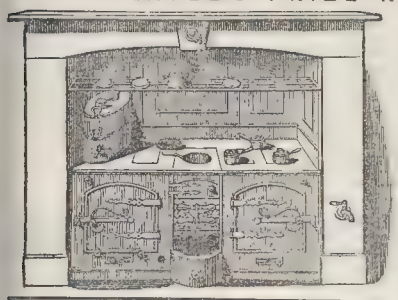
TO BUILDERS AND LEAD MAK

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to



THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

FLAVEL'S PRIZE KITCHENER.

The only Kitchen Range which obtained a Prize Medal and special approbation at the Great Exhibition, 1851.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

SOLE AGENTS:

BENHAM AND SONS,

19, WIGMORE-STREET, LONDON;

and at the Crystal Palace, Sydenham.

MOREWOOD & ROGERS'S PATENT PLUMBIC ZINC,

A SUBSTITUTE FOR SHEET-LEAD FOR

ROOFING, RIDGES, GUTTERS, FLOORING,

AND ALL OTHER PURPOSES TO WHICH SHEET LEAD IS APPLICABLE.

This Metal consists of six inel layers of Lead and Zinc, perfectly united in the process of Manufacture, one side of each sheet being pure Lead and the other pure Zinc; it therefore combines the Stiffness of Zinc with the Flexible Qualities of Lead. The Lead side of the sheet being outward effectually protects the Zinc below from those atmospheric influences which so rapidly cause its crimes its thickness and weight.

Plumbic Zinc not requiring to be more than one-fourth or one-fifth as thick as Sheet Lead, is consequently much cheaper than that material

For covering Terraces, Flats, Floors, Stairs, Passages, &c. it is well suited, being like Lead to the tread, whilst the Zinc on the under side of the sheet prevents it from treading out of shape.

The Size of the Sheets is 7 feet by 2 feet 8 inches.

No. 11 Gauge weighs about	18 oz.	per foot super.	
No. 13	"	"	20 oz. do. do.
No. 13	"	"	23 oz. do. do
No. 14	"	"	26 oz. do. do.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON. House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees', DOWIS, JAMES, and Co. Wholesale Builders' and Cabinet Ironmongery Establishment, 26, Wellington-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine, and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

SAWING, PLANING and MOULDING MACHINERY.—SAMUEL WORSSAM and COMPANY give notice that they have very greatly enlarged and improved their Premises in the King's-road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for sawing, planing, tenoning, and Moulding Wood. They have constantly in hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they conduct the fitting up to the use of the machinery, and are justified in bringing under the notice of Ironmongers and Builders the most distinguished Companies and Contractors in the world with their Machines for home and foreign use.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with Hose Pipe, Zinc, Lube, and Copper Wire, Gas Pendants, Brackets, and Jointed and downpieces for gas fitting, Brass and Iron, Tin, Composition, Iron and Brass Tubing, Corrugated Hose and Lacquered Cocks. Price for Picture Rods Desk Rods, &c. &c.

Solder, Round Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. &c.

RICHARD EVERED'S Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London

GAS COOKING-STOVES, for large or small establishments.—DEANE, DRAY, and CO. 1, Arthur-street East, London-bridge.

Testimonial respecting the Crystal Palace Kitchen, as fitted by DEANE, DRAY, and CO.

8, Ridgmount-place, Hampstead, March 9th, 1853.

Gentlemen, I have great pleasure in leaving testimony to the capabilities of your admirable Gas Cooking Apparatus, being the largest and most perfect yet in use. Sunday last it was applied to public houses, private houses, and theatres, having cooked in one oven fowls and many cwts. of ham, beef, veal, mutton, lamb, tongue, &c.; roasting in one department a baron of beef weighing 35 lbs. in nine hours, together with the presented by J. Bannister, esq. Tyrwhitt-street, to the directors, for the banquet given to the foreign bandsmen. They have been in full operation for ten months, and have now in use several orders which must be finished. I have leave to test one shilling per week.

I am, Gentlemen, yours respectfully,

EDWARD HORNE.

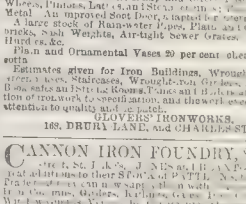
Messrs. Deane, Dray, and Co.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always in show-rooms, every article marked in plain figures. Patentees and Manufacturers of the Universal Gas Regulator. Complete pattern book and price list, 10s.—Southampton-street, Holborn.

HEATING BY HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea solicit the attention of architects, &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating 1,000 linear measure of 2-inch pipe in length, at the small expense per day of 1s. 6d. fuel and labour; 1s. 8d. This achievement in heating by hot water is unprecedented.



WARMING and VENTILATING.—COTTAM and HALLEN, 2, Wine-street, Oxford-street, having had thirty years' experience, and having warmed by the circulation of hot water upwards of 1,000 churches, conventual establishments, private, lunatic asylums, halls, and staircases, galleries, conservatories, forcing houses, &c. can with confidence recommend their system, which, by the recent improvements they have made, has perfected the construction and economised the expense. Greenhouses, conservatories, verandahs warmed by the circulation of hot or wood-air, of the most approved principle. Estimates upon application.—COTTAM and HALLEN, Engineers and Ironfounders, 2, Wine-street, Oxford-street.

ECONOMIC GAS-COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is made of varied sizes suitable for large or small families. In operation daily in the stove and broiler department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO., pertaining to the Monument, London-bridge. Established A.D. 1700.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. No smoke, dust, ashes, or dirt whatever from use, a great saving in coals, while it presents all the comfort and appearance of an open coal fire, seeming, at the same time, perfect ventilation. To be seen in action at DEFRIES'S office, 143, Regent-street, London.

THE COTTAGERS' STOVES.

Testimonial.

"Lord Hardinge requests Messrs. BAILEY will be so good as to inform him how much he is in their debt for the stoves which they supplied to him. He is happy to inform them that from the stoves the proved VERY GOOD ones in the Camp before SEBASTOPOL.

Horse Guards, 20th Feb. 1855."

D. and E. BAILEY, Ironmongers, 272, Holborn. Price 25s.

Engineers' and Builders' Castings of all kinds manufactured by JOHN WALKER,
Builder, Contractor, and Ironfounder, Mill-wall, Poplar.
Offices—Arthur-street West, London-bridge, where experienced draughtsmen are kept to furnish designs and estimates, which may be obtained on application.
N.B. Galvanized and painted Sheet-Iron, both plain and corrugated, supplied at the lowest possible prices, and a considerable allowance made to the trade.

CLARK'S PATENT SMOKE-BURNER: an improved means of perfecting Combustion, and thereby destroying Smoke.
This invention is now in operation upon Steam-engine Furnaces, of Cornish and Waggon Boilers, and upon Ovens. It is adapted to other descriptions of Furnace, such as Marine Boilers, Coppers, Coke Ovens, Bakers' Ovens, Potteries, Chemical Works, &c. Its effect is acknowledged by Government Inspectors to be amongst the most perfect of the inventions extant in subduing the Smoke Nuisance, and in many instances with a diminished consumption of fuel.
Ten furnaces, of various construction, to which it has been successfully applied, may be seen in operation at the Cement Works of Messrs. FRANCIS BROTHERS, Nine Elms, London.
Address, THE SMOKE-BURNER COMPANY, Nine Elms, London.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Founding, Nails wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds; with Patent Shifting Spindles; Dr. Arnott's Ventilator, 4s.; and the new registered Venetian Ventilator, so much admired, &c. 8s. 6d. each.
J. H. BOOBBYER (late SPENCE and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.
14, Stanhope-street, Clare-market, London.
No. 1764, BRITISH SECTION, HARDWARE DEPARTMENT, PARIS EXHIBITION, 1855.

CHUBB'S LOCKS & FIREPROOF SAFES.
INEFFECTUAL ATTEMPT UPON THE STRONG ROOM OF THE LONDON AND NORTH-WESTERN RAILWAY, LIVERPOOL.
"London and North-Western Railway Company,
"Liverpool, May 17, 1853
"Gentlemen,—I have much pleasure in bearing testimony to the efficiency of the iron door and locks of your make, which secure the strong room at this office, and which completely baffled the efforts of one or more burglars to get at the money chest on the night of Tuesday last, although it is evident that considerable force was used to break open the door.—I am, gentlemen, your obedient servant, "GEORGE PALMER.
"Messrs. Chubb and Son."
FROM MR. OTWAY, SUPERINTENDENT OF POLICE, C DIVISION.
"3, Great Vine-street, May 3, 1853.
"Gentlemen,—I have the pleasure to inform you, that having one of your iron doors and the street door of my house prevented my being robbed last night. The thief tried to open it, but not succeeding, has so damaged it that I have sent it to you for inspection, and shall be obliged if you will have it repaired.—I am, gentlemen, your obedient servant, "C. OTWAY.
"Superintendent C Division of Police.
"Messrs. Chubb and Son."
CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock.
Complete Illustrated Lists, with prices and sizes, will be sent on application.
CHUBB and SON, 16, MARKET-STREET, MANCHESTER; 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; and Horsley-fields, Wolverhampton.

HOBBS'S PATENT AMERICAN and ENGLISH LOCKS
Messrs HOBBS, ASHLEY, and Co. are now manufacturing their celebrated American and English Locks, on the premises, 97, Cheapside, and 33, Lawrence lane, London; where, by the introduction of their patent steam machinery, they are enabled to introduction of their patent steam machinery, they are enabled to guarantee superior workmanship, combined with greater security, at a moderate price, than in any locks produced either in town or country.
EVERY LOCK being MADE and FINISHED at the MANUFACTORY, is warranted, and bears their OWN STAMP, without which none are genuine.
These Locks can be procured by order through any respectable Ironmonger in the United Kingdom; or at the Warehouse, as above, Wholesale and Retail.

PATENT FIRE and BURGLAR-PROOF SAFES (MILNER'S PATENT), fitted with HOBBS'S PATENT POWDER-PROOF LOCKS, form the Strongest Safeguards against Fire and Robbery; they are made of various dimensions, adapted for the security of Money, Plate, and important Documents. Parish Registers, &c. Lists of prices and dimensions can be had on application to HOBBS, ASHLEY, and CO.—Wholesale and Retail Warehouses, 97, Cheapside, and 33, Lawrence-lane, London.

TO ARCHITECTS AND BUILDERS.
PATENT CLIMAX DOOR-SPRINGS.—The attention of architects, builders, and ironmongers is particularly directed to the above patented improvements in door-springs, being the most perfect and durable yet invented. Their power is equal to doors of any size and weight, and they are warranted to stand the wear and tear of any busk. public building, or business establishment in the kingdom.—Drawings, with full particulars, may be had from the manufacturers, WEBB and GREENWAY, Steelhouse-lane, Birmingham.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE.
Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Goods, and
STEWART'S PATENT CAST-IRON GAS and WATER PIPES.
Office, No. 7, Blue-lane, London.

HART AND SON,
IRONMONGERS AND MANUFACTURERS,
53, 54, 55, & 57, WYCH-STREET, STRAND.

An Illustrated Catalogue on receipt of six postage-stamps.

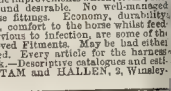
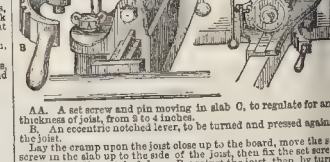
REDMUND'S PATENT HINGE MANUFACTORY, WELLINGTON FOUNDRY, Charles-street, City-road, near the Canal-bridge. Established thirty years.—E. GOLLOP, widow of the late J. Gollop, sole manufacturer of REDMUND'S and GOLLOP'S PATENT, rising and not rising spring, swing, double acting, gate, and other Hinges, Floor Centres, &c. &c. Orders for Hinges only, addressed to Mr. J. WEBB, sole Agent, at the Warehouse, 59, Greek-street, Soho; or at the Foundry, will be promptly attended to.—Every description of Small, Soft, and Malleable Iron Castings.

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for bunding and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.



BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY at PFEIL and STEDALL'S,
Nos. 8 and 9, BROAD-STREET, BLOOMSBURY.
The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

COTTAM'S NEW PATENT for STABLE REQUISITES.



COTTAM and HALLEN, of Winsley-street, are the ORIGINAL INVENTORS of this arrangement of MANGER, RACK, and WATER TROUGH as ONE FIXTURE; they are universally approved of, and obtained the Great Exhibition Prize Medal. The New Patent embodies all the improvements which, from practical experience, have been found desirable. No well-managed stable should be without these fittings. Economy, durability, appearance, cleanliness, safety, comfort to the horse whilst feeding, and being rendered impervious to infection, are some of the advantages of Cottam's improved Fixments. May be had either plain, galvanized, or enamelled. Every article for the harness room and stable kept in stock.—Descriptive catalogues and estimates on application to COTTAM and HALLEN, 2, Winsley-street, Oxford-street.

BARTON'S PATENT SAFETY STABLE FITTINGS, and ENAMELLED MANGERS.

This is the original Patent for important improvements in stable-fittings, including a method surpassing all others for conveying the straps and halter-weights to the back of the fittings, to prevent the horse being cast in the stall. Stable Fittings of every description, enamelled or galvanized. All kinds of Stable Furniture in stock; Iron Hurdles, Gates, Fencing, &c &c. Manufacturer of Kite's Patent Noiseless Cast-Iron Smoke Curing Chimney Cans.—Show on Buckingham-palace.—Price List sent on receipt of two postage-stamps.
JAMES BARTON, Iron Founder, &c. 370, Oxford-street, a few doors East of the Pantheon.

PATENT CRAMP FOR FLOORS, DOORS, AND SASHES.
W. BISSELL, PATENTEE, WOLVERHAMPTON, Manufacturer of Rein and Mortise Locks and Builders' Ironmongery.

AA. A set screw and pin moving in slab C, to regulate for any thickness of joist, from 2 to 4 inches.
B. An eccentric notched lever, to be turned and pressed against the joist.
Lay the cramp upon the joist close up to the board, move the set screw in the slab up to the side of the joist, then fix the set screw firm. Turn the notched lever B against the joist, then, by turning the handle D, the lever will gradually fix itself and hold the cramp firm: the greater the strain, the more tightly, by its eccentric action, will the lever hold. The Patentee, in asking the attention of Builders and others, assures them that his cramp possesses great advantages. It is a nascni cramp of the best kind, and well suited for doors and sashes as for floors. From its superior mechanical principles, it has greater power, and will be found to be more quickly and safely used than any yet brought out, and at the same time it is light and portable.

ESTABLISHED 1817.
WILLIAM HARMER'S SMITH WORK, STOVE and RANGE MANUFACTORY and IRONMONGERY, METAL, and ZINC WAREHOUSE, Horserferry-road, and 1, New Peter-street, Westminster. Contractors, Builders, &c. supplied with general Ironmongery, at the lowest wholesale prices.
Cottage Ranges, with Oven or Boiler complete, 22s. each.
Self-acting ditto, with ditto, from 33s.
Self-acting Oven and Boiler Ranges, with Wrought Fittings Brass Tap, &c. complete, from 45s.
Register Stoves, from 6d. per inch.
Elliptic Stoves, with double Backs, from 3½d. per inch

Rain Pipes {	2	2½	3 inch.	
	1½d.	1s. 3d.	1s. 4d. per yard.	

4-inch Eaves' Gutters, 9d. per yard.

O. G. Gutters {	3½	4	4½	5 inch.	
	1s.	1s. 1d.	1s. 3d.	1s. 6d.	per yard.
Best Cut Clasp }	1½	2	2½	3 inch, and larger.	
and Rose {	15s.	12s. 6d.	13s.	12s. 6d.	per cwt.

1-inch best Cut Lath, 14s. 6d. Sheet Floor Brads, 12s. per cwt.
Sash Weights, 7s. 6d. per cwt. 3-inch Air Bricks, 3s. 6d. per doz.
6-inch Sink Traps, 9s. per doz. Strong Coal Plates, with hook 20s. per doz. Sheet Zinc, Perforated Zinc and Tubing.—Estimates given for Iron Railing, Gates, Balconies, and ironwork of every description.

NAILS and IRONMONGERY, from BIRMINGHAM direct.
Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the
LOWEST BIRMINGHAM PRICES,
a complete LIST of which will be forwarded upon application.
FREDERICK BLYTH,
Nail Manufacturer and General Factor,
Regent-parade, BIRMINGHAM;
or at 16, Gresham-street, LONDON.

SMOKE CONSUMER.—A Patent Smoke Consuming Apparatus supplied for 3l. 3s. and upwards, by Mr. JAMES CARTER, 21, New Bridge-street, Blackfriars.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors, and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their STOCK of MARBLE is received direct from the principal quarry-owners in Italy and Belgium, for SALE on COMMISSION ONLY, and that they can consequently supply the Trade with the finest marbles at the lowest prices. Sawn Slab, Mortars, Vases, &c.; Yorkshire and Portland Stone for sale on commission.
The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MARBLE.—Mr. B. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.
MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account, Mr. Thompson being no longer his agent.
Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.
N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

PIMLICO MARBLE WORKS,
BELGRAVE-WHARF,
LOWER BELGRAVE-PLACE.
SAMUEL CUNDY.
THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL.
PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

YORKSHIRE STONE.
GEO. VINT and BROTHERS beg respectfully to inform Architects, Surveyors, Contractors, Builders, Masons, &c. that they can supply to any extent all kinds of YORK STONE of the very best quality, direct from their Quarries, to all Railway Stations and Ports in the Kingdom, on the most reasonable terms.—GEO. VINT and BROTHERS will give prompt forward prices by post on application.—Address, Idle, near Leeds.

SERPENTINE.—THE LIZARD SERPENTINE COMPANY manufacture Chimney-pieces, Tables, and all Architectural, Ecclesiastical, and Ornamental Works, from their beautiful stone, at prices in competition with coloured marbles. The stone from the lower beds of their quarries is superior to any hitherto brought into the market. Stone supplied in block or slab.—Offices and Show Rooms, 20, Surrey-street, Strand.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.
THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble, bold, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Verd Antique, Brocatella, Dove, St. Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

By Her Majesty's Royal Letters Patent.

SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in this most durable material. A large Stock kept of Mantel-pieces, Balustrades, Quoins, Tombs, Fonts, &c. at the new premises, Whitehall Wharf, Cannon-row, Westminster.

HAYTOR GRANITE COMPANY.—Incorporated by Royal Charter.—London Agent, C. HOAR, 4, Millbank-row, Westminster.—This Granite was used exclusively in the Nelson Monument, Trafalgar-square; the William Monument, City; and extensively for the plinth and steps at the Royal Exchange, and terraces at the Crystal Palace, &c.

TO FURNACE OVEN BUILDERS AND OTHERS
THE GODSTONE STONE COMPANY will supply the best description of FIRE STONE in large or small blocks, Oven Tiles, Backs of Grates, and all descriptions of Furnace work, at prices about half those charged for other goods of the same description offered to the public. The price of this Fire Stone is erroneously stated in Builders' Price Books for 1853, at 5s. per foot cube, whereas any quantity can be supplied at the Bricklayer's Arms Station, at 1s. 2d.—Apply at the Offices of the Company, 21, New Bridge-street, Blackfriars.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS,
QUARRYMEN AND STONE-MERCHANTS,
BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

BRAMLEY-FALL STONE and LARGE LANDINGS.—Mrs. ANN HUSLER can supply any quantity of BRAMLEY-FALL STONE, large landings, flags, steps, sills, copings, sinks, &c. &c. at the lowest wholesale prices. Note.—No charge made for supplying to dimensions. Apply for price, &c. to S. TRICKETT, Stone Wharf, Isle of Dogs.

DOCK WORKS.—STONE NOTICE.—To CONTRACTORS.—TO BE SOLD, 3,000 feet more or less, of ANSTON STONE, being the remainder of that which was got and scappelled three years since, for the Great Grimsby Dock Works.—Apply, by letter, to Mr. DUNCAN LIDDLE, 67, Princes street, Leicester-square.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late LUARD, BEEDHAM, and CO.) Caen Wharf, Rotherhithe, London, General Stone Merchants and Quarrymen, continue to deliver from their Wharf and Depôts CAEN STONE, AUBIGNY, PORTLAND, ANCASTER, GODSTONE IN BUILDING, BLOCK, and RUBBLE STONE, BLOCK and BURR HEARTH STONE; also RUBBLE BUILDING STONE, direct from the Caen and Aubigny quarries, at very moderate charges, to compete with the price of Brickwork.—For information, direct to Caen Wharf, Rotherhithe; or to Hibernia-chambers, London-bridge, Borough.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Waterloo-bridge. Offices: 245, High-street, Southwark, near the Townhall.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—TREGELLES and TAYLOR, 3, Pinner's court, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard.
This Granite is selected for the New Westminster-bridge

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

TO BUILDERS and Others in Town or Country.—For PRICES of BANGOR SLATES, apply to SCOLES and WOOD, Market Wharf, Regent's-park.

FREESTONE.—Architects and Others are reminded that they can obtain the CASTERTON FREESTONE, in Blocks of any portable size, at the Quarries, or at the Railway Stations of Stamford, Essendine, or Tallington, and which, from its price, and the facility with which it is wrought, offers immense advantage to the purchasers.—Apply to FRAS. and OCTS. N. SIMPSON, Stamford.
N.B. Specimens in plain blocks, and in elaborately carved Bosses, from Ely Cathedral, may be seen, and other particulars obtained, at the Offices of Messrs. PINDER, SIMPSON, and SONS, 29, Saville-row, Burlington-gardens, London.—May, 1853.

NORTH-WESTERN STONE DEPOT, Hampstead-road Bridge, Camden-town.—W. ASPINALL begs to call the attention of Contractors, Builders, and Masons, to his Stock of Portland, Park Spring, Potternewton, Newton, Harebill, Bath, Caen, and other Block Stone; York Paving, Landings, Steps, Sinks, Sills, &c.; Park Spring, Robin Hood, Hare-hill Landings and Slabs. Also, Aberdeen, Guernsey, and Haytor Granite Curb and Pitching, all at the very lowest prices.
N.B. Estimates given for Masons' Work.

TO ARCHITECTS, BUILDERS, IRONMONGERS, &c.
ENAMELLED SLATE CHIMNEYS, of elegant designs and superior workmanship, in great variety, at prices from 9s. to 10 guineas. Slate Cisterns made to any size.—H. HOWELL, Manufacturer, 5, Cook's-grounds, King's-road, Chelsea, Middlesex.

ENAMELLED SLATE.—REDUCTION in PRICE.—Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in price in the shape of a large and increased discount to the TRADE. His best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work.—PIMLICO SLATE WORKS, 30 and 40, Upper Belgrave place, Pimlico.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Buckingham Palace, Portman Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

BOW-BRIDGE SLATE WORKS, Stratford, near London.—A. A. ROBINSON begs to inform Architects, Contractors, Builders, and others, that his PRICE LISTS for SLATES and SLAB WORK for 1855 are NOW READY, and can be had on application, inclosing a postage-stamp.
N.B. A liberal discount to the trade.

SUPERB SCAGLIOLA.—Important to Architects, Builders, Decorators, and others.
E. ROBBINS'S new system of producing this beautiful material affords an opportunity never before offered for the display of Taste and Talent in the Ornamental and Decorative department of building. Inlaid work of the most elaborate designs, and in imitation of any marble, executed in a finished and workman-like manner, at prices considerably lower than are usually charged for work of a much inferior quality; this description of work can by this system not only be better executed, but in less than half the time required by the old system. The great simplicity of manufacturing Scagliola by this system enables E. R. to supply plain or face work, such as Panelling, Skirting, Chimney-pieces, &c. at one third of the ordinary Trade Tariff.—Specimens can be seen, and orders taken, at 31, Camden-street, Islington-green.

TERRA-COTTA.—Statues, Statuettes, Vases, Tazze, Busts, Consoles, Bas-relievi, &c. by J. M. BLASHFIELD, of Millwall, near the West-India Docks Station, and sold at No. 1, Frazer-street, Edmund's-town, where prices and designs can be obtained. Examples of Terra-cotta, by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Nereid Court. The statues of Australia, Venus de Medici, and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta, so are the fountains at the Renaissance Court, and the roof of the Alhambra Court. The Pompeian roofs is of Terra-cotta and red cement combined. Since the execution of these works, J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

MARBLE EDGE STONE RUNNER.—Any person having one to dispose of, about 4 feet 6 inches diameter, and 14 to 15 inches on the face, may hear of a purchaser on application to Mr. PAVETT, 6, Garlick-hill, City.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the asceusion and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 50, 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with upwards of 3000 gallons per diem, may be obtained on application at the depôt, Whitehall Wharf, Cannon-row, Westminster.

IMPROVED WINDOW BLINDS.—SANDYS'S PATENT EXCENTRIC CLEAT, manufactured solely by THOMAS PEMBERTON and SONS, and may be had of all ironmongers. It is the only perfect method yet introduced of sustaining a Venetian blind, on releasing the cord, and avoiding winding on hooks. For calico blinds its action is perfectly noiseless, as it works on centre pins, and the blind is raised and lowered by a single line without a centre cord.

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE-PACKING, both round and flat, and SOCKET-RINGS, for Hot-water-pipes. Vulcanized Rubber Door-springs, and Solid Round Rubber Cord of all sizes of any length. Billiard Cushions and Rubber Strips cut to any pattern for bagatelle tables.
Diving-dresses of superior make, and improved Vulcanized Rubber Supply-pipes for ditto.
Vulcanized Rubber, in sheets, from three to four feet wide, and of any thickness. Air-beds, Pillows, and Cushions inflating Portable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order.
N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell-mews, Goswell-road, London

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 8d.; gauze wire blinds, in mahogany frames, 3s.; perforated zinc blinds, in ditto, 4s. 10d.; outside blinds of striped cloth, 3s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at is per foot super. together with every particular of its cost and application, can be obtained of Mr. BURT, 2, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

WOOD-CARVING and FRET-CUTTING. T. HEWETSON, Wood-Carver, and Fret-Cutter, 5, Hatton-garden, London, begs to inform Architects, Builders, Iron-founders, Cabinet and Pianoforte Makers, that he is prepared to execute any kind of Architectural or Ornamental work, with accuracy and despatch. T. H. particularly solicits the attention of Ironfounders, having had many years experience in ornamental pattern making. Estimates furnished.

BUILDING MATERIALS.
BECK'S WHARF, ISLEWORTH.—Builders having works to execute south-west of London, will find a good supply upon this wharf, on reasonable terms, with every convenience for speedy loading by travelling cranes, either into barges or carriages. Portland, Caen, Bath, and Yorkshire Block Stone, always in stock; Landings, Paving, &c. Also, Marble in Slab, Chimney-pieces, &c. Slab and Roofing Slates from the Penrhyn Quarries. Timber, Deals, Limes, Cements, Clay Goods, &c.—N.B. This wharf is very near the St. Margaret's estate.

TO IRONFOUNDERS, ENGINEERS, MANUFACTURERS, &c. requiring strong roomy Premises, with powerful Cranes, Steam-engine, &c. TO BE LET or SOLD, by PRIVATE CONTRACT, the LEASE of an IRON-FOUNDRY (in work), sixty-six years unexpired, situate in Kingston-street, Gibson street, near the South-Western Railway Station, Waterloo-road, London. A plan and particulars may be had of WM. ELKIN, Lessee, on the Premises. The Premises are well adapted for a warehouse; three waggons could be loading or unloading under cover at the same time; the distance from the bridges convenient.

TO ARCHITECTS AND SURVEYORS.
TO BE DISPOSED OF, upon moderate terms, a small but increasing PRACTICE, in a rising and beautiful watering-place.—For particulars, address, S. S. 9, Studley-terrace, Larkhill-lane, Stockwell, Surrey.

TO ARCHITECTS, BUILDERS, and SURVEYORS.—TO BE DISPOSED OF, an old-established COUNTRY PRACTICE, having the building connection, which has been successfully carried on for a long period, and the reasons for wishing to relinquish it can be satisfactorily explained. For further particulars, apply to Messrs. EVERSFIELD and HORNE, Auctioneers and Estate Agents, 40, Parliament-street, Westminster.

PREMISES WANTED for a MANUFACTORY of a light nature, without nuisance. Buildings to have from 10,000 to 20,000 superficies of floor, in two or three stories. A high-pressure steam-engine of 25 horse power will be required. An eligible place within ten miles of St. Paul's will be leased by the parties.—Address, C. M. Messrs. Shanks and Co. Adelphi, Strand.

PREMISES WANTED, in the London or Borough roads, or Newington-causeway, or within half-a-mile of either, consisting of a large yard, with shed or workshop, either with or without dwelling-house; as it would be for a term the rent must be moderate.—Address, stating particulars, to A. B. 21, Admiral-terrace, Vauxhall-bridge road.

KILBURN.—Valuable Investment.—FIVE HOUSES; term, eighty-nine years; ground-rent, each 6l.; all well let at each 32l. Price, each 285l.; a reduction if sold altogether. For cards to view apply to Mr. W. F. HAMMOND, Auctioneer and Surveyor, No. 3, Carey-street, Lincoln's-inn.

GUILDHALL, London, 24th May, 1853.
BUILDING LEASES, NEWGATE-STREET.—The Committee for letting the Bridge-House Estates, will meet at Guildhall, on FRIDAY, the 22nd day of JUNE next, at TWELVE o'clock precisely, to receive TENDERS for BUILDING LEASES of THREE PLOTS of GROUND, on the north side of Newgate-street, in the City of London, and lying between Church-passage and Giltspur-street Compter, where prices and designs can be obtained. Examples of Terra-cotta, by letting may be seen at the Architect's Office, Guildhall.
FERDINAND BRAND, Comptroller.

TO BUILDERS AND OTHERS.
THE KINGSTON HALL ESTATE is now OPEN for BUILDING PURPOSES.—Particulars and plans of which may be obtained of R. F. BARTHOP, Esq. or Messrs. PHILLIPSON, Kingston-on-Thames. The Estate opens into the centre of the town; the first part offers fine sites for business houses, and the other (leading direct to the railway station) suitable for villas.

KENTISH-TOWN.—TO BE SOLD, several well-built six-roomed CARCASES, with garde-ground, in a first-rate situation, and low ground-rents.—For particulars apply to S. TAYLOR, Plumber, &c. 2, Albany-place, Kentish-town-road.

EAST BARNET.—FOR SALE by PRIVATE CONTRACT, Twelve and a Half Acres of FREEHOLD LAND, with good frontage, and eligibly situated not far from the Railway Station. It commands a very direct and the most delightful views of this highly picturesque locality. Brick Earth and Gravel on the estate.—Apply to Mr. BICKELL, 70 and 71, Goswell-road, Islington.

SECURE INVESTMENTS in the City of London.—TO BE SOLD, on advantageous terms, a FREEHOLD ESTATE, (the free, land-tax redeemed, and producing a net annual rental of 86l. Also, a LEASEHOLD ESTATE, (unexpired seven years unexpired, held direct from the freeholder, who insures; producing a net annual rental of 62l.; both recently erected in a very eligible position, and let principally on lease to merchants of the first character.—For further particulars apply to Messrs. JENKINSON, SWEETING, and JENKINSON, Solicitors, 29, Lombard-street.—Principals or their solicitors will alone be treated with.

PAPIER MACHE AND CARTON PIERRE ENRICHMENTS MANUFACTORY,

49 & 50, RATHBONE-PLACE.

GEORGE JACKSON AND SONS

Beg the attention of Architects, Builders, Decorators, and others, to their large assortment of ENRICHMENTS in every style, on view in the Public Show-Room as above, consisting of Carton-pierre Centres, Trusses, Friezes, Panels, Trusses, Capitals, Trusses, Trusses, Trusses

The Builder.

SATURDAY, JUNE 2, 1855.

THE profound observation with which Sterne commences his "Sentimental Journey," to the general justice of which much of our military and transport organization has of late borne a perhaps reluctant testimony, has scarcely held good with respect to the arrangements made by the executive of the Great Exhibition. "Matters" have certainly not been "better managed in France" than they were with us; and, as a consequence, those inevitable grumbles, of discontented exhibitors, and worried public, which with us only now and then made themselves audible through the storm of plaudits, in Paris have swelled into such a growl, that the voice of those who would timidly assert, what is perfectly true, that the Exhibition, taken as a whole, will be one of the most delightful and interesting collections of illustrations of art and industry ever brought together, is at once drowned by the chorus of malcontents.

Too many of the sources of this general irritation, so far as the building for manufactures is concerned, must be recognized in the extremely deficient provisions made for the physical comfort of those who are likely to be its principal occupants during the summer months. It will scarcely be believed that up to within two months of the opening, scarcely any provision whatever was made either for the admission of fresh air into the ground level of the building, or for getting rid of the vitiated atmosphere at the apex of the roof. The consequence of this want of forethought was, that during the busy time, in which exhibitors ought to have been unpacking and arranging their goods, workmen were busy beneath their feet, and over their heads, in cutting great drains right through the building for the fresh air channels, and in raising a portion of the glass roofing along the whole length of the summit of each semi-cylindrical vault for the escape of the heated gases. From the one operation arose constant clouds of dust, besprinkling everything with a fine white powder; and, from the other, every now and then descended fragments of broken glass, and other equally dangerous missiles.

The worst of all is, that up to the present time, neither of these palliatives is entirely completed or successful; the truth being, that the areas of the apertures are still insufficient for spontaneous ventilation, while the building is ill adapted for the introduction of any artificial stimulants to a rapid circulation of air.

It is to be regretted that the authorities have neglected to become wiser by the past. Almost every defect pointed out in the last French Exhibition, of 1849, by Mr. Digby Wyatt, in his report on the display of that year,* is perpetuated, and even aggravated, in the present arrangements. This is especially the case in respect to the exits and entrances, the catalogue, the want of system in the disposal of the currents of visitors, the classification of goods, &c. On the day of the opening there were provided neither refreshment nor retiring rooms, and the inconvenience and shifts to which the workmen and all engaged in the preliminary labours were subjected in consequence of such deficiencies, can be better imagined than described.

Happily, however, there is something in the specific gravity of any really great national work, and in the momentum it acquires when once fairly started, which carries away before it swarms of those petty impediments which would effectually bar the progress of any less weighty enterprise. It is the interest of so many that it should succeed, that the barriers interposed by the mismanagement of a few are soon removed and their mistakes rectified. Ballasted by such heavy interests, however much it may have heeled over, a good ship always rights itself; and once righted, the breath of success soon swells its sails, and carries it proudly forward in the current of progress. Such, let us hope, may be the case with the Paris Exhibition: it would be a thousand pities to see it wrecked through bad steering and seamanship.

The whole enterprise, as is doubtless known to the majority of our readers, is divided into three distinct sections,—raw produce and machinery, the basis of manufactures,—manufactures proper,—and fine arts. The first section is by far the most incomplete, and will scarcely be in satisfactory working order by the end of June. It will occupy an enormously long building adjacent to the principal structure, and running parallel to the bank of the Seine, for a distance of nearly two-thirds of a mile.

It is about 100 feet wide, and has a gallery on each side of the centre running along a considerable portion of its length. It is simple and clever in construction, and but for its closely-boarded floor, and deficiency of ventilation, would appear admirably adapted for the duty it has to perform. The arrangements for driving the machinery in motion are of the most extravagant kind, and elicited anything but complimentary remarks from the practical engineers, foreign as well as British, by whom their merits were discussed. One of the consequences of this cumbrous design most to be regretted is the delay which its carrying out has involved. Large combinations of mechanism are very costly to transport and erect, and the loss of the services of a valuable machine falls heavily on its proprietor: thus every day's delay in setting them in motion increases the expenses of their exhibitors, while it proportionally contracts the extent of good their exhibition might do, either to the general public, or to the producers and consumers. It was in this building that the celebrated chaos of packing-cases reigned which was generally nicknamed Balaklava; and in spite of the energies of the all-energetic Mr. Cole, and his indefatigable assistants, Captain Fowke and Mr. Owen, to vindicate the ascendency of mind over matter, and to rescue the English cases from the *mêlée*, it was long before order could be established. Mr. Wallis, the well known master of the Birmingham School of Design, worked hard in the same good cause. To describe the general confusion of the "*Annexe*," as the great building on the "Cours la Reine" is called, on the day of opening, would require the pen of an Ovid. Let us hope that such a description of chaos might, like his, prove only a preface to a series of "metamorphoses" at least of a demi-god-like character; and that when "order" may, at last, come "out of chaos," the darkness of the past may but enhance the brightness of the present.

It was in the main building—that destined for the reception of manufactured goods—that the inaugurative ceremony took place; and as the *Times* has already graphically described the scene, we shall not recapitulate such self-evident circumstances as that the Empress looked lovely, and the Emperor rather bowed down by that inevitable burden of care a crown seems doomed now-a-days to entail upon its wearer. We cannot but remark, however, in vindication of the justice of the strictures we have felt it our duty to make upon the imperfection of the building and general arrangements, that the same want of a wise governing power was no less perceptible in the impromptu ordering of the procession and spectacle, than it had been in all that had been done, and left undone, by the authorities, previous to the opening.

The building may be described, concisely, as composed of a great nave, entirely surrounded by an aisle; the nave being about 650 feet long, by a clear span of about 160 feet; and the aisle being of a uniform span of about 85 feet.* Both nave and aisle are covered with semi-cylindrical roofs of glass The whole of the construction is in iron, encased on the exterior in stone walling, divided into two stories, with two ranges of round-headed windows, about 10 feet wide. The whole of the aisle is divided by a gallery into two floors, to which these ranges of windows respectively give light—that is to say, give light on the ground floor, where it is too much needed, and fail, of course, to give it on the gallery level, which is one blaze of light from the glass overhead. Externally the architecture of these stone enclosures is agreeable enough, excepting in the centre mass, where regular columns are introduced, so stumpy as to appear completely crushed down by the heavy entablature and attic they support, or appear to support. The most satisfactory feature in the whole design is the treatment of the staircases, and of the pavilions in which they are inclosed. In these both the stone and plasterer's work is well composed and admirably executed.

The skill shown in the design of these pavilions, so far as the treatment of stonework is concerned, has not been extended to the arrangement of the forms of the constructive ironwork, which is heavy and altogether wanting in the Metallic style: the mouldings and ornaments are all borrowed from masonry, even to the marking of the keystones of semi-circular arches, while the proportions of the columns and girders are exceedingly cumbrous. To such an extent has iron been used in positions where its mass was a superfluity, that we were assured by the head of a well-known firm, largely engaged in the execution of works of a similar character in this country, that he had deliberately proposed covering double the area, in the same spans, with precisely the same amount of metal. It is not on the shoulders of Mr. York, the contractor for the whole of the works, that blame should be laid for such profusion, but rather on those of the authorities, who, in grasping after the same architectural effect of detail to which they were accustomed in stone, failed to attain its true scale of proportion; and, of course, altogether missed that refinement and lightness which the allotment to iron of its just economy of substance rarely fails to secure. The whole of the internal construction is painted of a light-grey colour—somewhat similar to that Mr. Brunel and Mr. D. Wyatt have adopted for the metal work of the Paddington station,—a treatment of colour which, in its extreme quietude of tone, may be suitable enough for a railway station, but makes a dowdy garnish to a building destined to contain the most brilliant products of the whole globe. This appears to have been strongly felt, for various attempts have been made to impart a more lively appearance to the interior of the great nave than this universal and almost unbroken grey permitted it to assume. In the first place the great semi-circular windows at each end have been filled with stained glass; and, in the second, flags and pendant banners of the most brilliant colours have been suspended from every practicable point. The stained-glass, which is made to embody vast allegorical compositions, is creditable to the executive abilities of the well-known M. Marechal, by whom it has been supplied, but is

* Prepared by the direction of H. R. H. Prince Albert, and the Council of the Society of Arts.

* A section will be found in a previous number of our journal, Vol. XII. p. 389.

unhappily faulty in its composition. Instead of dividing the subject into such groups as would allow the heavy vertical lines of the structural ironwork to pass free of all essential features, no attention whatever has been paid to them, and figures are cut into halves and quarters without compunction, whilst Commerce and such like are summarily "knocked on the head." How easily this might have been avoided is shown by an admirable design for the same subject exhibited in the architectural department of the fine-art building. Had it been carried out, the architect and stained-glass painter would have appeared to have worked in concert, whereas now it appears hard to distinguish which has most despised the other's work. Unfortunately, the amount of light admitted all round these great stained-glass windows makes them appear opaque and heavy; and, indeed, the conclusion is forced upon the mind of the spectator, either that the architect did not foresee the introduction of the stained glass, and that it formed no part of his original design,—or that if it did he was ignorant of, or failed to provide for, the most obvious conditions necessary to its satisfactory display. The flags and banners have a very gay effect, and relieve much of the monotony felt previously to their being put up.

On the ground-floor, the galleries produce rather an unsatisfactory and dull impression, but on the upper level the scene is very elegant: the lines of ironwork in the roofing fall most agreeably together, and the centre span is a truly noble one: it is a pity, however, that its springing was not higher from the ground.

Our comments on the preliminary arrangements and on the building have run to such a length that we must fain postpone our first impressions of the internal fittings, and goods exhibited.

ON THE ARCHITECTURE OF THE PRE-GOTHIC AGE IN GERMANY, OR THE ROMANESQUE DEVELOPMENT OF THE RHINE AND CENTRAL EUROPE.*

THE position which the architecture of the tenth, eleventh, twelfth, and thirteenth centuries—generally known by the comprehensive term Romanesque—holds midway between the classic severity of earlier ages and the aspiring freedom of Gothic construction, gives it the peculiar interest of being a link of the great chain which connects the old with the new civilization of Europe—the close of Roman splendour with the early dawn of Mediæval art. From the Romanesque buildings of the twelfth and preceding centuries, we learn how the great transition took place from the classic characteristics of breadth, horizontality, and repose, to the airiness and upper tendency exhibited in the Early Gothic structures; a change which, from first to last, occupied the space of nearly a thousand years in its accomplishment. Though extensively practised in these islands by our Norman conquerors, the Romanesque style received such an impress from their hands, and was so deeply imbued with their spirit, that it has retained their name among us as a distinctive appellation. It is to the Continent, therefore, that we must rather look for the purest characteristics of the Romanesque, and especially to Germany, which, though borrowing its original ideas from its subjected Italian estates, was amongst the first to carry them out with individual design, and the last to forsake the cherished forms, and yield up its sturdy "Rundbogen" for the novel and more graceful "Spitzbogen," or pointed arch.

Along that great highway, the Rhine, many a flourishing city was planted by the enterprising sons of the mistress of the world. And now on its banks stand clustered those venerable creations of Christian art, which far excel the few traces remaining of Pagan work and classic decline. Not only, however, on this spot, but throughout Central Europe, are to be seen traces of this once popular style, modified in accordance with local circumstances and individual feeling.* Distinct from, though closely allied to the Lombard edifices of the same date, and the examples of Byzantine influence exhibited at Venice and Ravenna, these Romanesque buildings claim equal kindred with the rival forms adopted in the buildings of the early Christian Church, the flat-roofed Basilica, and the domed temple of Byzantium. And it need excite no astonishment to find such clear traces of the chief features of each, when we remember that both were founded at the same time, for the same object, on the ruins of the same development of art.

Greece perfected the trabeated system of support. It was adopted at Rome, with the addition of a new, and, apparently, antagonistic principle—arcuation. Timidly at first, though boldly afterwards, the two were blended, till confusion became the result. Order succeeded under the artistic hands of the Lombards; and the style, further improved and developed by their German conquerors, became the great and noble Romanesque, which, extending its influence from Central Germany towards the north and the west, in after ages returned to invigorate the productions of its original country, the south. But, independently of their prominent position in the pre-Gothic age, and of their connection with Rome and Byzantium itself, constructively, artistically, and historically, these Romanesque edifices have a grandeur and a character of their own, and a strong claim on our attention by reason of their independent majesty and truth—a claim which has, indeed, been duly acknowledged in the well-known works of our countrymen, Hope, Whewell, Willis, and Pettit.

Although the types of many parts of these Romanesque buildings may be found in Byzantium—in the works of Greek artists, who had studied the arch and column at Rome itself—yet some particulars of their arrangement and construction may be derived from the early Basilicas of Rome. To the former may be referred the vaultings, the apsidal† terminations at the end of the nave and transepts, the semi-domed roofs, the piers, the open cupolas and windows, as well as some peculiarity of detail. To the latter may be attributed the Latin cross shown in the longitudinal and transverse arrangement of the piers and arches—corresponding to the marble avenues of the Basilica, some arrangements of the apses, and many examples of flat roofs, carried by plain walls, pierced with small round-headed windows. Indeed the campanile of Santa Francesca Romana‡ (Rome, A.D. 836), may serve as a type of those subsequently erected on the borders of the Rhine. The connection with the Byzantine types can be directly traced through the relation of Ravenna to that city. In 802 Charlemagne erected the cathedral at Aix-la-Chapelle (on the spot where a previous church was built in 543), in imitation of San Vitale, at Ravenna; and although this cathedral was altered in 983 by Otho III. yet enough remains of the base of the central cupola to indicate the style of the rest of the church. At this time in England, St. Paul's, Canterbury, Peterborough, and St. Albans, had been founded. Did the various edifices still exist which were successively erected on the site now occupied by the cathedral of Cologne, we should have a complete series, commencing from the year 94 of our era. Here Charlemagne built a church in 814 (a little later than that at Aix): another was erected in 873, and destroyed in 1248, in which year the present edifice was commenced.

It is through the works of the Lombards, in the church of S. Michele, at Pavia,§ and elsewhere, that we must trace the connection with the *Basilican* type. In Italy this form is naturally reproduced in most of the ecclesiastical edifices of this period. The church at Pavia dates from 720 to 750; and St. Castor, at Coblenz,* was consecrated in 836, by one who lived much at the former city. Not to mention that curious example at Lorsch (of which only a fragment now remains), consecrated in 774, in the presence of Charlemagne himself, we have, in the above-quoted instances, sufficient proof of the origin of the architecture of the Rhine. We shall see how it flourished for the next three centuries, and how, at the close of the twelfth and commencement of the thirteenth century, it attained its full growth under the protecting care of Frederick Barbarossa, at the very time when he was burning and laying waste the rebellious cities of Lombardy.

The less disturbed times in Germany, producing fewer warlike or palatial buildings, gave opportunity to its artists to lavish their talents on the ecclesiastical edifices of prince-bishops, and the results can be traced even as far as Liege, in the Netherlands.

Proceeding now to examine the particular arrangements which the three great cathedrals of Maintz, Worms, and Spires exhibit, we find that the grand central nave was universally adopted, generally vaulted in a semicircular form; though pointed vaulting was very early introduced. The nave-piers are large and plain, and the arches round. Sometimes there is a triforium, but always a clerestory, with windows as in the aisles, narrow and round-headed. There are transepts at both ends, often with apsidal terminations, which are also seen at the east and west ends of the nave. Over the junction of the nave and transepts, we find a light, open cupola, generally polygonal, *not domical*. There are towers on each side of the apse. If only four, they are very nearly alike in size; though the eastern pair are somewhat smaller. If each transept also has towers, they become little more than turrets, though still of bulk and elevation enough to assist in the grand effect of grouping,—as may be seen at Cologne, Maintz, Worms, Spires, Andernach, Laach, Boppart, and Coblenz. The high altar is approached by many steps, being raised over a crypt, half sunk in the ground, and generally supported by vaults on columns, exhibiting the best details. The entrance is sometimes through a cloister,† surrounding a square court. At Laach Abbey this exists entire. * * * * *

The constructive requirements for carrying the flat roofs, peculiar to the Italian and Basilican type, were simple; but in vaulting such spans as that of Spires (45 feet), more care was requisite. Large piers, generally square, with pilasters or semi-shafts attached in front to carry the vaulting, bear the arches of the nave,—but between these great pillars a smaller one is often placed, which, with the corresponding halves attached to the sides of the great piers, carries subordinate arches, and is continued upwards to form clerestory compartments beneath the great arch of the nave. This arrangement permits the sub-division of the vaulting of the aisles (which are generally half the width of the nave) into two squares; and so long as only the semicircular arch was used, the square was necessarily the plan of every compartment or vault of the nave. When the pointed arch was introduced, greater freedom in this respect was obtained, and we see it used in the *transverse* arch at Maintz, and both longitudinally and transversely at Worms and Bamberg. The square vaulting of the aisles, and the intermediate piers, were continued, however, long after this improvement, and I consider this subordination of arches to be a feature which, like the orders of tracery at a later period, gives great effect and lines of shadow, hardly to be expected in buildings with mouldings of so plain a character. The caps of these vaulting shafts are often boldly carved, as at Spires and Laach, and the latter even now retain some remnants of the colour with which they were originally covered. The impost mouldings of the arch piers are large and plain: those of the subordinate ones are often not carried round the face

GATEWAY OF KNOSTHORP HALL, YORKSHIRE.

in front. Most of these great churches have only a plain wall above the nave arches, or they sometimes exhibit smaller decorative arches beneath the clerestory. A gallery, called "männerchor," or "mannhaus,"* formed with large openings and a floor over the vaulting of the aisles, has a decided correspondence with the triforium,—a great feature of the later styles. England has many examples of the triforium, but Boppart, Andernach, Sinzig, and a few other smaller churches, are all the examples in Germany; and it is decidedly a Byzantine feature, as is also the vaulting of the apses by semi-cupolas, instead of the groined vaults which succeeded. The position of the apse has been already mentioned, but it remains to state that smaller ones were occasionally built in the east wall of the eastern transepts, as at Laach and Sinzig,—(like the Basilican tribunals), and in this case there are no north and south apses. The towers vary much in form, being square, polygonal, or round, and occasionally passing from one form to the other at the dividing stages; but their construction, or constructional ornamentation, is always the same. At the angle of the square, a strip of wall projects very slightly from the face. These flat pilaster strips, or incipient buttresses, are united several times in the height of the tower by flat bands, or a series of mouldings, carried on corbel tables of small round arches. In the panels thus formed, round-headed openings, single, double, or united under one common arch head, are inserted. Sometimes, in the centre of the wall, a flat strip, corresponding to the projection at the angle, is carried up to join the horizontal string, and is often continued above it to the very top of the tower. The two series of panels thus formed are pierced by windows.

This system (a decided Lombard importation, and seen later in our own Norman and Early English), is carried out in every wall. Cornices and eaves courses are supported on corbel tables of round arches. The apses, whether round, semi-octagonal, or semi-decagonal, are decorated in the same manner, the aisle and clerestory windows occupying the panels. Occasionally modified and varied round rolls are carried up the walls, and tied by horizontal rings of mouldings round the tower itself. A series of larger arches is sometimes carried round the walls on corbels only, without any vertical lines of support from below.* When it was required to cover a round tower with a roof of a polygonal form, the transition was easily accomplished by one or more of these projecting arches on corbels, and in this arrangement we sometimes observe a point in the arch coinciding with the face of the wall, exactly as the Byzantine pendentive. The system was carried out even further by the introduction of the trefoil-round arches and multifoils of pointed as well as round forms, in later examples. Wherever we meet with a building of the Romanesque period we have this characteristic, common enough with us under the term cornel table. The Normans used small carved blocks, as well as corbel arches, and their successors carried out the principle. But in Germany these corbel arches seem to have been so highly appreciated that many complete Gothic towers are formed in this manner, which seems to be peculiarly applicable to brick constructions. The two towers of the Frauenkirche (cathedral) at Munich, 318 feet high (built 1488), and other churches of the same city, have bands of ornaments of this character in carved or moulded brick. The Lombard churches, of course, show this system more or less, and even in the revival we see it carried out in unmatched boldness in the cornice of Florence Cathedral, and in the Campanile of Giotto, to say nothing of the extent to which it was employed in Italian brickwork.

In almost all the modern buildings in the neighbourhood of these early examples this feature is reproduced. In the towers or walls of Laach Abbey,* nearly all the peculiarities above mentioned are to be seen, and the little detached tower in the grounds adjoining may serve as a model to illustrate these remarks.

Exceptions prove the rule, and the church at Boppart, which is peculiar in many other points, has no vertical strip in the two towers, but one immense horizontal one, in the shape of a gallery, connecting them at the base of the spires.†

* Whewell, "Architectura' Notes on German Churches," pp. 91, 92.

* Compare the tower of the isolated chapel at Laach with the tower of the church of Sompting, Sussex, of about equal proportions.

GATEWAY OF KNOSTHORP HALL, YORKSHIRE.

The gateway engraved above is attached to an old hall in the neighbourhood of Leeds, built, I believe, in the former part of the seventeenth century. It belonged to Adam Baynes, who represented Leeds in Parliament at the time of the Commonwealth—the only time it was so represented before the Reform Bill was passed. The stone chairs outside the gate are a singular feature, which I have not remarked elsewhere.

* Damaged by fire within the last few months.

† To be continued.

ON THE EMPLOYMENT OF PAINTED GLASS.*

IF all buildings sought to be decorated with painted glass were of one character, or even in one style of architecture, much of the difficulty with which the modern glass-painter has to contend would have no existence. But, since he has to design works for buildings differing in their character or architectural style,—and as no glass paintings are likely to be very satisfactory which do not in some degree harmonize with the architecture with which they are associated,—it is necessary to give up a few minutes to the consideration of the principles which should guide us in designing windows for buildings of any particular character.

It is difficult, owing to the vagueness of language, to find a term by which the difference in the character of buildings can be compendiously expressed. And when I use the term "severity," to express my meaning, I am aware that it is sometimes used to convey the idea of rudeness,—sometimes that refined degree of simplicity which suggests no want or imperfection. But, if I use it in the popular sense, it will be sufficient for my argument. All buildings, then, and sometimes different parts of the same building, are more or less severe in their character. Thus, Norman buildings are more severe than any Gothic buildings, their architecture being a species of the Byzantine, itself derived indirectly from the Roman, but directly from the Greek, which is the severest style of all. So, again, Norman buildings are more severe than Roman ones, and much more severe than Palladian ones. And, again, buildings in the Early English style of architecture are more severe than those in the Decorated or Perpendicular. Moreover, buildings in the same architectural style may be more or less severe than others. And all these buildings require corresponding differences in the glass paintings designed for them.

I have noticed that the glass paintings which seem to harmonize best with Norman and Early English buildings are those displaying a certain degree of severity in the figure-drawing and ornament, and which are executed in a certain severity of manner, necessitating the employment, in these works, of glass of the richest tinture and most powerful hue. I believe that this severity, or roughness of execution, is demanded by the peculiar species of severity which characterises Norman and Early English architecture,—the severity of rudeness as distinguished from the severity of perfect refinement. But, if adopted, it requires, to carry it off and prevent offence to the eye, that it should be disguised by the richest and deepest colouring To take a familiar example: what can be more crude, or poverty-stricken, than a design of Early English pattern-work, executed on ordinary pellucid white glass?—what a miserable contrast does it present to the real thing, which is painted upon a material something between porcelain and glass in texture, and possessing a rich sea-green hue. A copy of fifteenth-century quarry-work, upon the same glass, would look fifty times as well,—simply on account of the more finished and elaborate character of the pattern. And so it is with the figures.

The thirteenth-century figures, executed with simple black lines, and smear shadow, and broad high lights, tell admirably (bad drawing, and so forth, excepted), when painted on the rich solid-looking material of the period. But their modern representations, done in the same manner on ordinary glass, appear not only very weak, but as if they were absolutely unfinished. Moved to pity by the sight of some of these wretched objects, and at that time not dreaming that the ancient manufacture of glass could be revived, I once took upon myself to recommend the adoption of a more elaborate style of execution than that of the thirteenth century for glass paintings intended for Early English buildings, as being better calculated than it to counteract the flimsiness of the material. Our critics loudly abused what they were too ignorant to understand; and not content with the grossest misrepresentations of my language, they have lately actually had the assurance to taunt me with abandoning my principles, because, having obtained the ancient material, I have advocated a return to the ancient mode of using it. Really I am at a loss which to admire most, their simplicity, their courtesy, or their candour. But, in truth, it will be found not only that a rich solid material is best suited to a simple mode of execution, but that a simple mode of execution is best adapted to the use of a rich solid material. None but a bold dashing style of painting would tell upon a material so powerful in colour as that of the thirteenth century. Fine shading and finish would be absorbed in the intensity of the local tint, and lost. And it would seem that if such a material is to be used with effect, the design should consist either of a pattern or of a picture in which no attempt is made at representing greater depth than we see in a well-sculptured relief. To represent a greater degree of depth or distance than this between the foreground and background of the picture would necessitate the employment of a good deal of glass lighter in tint than what is usually met with in thirteenth-century work. And I do not think that anything could compensate for the consequential loss or diminution of that breadth of deep, intense, vivid colouring which is the characteristic of a twelfth or thirteenth century window, and which of itself appears to harmonize with the severity and gloom of a Norman or Early English interior.

The existing thirteenth-century window appears therefore to be the best type to be followed in designing a window for a Norman or early English building, and it is probable would be found to be the best type for a window intended for a purely Greek building, though, of course, many modifications would be necessary to make the design and execution harmonize with the refinement of the architecture. But I wish to guard myself against being supposed to adduce the old thirteenth-century window for anything else than as a type. Its colouring, both in arrangement, and more particularly in tone, cannot be too highly praised. But its composition is too often crowded and confused; and not only are the figures badly drawn, but their attitudes are, in general, forced and affected. These ancient remains are subjects for study only. They suggest the representation of groups arranged, as in a bas-relief, in a single line; the figures cut out, and rendered distinct, by the ground of the panel, and unaccompanied with any accessories in the background; of draperies, having the sculpturesque character of the antique; of heads, significant and powerful as those of Raffaelle, touched in with a few bold strokes; and of an architectural style of ornament redolent of Greek art. In short, I know of no style containing more of the germs of true art, or so suggestive, as that of the twelfth and thirteenth centuries; nor one, in the hands of a man possessing artistic feeling and skill enough to derive his inspiration from the same pure and exalted source whence the Byzantine school undoubtedly drew theirs,—so capable of being worked out in a manner alike satisfactory to the antiquary and the connoisseur. I have alluded to the colouring of these early windows in terms of praise. The excellence of that colouring depends principally on the excellence of the individual tints. Arrange the twelfth or thirteenth century glass as you like, still the colouring will not cease to be harmonious. The secret lies in the fact, that not one of these tints is a pure colour: all are more or less modified. The white is a sea green, or a greenish blue: the blue is a neutralised purple: the yellow has green in it: the purple has yellow in it: and the green and the red have brown in them, besides other colours. Chemistry can account for some of these things. Age, to a certain extent, improves the effect of painted glass, by neutralising the colour of a bit here and there. This is particularly the case with the blue. It is well, therefore, to glaze up a good deal of subdued blue along with the more positive blue. I am not averse to the "antiquating," as it is called, of bad modern glass, as it serves to make that tolerable which otherwise would be intolerable. But, however judiciously done, it is but a clumsy and imperfect expedient. The best course is to use a material made like the old, and to anticipate the effect of age, by the partial introduction of glass the tint of which has been modified, in the glass-house, without any loss of brilliancy.

In like manner, hints for the glazing of fourteenth-century windows may be derived from the remains of glass belonging to the Decorated period, though not to the same extent; for nearly all that is worthy of being studied in the works of the artists of the fourteenth century seems borrowed from their predecessors in the twelfth and thirteenth. Their white pattern windows,—their groups of figures in panels—their stems of Jesse,—differ from those of the twelfth and thirteenth centuries only in matters of detail,—not in principle; and from these, no doubt, useful hints may be derived. But canopies executed, as theirs are, without the slightest attempt at perspective, and without showing the recess of the niche in which the figure is supposed to stand, seem to set at naught every rule of art and even of propriety. Their use is sometimes attempted to be justified on account of the facility which the spire-ground is said to offer for the introduction of colour. But this argument is at once met by the remark, that precisely the same effect of colour could be given in a variety of ways, each artistic in itself. But the drollest defence is thus set up by our critics. They say, that the representation of depth should never be attempted in a glass painting, because it is part of the church, and therefore flat in reality; and that the ancient artists purposely selected objects, such as canopies, which, it is admitted, cannot, without an effect of doubt, be intelligibly represented,—and represented them, as we see them,—flat,—as if they had been "ironed out" against the glass,—not indeed from ignorance of the rules of perspective, but intentionally, in order to vindicate the principle for which these gentlemen are contending.

This process of reasoning is certainly very comical, and reminds me of a remark I once heard made by a Master of Arts of the University of Oxford, and who must, therefore, be presumed to have gone through a course of logic. He maintained that the mediæval artists drew their figures incorrectly, not from any inability to draw them correctly,—but purposely, and in order that their works might not be confounded with the more perfect works of the heathen. It is perhaps fortunate for us, that a man with a mind so constituted is not likely to win his way to the judicial bench; otherwise, we might hear of some unhappy wretch convicted of having possession of stolen goods, upon an irresistible inference of his guilt, drawn from the circumstance of the evidence having utterly failed to establish the fact of possession.

So much for our critics' argumentative powers;—now for their taste. All great artists, and all great writers upon art, from Phidias down to Sir Charles Eastlake, whatever their difference of opinion may be on other points, are agreed on this, that, though the existence of certain conditions may impose on the artist the necessity of adopting a flat method of representation, even when the object to be represented is not naturally flat, he fails as an artist if, under such circumstances, he does not contrive to convey to the spectator's mind the idea that the object is as rotund as he knows it to be in nature; the perfection of artistic conventionality being, that it should suggest no defect. In other words, an object like a canopy should not be represented at all, unless it can be represented in relief; and whether it can, depends a good deal on the effect of colour that it may be desirable to produce. The circumstance that the glass forms part of the church wall makes no sort of difference: it has really nothing whatever to do with the question, as any clear-headed person must at once perceive.

Still less does the painted glass of the fifteenth century supply hints for the glazing of perpendicular windows. The pattern-work of that period is well enough; but the appearance of an inartistic flatness and confusion in all the pictures is greater than in the remains of any former period. This is not surprising, when we not unfrequently find that the groups are arranged on a principle of relief. The figures are drawn up on the arc of a circle, not on its chord, as in a twelfth or thirteenth century example. Neither are they, as in the latter instance, sufficiently insulated by means of the ground, nor are any other means adopted to

* See p. 241, *ante*.

ensure distinctness. Hence a perpendicular picture window most resembles a collection of court cards.

It was not until the middle of the sixteenth century that the art of producing a picture, in glass, capable of conveying an adequate idea of depth, was discovered. I have already mentioned the windows at Brussels as most favourable specimens of this art; and I attribute their great power, and completeness of effect, to their extreme simplicity. In one of these windows, of which I have here a drawing, the group is placed in front of an arcade. The whole picture is seen under the influence of bright sunshine, and the shadows throughout are consequently sharp and decided. The blue firmament appears through the opening of the arches, and being contrasted with the dark shadows in the soffits, and on the figures, seems to recede, and this apparent distance gives a peculiar charm to the composition. A window like this bears the stamp of the master's hand, like the cartoons. And in many respects, the principle of its composition is analogous to that of the cartoons. In both cases the artist has had to work with reference to a mode of execution limited in its means, as compared with oil, or fresco painting. And in these windows we recognize the skill of the artist in the manner in which the excellencies of glass painting are displayed to the best advantage, and its defects concealed. And this, to borrow Sir Charles Eastlake's words, in speaking of the cartoons,—"without any sacrifice of such of the proper attributes of painting as were compatible with the means employed; and without any violation of probability."

It is manifest that this style, modified in its details according to circumstances, suggests the type for windows proper for Perpendicular and Palladian buildings. The east window of St. James's, Piccadilly, is, indeed, a sufficient warning against introducing the Byzantine principle of composition into a building in the latter style.

The result of the foregoing remarks is, that there are, in truth, but two styles of composition that need be attended to in painted glass,—the one, in which the picture is arranged on an artistically flat principle, like a bas relief, the figures of course being given a proper degree of roundness,—the other, in which such a degree of depth, or distance, is represented in the picture, as we see in the Brussels glass, or the cartoons,—that the first style is the best whenever the object is to produce a mosaic of rich intense hues, and which will suit only buildings of a certain character;—and that the second is the most appropriate for buildiugs in a less severe style;—the extent to which the artist should avail himself of the power of producing the effect of depth, being, of course, a point dependant on circumstances. A violent outcry has, no doubt, been raised against the second style; but its authors are, I am happy to say, only our logical critics, or a small fry of glass painters dependant on them for patronage, and who are sagacious enough to see their own interest in decrying a style which, being far more artistical than any of its predecessors, demands some artistic qualities in those who should attempt to carry it out. I shall, therefore, trouble you with no defence of such a style. To say that it is impossible to represent depth or distance in painted glass, even with the limited means afforded by the Mosaic system, is simply to deny the existence of those glass paintings in which this object has been successfully achieved with such means.

Our critics, who, though great sticklers for authority, are always ready to give it up whenever it clashes with their own preconceived notions, are loud in their condemnation of all those glass paintings which, in their opinion, are not in "strict subordination to the architecture." I do not quite understand what they mean by this phrase: perhaps they don't know themselves. But, as those compositions in painted glass which, in a mullioned window, extend beyond the limits of a single light, are especially subjects of their denunciation, and as such alleged solecisms in taste do occur pretty frequently, even in the golden age of the thirteenth century, it becomes a question whether greater credit for sound views is to be given to our critics or to the old artists themselves, whose works, it is admitted, have never yet been surpassed, nor even equalled. That a perfect harmony exists between old glass paintings and the architecture with which they are associated, is what I have asserted in this very paper; but this harmony I hope I have shown depends on something deeper than the confinement of a design between two mullions of a window. Indeed, the harmony between the glass and the architecture is sometimes ensured by a violation of this alleged principle.

To take a familiar instance: a fine thirteenth-century rose window owes its plenitude of effect to the circumstance that the lines of the glass composition are concentric, and therefore in direct opposition to the lines of the stone-work, which diverge, as rays, from the centre to the circumference of the window. And, as if it were that there should be no mistake about this, there is generally found, in some part of the window, a broad concentric border, which is ruthlessly cut through by every one of the mullions of the window.

I do not mean by this to lay down as a rule that all designs in glass should be independent of the mullions of a window,—but only to show that cases may exist—not confined to those windows, by the bye,—in which the general effect of an interior may be improved by carrying one entire design over the whole window; and in such case we may depend upon it that the glass is in harmony with the architecture. Indeed, if the object be to show off the shape of the window tracery, it is even better, when the glass is dark, that its lines should not conform to those of the tracery,—as is shown in one of the diagrams. Though, as a general rule, I think that for a mullioned window, a design of rich mosaic work, like the glass in the Ste. Chapelle, at Paris, is not so appropriate as a white pattern design, such as we see in many English windows of the same date.

In conclusion, I would impress upon you, that originality of design is essential in composing a window. The artist must study the building he is employed to decorate, and make his design to suit its character; instead of merely looking out for some old example to copy,—the design of which can be easily made to fit the size and shape of the window to be filled. Above all, recollect that the ordinary rules of art are as applicable to glass painting as to any other species of painting. It is true that the violation of these rules may be, and often is, overlooked, and even applauded, by persons who set themselves up for critics, without possessing any knowledge of these rules themselves. But, beneath all the accumulated rubbish that is said and written on the subject, runs the deep still current of public opinion, whose real course may not coincide with that of the straws that float on its surface. The English people may be confused by clamour, but not convinced; and, though ours may not be an artistic nation, its innate good sense will eventually vindicate itself in matters of art, as in other matters. Therefore be warned in time; and be guided rather by the works of experienced writers upon art,—such as Eastlake's "Literature of the Fine Arts," which is perhaps the best of all,—or, Leslie's "Lectures," which I mention, as it contains a good *exposé* of modern art-criticism,—than by what appears in the pages of ephemeral publications. There is no royal road to any branch of knowledge. A knowledge of the ordinary principles of art is not necessarily given by a University education, nor, I fear, common sense either, if the works of some of our critics can be taken as a criterion. I have felt it my duty to expose a few of the dogmas, because they are apt to gain a sort of currency by mere repetition, and because I do feel that the currency of these, and similar dogmas, has in great measure been the cause that the art of glass-painting, notwithstanding the very large sums that have been expended on painted windows during the last twenty-five years, is still, at this moment, in a more degraded state, in England than it is in any other country in Europe in which it is practised.

It might have been dangerous for any of you to have questioned these dogmas of our critics; but my case is different, as I want none of their patronage, and despise their praise.

C. WINSTON.

ROYAL INSTITUTE OF BRITISH ARCHITECTS.

AT the meeting held on the 21st ult. Mr. F. C. Penrose, in the chair, Mr. F. W. Porter was elected as Fellow, and Mr. Joseph Woods, of Lewes, as honorary member.

A communication from Mr. W. L. Donaldson, the honorary solicitor, was read, being "a summary of a report made by Mons. Remont, Architect of the City of Liége, on the Sanitary measures adopted in London." Models of Z. Round's patent bricks to supersede the use of wood bricks, were exhibited and explained by Mr. Wigginton.

The next meeting will be held on the 4th of June, when the Rev. J. L. Petit, M.A. will read "A few Remarks on Italian Architecture."

A committee has been appointed to consider the subject of premises for the Institute with reference to finance, and to report to a general meeting. It is much to be hoped that more commodious premises may be obtained. If Burlington-house is to be appropriated for the use of scientific societies, surely architecture may prefer a strong claim. The State has done little enough for her yet.

On Friday, the 25th, Earl de Grey, president, received the members of the Institute, together with a large number of persons distinguished by position or attainments, at his house in St. James's-square, to the ordinary attractions of which were added numerous folios of drawings and other works of art.

BELGRAVIA.

THIS aristocratic domain, as it may be called, has from accidental circumstances been exalted to its present distinction; for it was originally, and indeed until lately, mere fields, and of a common description. It is the district generally called "Pimlico," of which name there is no correct etymology. In the earliest accounts it is described as the Manor of Eye, situated between the Monastery of Westminster (to whom it belonged) and Chelsea. There is something said about it in Widmore; but, still, its precise situation seemed doubtful, until derivations became useful; thus the Manor of Eye had its Bury, next appeared Eye-bury—the present Ebury.

From Ellis's "Domesday," p. 42, "among the lands of Geoffrey de Mandeville, in Middlesex, in the Hundred of Ossulton, we find Eia entered in 'Domesday,' tom. i. fol. 129: our topographers have omitted to say where this property stood." From the "Chartulary of Westminster Abbey," however, we learn that close upon the time when "Domesday" was taken, Geoffrey de Mandeville gave this Manor of Eye, described as at no great distance from St. Peter's church, to the abbot and convent of that place.—See the "Chartulary of Westminster," Cotton Faust. A. III. fol. 281 b. King William the Conqueror's confirmation of the grant occurs in fol. 576. The same manor, with various other lands, was exchanged by the name of Eyebury with King Henry the Eighth, in the twenty-eighth year of his reign, for the Priory of Hurley, Berks, and some other possessions, by the abbot and convent.—See stat. 28 Henry VIII. cap. 29. It now belongs to the Marquis of Westminster, It is in the parish of St. George's, Hanover-square, although formerly in that of St. Martin-in-the-Fields. The lands taken from the convent were 100 acres, which Henry the Eighth formed into St. James's-park, opposite his palace, Whitehall, and the Convent-garden property, since of very increased value. The church of Westminster, as well as I recollect, is now only possessed of Hurley-wood. The Manor-house there, since erected, occupied the site of the Benedictine Monastery, founded in the reign of William the Conqueror by the fair Cecelina, "to which the monks of Westminster resorted as to their Tusculanum."

The Manor-house, since called Lady-place, had for some centuries been the residence of the Lovelace family, who have left donations to the poor. In the reign of James the Second, private meetings of the leading nobles of the kingdom were held in the subterraneous vault, formerly the burial cavern of the monastery, for calling in the Prince of Orange; and it is said that the principal papers which brought about the Revo-

lution of 1688 were signed there; and on that account William the Third and George the Third visited the vault, which was formed at the great Norman Revolution, and in this place, 600 years afterwards, the Revolution of 1688 was begun. On the last occasion, the house was in the possession of Lord Lovelace, by whom private meetings of the nobility were assembled in the vault. With the extinction of the family of Lovelace, the glory of Lady-place appears to have departed, and one tomb in the little church, although crumbling in decay, attests something of the former magnificence of the Lovelaces, lords of Hurley.

"Dust and ashes,
Mortality and vicissitude to all."

T. H.

PROVINCIAL NEWS.

Frating.—A school-room has just been built at the expense of the Rev. R. Duffield, the rector, in Frating parish, on the borders of the parish of Thorington, for the instruction of the children of both parishes. The school-room was opened on the 10th ult.

Godstone.—A new National and Infant School was opened here on Tuesday before last, with 200 children.

Tenbury.—The foundation-stone of a National School was laid here on Saturday before last.

Liverpool.—We are asked to say that the Liverpool Assurance Company mentioned in our last, as contemplating a new building, is "the Liverpool and London Insurance Company."

Manchester.—On Monday before last, the Town-hall was on fire. The fire was happily soon extinguished, and it was then ascertained how it originated. A zinc speaking-tube had been inserted into a flue, to communicate with the town-clerk's offices and that of the clerk of committees. This flue has in front of it a wooden casing, and the workmen when inserting the tube, according to the local *Courier*, had not replaced the bricks removed, thus allowing soot, which had accumulated in the flue, to fall down beside the wooden casing. About one o'clock on the Sunday morning, the chimney of the A division station, communicating with this flue, had been on fire, and some of the burning soot having got in among that in front of the casing, ignited it also, extending in a short time to the woodwork and flooring, and thence by a wooden pilaster to the roof.

Blackburn.—Mr. Chadwick, of Manchester, the contractor for the making of the roads in the public park here, has commenced operations with about thirty men.

Halifax.—Several engineers, together with the workmen in the employ of Mr. G. Thomson, railway contractor (now engaged upon the Halifax Station), lately resolved to erect a monument to the memory of Mr. W. Watts, jun. of Manchester, civil engineer, who was drowned while bathing near Wakefield, on the 20th of last July. The monument has been constructed at the Halifax Station during its erection. It is in the Gothic style. A moulded base has been prepared, 6 feet 5 inches long, by 2 feet wide, whereon the tablet is placed. On each side of the tablet stand clustered columns, with carved capitals, and rising from each capital is a moulded and carved canopy with crockets and finial. The spandrils are carved. The covering is in the Decorated English style of fourteenth century. The monument is carved from Ringby stone, and executed by Mr. George Shaw, of Halifax. It will be shortly removed to Newton Heath churchyard, where the remains of Mr. Watts are interred.

Darwen.—The foundation-stone of Sunday-schools, in connection with the lower chapel, Darwen, was laid on Saturday week.

Jarrow.—The amount of the accepted tender (that of Messrs. Jackson, Bean, and Gow, of London) for the execution of the entire of the Jarrow-dock works, is stated to have been 358,000*l.* There were fourteen tenders in all, two of which were below the above figures; but there is said to have been only a difference of 7,000*l.* out of seven of the tenders. The tender offered by Mr. Hutchinson, of Hartlepool, was 386,200*l.*; while that of Mr. Cail was 386,000*l.*; and Mr. Lawton, 380,000*l.* The ground, it is stated, is already staked out at Jarrow, as well as the branch railway for the trunk line near to Brockley Whins.

South Shields.—There was a proposal before the town-council of South Shields, some short time ago, to enclose the open area under the town-hall of that borough, by way of effecting a "public improvement." But plans of a new building altogether, to occupy the same (or rather an extended) area, and to accommodate, not only the town-council, but the post-office, custom-house, and other public establishments of the place, with also several tradesmen, were subsequently submitted, by Mr. Matthew Thompson, of Newcastle, architect, to the local authorities, with a statement showing that such a structure might prove a source of revenue to the corporation. The council very commendably paused in their patchwork enterprise; and we trust that so good a site as the centre of Shields market-place will be devoted to Mr. Thompson's Gothic edifice.—*Gateshead Observer.*

THE LAND OF THE '51 COMMISSIONERS.

WE are often asked as to the progress which is being made on the estate at Kensington, purchased for the "Industrial University," but have had little to say. Now, however, there appears to be again a movement on the land: the roads are advancing, and negociations with circumjacent owners and tenants are being revived. There is a little scandal current, but we must have something more than anonymous assertions. The road from Brompton Church and the "Bell and Horns," is to be opened westward, we are told, very soon. The wall, enclosing the ground of the Oratorians at a distance back from the present line, has been built some time. The opening should make a great improvement in that part of Brompton. The road thence for half a mile towards Hyde-park-corner, offers great facilities for improvement.

THE METROPOLITAN BUILDINGS BILL.

WE are still wholly in the dark as to the condition into which the proposed Buildings Bill has actually been brought by the Commons' committee. Comment is therefore out of the question. When the committee broke up last week, it was determined that the Bill, as altered, should be reprinted; but up to the moment before going to press, we were informed that this had not been done.

Since our last we have had an example of the want of uniformity in practice, and the injurious uncertainty which will result from leaving the enforcement of the Act with the police-magistrates. By the direction of the official referees, the district surveyor for South Islington summoned to the Clerkenwell Police Court the builder of a greenhouse (22 feet square, and erected close to the high road, to serve as a florist's shop), for having built the same without giving the notice required by the Act. The Act states that *every* building, "of what nature soever" (except the buildings comprised in a given schedule, and sewers), shall be built in conformity with the rules of the Act; and that notice shall be given "before *any* building shall be begun to be built:" and the referees decided immediately after the Act was passed,—

"That inasmuch as all buildings (except buildings comprised in Schedule B), are by section 5 of the said Act, brought within its operation, the greenhouse or building in question must be deemed to be within the provisions of the said Act.

That the exception in Schedule C, part 7, must be deemed to apply only to the mode of determining the rate of such greenhouses or buildings, and the thickness of the walls and any other matter dependent upon the rate of building.

That greenhouses, vineries, aviaries, or such like buildings are within the jurisdiction of the district surveyor. And further,

That such buildings are under the direction of the district surveyor, under Section 8 of the said Act."

But notwithstanding this, and that last week a magistrate at another court had re-affirmed that notice was unquestionably necessary, the sitting magistrate at Clerkenwell decided, after two hearings, that notice was *not* necessary. The exception in Schedule C, part 7, refers simply and specifically "as to the rates and walls:" it does not exempt "greenhouses, vineries, aviaries, or such-like *buildings*," from the requirements as to footings where walls are used, as to height of chimney, if a chimney be built, or as to the necessity of covering every roof "with slates, tiles, metal, glass, artificial stone, or cement;" and how can the surveyor see that these and other requirements are attended to, without which the public safety is endangered, if notice be not given to him?

The solicitor for the owner threw out the *gentlemanly* imputation that it was simply a question of *fee*, although the surveyor had sought to show his own feeling in the matter by relinquishing, at the commencement of the proceedings, any claim which he might have, in favour of the "poor-box."

One of the great difficulties the surveyor has to contend with in causing the rules and regulations of the Act to be properly observed, is from that class of small builders vibrating between workman and master, possessed of little or no means, but of considerable assurance; who undertake work often without notice, execute it improperly, and plead that it does not come under the Act, which, by the way, if able to decipher, they are unable or unwilling to understand: many of them are unable to affix their names to a notice. Surely as well for the sake of the public as of the surveyor, the owner and occupier should be made responsible as well as the builder. With those who set all law at defiance it is extremely difficult to deal.

ONE OF THE PUBLIC.

On Monday, the 11th of June, Mr. Hesketh will read a paper at the Royal Institute of British Architects, as to "What are the methods which it is most advisable to adopt in the Metropolitan Buildings Bill for regulating the thicknesses of walls." Builders, as well as architects and others interested in the subject, who have any opinions to express, should attend.

FOUNTAIN IN THE CRYSTAL PALACE, SYDENHAM.

ON Saturday, June 2, the date of our present number, when there will be a flower show in the gardens of the Crystal Palace, the fountains in the building, namely, the crystal fountain, one of Monti's, and probably the Lions fountain in the Alhambra, will play during the afternoon. The waterworks, out of door, which are to make their first appearance on Saturday, are the fountains of the six basins on the terrace-garden, the two small circular basins just below the terrace, and the large round basin in the centre walk. These nine basins are called the *upper range*, to distinguish them from the great cascades and the immense double series of circular jets with centre spires 250 feet high, which lie lower down in the grounds, and which will not be ready till some time in July.

The *upper range* is played from the large lake at the Sydenham end of the building: its high jets are played from two square tanks just erected on the edge of the lake. The two high towers are for the high jets of the lower fountains.

We have engraved a view of the fountain in the nave designed by Mr. Monti. If we understand the intention rightly, the figures supporting the large shells typify by their colour four races of men,—white, the Caucasian; black, the Nubian; red, the North American Indian; and olive, the Australian. The smaller figures above these bear various appropriate fruits.

While we write the rain is coming down in the quiet, steady manner which indicates a firm determination to persevere. If, however, by Saturday the sun should gain the mastery, and it is much to be hoped he may, the scene at the Crystal Palace will be a fine one.

The fountains will all play on Monday between the parts of a concert, at which Alboni is to make her first appearance.

SEWERS (DRAINAGE) BILL.—On the motion of the Earl of Shaftesbury in the House of Lords, this Bill was last week read a second time. The standing orders having then been suspended, the Bill was passed through all its remaining stages.

FOUNTAIN IN THE NAVE OF THE CRYSTAL PALACE.

ARCHITECTS' CHARGES AND BRIDGEWATER CHURCH.

Mr. Editor,—In your brief paragraph upon this matter, there seems something so contrary to the practice of the profession, that it is necessary, for the justification of the members, that further particulars should be given in order to show the grounds upon which the charge of 570*l.* 7s. 4d. on an outlay of 3,946*l.* or nearly 15 per cent. could arise. It may be presumed, that a certain per-centage may have been fairly chargeable upon old materials; but the profession have yet to learn how it can be reconcileable for an architect to act in more than one capacity. If as an architect, it is inconsistent to be paid as clerk of the works. If as clerk of the works, he has no title to remuneration as an architect. I do not know even the name of the individual; consequently, in requesting further explanation, I am only influenced by the desire of vindicating the profession; to protect it from impropriety of practice if such exist; or to justify a charge however large, if fairly earned by legitimate professional services. Will you be pleased to procure the other special circumstances, for the matter must be cleared up.

Thomas L. Donaldson.

*** Thus called on, we give the heads of the account as we find them in the columns of the *Bridgewater Times*:—

"Architect's Account.

	£.	s.	d.
To furnishing all necessary designs working drawings and specifications, with professional supervision rendered, in carrying into effect the several works enumerated in statement of expenditure, amount being 3,946*l.* 3s. at a commission of 7½ per cent.	295	19	2
To furnishing a report of the state of dilapidation of the church, with rough estimate of repairs	2	2	0
To surveying and reporting to you the condition of tower	2	2	0
To furnishing a detail drawing and estimate of repairs of roof over chancel and chapel, amount of estimate 282*l.*	7	14	0
To furnishing a large revised plan of the church, for the Incorporated Society	5	5	0
To furnishing a detail coloured design for staining glass window	2	4	0
To furnishing designs for organ case and chancel screens	3	3	0
To travelling and incidental expenses incurred during the progress of these works	7	2	0
	325	11	2

Surveyor's Account.

To taking out quantities of work in the new chancel roof for the use of contractor's estimate, being 188*l.* 6s. 6d.	3	15	4
To estimating the value of works proposed, and measuring up and valuing works performed, as shown by accompanying statement, amount being 1,234*l.* 12s. 8d.	24	13	10
	28	9	2

Clerk of Works' Account.

To personal supervision of works from June, 1849, to April 25th, 1850	33	13	0
To personal supervision of works from April 25th, 1850, to December 25th, 1851, at 2 guineas per week	182	14	0
	216	7	0"

Total ... 570*l.* 7s. 4d.

The architect states, in a published letter, that there was a special arrangement for the payment of 7½ per cent. commission, and that his "personal superintendence saved the parish, in the re-use of old materials, at least twice the amount of his [my] full claims."

The O'Connell Monument.—Mr. Patrick Costelloe, one of the committee, has addressed a letter to the *Dublin Evening Post*, in which he states that there are 69 feet of the O'Connell monument already erected, and that the work "is progressing with as little delay as its vast extent and altitude will admit." The directors of the Glasnevin Cemetery have devoted a quarter of an acre of their most elevated ground for the monument and ornamented garden. When completed, the tower will be 30 feet higher than Nelson's pillar, in Sackville-street, Dublin.

BURIAL BOARDS.

The *furor* for obtaining cheap cemetery chapels and economic boundaries, and plantations of a growth exceeding all vegetative power, and drains of less value than the converted clay composing them, seems to rage with undiminished strength. We read of a chapel, lodge (containing several rooms), also entrance-piers, at Luton, that have been actually built for 450*l.*! and architects must have found, by painful experience, how often their designs for chapels—perfect marvels of economic construction—are thrown by, by the clerk to the Burial Board, proud man!—

> "Drest in a little brief authority;
> Most ignorant of what he's most assured;"

with, "Oh! your chapels are far too expensive for us!" How sad it is to see a cathedral city offering, for designs for its cemetery, a set of paltry premiums, and putting forth a farrago of threatening would-be-tyrannical conditions, to the medley of "Landscape Gardeners, Surveyors, and Others," who are to scramble for the next-to-nominal rewards, which, it may be observed, cannot be adjudged to merit so much as to a power which sharp practitioners possess of making their perspectives show more *materia architectonica* than the plans really afford. The "wolfish, ——, starved, and ravenous" desires of these managers of burial-grounds (for such they do appear), are justified in their exercise by the complaint. The parish cannot and will not grant us more. Why not then individuals? How many hundreds are yearly spent in inserting splendid memorial windows in churches too modest to merit them! Why cannot the Burial Acts secure a respectable fund—a loan—gradually to be liquidated by a tax upon the more costly interments? How ridiculous it is to see, as one may now-a-days, a chapel of starved, pigmy proportions, reared at a contract price of 250*l.* and close beside it a vulgar, vain-glorious tomb, dazzling with white paint and red letters, and iron-work, which has cost half as much as the chapel.

Spectator.

CHURCH BUILDING NEWS.

Ringwood.—The new church here was consecrated on Tuesday before last. A partial rebuilding of the old edifice was originally contemplated, but the progress of the works disclosed so much constructive weakness, that one part after another had to be taken down, and at last the failure of the tower necessitated the reconstruction of the whole. The estimate, which was originally 3,789*l.* was thus increased to 5,659*l.* No part, therefore, of the old church remains, but the new edifice, though enlarged in width, represents the original church. Care, it appears, has been taken by the architects, Messrs. Francis, of London, to re-produce the ancient details. The church consists of nave, north and south aisles, transepts, tower at the intersection of the cross, and chancel. The style is Early Pointed, of the thirteenth century. The necessities of the parish have led to the erection of galleries, which mar the effect of the interior. The seats are all low, and for the most part without doors. The chancel has been rebuilt by the patrons of the living, King's College, Cambridge. The contractors for the work were Messrs. Cottman, of Poole. The consecration day was kept as a holiday, and ushered in by the ringing of bells, and the somewhat incongruous firing of cannon. The contractors, churchwardens, &c. dined together at the White Hart, and the workmen were not forgotten by the contractors, who "dined" them at the New Inn on the auspicious occasion.

Shrewsbury.—St. Michael's Church is at present undergoing a considerable enlargement, from plans by Mr. S. P. Smith, the carrying out of which has been entrusted to Mr. Dodson, of this town, builder.

Cwmavon.—The foundation-stone of a church, dedicated to "All Saints," was laid on 15th ult. at Ty Maen, near the Cwmavon Works, and at the instance of the Governor and Company of Copper Miners in England, and for behoof of the workmen employed at the Cwmavon Works, of which they are the proprietors. The style of the building is Early English, and, when completed, it will contain nearly 700 people. It will consist of a nave, two side aisles, two porches, chancel, organ chapel, vestry, and tower and spire 160 feet high, the whole of which will cost, probably, little less than 4,000*l.* The church is intended to be built out of funds provided, with a few exceptions, by the voluntary contributions of the individual shareholders in the corporation.

Weaverham.—The parish church of Weaverham, Cheshire, which has been undergoing extensive restoration for the last ten months, under the direction of Mr. Salvin, has been re-opened for divine service.

Wolverhampton.—The churchwardens of St. John's Church are appealing to the inhabitants for subscriptions to put the interior and exterior in repair, for which purpose upwards of 2,000*l.* are required. More than 300*l.* are announced as already subscribed by nine subscribers.

COMPETITIONS.

The Oxford Museums.—Premiums have just now been awarded to three of the designs submitted, irrespective of the design selected for execution. The Delegacy submitted six designs out of the whole number to Messrs. Hardwick and Son, with the sole question, can they be executed for 30,000*l.*? The answer was, decidedly not: none of them can be executed for that sum. Thereupon the Delegacy decided that the prizes could not be given. Now, however, the successful design has been contracted for at 29,000*l.* and one of the other designs has also been tendered for at 30,000*l.* Under these circumstances, the Delegacy determined that, as the report had been disproved, they must proceed to award the prizes as originally intended, and they have been given as follow:—

Fiat justitia ruat cœlum	£100
A. Z.	50
Compasses	50

The first-named is the design of Mr. Edward M. Barry, the last of Mr. John Thomas, the sculptor at the Houses of Parliament.

Grimsby.—We are informed that Messrs. Bellamy and Hardy, architects, have obtained the premium of 25*l.* for their designs for a corn exchange and covered market, to be erected at Grimsby. Their estimate of the cost is 3,500*l.*

Braintree.—The Braintree Burial Board having offered a premium for designs, &c. for laying out, planting, &c. their new cemetery, and for building two chapels and a lodge, met on the 29th ult. and examined the plans which they had received from twenty-two different parties. They ultimately awarded the premium of twenty guineas for the plans marked "Spere," and the author was found to be Mr. J. Johnson, of Bury St. Edmund's. The Board also awarded a second premium, of five guineas, for the plans marked "Excelsior," they being, in the opinion of the Board, plans which deserved some mark of their approbation. They also expressed a high opinion of the plans marked "Q. E. D."

ARCHITECTURAL SOCIETY OF ARCHDEACONRY OF NORTHAMPTON.

The public spring meeting of this society, in conjunction with the Architectural Societies of the diocese of Lincoln and the University of Cambridge, and the Architectural and Archæological Society of the county of Leicester, was held at Peterborough on Wednesday before last. There were a large number of visitors from the neighbourhood. The room (attached to the recently-erected Wentworth Hotel) in which the meeting was held was adorned as usual with various specimens of art.

It was announced that the chair would be taken by the Marquis of Huntly, but the Marquis was unable to attend, and the Ven. Archdeacon Davys was called to the chair.

The Archdeacon, in his opening address, said he had reason to feel very grateful to the society for the improvements that had been effected through its means in the Churches of Northamptonshire.

A paper on Peterborough Cathedral was read by the Rev. G. A. Pool, who entered fully into the history of the cathedral, from its erection in 1118, and noticed the various architectural improvements by William de Waterville and others. He also combatted opinions entertained by Dr. Paley and others, as to the date of subsequent additions, and intimated that in the afternoon he should illustrate his paper within the cathedral.

The Rev. O. W. Davys then read a paper on the west fronts of English churches, with especial reference to that at Peterborough, in course of which he made the following remarks on its west porch:—

"It must ever be a cause of regret that what would elsewhere have been regarded as one of the most beautiful third pointed porches existing, should now be looked upon as an unworthy intruder when found placed within the centre arch of the façade. Nevertheless it will be evident, upon further examination, that this porch is a very valuable piece of architectural mechanism, and that it stands where it does

simply to form a buttress for the preservation of the whole structure, which early began to show signs of weakness, and to cause fear as to its approaching decay. The piers supporting the great arches, unable to bear the superincumbent weight of the gables and the outward thrust of the vaulting beneath, were beginning to lean outwards; and therefore, to prevent the fatal consequences which might arise if they were not kept from a further settlement, the library porch was constructed, and not without reflecting the greatest mechanical credit on its designer. Therefore we must not quarrel with this perpendicular innovation, as we are indebted to it, in all probability, for the preservation of the earlier portions of the front which are so much admired. We must not dwell longer on the consideration of the merits of the west front of Peterborough," added the reader, "but simply conclude what we have said with the remark, that if ever a perfect entrance to a church could be conceived, the design seems to be found here."

The Rev. T. James afterwards called attention to the drawings, rubbings, &c., with which the room was decorated. He pointed out a collection of photographs, brought by Rev. F. A. Marshall, to illustrate a paper which he had promised.

Several objects of archæological interest were also exhibited.

An evening meeting was held at the Wentworth Assembly Rooms, after about 70 gentlemen of the party had dined at the Angel Hotel. At the evening meeting, Archdeacon Churton read a paper on Croyland Abbey, and Sir Henry Dryden created considerable amusement on being called upon by the Chairman to read a paper, by announcing his intention to recount the chief architectural mistakes of his life,—an amusement to which all of us might well contribute at architectural meetings, for all have made mistakes who have had any architectural experience. A brief but interesting discussion followed Sir Henry's unreserved communication of what he conceived to be his various architectural blunders.

The following day was pleasantly occupied by a party of gentlemen in an excursion to Thorney and Croyland Abbeys, Northborough, Peakirk, &c., and the proceedings terminated with a second evening meeting at the Wentworth Rooms, at which papers were read by Mr. Bloxam, Rev. F. A. Marshall, &c. to an attentive audience.

THE GRAND TRUNK RAILWAY OF CANADA.

REPORTS to the London Board of Directors of the Grand Trunk Railway Company of Canada, by Sir Cusack Roney, Mr. A. M. Ross, and Mr. S. P. Bidder, have been issued in a printed form. These reports show the present state of progress of the various connected sections of this important line of railway, which is to traverse the colony westwards from Trois Pistoles at the mouth of the St. Lawrence, *viâ* the river itself and its towns Quebec, Montreal, Toronto, &c. to Port Sarnia at Lake Huron, while another section runs to the Atlantic at Portland, through the United States, from Montreal by one fork, and from Quebec by another; this section lying nearly at right angles with the other. Portions of the line were already imperfectly formed in 1853, when the system was amalgamated into the Grand Trunk; and now rapid progress is being made in different parts of the line, and especially between Montreal and Toronto on the one hand, and Montreal and St. Thomas, to seaward of Quebec, on the other: indeed, the Atlantic line from Quebec to the junction of the fork at Richmond, and thence to Montreal, is already open, though not fully completed, and the remainder of the Atlantic line to Portland has been open since 1853. In the autumn of the present year a continuous line also will be opened in the main trunk, from St. Thomas and Quebec to Brockville, between Montreal and Toronto, a length of 325 miles, making, with the other sections now available, a total mileage of 643 out of the 1,100 miles composing the whole line. The country through which the Atlantic section runs, though forming part of the United States Atlantic sea-board, was an uninhabited and even unexplored forest in 1853. In the heart of this country there are now 3,000 active contributors to the railway traffic, and large clearances have been made. Twenty-eight sawmills have been erected, and others are in progress. Those now at work saw 500,000 feet a day, and it will take at least seventy years to exhaust this primary traffic, and then cleared lands will succeed with traffic equally profitable. All the other lines which approach the grand trunk, whether in Canada or from the States, come towards it at right angles, so as to form feeders, and not competing lines; and there is a large mileage of such lines already at work. In fact, this trunk line has taken possession, as it were, of the Canadas, and forms or will form the great route through which all its riches will be carried, in connection with the whole system of Canadian railways; and, as Mr. Stephenson says, in one of his reports, "the great object of the Canadian system of railways is to bring their rich provinces into direct and easy connection with all the ports of the east coast of the Atlantic, consequently to bring them nearer to Europe."—and nearer to *home*, he might have added. Of the nature and extent of these riches an excellent abstract is given by Sir Cusack Roney, in his report, an abstract drawn much more from personal investigation in the various districts referred to, than from mere previous report. Sir Cusack is a most useful public servant. His peculiar forte appears to be the organization of great works. To him the English and Irish public were indebted for the organization of the Irish and connected British lines into a system by means of which tourists have greatly profited. He it was who may be said to have organized the Great Irish Exhibition; and now we find him engaged in what we may really call the commercial, agricultural, and manufacturing organization of the Canadas, by means of railway connection. There is a bright future in immediate prospect for Canada. Its resources will be suddenly opened up and immensely magnified, so soon as its railway system is developed. As it is, it is perhaps not generally known that immigration into the Canadas last year was greater than the whole of that into the United States,—a sort of cosmopolitan ballot in favour of limited monarchy and against republicanism. The reports on which our present remarks are based contain a great deal of interesting and valuable information as to the Canadas.

THE BUILDERS' BENEVOLENT INSTITUTION.

ON Thursday, 31st ult. a special general meeting of the friends and supporters of this valuable institution, founded in 1847, for allowing pensions to decayed master-builders, including all engaged in that business, and their widows, as well as to give temporary relief to deserving workmen in cases of accident, was held at the London Tavern, for the election of four pensioners; the president, W. Lee, Esq. M.P. in the chair.

The Chairman, in opening the proceedings, congratulated the meeting upon the state of the institution, and remarked that, notwithstanding the war and its depressing tendencies, this charity had continued its onward progress towards success. The funded stock now amounted to 4,750*l.*; divided as follows: relief fund, 3,250*l.*; and the building fund, 1,500*l.* To show the necessity of such an institution as this, he need only state that there were at the present time fourteen males and eleven females receiving its benefits, and that they had met there that day for the purpose of electing two males and two females, from a list of fourteen candidates, all of them, he had no doubt, very distressing cases, but who from the want of necessary funds, could not then be taken in. When they considered with what aching hearts those who were unsuccessful would depart, he trusted that all connected with the building trade would be induced to come forward, and by placing sufficient means at the disposal of the directors, enable them to admit all that might apply. In conclusion, the chairman called upon the friends of the institution never to cease their exertions on behalf of this society,—a society which he trusted ere long to see take its stand in the foremost rank with those noble charities of which England and Englishmen were justly proud.

The meeting then proceeded to the election, after which votes of thanks were passed to Mr. Lee, to Mr. George Bird, the treasurer, who afterwards took the chair, and to the scrutineers.

ELECTRICITY AND CHEMISTRY AT THE PANOPTICON.

WE witnessed some experiments with the great machine at the Panopticon the other day. It is a noble instrument. The charge is excited by steam power, and a lightning flash, *six or seven feet long*, is sent through an exhausted glass tube, and otherwise displays its peculiarities and its powers in various interesting vagaries, such as annihilating long lengths of wire, or dispersing them in smoke; lighting up a series of eminent names, such as those of Franklin and Faraday, in large illuminated letters, through points along which the flash is passed, &c. Some interesting galvanic or electro-chemical experiments have lately been made at the Panopticon. On Wednesday evening in last week, in the course of a lecture on the application of chemistry to science, Mr. G. F. Ansell made an experiment of singular interest, though not the first of the kind. After referring to hydrogen as the perfect type of the metals, and to compound bodies behaving like metals, he proceeded to pass a powerful galvanic current through a solution of ammonia over mercury, one pole of the battery being beneath the surface of the mercury, which swelled up rapidly, its physical appearance changing completely by the formation of an amalgam, it is believed, with the compound body termed ammonium. The nature of this compound the lecturer further illustrated by the formation of the amalgam of potassium, by means of the process first discovered by Sir H. Davy, and pointed out the analogy between these two amalgams; thence arguing the existence of a compound consisting of four equivalents of hydrogen, and one equivalent of nitrogen, comporting itself like a simple metal, and so forming an amalgam with mercury. Numerous as the gaslights are of an evening in the Panopticon, by the way, they do not seem to fill the expanse of the interior well, so that many attractive objects are almost lost sight of in the haze. Could not the managers get up some grand exhibition of electric light in the ceiling or cupola by means of which to do justice to their evening display?

OPENING OF THE GREAT YARMOUTH WATERWORKS.

ON Thursday in last week, the ceremony of opening the Great Yarmouth Waterworks took place, in the presence of a large assembly, in the Market-place. The scheme originated with the present chief magistrate, Mr. C. J. Palmer. The works were designed by Mr. J. G. Lynde, C.E. of Westminster, and have been carried out under his superintendence. They consist of, first, works at Ormesby, viz. two filter beds, with steam-engines, tanks, wells, conduit pipes, and other apparatus for raising the water from the broad, filtering, and lifting it to the high-service reservoir for distribution; secondly, a high-service reservoir and stand pipe at Caister, with tanks, pipes, sluices, and apparatus for supplying and regulating the supply to the town, and for draining and cleansing the reservoir; and lastly, the main and service pipes, with hydrants, &c. The main is of cast-iron, 12 inches in diameter, and about 4½ miles long to the high-service reservoir at Caister, which will hold 600,000 gallons. This reservoir is about 50 feet above the Market-place, so that a constant supply of pure water is always at hand, and ready to flow to the highest houses in Yarmouth. The cast-iron main, from the reservoir to the town is 2½ miles long, and 12 inches in diameter. About 13 miles of mains and service pipes, varying from 12 inches to 3 inches in diameter, have been laid in the town. The works provide about 100 gallons of water per house, or 20 gallons per individual, per day. The filter beds at Ormesby are each capable of filtering 1,152,000 gallons in twenty-four hours. The engines can raise from the broad, into the high reservoir at Caister, 800 gallons in a minute. The works have been constructed by Messrs. Lucas (Brothers), of Lowestoft, the contractors, and the machinery and pipes by Messrs. Cochrane and Co. of Dudley.

THE OLD TOWN-HALL AT LEOMINSTER.

AN enthusiastic and excellent lady urges us to induce the inhabitants of Leominster to keep their old Town-hall for themselves. "What!" writes our fair correspondent, in the most vigorous and elegant of "hands,"—"What! Is the town so overcrowded that no other plot of ground can be found on which to erect 'a more commodious and spacious hall,' than that occupied by Mr. John Abel's picturesque half-timber building? Is it to be lost to the town for 95*l.*?—322 years' associations all knocked down by the auctioneer's hammer! A great shame is coming upon Leominster." We are glad to be able to calm the virtuous indignation with which our correspondent heaves. Mr. Arkwright, who purchased the old Town-hall at Leominster, intending to re-erect it near his own seat at Hampton-court, has generously presented the ancient structure to the inhabitants of Leominster, on condition of its being appropriated to some purpose of general utility, such as a public reading-room or museum. A public meeting has been held, and a subscription opened, for the purpose of carrying out the proposal. There is still virtue in the land.

GOVERNMENTAL BLUNDERS.—For the last three months the daily and weekly metropolitan papers have been crying out against the abortions, in the shape of monster egg-boxes, being put up at Aldershott, for the use of the army. From the descriptions we have read in the *Builder*, and from views which have been published, we feel confident any Fell or Fylde country wheelwright's apprentice could erect equal if not superior to those put up at Aldershott. The waste of public money at Aldershott is most disgraceful to Government, but it is only a part and parcel of what is going on in every department. Last week's *Builder* confirms the previous statements which that journal had published.—*Preston Guardian*.

Notices of Books.

The Theory and Practice of Horticulture. Second Edition, much enlarged. By John Lindley, F.R.S. &c. Longman and Co. London. 1855.

If we ever realise a grand development of horticulture and agriculture, as branches of manufacture, such as was the development of our cotton and other manufactures from the distaff and the spinning-wheel in the humble cottage, into the steam-urged loom and spinning Jenny in the extensive factory, it must be by the aid of such enlightened minds as shall show the way to convert the empirical complication of mere practical experience, with its often no less narrow and mistaken than peremptory and obstinate code of precepts, into enlarged and intelligent views of the physiology or the general laws of the vegetable creation, and its terrestrial and atmospheric correlations. And to this end, so far as regards one branch at least of vegetable manufacture, there is no more hopeful aid, we believe, as yet in existence, than Lindley's "Theory and Practice of Horticulture." The first edition of this valuable work was issued in 1840, since which time it has had an extensive circulation, and has been translated into the German, Dutch, and even Russian languages. Being more particularly restricted to principles, however, the author at length resolved to render the work more generally interesting and useful, by a more extensive illustration from examples and a more frequent reference to practical operations: he has thus greatly extended the matter, by supporting the physiological doctrines with an appeal to facts familiar to cultivators, or which ought to be; and the result is a still more interesting and popular compendium of the principles and practice, or the science and art, of horticulture than before. The new work is dedicated "To the Right Hon. T. F. Kennedy, lately one of her Majesty's Commissioners of Woods, Forests, and Land Revenues, who endeavoured to reform a public department in which unskilful management has been most disastrous," and "as a mark of respect for high official character and ill requited public service." The interest we have ourselves taken in the reform of the Forest department of the administration, induces us thus to quote Dr. Lindley's dedication; and if Mr. Kennedy was a reformer of such abuses as those the *Builder* has done more than any other publication to expose, it is right the public should know the reason why he was not regarded, *ab intra*, as the right man in the right place.

Dr. Lindley, in the discussion of his subject, adopts a very natural and simple order of sequence, his whole book being divided into disquisitions on,—1. Vital Force; 2. Germination; 3. Growth of the Root; 4. Growth of the Stem; 5. Action of the Leaves; 6. Action of the Flowers; and 7. Maturation of the Fruit. By these means the life of a plant is traced through all its principal changes, and opportunities afforded for the introduction of all correlative information useful or interesting to the cultivator.

Under the head of Growth by the Root, the author, we observe, gives some interesting details as to the mode in which roots may insinuate themselves into drains, and even pipes, so as to choke them up. That roots will do so is very well known, but perhaps few are aware of the extent of the power or capabilities of roots, or the pertinacity and subtlety with which they will insinuate themselves through even the slightest cracks in a pipe drain, accommodating their form and size to the dimensions, the peculiarities, and the windings, of the crack until their *object*, we may almost say, be effected, namely, that of reaching the moisture and the nutriment within. In this respect a root seems to display all the eagerness and the subtlety of a rat, with far more than its pliability and adaptability of form. The matter which really insinuates itself, is not solid, but, in fact, fluid, as it issues from the root point, attracted as it positively appears to be (by diamagnetic agency?) towards the moisture of which it is in search. The fluid matter thus enters and spreads in the crack, however thin, so that a thick root will at once assume a thin and flattened form like that of even paper; and so soon as it finds its way fairly into the interior of the tube, it thickens at once again, and then divides and subdivides with the most astonishing multiplicity till a mass of fibres accumulate, all dependant on the one thin papery fibre, that will completely choke up the pipe, however wide almost it may be. From a knowledge of these facts, we may judge of the care requisite in securing the perfect integrity of drains and pipes wherever there is any possibility of roots reaching them, as from the front plots of streets. A tree or shrub will send a shoot off for many yards in length towards a hopeful source of moisture and nutriment if it be much in need of it, and even such trifling little plants as the mignonnette, growing accidentally in a crack of an old pavement, has been known to send shoots down into a wine-cellar 5 or 6 feet below in search of moisture: whether it mistook the contents of the wine casks for the real "mountain dew," or had a special liking for the article itself, we shall not pretend to decide.

The amateur horticulturist, no less than the practical gardener, will find much curious and interesting information in Dr. Lindley's volume. Even the love-lorn damsel may here learn the way to perpetuate the single fragile leaf which may happen to accompany some prized though fleeting flower, presented her by one whom she still more prizes; for often a single leaf can be made to strike root, and send forth buds and shoots, and so become itself a plant or tree. Horticulture is indeed a most interesting and curious pursuit, and many wonderful metamorphoses might be effected that few think of as yet. Thus, flowers such as the hollyhock, might by degrees be dwarfed till they became as tiny and as delicate as the Forget-me-not; while on the other hand, a useful article, such as the pea, might be magnified by successive culture and repeated restriction to, and selection of, the largest produce, till it became a perfect giant by comparison. The Japanese are known to be able to dwarf even trees into plants (of full growth) an inch or two in height; and probably the only secret here, as in the case of the hollyhock, which we have ourselves dwarfed to a certain small extent, is to check the growth successively by transplanting, fructifying, replanting the diminished seed, and again checking the growth by transplanting or by setting slips which may yield still smaller flowers and seed. On the other hand, the large and luscious apple has doubtless been got from the small wild "crab" by some such process as that of the enlargement of the pea, combined with grafting; and so in many other instances ameliorations have been and may yet be effected to a wonderful extent, as indeed is now being done in this very way in the case of wheat and other corns. Gardeners can rear a salad in a single night. A French horticulturist recently discovered a way of forcing flower-buds into full bloom in course of a few minutes. In short, we anticipate *almost* as great things from the future study of horticulture as the Indian magician *appears* to effect in planting a mango-seed in presence of a surrounding multitude, and causing it to spring up into a plant, yielding its flower and fruit before their eyes, and in course of a few short hours of a single day. But this is looking *rather* far perhaps into the future. Meantime, with more moderate and realizable expectations, much *may* be done, by the study of such books as this of Dr. Lindley's, towards the attainment of that German paradise, for example, where the children amuse themselves by sowing flower-seeds, and reaping the flowers, all in the noon hours of a single sunny day.

Miscellanea.

Model Dwelling-Houses at Hampstead.—It is proposed to erect three model dwelling-houses at Hampstead, for the accommodation of thirty families, from the designs of Mr. Charles Lee, architect; each family to have three rooms, with scullery, water-closet, and coal cellar. The following tenders have been delivered:—

Locke and Nesham	£5,475
Myers	5,460
Styche and Grey	5,220
Hopkins and Roberts	5,080
Patrick and Son	5,050
Clowser	4,930

The works will be commenced immediately.

Fall of Arches, South Lambeth Waterworks.—On Wednesday, 30th ult. an accident took place at the reservoirs of the South Lambeth Waterworks, adjoining the old House of Correction on Brixton-hill, by which, unhappily, four unfortunate men lost their lives. It appears that within the last few days one of the reservoirs had been covered in by a series of brick arches, the surface or crown of the arches being covered with a layer of clay two feet thick. It is stated that a number of the centres, on which the arches had been turned, had been removed, and no appearance of danger was observable. The men were employed removing others, when several of the arches gave way, and fell to the bottom of the reservoir with a loud crash, burying beneath them the unfortunate men who were at work below, the labourers who were engaged on the top falling with the mass. Messrs. Locke and Nesham are the contractors.

The Whittington Club.—On Monday in last week a public meeting was held at the Freemasons' Tavern, Great Queen-street, to concert measures for restoring the building of the unfortunate Whittington Club. Mr. Mechi (in the chair) stated that the expense of rebuilding the club-house was estimated at 12,400*l.*; but the committee had resolved upon raising, if possible, 13,000*l.* to cover extra expenditure, and pay rent whilst rebuilding. The Duke of Norfolk had come forward with 10,000*l.* and it was for the club to raise the additional 3,000*l.* Already 950 shares of 1*l.* each had been subscribed for by 157 members; and as there were, when the club was burnt down, 1,000 members on the roll, there should be no difficulty in raising the remainder. Resolutions were agreed to, recognising the necessity of such a club for the middle classes, and approving of the plan proposed for raising 3,000*l.* for rebuilding and decorating the premises.

Dwellings of the Labouring Classes in Ireland.—In the House of Commons last week, Sir W. Somerville obtained leave to introduce a Bill to encourage the providing of improved dwellings for the labouring classes in Ireland.

Holyhead New Harbour.—The large harbour of refuge constructing by Government at Holyhead, from plans by Mr. J. M. Rendel, is making great progress. The northern (or great) breakwater is at present 5,000 feet in length, and is to be extended 2,000 feet farther in a north-east direction, by which it will give shelter to upwards of 500 additional acres of Holyhead-bay. The works are carried on with great activity, there being employed at present about 1,200 men, eight locomotives, four stationary engines, upwards of sixty travelling-cranes (some of them with steam power), and forty horses. In the quarries, upwards of five or six tons of powder are sometimes ignited at once, for blasting, and often from 40,000 to 50,000 tons of stone are obtained at a single explosion. Holyhead mountain is the quarry; and, literally, this mountain is being cast into the sea. At the timber-stageing there are fifty to sixty carpenters suspended 40 feet above the level of the sea, employed in throwing out new lengths of timber-stageing, consisting of five roads, over which the stone is tipped into the breakwater, averaging 4,500 to 5,000 tons of stone daily, or upwards of 1,000,000 annually. The works are superintended by Mr. G. C. Dobson, the resident engineer (formerly one of the superintendents of the breakwater at Plymouth), and are carried out by the Messrs. J. and C. Rigby, of Westminster.

Value of Ground-rents.—A large number of freehold ground-rents at Prince's-gate, Hyde-park, were sold by Messrs. Foster and Son, on the 21st of May. The prices fetched varied very singularly. We give some of the items. The existing leases have about ninety years to run:—

	Ground-rent.	Sold for.

THE HOSPITAL OF ST. CROSS FOR CRIPPLED SOLDIERS AND SAILORS.—A printed address has been issued to the trustees and subscribers to the Patriotic Fund and the public in general by Mr. H. Holloway, churchwarden of the parish and parish church of St. Faith with the parish of the Holy Cross, at Winchester, called, in which he suggests that the now celebrated Hospital of St. Cross, lately wrenched, as it were, out of the clutches of the reverend earl who had therefore appropriated its splendid revenues, should be converted into a permanent asylum for 400 crippled and disabled soldiers and sailors of our army and navy. This, Mr. Holloway remarks, might be done without encroachment on the original purposes of the charity, or rather in fulfilment of its ultimate objects, after providing for the comparatively few "poor impotent men" for whose behoof it was originally intended. The Hospital of St. Cross was founded by Henry de Blois, Bishop of Winchester, and brother to King Stephen, in 1133, within the walls of Winchester, and founded anew without the walls, in 1157, as a curative hospital, for "a prior and thirteen poor impotent men." A subsequent foundation, by Cardinal Beaufort, in the time of Henry VI. provided for thirty-five decayed gentlemen, two chaplains, and three nurses. The means of the hospital are said to have increased from 250*l.* a year to no less than 22,000*l.* Besides the current revenues, moreover, there is a sum of 90,000*l.* which the Master of the Rolls, in recent proceedings against the Rev. Earl of Guilford, declared his "inability to compel his lordship to refund," on account, however, of a mere informality, which her Majesty has been petitioned to direct the Attorney-General to obviate or amend. It is farther suggested, that Prince Albert, as the soldiers' friend, should nominate the inmates.

ARCHÆOLOGICAL.—During the past week, at the parish church of Culford, near Bury, the workmen, in removing one of the monuments from against the east wall of the chancel, exposed to view a curious relic of church decoration of an early period. It would appear from this discovery that the chancel was part of a Norman church, and had been lighted not only by the great east window, as it is commonly termed, but by two small loop lights, one on either side of it, deeply splaying in the interior. The recesses or niches thus formed, and now re-opened, had been decorated by paintings on the plaster and stone work, representing in roundels or medals various incidents from the legendary history of the Romish Church.

BARRACKS.—Mr. G A. Burn, architect, has submitted a plan for barracks, something on the principle of the "model prisons," having a central area, open to the top, and galleries, one above the other, at each side. The projector sets forth that good ventilation is thus obtained, the amount of internal walling greatly reduced, and that the division of the area into three moderate spans allows of roofs and floors of a light and simple construction, the result of which is a saving in cost.

WORKMEN'S PASSPORTS TO THE PARIS INDUSTRIAL EXHIBITION.—The Earl of Clarendon having received an assurance from the French Government that all British workmen desirous of visiting the Exhibition, and furnished with Foreign-office passports, shall be allowed to land in France and proceed to Paris without any hindrance whatever; our own Government have decided upon granting such passports without payment of the usual stamp duty and fee.

OPENING OF A NEW COAL DISTRICT FOR BIRMINGHAM.—The Birmingham Canal Company propose to construct a large tunnel under the Rowley Hills, to connect the South Staffordshire mining district with East Worcestershire, thus bringing into the network of canals converging in Birmingham a coal-field, with which it has hitherto had scarcely any connection. The expense of construction is expected to amount to 230,000*l.*

TRINITY COLLEGE CHURCH, EDINBURGH.—At the city council last week, a letter was read from Mr. Gourlay, offering to rebuild Trinity College Church within two years, if the council would hand him over the sum received from the railway company for that purpose. It was agreed to inform Mr. Gourlay that his proposal could not be entertained. On this occasion the Lord Provost said they were all most anxious to rebuild this church if a good site could be procured. There were one or two sites at present under consideration.

LAW OF PARTNERSHIP.—Mr. Bouverie has obtained leave of the Commons to bring in a Bill on the limitation of liability.

THE ARCHITECTURAL MUSEUM.—On Monday, 28th ult. Mr. Jopling gave a lecture on Curves applicable to architectural purposes, when the curve of the top step of the Parthenon was shown full size, 101 feet long, and the method of its setting out in the original temple described. The model will remain until after the meeting on the 25th.

LORD LONDESBOROUGH'S CONVERSAZIONE.—On the 28th ult. Lord Londesborough opened his house in Carlton House-terrace to a large circle of friends, including the Numismatic Society, and gave them an opportunity of examining part of his very extraordinary collection of antiquities and objects of beauty, —Greek, Saxon, Mediæval, and *Cinquecento*. The latest addition to the collection, namely, the Saxon relics recently exhumed from graves in the Isle of Wight, excited considerable interest. These consist of large and small fibulæ, the gilding on some of them as bright and fresh as if modern work, two curious crystals supposed to represent the sun and moon, rings and beads of all sizes and forms.

FALL OF A WAREHOUSE AT LEITH.—On Monday week, a warehouse, consisting of a ground-floor and a loft, in Coatfield-lane, occupied by a slater, fell, burying two men and a woman under the ruins, who were at the time engaged in storing a cargo of roofing-tiles.

REMOVAL OF CITY CHURCHES.—The third report of the Parochial Commissioners, just published, relates to the City churches. The commissioners report that it would be highly advisable to remove twelve or sixteen of these churches, and to raise at least an equal number in other adjacent parishes; and they express their entire concurrence in the design and general purposes of the Bill of 1854, which the House of Commons rejected. The report is dated 14th March, 1855.

STREET INSCRIPTIONS.—A glass painter, W. Grant, is bringing into use a mode of displaying the names of streets, so that they can be read at night as well as day. The name is painted and burnt in on a slip of glass, and is suspended to the upper rim of the street lamps. He has received orders, we are told, to hang the plates in two metropolitan parishes.

MR. THOMAS BARCLAY, who has filled the office of county surveyor, in the King's County, Ireland, for sixteen years, expired suddenly on Thursday in last week, when about to attend a presentment session.

THE INFLUENCE OF THE FINE ARTS.—At the M'Lellan Rooms, Glasgow, on Tuesday in last week, Mr. Sheriff Bell delivered a lecture "On the Influence of the Fine Arts." The rooms were brilliantly lighted up, and the centre hall, ample as it is, did not nearly accommodate the whole assemblage. For half-an-hour previous to the lecture, opportunity was afforded of examining the pictures, under the quickening influence of music. Bailie Mitchell took the chair, in the absence of the Lord Provost from illness. In course of his lecture, Sheriff Bell said that what he predicated of the fine arts was, that they were extended to all classes in all ages and countries; that they afforded scope for new and varied manifestations of intellect; and that, above all, they had exercised a moral power in conjunction with the noblest efforts of the legislator, the philosopher, and the poet. Mere imitation, though necessary in its place, was not the end or aim of art. The thing to be imitated must previously be understood. If imitation were everything, the work of the engraver or photographer might rank with that of the highest artists. It was in selecting and combining outlines that the genius of the artist became apparent. He pointed out the connection which exists between the fine and the useful arts; enlarged on the gratitude due to cultivators and encouragers of the fine arts; paid an eloquent tribute to the memory of Mr. M'Lellan, and concluded by expressing a hope that others would contribute to the enlargement of the collection, and that the citizens would encourage it by their frequent and studious attendance. The lecture was attentively listened to, and enthusiastically applauded.

KIDDERMINSTER BATHS, &c.—The Baths and Washhouse in Mill-street are drawing towards completion. The front elevation consists of a centre portion in two stories, with a wing of one story on each side. The materials are of red bricks, with a whitish stone from Ombersley for the dressings, and with terra-cotta ornaments. There are two entrances in the front, with a window between. The eaves project considerably and are supported by ornamental brackets in terra-cotta. Beneath the eaves is a frieze with terra-cotta decorations. The windows have stone pediments, and the flights of steps at the front doors are finished with stone piers. The swimming-bath is immediately at the back of the centre building. Its dimensions are 38 feet by 30 in area, and 4 feet 9 inches in depth at one side to 5 feet 9 inches at the other. It has a platform provided with dressing-boxes. The washhouse is on a small scale. The floors of the bath-rooms and washhouse stand upon brick piers, enabling a mechanic to get beneath to attend to the tubing and apparatus. The chimney from the boiler-house is 57 feet high, is square outside, and does not taper: it is ornamented with a coping. The water used for the establishment is taken from the Stour in the rear of the building.

M. GAUTHIER, of the French Institute, and an architect of merit, died at Paris a few days ago. He was a corresponding member of the Institute of British Architects.

CHURCH VENTILATION.—The ventilation of St. Thomas's Church, Newcastle-upon-Tyne, has been effected under the direction of Mr. C. Burnup, by a simple adaptation of the common method of ventilating coal mines. No want of fresh air was felt: what was wanted was the removal of vitiated air. The tower is at the west end, and openings have been made into it through the ceiling above the organ, and through the wall behind it. These openings communicate with a sheet-iron tube, 12 inches in diameter, which is carried a considerable distance up the tower. Inside the tube, near the bottom, is fixed a copper gas pipe, ¾ inch in diameter, in the form of a ring, perforated for jets of gas. The flame is steadied and increased in heat by being enclosed between two copper cylinders, one inside the other outside, the ring. A draught is thus obtained, which carries off the vitiated air. The local *journal* urges that the Music-hall, the Lecture-room in Nelson-street, the Lecture-room of the Literary and Philosophical Society, and in fact all public rooms and buildings in the town, frequented by crowded audiences, ought to undergo similar ventilation.

"HOME FOR INDIGENT GENTLEWOMEN."—The performance on Wednesday night of Mr. H. Leslie's oratorio of "Immanuel," at St. Martin's-hall, must have produced a considerable addition to the funds of the above excellent institution, if we may judge from the crowded audience who were collected together, and amongst whom we observed many celebrated in literature and art. We may be excused departing a little out of our usual course in commenting upon this clever work of musical science: it illustrates once again, how the strong love of art may conduct an enthusiastic amateur into a veritable artist. Considerable novelty of melody, masterly scoring, and skilful orchestral instrumentation give the stamp of profound scholarship to this production, and deservedly rank it amongst the best efforts of native talent. Madame Novello, Miss Dolby, and Mr Weiss exerted themselves with excellent effect. Mr. Sims Reeves suffered from a cold.

CAST-IRON STAIRCASES.—Sir,—Can any of your readers inform me of the best mode of executing a cast-iron staircase, in such manner as to prevent the slipperiness which is generally the result after a few years wear with the ordinary modes of construction when the treads are made solid—that is, when circumstances will not allow of their being *perforated*: which is the case with reference to two staircases now about to be erected in a public building. In the ordinary mode of construction a portion of the tread is raised, and the surface indented with diagonal lines, but as this is found to wear down, a different mode of attaining a lasting, yet not slippery, surface is required. Casing in part with wood is objected to.

G. L.

TENDERS

For Ercall Vicarage and stabling, Salop, for the Rev. R. T. Forester. Messrs. Wehnert and Ashdown, architects:—

Preen (Ludlow)	£2,651	0	0

ADVERTISEMENTS.

TO PARENTS AND GUARDIANS.

AN Eminent Architectural Firm, in a large manufacturing district, in one of the midland counties, have now a VACANCY in their offices for an OUT-DOOR ARTICLED PUPIL, possessing a good address, and having a taste for drawing; to whom will be afforded peculiar opportunities and advantages.—Address to A. & B. Office of "The Builder."

TO WORKING JOINERS

WANTED, in a business a few miles from London, a WORKING FOREMAN of CARPENTERS and JOINERS; he must be able to undertake shutterings and general jobbing work. The situation permanent, if the party suits. Apply by letter, naming wages expected, directed to X. Office of "The Builder." A good reference will be required.

WANTED, by a Builder in the country, a PERSON with a general good practical knowledge of building, capable of making fair and working drawings, measuring work, keeping accounts, &c. A churchman preferred.—Apply by letter, to W. G. 14, Stockwell-street, Greenwich.

WANTED, a good FOREMAN of CARPENTERS, to engage in eight large houses; also TWO or THREE good CARPENTERS, and TWO or THREE good SHOP JOINERS. None need apply but men with good testimonials. Wages, for Foreman, 6s.; other hands, 5s.—Apply to G. W. KNIGHT, Builder, Salmon's-lane-bridge, Limehouse, before TEN in the Morning, or after SEVEN in the Evening.

TO MACHINE SAWYERS.

WANTED, and active, steady, and experienced MACHINE SAWYER.—Address, stating age, particulars, and wages required, to M. M. Office of "The Builder."

WANTED, a FOREMAN, to superintend the Shop and Yard of a Builder; he must be thoroughly conversant with the business.—Apply, No. 1, Brook-street, Newroad.

TO WORKING FOREMEN OF BRICKLAYERS.

WANTED an experienced active Man in the above capacity.—Address, stating age, particulars, and wages required, to N. N. Office of "The Builder."

WANTED, in an Architect's Office, in the City, an active intelligent LAD, who writes a good hand, and has a taste for drawing. He will have the opportunity of learning the routine of an Office, with a view to an Engagement, at the end of a term to be agreed on.—Apply by letter only, prepaid, to O. C. care of R. W. Wright, Esq. 4, Railway-place, Fenchurch-street.

TO FOREMEN OF MASONS.

WANTED immediately, a first-rate FOREMAN of MASONS, to carry out a Public Job in Ancaster Stone. None need apply who cannot furnish first-rate Testimonials as to ability and sobriety.—Application to be made to Messrs. WILSON and ASHTON, Contractors, East Retford, Notts.

TO ARCHITECTURAL DRAUGHTSMEN.

WANTED, a DRAUGHTSMAN, who is thoroughly conversant with exterior and interior perspective, and the preparation of working and detail drawings. Address, with references, and stating age and salary required, to O. W. S. care of Mr. Steel, News-agent, Spring-gardens, Charing-cross

TO HOUSE-PAINTERS, BUILDERS, AND OTHERS

WANTED, constant EMPLOYMENT, by a thorough Sign Writer and good Grainer. Address, paid, to E. Y. care of Messrs. Woodward and Whiting, Star Coffee House, St. George's-circus, Blackfriars-road, Southwark.

TO COUNTRY CARPENTERS AND JOINERS.

WANTED, to APPRENTICE a strong, active YOUTH, aged 14; he has been accustomed to a furniture shop.—Apply at Mr. SMART'S, 30, Chapel-street, Somerstown.

TO PLUMBERS AND BUILDERS.

WANTED, by a good PLUMBER, a SITUATION. He can turn his hand to any other part of the Business, if required. No objection to the Country. Good references.—Direct A. M. C. 8, Carlton-terrace, Harrow-road, Paddington.

TO ENGINEERS, &c.

WANTED, by a thorough Practical Mechanical Draughtsman, of first-rate ability and experience, a SITUATION as above, permanent or otherwise. Unexceptionable testimonials.—Address, M. D. Post-office, Northampton.

WANTED, a TOWN ENGAGEMENT, with an Architect, a Surveyor, or a Builder, by an experienced Assistant, competent to superintend in an office, a neat and rapid draughtsman, and quick at accounts.—Address, N. S. Messrs. Pugh, Blackman-street, Southwark.

TO ARCHITECTS AND SURVEYORS.

WANTED, by a Young Man, who has been three years in the profession, a SITUATION in an office with the above; has good testimonials, salary not so much an object as improvement.—Address C. A. Office of "The Builder."

WANTED, to APPRENTICE a BOY, indoors, to the PLUMBING, PAINTING, and GLAZING. A small premium only given.—Address, A. B. 2, Duke-street, Westminster.

TO ARCHITECTS, ENGINEERS, SURVEYORS, AND OTHERS

WANTED, by the Advertiser, a SITUATION in any of the above offices; is well acquainted with surveying, mapping, levelling, taking out quantities, measuring up and setting out works, and preparing architectural fair and working drawings. Salary required, not less than 120*l.* per annum.—Address, C. 43, Upper Albany-street, Regent's-park.

TO BUILDERS AND MASTER PAINTERS.

WANTED, by a Young Man, who fully understands his business CONSTANT EMPLOYMENT as Painter and Glazier. Wages one guinea per week.—Direct to A. B. No. 7, York-street, Pentonville.

TO BUILDERS AND ARBLE MASONS.

WANTED, by the Advertiser, a SITUATION as FOREMAN. Can give a good Reference.—Address, C. W. Mr. Bird's, 48, Gower-place, Euston-square.

WANTED to APPRENTICE a respectable YOUTH to a good MANUFACTURING BUSINESS, to Board with the Family; age between 15 and 16.—Address, with particulars, R. W. Castle Tavern, Mark-lane, City.

TO BUILDERS.

WANTED, by a Young Man, 33 years of age, a SITUATION as CLERK. Can keep books, measure work, and have years' character from last situation.—Address, to G. A. 2, Merridale-terrace, Wolverhampton.

TO ARCHITECTS AND SURVEYORS.

THE Advertiser who has just completed his Articles with an Architect and Surveyor, in the country wishes for an ENGAGEMENT in a London Office. Salary not so much a consideration as improvement. Good references will be given.—Address, R. R Office of "The Builder."

TO ARCHITECTS AND SURVEYORS.

THE Advertiser is desirous of a Situation, in either of the above offices; has been accustomed to make fair working, and other drawings, measuring up works, &c.—Address A. B. C. 22, Johnson's-place, Harrow-road.

AS CLERK of WORKS, or FOREMAN.—The Advertiser, a Practical Man (aged 28 years), is desirous of a RE-ENGAGEMENT in either of the above capacities, in Town or Country; or to Superintend the Repairs, &c. on an Estate. Can keep the books, if required. Satisfactory testimonials and references can be given.—Address, S. J. 37, High-street, Marylebone.

TO CABINETMAKERS, &c.

A YOUNG MAN, having some knowledge of the practical part of the business, wishes to obtain a SITUATION, in a good business house, where his services for twelve months would be considered a compensation for further instruction, with board and lodging (or its equivalent). Country preferred. Good reference.—Address, C. M. Reading Rooms, Petersfield.

TO ARCHITECTS, &c.

AN ASSISTANT, accustomed to preparing finished and working drawings, and superintending works, wishes for a RE-ENGAGEMENT, either as Assistant in the Office, or as Clerk of Works, or to act as both occasionally. Address, S. W. 84, Aldersgate-street.

TO ARCHITECTS.

A YOUNG ARCHITECT, competent to prepare working, detail, and perspective drawings; a fair colourist, and practically acquainted with surveying and levelling, desires an ENGAGEMENT. Moderate remuneration.—Address, X. Y. Z. 180, Fleet-street.

A good DRAUGHTSMAN, who understands perspective and artistic colouring, is desirous of an ENGAGEMENT in an Architect's office, where he may acquire further improvement.—Address H. R. M. City News-rooms, Cheapside

TO ENGINEERS, ARCHITECTS, SURVEYORS, CONTRACTORS, BUILDERS, &c.

AN Architect and Surveyor, of twenty years' practice, OFFERS his SERVICES to those requiring assistance in taking out quantities, estimating, measuring up, and valuing every description of architect's work, house, landed, and other property, on moderate terms.—Address, H. W. 9, Harpur-street, Red Lion square, London.

TO OWNERS OF HOUSE PROPERTY.

A PRACTICAL BUSINESS-MAN is desirous of an ENGAGEMENT in charge of house property, superintending repairs and improvements, collecting rents, &c. or the management of a building estate. Good references and security.—Address, M. A. Messrs. Collins and Co. 11, Great Winchester-street, City.

TO BUILDERS.

A YOUNG MAN, aged 18, wishes to ARTICLE himself for three years; town preferred. For further particulars, direct to X. Y. 3, Margaret-place, Goldsmith-row, Hackney-road.

AN ENGAGEMENT is WANTED by a Young Man, aged 23, who is capable of measuring off works, taking out quantities, making drawings, and thoroughly conversant with the routine of a builder's office. No objection to the country.—Address, E. B. Mr. Dick's, 19, Guildford-street, Grav's Inn-road.

A YOUNG MAN, aged 19, who has been articled for three years to a dealer in materials for building in a large country town, is desirous of obtaining a SITUATION in a similar capacity. He understands the measuring and selling timber, bricks, lead, glass, paint, paperhangings, &c. and can have a good recommendation.—Address, T. C. at Mr. Thurlow's, 26, Wellington-road, St. John's-wood

PARTNERSHIP.—A Manufacturer of Enamelled Slate, is in want of a PARTNER, with from 500*l.* to 800*l.* to be employed in extending the works, or the Proprietor would be willing to treat with a party for the sale of the business.—For particulars, apply to W. BEALE, No. 1, Kingstreet, Lower-road, Islington.

TO YOUNG ARCHITECTS AND SURVEYORS.

ANY YOUNG MAN in the above Line, having 1,000*l.* to 2,000*l.* to INVEST in improved GROUND RENTS, to pay 5 per cent. would be introduced to Professional Business and other lucrative employment. Apply, by letter, to S. B. Mr. Croggan's, 2, Dowgate-hill, when a personal interview will be appointed

TO MILLWRIGHTS, ENGINEERS, &c. WANTED, a person who can command from FOUR to FIVE HUNDRED POUNDS, to join the Advertiser, a practical Engineer in the above business, which has been established upwards of fifty years. A good trade has been carried on by the same family for the above period. Application to be made by letter, to Mr. RICHARD PILLINER, Ironfounder, &c. 4, Hatfield street, Blackfriars-road, London.

WILLIAM BATLEY, Engineer and Boiler Maker, Northampton.—Manufacturers, Local Boards of Health, or any persons requiring Engines, Machinery, or Boilers of any description, may be supplied with the same of the very best material and workmanship on the shortest notice.—For catalogues, estimates, or contracts, apply as above.

TO IRON MANUFACTURERS, Founders, and Shipping Merchants in want of OLD IRON.—Apply at JACOBS and HYMAN'S Wharf, Thornhill Bridge, Caledonian-road, King's-cross, where they can be supplied with from 1 to 200 tons, at the lowest market price.

TO BUILDERS and others in want of SECOND-HAND STEAM ENGINES, Boilers, Lathes, Pumps, Presses, Iron Girders, &c. &c.—Apply at JACOBS and HYMAN'S Repository, Thornhill-bridge, Caledonian-road, King's-cross.

N.B. All kinds of Machinery, Old Iron, Zinc, Lead, and all kinds of Metal bought. Cash paid on delivery.

EDWARD RUSSELL, ALMA TUBE WORKS, WALSALL, Manufacturer of Wrought Iron Tubing for Gas, Steam, and Water, Stocks, Taps, and Dies, and all kinds of Gas Fittings.

TO BE SOLD, by PRIVATE CONTRACT, a variety of SMITH and ENGINEERS' TOOLS, &c. comprising 6 horse Engine, 10½-inch Centre Lathe, with 10-feet Iron Bed, capital Pattern-maker's Lathe, Hand power Wheel, Forges, Bellows, Smiths' Tools, Grindstones, and Vice Benches; also, an excellent Cooking Range, suitable for a Club or Hotel.—Apply at 20, Marlborough Mews.

CASSLAND ESTATE, South Hackney.—FREEHOLD LAND TO BE LET, on Building Leases, in Victoria park-road, Gascoyne-road, Kenton-road, &c. for second, third, or fourth-rate houses. The roads are well formed and several lots let. For particulars apply to Mr. WALES, at the Estate Office, Cassland-road, or at 8, Great St. Helen's, City.

GREENWICH.—BUILDING GROUND TO LET, in the most commanding part of the town, nearly opposite the Railway Station, adjoining the Baths, Literary Institutions, suitable either for public institutions, first-class shops (much wanted), or dwellings. There is a great depth, and a frontage of nearly 100 feet. A part or the whole may be taken upon a long lease.—Further particulars of Mr. DOWSON, Auctioneer, London-street; or at the Portland Hotel, Greenwich.

MAITLAND-PARK, HAVERSTOCK-HILL, Hampstead road. LAND-TAX REDEEMED.—TO BE LET, upon Building Leases, for ninety-nine years, desirable BUILDING SITES upon the above Estate. The continued demand for houses in this locality, and the picturesque position of the property adjoining the grounds of the Orphan Working School, render this a desirable opportunity for builders or gentlemen wishing to erect villas for themselves. For terms and to view plans, apply to the Secretary of the Orphan Working School, 32, Lamb's-buildings, Messrs. TERRELL and CHAMBERLAIN, 20, Bedford-street; the Architects, Messrs. WEBNERT and ASHDOWN, 42, Charing-cross; or at the Porter's Lodge, on the Premises.

HIGHBURY NEW PARK.—FREEHOLD BUILDING GROUND TO BE LET, in this desirable locality, commanding extensive views. To gentlemen desirous of selecting a site for the erection of villa residences, this affords an excellent opportunity. Money advanced to responsible persons, if required.—For particulars apply to Mr. G. HAMBRIDGE, Architect, 73, Coleman-street, City.

CAMDEN TOWN CEMETERY BUILDING ESTATE.—TO BE LET on Building Leases for ninety-nine years, very eligible SITES upon the above estate, having good frontages into Camden street, Pratt-street, and Bayham-street. There is a great demand for houses and shops of the third-rate in this locality, which is enhanced by its near proximity to the North-Western and North London railway stations, and the Hampstead-road.—Plans may be seen, and particulars obtained by applying to H. E. KENDALL, Esq. Architect, 17, Suffolk-street, Pall-mall East; or to JOHN DANGERFIELD, Esq. Solicitor, 24, Craven street, Charing-cross.

AUGUSTUS SMITH, Auctioneer to Engineers, Machinists, and the Metal Trades, 255, Blackfriars-road, near the bridge, respectfully invites all persons having Engines, Machinery, Foundries, Plant, or Ironmongery businesses to dispose of, to forward the particulars thereof for insertion in the REGISTRY-BOOK, for which NO CHARGE will be made unless sales be effected.

TO ENGINEERS, MACHINISTS, and OTHERS.—A first-rate PREMISES in the above line, on the Surrey side, TO LET, fitted up with an excellent 3-horse engine boiler, 3 furnaces and fans, fitting and other lathes, benches, anvils, blocks, tools, &c. The forgoing spacious premises are in full work, and will be sold, or let, and may be had on advantageous terms.—Apply to AUGUSTUS SMITH, Auctioneer to Engineers, Machinists, and the Metal Trades, 255, Blackfriars-road, near the bridge

KENSINGTON GORE.—Valuable SITES for first-class MANSIONS, in the new (Prince Albert's) road, Kensington Gore; with frontages to the Park like property purchased by the Royal Commissioners for the Exhibition of 1851, as a site for institutions connected with science and art; may be obtained upon 99 years' lease, by application at Mr. W. JACKSON'S Office, 10, Kensington Gore.

LEE, near LEWISHAM.—TO BE LET, on Lease for Eighty Years, a valuable PLOT of BUILDING LAND, with a frontage of 163 feet to Belmont-hill, in a dry gravelly situation near to Lee Church, Blackheath, and within a few minutes' walk of the railway station. Apply to Mr. W. MOXON, Land Agent and Surveyor, West Strand, Charing cross.

TO BE LET, or the LEASE TO BE SOLD, of an ENGINEER'S SHOP, conveniently situated near Oxford-street, and well suited for any Mechanical Trade. The Fixtures, and a portion of the Tools, may be had if required, at a moderate rate.—Apply at 20, Marlborough-Mews.

FREEHOLD BUILDING GROUND.—TO BE LET, or SOLD, on advantageous terms, TWO PLOTS of GROUND, situate in the most preferable part of St. John's Wood.—For particulars apply, by letter, post-paid, to W. L. No. 2, Craven terrace, Paddington.

TO WHOLESALE and RETAIL MANUFACTURING and FURNISHING IRONMONGERS.—TO BE LET, a LARGE SHOP, in a situation requiring the above business, at a low rent.—Apply to Mr. B. J. HUDSON, Timber Merchant, Great Peter-street, Westminster.

TO MASONS or other Trades who may be desirous of WORKING OUT the VALUE of a CARCASE of an EIGHT-ROOMED HOUSE, on liberal terms, may hear of an opportunity, by applying to Mr. WM. ELLIOTT, No. 8, Oxford-terrace, King's-road, Chelsea.

LAMBETH and PROVINCIAL FREEHOLD LAND SOCIETY, Enrolled as the "Borough of Lambeth Benefit Building Society."

PRESIDENT,
The Hon. JOHN LOCKE KING, M.P.

TRUSTEES.
George Singer, Esq. James Smee, Esq. S. Bitches, Esq.

OFFICES, 311, High-street, Borough.
Open from Ten A.M. till Seven P.M.

Shares, 30*l.*
Entrance fee, 1s. Subscriptions, 4s. monthly.

Allotments distributed by rotation, ballot, and to completed Shares in the order of their completion

No Fines on unadvanced Shares. No back payments.

This Society within four years has divided five estates, satisfying 1,314 Shares out of 5,756. The value, as divided amongst members, 47,767*l.*

A Bonus of 5 per cent. in addition to 5 per cent. interest, in all 10 per cent was declared upon all unadvanced Shares at the annual meeting of 30th January last.

311, High-street, March 1, 1855.

WM. BANKS, Secretary.

LEATHER BANDS for DRIVING MACHINERY.—EDWARDS'S PATENT.—Engineers, Mill-owners, Printers, and others using bands for driving machinery, are respectfully invited to inspect

EDWARD'S
IMPROVED FOLDED FLAT AND ROUND LEATHER BANDS,

Which for strength, durability, and straightness in working, surpass any bands at present in use.

Improved LEATHER HOSE, SUCTIONS, FIRE BUCKETS, &c.

A few Second-hand Bands for sale.

MANUFACTORY,
33, Great Sutton-street, Clerkenwell.

THE LONDON AND MANCHESTER PLATE GLASS COMPANY

Beg to inform the TRADE, that the EXTENSION OF THEIR WORKS being now completed, they are enabled to execute orders to any extent at immediate notice. The Company also beg to intimate that owing to improvements effected in the reconstruction of their Works, the COLOUR and QUALITY of their GLASS will be found to be considerably improved, and that they can guarantee the maintenance of these essential requirements. They further beg to invite attention to their reduced List of Prices, which may be obtained on application at their London Warehouse, or at the Works

For the convenience of the LONDON TRADE, a large stock of POLISHED PLATE is now kept at the COMPANY'S WAREHOUSE, BARRAUD'S WHARF, WHITEFRIARS.

The Works, Sutton, St. Helen's, January, 1855.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

LOOKER'S PATENT VENTILATORS,

FOR FACTORIES, WORKSHOPS, GREENHOUSES, STABLES, FARM BUILDINGS, &c. &c.

The Inventor solicits an inspection of the above at his POTTERY and DRAIN-PIPE WORKS, Kingston-Hill, where orders to any extent can now be received. The Ventilators are extremely simple in construction, and can be made of any size or shape, in Pottery, Metal, or other Material. They admit fresh air without the slightest draught, can be regulated with perfect ease, and are not a third the cost of any other arrangement for the purpose hitherto introduced.

Full particulars, with prices, forwarded to any part of the United Kingdom, on application to the Inventor, Patentee, and Manufacturer, BENJAMIN LOOKER, JUN. Kingston-on-Thames.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'s PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

STAINED GLASS WORKS, 32, Allsop-terrace, New-road, near Baker-street, London.—Messrs. GIBBS beg to announce to Architects and Builders, that they have removed their old-established Stained Glass Works, from No. 3, Harmood-place, Camden town, to the above address, where business will be continued the same as usual. N.B. Stained Glass Designs and Estimates given for Ecclesiastical and Domestic purposes.

By Royal Letters Patent.

THE COSMOPOLITAN GLASS COMPANY, 298, Oxford street.

The Managers acquaint Architects, Builders, Glaziers, &c. that their Tariff for BRITISH PLATE, PATENT PLATE, CROWN and SHEET WINDOW GLASS, HARTLEY'S PATENT ROUGH PLATE, COLOURED and ORNAMENTAL GLASS, may be had, free, on application at the Company's Depôt.

Hartley's Patent Rough Plate Tiles from 8s. per dozen.

Perforated Rough Plate and Sheet Ventilating Glass, is 6d per foot.

Flashed Ruby, 1s.; Ground Sheet, 3½d.; Enamelled, 8d. per foot. Crown or Sheet Squares, in 100 feet boxes, 2d. per foot.

Sashes Primed and Glazed, 3s. per dozen.

All kinds of Agricultural, Horticultural, Architectural, Domestic, Scientific, and Ornamental Glass, at wholesale prices.

SUPERIOR BRITISH PLATE-GLASS AT VERY LOW RATES.

THE UNION PLATE-GLASS COMPANY having recently completed very considerable improvements and additions to their works, take the opportunity of informing their friends that they will now be able to supply orders without delay; and respectfully invite the attention of the trade generally to the low rates at which their now much-extended manufacture is sold.

Lists of prices may be obtained on application at

The Works, Pocket Nook, St. Helen's, Lancashire.

The Warehouse, 99, Hatton-garden, London.

" 45, Piccadilly, Manchester.

Messrs. C. and J. Malloch, 30, Turner's-court, Glasgow.

" John Dix and Co. Bath-street, Bristol.

" H. Sibthorpe and Son, Cork-hill, Dublin.

ROUGH PLATE-GLASS from 4 to 1 in thick, suitable for the windows and roofs of mills, mechanics' shops, market halls, railway stations, &c.

Beautiful and highly-finished POLISHED PLATE GLASS, for shop-fronts and all superior glazing purposes, and for silvering.

Superior silvered Plate-glass Mirrors of all sizes.

WHOLESALE BRITISH and FOREIGN WINDOW GLASS WAREHOUSE, established upwards of Sixty Years.—ROBERT METTAM begs to call the attention of builders and the trade in general to his prices of British and Patent Plate, Rough Plate, Crown, Sheet, and Ornamental Window Glass of every description, stock of 16 oz. Sheet Glass, in crates, from 21d. per foot; C C C Crown, 18 tables, 32s. per crate; Foreign Sheet Glass, in cases of 200 feet each, large sizes, 32s. 6d. and 42s. per case: Ground Glass, 24d. per foot. Extra size sheet glass of all qualities for shop-fronts, &c.—Estimates and price-lists forwarded, post free, on application at the Warehouse, 30, Princes-street, Leicester-square, London.

ROBERT TUCKER, Secretary.

IMPERIAL LIFE INSURANCE COMPANY, 1, OLD BROAD-STREET, LONDON. Instituted in 1820.

WILLIAM R. ROBINSON, Esq. Chairman.
HENRY DAVIDSON, Esq. Deputy-Chairman.

The SCALE of PREMIUMS adopted by this Office will be found of a very moderate character, but at the same time quite adequate to the risk incurred.

FOUR-FIFTHS, or 80 per cent. of the profits, are assigned to policies every fifth year, and may be applied to increase the sum insured, to an immediate payment in cash, or to the reduction and ultimate extinction of future premiums.

ONE-THIRD of the premium on insurances of 500l. and upwards, for the whole term of life, may remain as a debt upon the policy, to be paid off at convenience; or the Directors will lend sums of 50l. and upwards, on the security of policies effected with this Company for the whole term of life, when they have acquired an adequate value.

SECURITY.—Those who effect insurances with this Company are protected by its subscribed capital of 750,000l. of which 140,000l. is invested, from the risk incurred by members of Mutual Societies.

The satisfactory financial condition of the Company, exclusive of the subscribed and invested capital, will be seen by the following statement:—

At the close of the last financial year, the sums assured, including bonus added, amounted to	£3,500,000
The premium fund to more than	800,000
And the annual income from the same source, to	120,000

Insurances, without participation in profits, may be effected at reduced rates. SAMUEL INGALL, Actuary.

LEASEHOLDS RENDERED AS MARKETABLE AND MORTGAGEABLE AS FREEHOLDS BY THE LAW PROPERTY and LIFE ASSURANCE SOCIETY.

*** Healthy and Diseased Lives Assured, Redemption of Mortgages and Loans, &c.

EDWARD S. BARNES, Secretary.

30, Essex-street, Strand, London.

SECURITY FOR MEMBERS OF BUILDING AND FREEHOLD LAND SOCIETIES.

THE LAW PROPERTY LIFE ASSURANCE SOCIETY will assure, for a very moderate annual premium, the PAYMENT of all future SUBSCRIPTIONS in the event of the Death of a Member, before the property is redeemed.—Every information forwarded on application.

EDWARD S. BARNES, Secretary, 30, Essex-street, Strand.

SECURITY TO EMPLOYERS.

THE TIMES ASSURANCE COMPANIES.

To Clerks and others guarantees at the lowest rates.

CHARLES JAMES THICKE, Resident Secretary.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers of White Zinc Paint on a large scale in this country, are enabled, by a process, which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Those direful maladies, paralysis and painters' colic, will be entirely avoided. It is entirely free from any poisonous or pernicious property. Neither exposure to heat, nor tropical climates act upon it. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. To be had of the Wholesale Paint-dealers in original Packages, each cask stamped—HUBBUCK and SON, PATENT. And if not so marked, the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers in this country. Paint and Varnish Works, Upper East Smithfield, opposite the London Docks.

DAMP WALLS.

STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,

Is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 2s. 6d.

Prepared only by W. J. STENT, Warminster.

London Agents: Messrs. GEO. and THOS. WALLIS, 64, Long-acre. Agent for Ireland: Mr. S. BOYD, 48, Mary-street, Dublin.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphurous or any other vapours or emanations. Being completely innoxious and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agents. In London, Messrs. CHARLES DEVAUX and CO., Wholesale Agents, 93, King William-street, City; FREDERICK BRABY, Wholesale and Retail Agent, 8, Tottenham-court, New-road. In Manchester and Liverpool by R. CLAY, 8, Mersey-street, who is the acknowledged Painter to the Company's Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bush; and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Yarmouth, Isle of Wight, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with ZINC Paint by contract.

For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above named CEMENT, being of uniform colour and quality,—a desideratum never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which, its eminent hydraulic properties stamp it at once as the best Cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cements, which are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in use market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, 8c, Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Testimonials of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of the Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also of, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

ROMAN and PORTLAND CEMENT of the first quality, manufactured at the ELMLEY CEMENT WORKS, Isle of Sheppey, Kent; also, STOCK and KILN BURNT BRICKS, hand-moulded and machine, made for shipping or otherwise.—Apply to G. BOOTH, Agent, 11, George-yard, Lombard-street, City.

BATH CEMENT.—This Cement is equal to Portland in strength and durability, does not vegetate in damp situations, is perfectly hydraulic, of a regular and warm colour resembling the Bath stone.—CHARLES RICHARDSON, 6, South Wharf, Paddington.

FRONTS of HOUSES.—GREENE and CO.'S PORTLAND CEMENT WASH, equal to oil paint for durability; in casks, 1 cwt. for 10s.

DAMP WALLS.—GREENE and CO.'S OXIDE SOLUTION PAINT, a sure and effectual remedy for damp, salt, or spotted walls; price 12s. per gallon, which will cover 200 square feet.—Prepared only by GREENE and CO. Original Inventors, 29, Norfolk-street, Islington.

SOUTHAM.—BLUE LIAS LIME, and CEMENT WORKS.—OLDHAM and TATHAM'S Blue Lias Lime, Portland, Roman, and Lias Cements.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS', STOCKS, and other BRICKS.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 20, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF-ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester, March 31, 1855.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 31, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 781, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 35s. 6d. per 1,000; floor bricks and 6-inch pavings, at 40s. per 1,000; 8-inch pavings, at 60s. per 1,000; 9-inch pavings, at 72s. 6d. per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties Railway.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants. Builders, contractors, and others supplied with every description of building material at the lowest market prices.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

STONE-COLOUR BRICKS, moulded to any pattern, for cornices, copings, labels, &c. at about one-third the cost of stone; also ornamental ridge and other tiles; may be had to order of Messrs. HOOPER and CO. 2, Portland-street, Southampton.—Illustrated list of prices or samples forwarded on application.

TO BUILDERS and OTHERS.—BRICKS delivered at any part of the River up to Battersea-bridge, at the following prices, viz.:—Grey Stocks, 26s. per thousand; Grizzles, 20s. per thousand; Rough Stocks, 20s.; Place, 16s.—Terms, cash on delivery.—Apply to Mr. G. SMEED, Sittingbourne, Kent.

Depôt, Agar Wharf, King's-road, St. Pancras.

VITRIFIED STAFFORDSHIRE BLUE BRICKS, Paving, Roofing, and Ridge Tiles, Sanitary Pipes, &c. Stourbridge Fire Goods, &c. of all descriptions, and of best quality.—WOOD and SON, Manufacturers, Portway, Oldbury, near Birmingham. Agent.—Mr. J. UNWIN, Private Residence, 59, Nelson-square, Blackfriars-road.

WHITE SUFFOLK and RED FACING BRICKS

COWLEY, KENT, and ESSEX BRICKS.

Also Yellow and Pale Malm Seconds, Cutters, Faviors, Shippers, &c.

KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE (successors to Mr. Benjamin Gough), 5, ADELAIDE-PLACE, LONDON-BRIDGE.

TO BRICKMAKERS, BUILDERS, and BUILDING SOCIETIES.—To be immediately DISPOSED OF, entirely from want of capital, a first rate BRICK and TILE WORKS, licensed under Beart's Patent, in new and full operation, worked by steam-power, producing sixth thousand bricks per week, from the finest bed of white clay in England.—For particulars, apply to Mr. GLENN, Cambridge-terrace, Liverpool-road, Islington.

TO BUILDERS, CONTRACTORS, AND OTHERS.

MESSRS. BARRETT and SHARP beg to inform the trade that they are prepared to LAND STONE, BRICKS, SAND, &c. &c. at their Wharf, at the usual rates. The trains after will land any blocks of stone, timber, or engineering work not weighing more than fifteen tons. BARRETT and SHARP, "Patent Stone Preserving Works," Holdenerus Wharf, 46, Bridge-place, Harrow-road, Paddington.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical, and Alhambresque Mosaics, manufactures of a highly decorative character, and extreme durability, Slabs and Tiles for Fireplaces and Hearths, Copings for Gates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had in great variety at their Warehouse, 9, Albion place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

GREAT REDUCTION of PRICES.—SAMUEL PUTNEY respectfully solicits the attention of buyers to the still further reduction, owing to the recent fluctuations.

Pine Planks, 12 ft. 3 in. by 11 in.....	from 3s. 6d.	each.
Spruce Deals.....	„ 3s. 9d.	„
Yellow ditto.....	„ 4s. 0d.	„
Honduras Mahogany	„ 0s. 6d.	per foot.
Spanish ditto.....	„ 0s. 7d.	„
Oak Staves	„ 2s. 0d.	each.

Prepared Flooring, Veneers, &c. at equally low prices.

Borough-road, Southwark, and Elm-street, Gray's-inn-lane.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand, at his manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¼ inch to 1½ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Sills, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 5 per cent. upon his list prices for Mouldings.—A large stock of dry flooring at low prices. Southwark-bridge Wharf, Bankside.

IMPROVEMENT in WOOD MOULDINGS. J. SIMMONS'S improved WOOD MOULDINGS are acknowledged by all who have tried them to be the best ever produced by machinery. J. S. in returning thanks to his friends and customers for the liberal patronage already bestowed upon him, begs to call their attention to his large stock of Mouldings now on hand, feeling assured that one trial will insure a continuance of their favours. Price lists can be obtained on personal application, or by letter, enclosing six postage stamps, the cost of postage.—Steam Works, 50, North Wharf road, Paddington.

N.B. Builders supplied with all kinds of Marble and Stone Chimney-pieces, at prices lower than any house in London.

TIMBER and DEAL YARD.—A large CONSIGNMENT of PREPARED FLOORS (dry), DEALS, BATTENS, &c. for SALE on COMMISSION, at very low prices for cash. Timber Deals, &c. received for Sale on Commission.—THOMPSON and HOLMES, Wood and Stone Brokers, the Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

ACORN TIMBER WHARF and SAW-MILLS,

GRAND SURREY CANAL, OLD KENT-ROAD.—The extensive Waterside Premises Improved Sawing Machinery and Drying Warehouses, with a supply of all kinds of Foreign Wood direct from the importers, enable consumers to select from one of the largest stocks in London, at the lowest prices, for cash.

The Monthly Price Current forwarded on application.—RICHARD MAY informs the building public that American Pine and Spruce are cheaper, and Baltic goods are scarce.

ST. PANCRAS SAWING, PLANING, and MOULDING MILLS, Cambridge-street, near the Great Northern Railway Station, King's-cross.

GEORGE NUKES and CO. (late Nuchbur and Atkinson) beg to acquaint architects, builders, carpenters, and others, that they have opened the above premises with superior machinery for manufacturing architrave mouldings of any size and design, sash-bars, match-boarding, skirtings, flooring, &c. and have always on hand a large stock of seasoned flooring at reduced prices; also, timber, deals, scantling, sash sills, mahogany waincot, &c. Goods sawn at the mills fetched and delivered free of charge.

May 19, 1855.

TO ENGINEERS, SAW-MILL PROPRIETORS, &c.—WANTED, a Second-hand DEAL SAW-FRAME.—Address, stating full particulars and lowest price, to A. Z. care of Mr. Allingham, 22, Blackfriars-road.—A NEW ONE not objected to, if price sufficiently moderate.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand the exposure to the weather. Price 6s. per gallon. Varnishes for W. NAYLOR'S Stains may be had at the Factory, 44, James-street, Oxford-street; also Manufacturer of Improved Knotting and Decorative Varnishes.

OAK VARNISH, 8s. 6d. per Gallon, in quantities not less than two gallons, fetched away and paid for at the time, at C. LEFTWICH'S Lead, Glass, and Colour Warehouse, 31, Munster-street, Regent's-park. A large quantity of PAPER-HANGINGS, CHEAP. 18s. per cwt. given for old lead.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 11b, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

FOWLER'S

MEDWIN, HALL, and CO. Engineers, 92, Blackfriars-road, Sole Patentees and only Manufacturers. N.B. Any of these Engines may be purchased.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, suitable for all purposes and climates. Patent Closets and Basins with screw-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of this tubing, the following letter received from Mr. C. Hacker, surveyor to the Duke of Bedford:—"Office of Works, Woburn-park, Jan. 10, 1852.—In answer to my inquiries respecting the Gutta Percha Tubing for pumping water, I find that the water has not affected it in the least, although it will eat lead through in two years; we have adopted it instead, both on account of being cheaper than lead, much easier laid down, and a great part of job. Yours &c. C. Hacker." Mr. Thomas Hancock, Manufacturer of Caoutchouc, Gutta Percha, and Elastic Compositions, 24, Parkside, Knightsbridge, Sole Proprietor of the Patent for Vulcanizing India Rubber, Sheets, Solutions, &c. Also Manufacturer of the Patent Gutta Percha Stamps. The Gutta Percha Company, Patentees, 18, Wharf-road, City-road, London.

ONE THOUSAND BEDSTEADS to CHOOSE FROM.—HEAL & SON have just erected extensive Premises, which enable them to keep upwards of One Thousand Bedsteads in stock. One Hundred and Fifty of which are fixed for inspection, comprising every variety of Brass, Wood, and Iron, with Chintz and Damask Furnitures, complete. Their new warerooms also contain an assortment of BED-ROOM FURNITURE, which cannot be equalled, for quality, in the country. Japanned Dressing Tables, Washstands, Chests of Drawers, Bedsteads, Mattresses, Feather Beds, Bolsters, and Pillows, Blankets, Quilts, and Counterpanes, Carpets, Floor Cloths, Rugs, Fenders, Fire-irons, Kitchen Utensils, Tin Ware, Turnery, Brushes, Mats, &c. &c. Persons furnishing will find it to their advantage to visit this Establishment, as they have the largest stock to select from, and the prices are marked in plain figures at the lowest possible profit for ready money. Purchasers are respectfully requested to compare the articles and prices with those of other houses. Heal & Son's Illustrated Catalogue of Bedsteads and Prices of Bedding, sent free by post. Heal & Son, 196, Tottenham Court-road.

N.B. Country Agents and Railway Engineers and Contractors supplied with the best Bitumen for covering Bridges and Arches.

TYLOR'S improved METAL-BOUND PAINTING BRUSHES.—These are the lightest metal-bound painting brushes hitherto introduced; the bristles are perfectly secure against the action of all kinds of varnishes and colours, the cramp will not rust or rust when the brushes are placed in water, and the handles cannot come loose.—Price lists forwarded, post free, on application to the Manufacturer, J. B. TYLOR, 3, Bury-court, St. Mary-axe, London.

KENT'S PAINTING-BRUSHES are of the best quality, and may be obtained at all the first houses in the trade, and of the Manufacturers,
G. R. KENT and CO. 11, Great Marlborough-street, London.
Established 1777.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

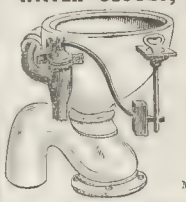
TUNED BY MACHINERY.

Stocked and wheels ready for hang. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is CROSSE'S WHOLESALE WAREHOUSE, 92, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT CHEAPER than any other House in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

THE PERMANENT WAY COMPANY, 26, Great George-street, Westminster, beg to call the attention of Civil Engineers, Contractors, and others interested in the construction of railways, to their patent rails, sleepers, fish-joints, and other important improvements now in use on upwards of 250 miles of railways.—Every information can be obtained on application to CHARLES MAY, F.R.S. Manager; or WILLIAM HOWDEN, Secretary.



TO WATER and DOCK COMPANIES, CONTRACTORS, &c.—PARSEY'S PATENT REVOLVING PUMP will throw as much water with one third the labour as any other pump. One of these pumps at work at No. 70, Strand.

To LOCAL BOARDS of HEALTH and GAS and WATER COMPANIES.—FREEMAN ROE'S PATENT SLIDE-VALVES, acknowledged to be the best in use; hydrants or fire-plugs; wells sunk and bored; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all works connected with the above branches. Pumps let on hire.—W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.

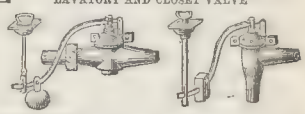
to their reduced LIST of PRICES of Drain Pipes, Junctions, Pans, Traps, &c.; also, to their Patent Sinks, Sinks, &c.; Slates of the best quality, wholesale and retail. Country builders and others supplied with all kinds of goods on application to E. and W. STURGE, Bridge-wharf, City Road.

N.B. The wharf is well situated for carriage by canal boats, or to the railways, to which, but a small charge for cartage is made.

January, 1853.

SUPERIOR GLAZED STONEWARE

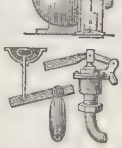
DRAIN PIPES, recently laid manufactured by WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.



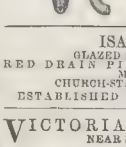
W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHONS, TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipe and sockets, the dies being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in the manufacture, which is equal to glass, and rendering stoppage in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—



Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse shoe Wharf, No. 6, Upper Thames-street.—Millwood and Co.'s Wharf, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbet's Depôt, Britten-street, Chelsea; and at the Pottery.



LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET VALVE

Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under a constant pressure of 100 to 200 feet; they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured and fixed by the Inventors,

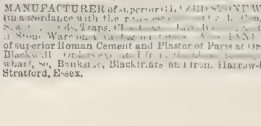
THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short street, New Cut, Lambeth.

UNDERHAY'S PATENT REGULATOR CLOSETS,

for constant or intermittent supply, dispense with Cisterns, Service Boxes, Valves, Levers, Cranks, Wires, &c. &c.; much time is saved in fixing, and a better flush of water obtained in use.

Pan, Valve, Self-acting, and Servants' Closets, on this principle, may be seen at the Works. They are very cheap, their efficiency is guaranteed. 5,000 of them have been sold, and no instance of failure has occurred

These Stoneware are cheaper, stronger, and more ornamental, than any other. Many thousands are in use, and greatly approved of.



Manufactured by
CHARLES BOTTEN and SON,
Brass Founders, Crawford passage, Clerkenwell, London.

PULLEN and SON are directed to SELL by AUCTION on the PREMISES, on MONDAY, JUNE 18, at TWELVE, the whole of the capital BUILDING MATERIALS and FITTINGS-UP of an extensive Stack of Warehouses and Show-rooms, at the corner of Distaff-lane and Cannon-street West, St. Paul's; comprising about 200,000 excellent stock bricks, 100 squares of stout boarded and timber floors, a large quantity of plain tiles, iron framed sashes, hoop-hole and other doors, iron columns, large skylight with rough plate glass, stone paving, coping, and cills, several tons of lead in gutters and pipes, iron crane and jib, 250 feet super. of counters and show tables, 500 feet run of shelving, office desks and partitions, counter cases, and a great variety of fixtures and fittings up.—May be viewed the day previous, and catalogues had of PULLEN and SON, 96, Fore-street, Cripplegate.

CAMP, ALDERSHOTT.—Valuable FREEHOLD BUILDING LAND, intersecting the Camping-Ground, will be SOLD by AUCTION, by Mr. ALDRIDGE, at the ROW-BARGE INN, Aldershott, on THURSDAY, the 7th day of JUNE, 1855, at THREE o'clock in the afternoon, in 49 lots.—Printed particulars may be had on application to Mr. HUGGETT, 4, Beaufort-buildings, Strand; Row-Barge Inn, Aldershott; and of the Auctioneer, 11, Poultry.

SALES BY AUCTION.

MARBLE.—To Sculptors, Masons, Builders, and Others.

MESSRS. THOMPSON and HOLMES will OFFER, by PUBLIC AUCTION, on MONDAY, the 11th day of JUNE next, at TWELVE for ONE o'clock, at their WHARF, the Marble Wharf, Thames Bank, Pimlico, at the foot of Vauxhall-bridge, about 600 tons of MARBLE, consisting of Statuary, Sicilian, Veined, Black and Gold, Dove, Bardilla, Emperor's Red, and St. Ann's and Irish Black, of the finest quality and sizes. Also, about 4,000 superficial feet of English and Foreign cut Slab May be viewed previous to the Sale. Catalogues and further particulars had of the Brokers, the Marble Wharf, Thames Bank, Pimlico, at the foot of Vauxhall-bridge.

MARBLE.—POSTPONEMENT OF SALE.

MESSRS. THOMPSON and HOLMES beg to inform the trade that their PUBLIC SALE, advertised to take place on the 11th, is unavoidably POSTPONED till the 18th inst. on which day they request the attendance of their friends, the greater portion of the stock to be offered having been just landed. The MARBLE WHARF, Thames Bank, Pimlico, at the foot of Vauxhall-bridge.

TO BUILDERS, STONEMASONS, PAVIORS, AND OTHERS.

MESSRS. EVERSFIELD and HORNE have received instructions from the Proprietor, to SELL by AUCTION, without reserve, in JUNE, at the GOODS DEPARTMENT of the MARLBOROUGH and CREEN RAILWAY, Paddington, several thousand feet of Paving, Landings, Steps, Kerb, Sinks, and Coping of the Forest of Dean Stone, which will be arranged into suitable Lots for public sale. Catalogues, when ready, will be forwarded by post, on application, or may be had at the Auctioneers', 41, Parliament-street, Westminster, or Coal Exchange.—Approved bills at three months from purchasers above £5.

To Statuary Marble Masons, Builders, and Others.

MESSRS. EVERSFIELD and HORNE have received instructions from the Proprietor, to SELL by AUCTION, on the PREMISES, Garratt-wharf, Thames-bank, near Vauxhall-bridge, on TUESDAY, JUNE 12, a valuable Stock of MARBLE; consisting of about 200 tons of very superior Statuary, Sicilian, Dove, Bricia, and Black and Gold in Block and Scantling, and about 3,000 feet Slab of various thickness; also, several pieces of Italian sculptured Figures and Monuments. Approved bills at four months will be taken in payment. May be viewed two days previous to sale, and catalogues had on the Premises, and of the Auctioneers, 41, Parliament-street, Westminster, or Coal-exchange

On MONDAY next, JUNE 4 and two following days, at TWELVE, by

SOUTHGATE and BARRETT, at their ROOMS, 23, Fleet-street, Mr. WEALE'S Stock of Ancient and Modern Books, consisting of the best standard works in Architecture and Engineering, the Fine Arts, and other Sciences; and a great variety in miscellaneous literature; together with the entire remaining Stocks and Copyrights of several important publications May be viewed, and catalogues had.

The remaining copies of Louis Haghe's last illustrated book.

SOUTHGATE and BARRETT will SELL by AUCTION, at their ROOMS, 23, Fleet-street, on TUESDAY, JUNE 5, and following day, the whole of the coloured proof, and plain copies of AYA SOPHIA, CONSTANTINOPLE, recently published, by H. M. the Sultan Abdul Majid, 25 plates in the very best style of available tinted lithography, by LOUIS HAGHE, from the original drawings by the Architect Thomas Gaspey a series of Twenty-five Interior and Exterior Views of the Mosque of St. Sophia, and four Panoramic Views of Constantinople.

*** Apart from the interest at all time to the subject here illustrated, associated as it is with the events now passing in the East, this work recommends itself by its artistic merits, the Plates supply one of the highest class, and the very last from the pencil of Mr Haghe.

TO BUILDERS AND OTHERS

TO BE LET, on LEASE, for a term of Sixty-one Years, a most desirable PLOT of FREEHOLD BUILDING LAND, containing about 1 acre, situate at Holloway, in the vicinity of the Metropolitan cattle market and the New City Prison For particulars and plan, apply at the King's Head Tavern, Holloway and of Mr. JAMES HARRISON, Architect, 10, Margate-street.

FREEHOLD LAND.—To Builders or Parties wishing to Build Suburban Residences

FREEHOLD LAND TO BE SOLD on some of the most eligible building estates in the neighbourhood of London, viz.
Forest Hill, Croydon Railway.
St. Margaret's, near Richmond, South-western Railway.
Oatlands Grange, Weybridge, Surrey, ditto.
Hertford Estate, Eastern Counties Railway.
Putney, South-Western Railway.
Rectory Estate, Edmonton, Eastern Counties Railway.
The Waddington Estate, Enfield, Eastern Counties Railway.
Wood-green, Green-lanes, Hornsey, Great Northern Railway.
Old Ford, Stratford, Eastern Counties Railway.
Each of the above estates offers its own peculiar advantages
Plots of land of any size, or for any class of houses, to the extent of One acre, may be obtained. In the two first estates, large pleasure grounds are allotted to the freeholders or tenants of houses Part of the purchase-money may remain at 5 per cent, interest. Parties assisted in the erection of their residences Builders may obtain the freeholds of plots of land to build upon, and the greater portion of purchase-money may remain at an annual charge for about ten years less than the ground-rent of the same under the usual system. In addition, therefore, to the amount to be raised on the building by mortgage, they can sell the ground-rent reserved to themselves at a large profit. Several plots to be let on building lease. Money advanced to responsible parties.—Apply to Mr. GEORGE MORGAN, Architect, 8, Chancery-lane.

BUILDING LAND TO BE LET for 300 Years.—Lease Sites for Villas, commanding views of great extent and beauty, within a hundred yards of the Carshalton Station of the Epsom Railway. Trains to and from London in half an hour.—Apply to Mr. FOWLER, Architect, 4, Gardencourt, Temple.

VALUABLE BUILDING SITE TO BE LET on Lease, situate in the High-street, Camberwell, having two frontages making together about 168 feet, having a large quantity of old materials in buildings on the ground.—For particulars apply to W. CREED, Architect and Surveyor, 64, Old Broad street, City, where a plan of the estate can be seen

TO BUILDERS AND OTHERS.

BUILDING FRONTAGES TO BE LET, for detached or semi-detached VILLAS, in BLESSINGTON ROAD, Belmont, Lee, Kent, close by the church. This is the most attractive, picturesque, and respectable locality on any side of London, from which it is only distant one quarter of an hour by railway, and five minutes' walk from the Blackheath Station of the North Kent Railway. Accommodation will be afforded to respectable men.—For particulars, apply to Messrs J. and C. W. TODD, Miner-street, Brompton; or at their office in Church lane, Lee; or to Messrs. NELSON and INNESS, 9, Whitehall; or to Mr. WELLINGTON, Wellington-chambers, Strand.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing office of COX Bros. & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 1, York street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, June 2, 1855.

In addition to this, a Prize of Five Guineas, Three Guineas, in money, and Two Guineas, in books, will be given by Mr. RUSKIN, for the three most successful SPECIMEN exhibited at the same time in the Rooms of the Museum, of STONE CARVING.
Prospectuses, containing particulars of the competitions, may be obtained at the Rooms of the Museum, between TEN and FOUR o'clock.
June 1, 1855. GEORGE GILBERT SCOTT, Treasurer. JOHN RUSKIN.

COMPETITIONS.

TO ARCHITECTS AND OTHERS.

THE BURIAL-BOARD for the Parish of GREENWICH is desirous of receiving PLANS, DESIGNS, and ESTIMATES, comprising Grand Plans, Sections, Elevations, and Specifications, for LAYING OUT, PLANTING, and ENCLOSING a NEW BURIAL-GROUND, with suitable Entrance gates, and for ERECTING TWO CHAPELS, LODGE, and SEXTON'S HOUSE thereon. A separate and fully detailed estimate of the cost must be furnished. The land contains sixteen acres, a plan of which may be seen, and further information obtained, at the Office of the Clerk to the Board. The party whose designs shall be accepted will, at the option of the Board, either have the superintendence of the works, or be paid the sum of 25*l.* for his designs, but the Board does not pledge itself to accept any of the designs. All plans, &c. will, the estimates, must be delivered in on or before the 25th day of JUNE next, at FIVE o'clock in the Afternoon, at the Clerk's Office, No. 1a, Burney-street, Greenwich. Each plan must be distinguished by a motto, and be accompanied by a sealed letter, and sealed with the like motto, and containing the competitor's name and address.
E. W. JAMES, Clerk to the Board.
Greenwich, 30th May, 1855.

CONTRACTS.

NOTICE to CONTRACTORS.—SWANSEA HARBOUR.—The Swansea Harbour Trustees are, by "The Swansea Harbour Act, 1854," authorised to construct and execute the following Works:

1st A Dam across the Old Channel of the River Tawe, opposite the Pottery Mill, with a Lock therein, to excavate the Pottery Mill Pool, and convert the same into a Basin for Barges.

3rd To construct on both sides of the existing new Ship Cut, certain portions of Quay Walls, to be completed by the owner of the adjoining lands.

4th. A Dam across the River Tawe outside the existing Float, and to form the old part of the river from that point to the Float into a Half-tide Basin of an area about 21 acres, and deepen the same to a level of 25 feet below the high-water mark, ordinary spring tides.

7th. To construct on the East side of such Half-tide Basin, certain portions of Quay Walls, to be completed by the owner of the adjoining lands.

8th. To excavate and deepen the present navigable Channel from the Town Float to the Sea.

7th. To alter and extend the West Pier of Swansea Harbour to the extent of about 600 feet, and erect a New Lighthouse on such Pier, and to remove a portion of the East Pier, and construct a New Head to that Pier

8th. A Railway diverging out of the line of the Swansea Vale Railway for the purpose of removing the ballast of vessels frequenting the harbour.

The Trustees are also empowered to make all necessary Bridges, Roads, Quays, Landing places, and other conveniences connected with the above works. The Trustees have under considerable progress with the deepening of the Channel from the Floating Harbour to the Sea, and are now exercising no Powers or Powers for executing the following portions of the remaining Works, viz

First The construction of certain portions of quay walls on each side of the New Ship Cut below the present bridges, 1,450 feet in length, or thereabouts.

2nd. For the construction of a Lock, with all the necessary gates, coffer-dam, walls, and embankments in the bed of the River Tawe, near the north end of the Town Float.

3rd. The construction of a Canal Lock between the Swansea Canal and the Harbour, together with the formation of certain walls and embankments.

4th. The deepening of the bed of the Harbour between the proposed Lock and the Town Float.

Plans, Sections, Estimates, and conditions of the foregoing Works may be seen at the Offices of JAMES ABERNETHY, Esq C.E. Engineer of the Trustees, at 3, Parliament-street, Westminster; and at the Offices of the Trustees, at Swansea, on and after the 1st MAY inst. Tenders for the whole or part of the works as described in the conditions) to be forwarded to me by the 14th day of JUNE next. LEWIS THOMAS, Clerk to the Trustees.

Harbour Offices, Swansea, 15th May, 1855.

HENRY BES. SOWTON, Solicitor.

CLARK'S PATENT SMOKE-BURNER: an improved means of perfecting Combustion, and thereby destroying Smoke.

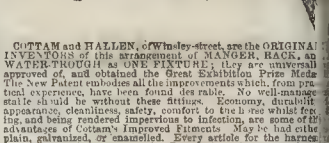
This invention is now in operation upon Steam-engine Furnaces, of Corn and Waggon Boilers, and upon Ovens. It is adapted to other descriptions of Furnace, such as Marine Boilers, Coppers, Coke Ovens, Bakers' Ovens, Potteries, Chemical Works, &c. Its effect is acknowledged by Government Inspectors to be amongst the most perfect of the inventions extant in subduing the Smoke Nuisance, and in many instances with a diminished consumption of fuel.

Ten furnaces, of various construction, to which it has been successfully applied, may be seen in operation at the Cement Works of Messrs. FRANCIS, BROTHERS, and upon Ovens. It is adapted to other descriptions of Furnace, such as Marine Boilers, Coppers, Coke Ovens, Bakers' Ovens, Potteries, Chemical Works, &c. Its Address, THE SMOKE-BURNER COMPANY, Nine Elms, London.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, &c.

THE following are the PRESENT PRICES of PATENT SASH LINE:—

No. 3	4	5	6
5s. 4d.	6s. 6d.	8s.	9s. 9d. per gross.



At JOHN YOUNGS, Birmingham and Wolverhampton, Agent, Factor, and General Ironmonger, 18, Blandford-street, Manchester-square, running out of Baker-street, Portman-square. Every other article equally reasonable.

COTTAM'S NEW PATENT for STABL... REQUISITES.

COTTAM and HALLEN, of Winsley-street, are the ORIGINAL INVENTORS of this arrangement of MANGER, RACK, and WATER-TROUGH as ONE FIXTURE; they are universally approved of, and obtained the Great Exhibition Prize Medal. The New Patent embodies all the improvements which, from practical experience, have been found desirable. No well-managed stable should be without these fittings. Economy, durability, appearance, cleanliness, safety, comfort to the horse whilst feeding, and being rendered impervious to infection, are some of the advantages of Cottam's Improved Fitments. May be had either plain, galvanized, or enamelled. Every article for the harness room and stable kept in stock.—Descriptive catalogues and estimates on application to COTTAM and HALLEN, 2, Winsley-street, Oxford-street.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLERS, plain or enamelled.

Castings Warehouse removed from 81 to 48, Upper Thames-street.

DR. ARNOTT'S SMOKE-CONSUMING FIRE-GRATE is manufactured by F. EDWARDS, SON and CO. 42, Poland-street, Oxford-street, where one may be seen in daily use. The advantages of this grate consist in the smoke being perfectly consumed, no chimney sweeping being required, and a saving of from 40 to 50 per cent. being effected in the cost of fuel. Prospectuses, with testimonials, sent on application.

HEATING by HOT WATER.—J. JONES Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars ornamental and plain supply cisterns, double doors and frames furnace-grates, soot-doors for the same, hot-water pipes, elbows, tees, syphons, throttle-valves, stop-cocks, flange and socket elbows &c.; also, trough-pipes. Drawings and prices of the above, on application to J. JONES, Iron-bridge-wharf No. 6, Bankside, London, near the Southwark-iron bridge.

HEATING BY HOT WATER.

JOHN WEEKS and CO. King's-road Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS, at Messrs. Weeks' establishment, at which with one boiler can be seen daily in full operation, heating buildings measuring 1,000 feet in length, at the small expense of 1d. per day in fuel and labour of 3s. 6d. This achievement in heating by hot water is unprecedented.

WARMING and VENTILATING.—COTTAM and HALLEN, 2, Winsley-street, Oxford-street, having thirty years' experience, and having warmed by the circulation of hot water upwards of 4,000 buildings, consisting of churches, prisons, lunatic asylums, halls, and staircases, galleries, conservatories, and private houses, do can with confidence recommend their system, which, by the various improvements they have made, has perfected the construction and economised the expense of the conservatories, verandahs constructed entirely of iron or wood, and of iron and wood combined. Estimates upon application.—COTTAM and HALLEN, Engineers and Ironfounders, 2, Winsley-street, Oxford-street.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment, where may also be obtained engravings with prices, or forwarded free by post. DEANE, DRAY, and CO opening to the Monument, London-bridge Established A.D. 1700.

ROYAL POLYTECHNIC GAS FIRE, BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and soot are entirely effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation. To be seen in action at DEFRIES'S Office, 165, Regent-street, London.

STEPHENSON and PEILL, 61, Gracechurch-street, London, and 17, New Park-street, Southwark, Manufacturers of COPPER CYLINDRICAL and improved CONICAL IRON BOILERS, and Conservatory and Hot-house Builders, either in wood or iron, respectfully call the attention of the nobility, gentry, and surveyors to their simple but efficacious method of warming horticultural and other buildings by Hot Water. From the extensive works they have executed, references of the highest respectability can be given, and full particulars furnished on application.

REDMUND'S PATENT HINGE MANUFACTORY, WELLINGTON FOUNDRY, Charles-street, Grey-road, near the Canal-bridge. Established thirty years.—E. GOLLOP, widow of the late J. Gollop, sole manufacturer of REDMUND'S and GOLLOP'S PATENT, rising and noiseless spring, swing, double acting, cast, and other Hinges, Floor Centres, &c. &c. Orders for Hinges only, addressed to Mr. J. WALBY, sole Agent, at the Warehouse, 69, Greek-street, Soho, or at the Foundry, will be promptly attended to.—Every description of Small, Soft, and Malleable Iron Castings.

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent articles, sugar-mills, &c.

A. MOREWOOD and CO. (late Morewood and Rogers), Dowgate Dock, Upper Thames-street, London, and Backerville Works, Birmingham. Patent Galvanized Tinned Iron, and Galvanized Iron in Sheets, plain or corrugated, and curved, of all gauges. Manufactured articles always kept in stock. Pails, scoops bowls, riddle-, skips, &c. of all sizes. Also the Patent Galvanized Tinned Iron Tiles, Patent Gas and Water Tubing, Stamped and Moulded Gutters, Wire, Wire Netting, Hooping, Nails, Rivets, &c. Estimates given for every description of Galvanized Works Roofs, &c.—MOREWOOD and ROGERS' Patent Plumbic Zinc, a substitute for Sheet Lead. Plumbic Zinc is a perfect combination of lead and zinc, and not requiring to be more than one-fourth or one fifth as thick as sheet lead, is consequently much cheaper than that material. The Patent Stamped Black Wrought-Iron Eaves Gutter, in four sizes, kept in stock, 7½d. per yard, for 4-inch, and other sizes in proportion.—Discount to the trade.

UNDER PATRONAGE of the ENGLISH and FRENCH GOVERNMENTS.
Portable Galvanized or Painted Corrugated Iron Dwellings, Barracks, Hospitals, Stables, Warehouses, Theatres, Billiard and Concert Rooms, &c.

IRON ROOFS,
Patent Corrugated, Galvanized, and Painted, Wrought-iron, principal, Glass and Slated Roofs, to any span.
Wrought and Cast-Iron Bridges, Girders, Fire-proof Floorings, Shutters, Doors, &c.
Engineers' and Builders' Castings of all kinds manufactured by JOHN WALKER,
Builder, Contractor, and Ironfounder, Mill-wall, Poplar.
Offices—Arthur-street West, London-bridge, where experienced draughtsmen are kept to furnish designs and estimates, which may be obtained on application.
N.B. Galvanized and painted Sheet-Iron, both plain and corrugated, supplied at the lowest possible prices, and a considerable allowance made to the trade.

SAMUEL HEMMING'S PATENT much approved PORTABLE BUILDING and ROOFING MANUFACTORY, REMOVED from BRISTOL to BOW, near London, close to the Bow Railway Station.—A large variety of Buildings always on view, churches, chapels, shooting boxes, lodges, bazaars, ornamental villas, dwelling-houses, farm buildings, and fire-proof stores. Also, railway stations, trucks, and carriages made to any plan on the shortest notice.

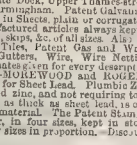
JACKSON and COOK, Ironfounders and Manufacturers of CORRUGATED and GALVANIZED IRON ROOFS and BUILDINGS, beg to call the attention of Architects, Builders, and others, requiring roofing, to the superiority of iron as manufactured by them for that purpose, in point of lightness, cleanliness, durability, cheapness of construction, and being fire-proof. Drawings and estimates furnished.
Island Foundry and Ironworks, Millwall, London.
Offices: 12, Fenchurch-street, City.

TUPPER and CARR, Contractors and Manufacturers of all sorts of IRON ROOFING.
PLAIN, CORRUGATED, PAINTED, or GALVANIZED.
Estimates and Drawings furnished on application.
Experienced Workmen sent to all parts of the Country.
3, MANSION-HOUSE PLACE, and LIMEHOUSE, LONDON; BERKLEY-STREET, BIRMINGHAM.

TUPPER and CARR'S (Craufurd's) PATENT GALVANIZED IRON,
For Roofs, Flats, Cisterns, Tubing, Gutters, Pipes, Fencing, &c.
To be obtained only at
TUPPER and CARR'S WAREHOUSES, REGENT'S CANAL DOCK, LIMEHOUSE, LONDON; or BERKLEY-STREET, BIRMINGHAM.
Sheets, Bars, Rods, Hoops, Nails, Rivets, Screws, Wire, and Manufactured Articles, Pails, Coal-scoops, Buckets, Pumps, &c. always in Stock.
N.B. An allowance to the trade.
Address all letters to TUPPER and CARR, 3, MANSION-HOUSE-PLACE, CITY, LONDON.

SKAIFE'S GALVANIZING WORKS, Commercial-road, Limehouse, London.
Skaife's process is the most effectual preventive against rust, and is extensively used for all purposes where Iron not liable to rust is required.
Patent Galvanized Iron supplied in every form.
Sheets plain and corrugated.—Roofs fixed complete.
J. Skaife is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, Plumbic Zinc, and Tiles.
An Allowance to the Trade.

HOSE PIPING.—To ENGINEERS, AGRICULTURISTS, GARDENERS, SHIP CHANDLERS, and FIRE BRIGADES.—WAITHMAN'S PATENT FLAX TUBING (Linen to 3 inches in diameter) will sustain a greater pressure, is lighter, less bulky, will wear longer, and is about 60 per cent. cheaper than the leather hose-pipe. Manufactured only by WAITHMAN and CO. Bentham, Lancaster.



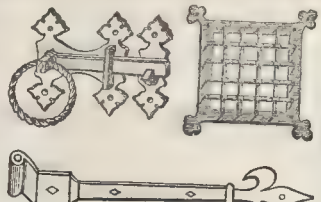
Inches in diameter and price per yard:—

½	¾	1	1¼	1½	2	2½	3
11d.	1s. 1d.	1s. 3d.	1s. 7d.	1s. 9d.	2s.	2s. 3d.	2s. 9d.

Testimonial from Mr. WRIGHT, Lancaster:—
"I beg to inform you that I yesterday tested your piece of 2½-inch Patent Flax Tubing, connected with the Lancaster Waterworks, in the presence of the Mayor, Mr. Rawlinson, Government Inspector, Professor Owen, &c. The column of water at which the Tubing sustained, was equal to 346 feet in height, or about 150 pounds on the square inch, and I have pleasure in stating that the hose sustained this pressure most admirably."
Testimonial of Capt. MARTIN, of the Great Britain Steam-ship:—
"I have much pleasure in being able to tell you that your hose supplied to the Great Britain and other ships, is well worth the attention of shipowners. It gives us much satisfaction."
Testimonial from FAIRBAIRN and CO. of Leeds:—
"We have tested your hose, 3½ inches in diameter, with the pressure of the Leeds Waterworks, and found it highly satisfactory."

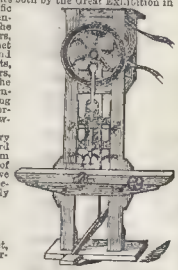
LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE.
Manufacturers of the Iron Railway Chair, Forge and Engine Work, Cast-Iron Goods, and
STEWART'S PATENT CAST-IRON GAS and WATER PIPES.
Office, No. 7, Bite-lane, London.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.
JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trade, to the inspection of his immense stock of ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.



Elliptic Stoves, double backs, 3d. per inch, and upwards.
Register Stoves, 8d. 6d. 7d. 8d. and 9d. per inch.
Self-acting Ranges, with circular ovens and back boilers, best wrought bars and bright fittings:—
2ft., 2l. 18s.; 3 ft. 6 in., 3l. 8s.; 4 ft., 3l. 18s.
Cottage Ranges, with ovens and back boilers, 30s. each.
Best self-acting ditto, ditto, 36s. each.
Air Bricks, 4s. per doz.
Best Town Glue, 6s. Ditto, Scotch, 8s. per cwt.
Best Patent Sash Line.

1.	2	3	4	5	6
4s. 6d.	5s.	6s.	7s. 6d.	8s. 6d.	11s. per gross.



And every material required in the building, bell-hanging, upholstery, and brass-foundry trades on the most reasonable terms.
List of Prices had on application at the Warehouse, or by letter (paid).

HART AND SON,
IRONMONGERS AND MANUFACTURERS,
53, 54, 55, & 57, WYCH-STREET, STRAND.

An Illustrated Catalogue on receipt of six postage-stamps.

VALUABLE PATENT MACHINES FOR WORKING IN WOOD.
PRIZE MEDALS have been awarded to these celebrated Machines both by the Great Exhibition in London, and many scientific institutions. They are extensively used throughout the United Kingdom by joiners, contractors, coach and cabinet makers, railway carriage and wagon builders, machinists, agricultural implement makers, shipbuilders, and also by the British and French Governments, for planing and squaring up, moulding, tenoning, mortising, grooving, rebating, sawing, and boring.
Their operations are in every respect perfect, either in hard or soft wood, and will perform all the ordinary descriptions of work required in the above trades in a very rapid and superior manner, and at a greatly reduced cost.

POWER MORTISING MACHINE.

Sold only by
WILLIAM FURNESS,
Atcutter, No. 20, Lawton-street, Liverpool, from whom full particulars may be obtained.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON.—House and Coach Builders, Joiners, Cabinet-makers, and others, doing similar work, are invited to call at the Patentees', POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.
P.S. Steam Engines and Machinery contracted for.

SAWING, PLANING, and MOULDING MACHINERY.—SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the King's-road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they combine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use.

ESTABLISHED 1817.
WILLIAM HARMER'S SMITH'S WORK, STOVE and RANGE MANUFACTORY and IRONMONGERY, METAL, and ZINC WAREHOUSE, 19, Horseferry-road, and 1, New Peter-street, Westminster. Contractors, Builders, &c. supplied with general Ironmongery, at the lowest wholesale prices.
Cottage Ranges, with Oven or Boiler complete, 22s. each.
Self-acting ditto, with ditto, from 30s.
Self-acting Oven and Boiler Ranges, with Wrought Fittings, Brass Tap, &c. complete, from 45s.
Register Stoves, from 5d. per inch
Elliptic ditto, with double Backs, from 2½d. per inch
Rain Pipes { 2 2½ 3 inch.
{ 11d. 1s. 2d. 1s. 3d. per yard.

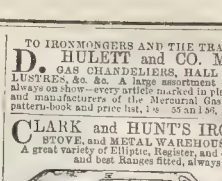
and Rose. }	10s.	12s. 6d.	13s.	13s. 6d. per cwt.

1-inch best Cut Lath, 1s. 6d. Sheet Floor Brads, 12s. per cwt.
Sash Weights, 7s. 6d. per cwt. 9-inch Air Bricks, 4s. 6d. per doz.
6-inch Sink Traps, 9s. per doz. Strong Coal Plates, with hooks, 20s. per doz. Sheet Zinc, Perforated Zinc and Tubing.—Estimates given for Iron Raining, Gates, Balconies, and Ironwork of every description.



TO IRON MANUFACTURERS, Founders, and Shipping Merchants in want of OLD IRON.—Apply at JACOBS and HYMAN'S Wharf, Thornhill Bridge, Caledonian-road, King's-cross, where they can be supplied with from 1 to 200 tons, at the lowest market price.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.
ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of
UNITING LEAD TO LEAD WITHOUT SOLDER.
Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.
PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Cornice-poles, Rings and Lacquered Case Tube for Picture Rods. Desk Rails, &c. &c.
Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at
RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London.

TO IRONMONGERS AND THE TRADE GENERALLY.
D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show—every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete pattern-book and price list, 1 s. 35 and 36, High Holborn.

CLARK and HUNT'S IRONMONGERY, STOVE, and METAL WAREHOUSE, 159, Shoreditch.
A great variety of Elliptic, Register, and other Stoves, Cottage and best Ranges fitted, always in Stock.

Improved Self-acting Cottage Ranges, with Large Oven and Boiler,

30	32	34	36-inch,
28s.	29s.	32s.	34s.

Best self-acting Ranges, with Oven and Back Boiler, Bright Wrought Bars—

Dr. Arnott's Ventilators, 4s. 6d. each.
An extensive stock of bar, rod, hoop, and sheet iron.
Brick Moulds kept in stock. Any size made to order.

IRON FOUNDRY, HARROW-STREET, LANT-STREET, SOUTHWARK.
W. R BARTLEET, manufacturer of Girders, Columns, Cantilevers, Newel and Railing Bars, Panels, Iron Coping, Hot Plates, Tank Plates, Area Gratings, Sash Weights, Fly and other Wheels, Riggers, Pinions, Engine and Lathe Castings, Forge Backs, Furnace Bars, Kilns, Pans, and other castings, to patterns or drawings.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at 6s. 6d. shilling the foot.
R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.
OFFICES.—Gateshead-on-Tyne.
13a, Strand, London.
67, 68, le-park-street, Glasgow.
97, Dale-street, Manchester.

TO IRONMONGERS, BUILDERS, &c.
PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's improved ventilators.—HULETT and CO. 35, High Holborn.

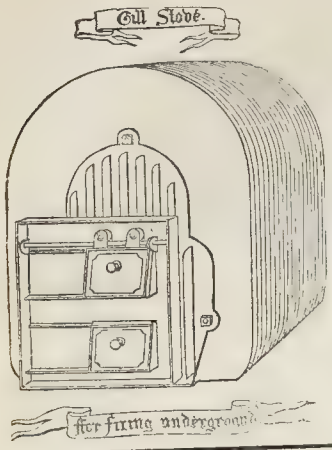
BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY at PEELE and STEDALL'S,
Nos. 5 and 6, BROAD-STREET, BLOOMSBURY.
The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

NAILS and IRONMONGERY, from BIRMINGHAM direct.
Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the
LOWEST BIRMINGHAM PRICES,
a complete LIST of which will be forwarded upon application.
FREDERICK BLYTH,
Nail Manufacturer and General Factor,
Regent-parade, BIRMINGHAM;
or at 16, Gresham-street, LONDON.

CIRCULAR IRON STAIRCASE for SALE.—TO BE SOLD, an ornamental CIRCULAR IRON STAIRCASE, occupying a space of 84 inches, with iron hand-rail cased with brass, and iron balusters complete. Made by Cottam and Halleo. May be seen at Messrs. SPALDING and HODGES, 147, Drury-lane.

FOR SALE, a powerful IRON TURNING-LATHE, with a double motion, fly-wheel, bands, and staff, and sundry chucks; a large slide rest, and about thirty cutting tools, &c.—To be seen at T. R. NASH'S, No. 1, Leigh-street, Burton-crescent. Price 13l.

EDWARD RUSSELL, ALMA TUBE WORKS, WALSALL, Manufacturer of Wrought Iron Tubing for Gas, Steam, and Water; Stocks, Taps, and Dies, and all kinds of Gas Fittings.



TO BE SOLD, by PRIVATE CONTRACT, a variety of SMITH and ENGINEERS' TOOLS, &c. comprising 6-horse Engine, 10½-inch Centre Lathe, with 6-feet Iron Bed, capital Pattern-maker's Lathe, Hand-power Wheel, Forges, Bellows, Smiths' Tools, Grindstones, and Vice Benches; also, an excellent Cooking Range, suitable for a Club or Hotel. Apply at 30, Marlborough Mews.

TYLOR'S improved METAL-BOUND PAINTING BRUSHES.—These are the lightest metal-bound painting brushes hitherto introduced; the ferules are perfectly secure against the action of all kinds of varnishes and colours, the caps will not burst or rust when the brushes are placed in water, and the handles cannot come loose.—Price lists forwarded, post free, on application to the Manufacturer, J. B. TYLOR, 3, Bury-court, St. Mary-axe, London.

KENT'S PAINTING-BRUSHES are of the best quality, and may be obtained at all the first houses in the trade, and of the Manufacturers,
G. B. KENT and CO. 11, Great Marlborough-street, London.
Established 1777

VASES, STATUARY, CHIMNEY-TOPS, &c. in PORTLAND CEMENT.—A quantity of IRON and PLASTER MOULDS for the same TO BE DISPOSED OF; they are modern designs, in good condition, and will be sold much below cost price. For particulars apply to FULLWOOD, THOMPSON, and CO. Bridgewater.

PATENTS in AUSTRIA and GERMANY.
Messrs. PAGET and CHOCZENSKI, of Vienna, offer their services to parties desirous of procuring Patent Rights for Austria and the German States.—For particulars, apply by letter (prepaid), to Mr. F. PAGET, Jun. 42, Union-street, Ardwick, Manchester.

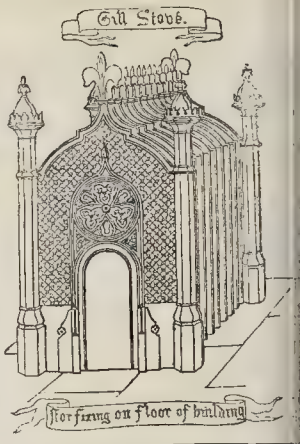
STUART AND SMITH'S

PATENT GILL STOVE,

FOR

HEATING CHURCHES AND OTHER PUBLIC AND PRIVATE BUILDINGS.

The constant failures, and enormous expense, consequent upon the endless variety of experiments to warm buildings has left the public in doubt as to whether there exists any certain, economical, and safe mode of effecting that object or not.



STUART AND SMITH,

ROSCOE-PLACE, SHEFFIELD,

confidently assert, that the Air-Warmer they recommend, possesses the desired qualifications, and respectfully request Gentlemen interested in the question, to ascertain the fact from the actual working of the invention.

It has been fixed in the following, besides a great many other private and public buildings:—St. Stephen's, Longsight, Manchester; Grassendale Church, Aigburth, Liverpool; St. Ann's, Aigburth, Liverpool; North Wootton, near Lynn, Norfolk; St. Paul's, Alnwick, Northumberland; Bettesanger Church, Sandwich, Kent; St. Mary's, Pitsmoor, and Grimesthorpe, Sheffield; County Lunatic Asylum, Derby, &c. &c. &c.

Prospectuses, and every information, sent on application.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

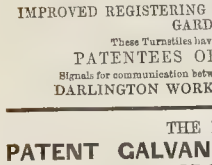
Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.



STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS

FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service-Pipes, Lamp-Posts, Lamps, and Gasfittings.

WATERWORKS FOR THE SUPPLY OF TOWNS,

WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark; and numerous Churches, Chapels, &c.

Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.

DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

THE LIVERPOOL AND MANCHESTER

PATENT GALVANIZED CORRUGATED IRON WORKS,

AND IRON ROOFING MANUFACTORY.

Head Offices: 13, JAMES-STREET (late the Coalbrookdale Company's Premises), LIVERPOOL,

Where all Letters are requested to be addressed.

FRANCIS MORTON AND CO.

Beg to inform ENGINEERS, CONTRACTORS, and the PUBLIC that they have increased their manufacture of Corrugated Iron by the purchase of the machinery and all the working dies of the late firm of Messrs. PORTER, BROTHERS, and STUART, of BIRMINGHAM.

Parties accustomed to use the PARTICULAR SIZES of Corrugations heretofore manufactured by that Firm can be still supplied with the same sizes from the same dies.

FRANCIS MORTON and CO. manufacture now a greater variety of Corrugated Iron either galvanized or black, than any other house in the trade, comprising every intermediate size from 3 inches up to 10 inches each corrugation, in all lengths up to about 11 feet; also the angular or step corrugation.

STRONG PLATES CORRUGATED EXPRESSLY for FIRE-PROOF FLOORS, ROADWAYS, BRIDGES, PARAPETS; also for ALL KINDS of ROOFING, RAILWAY WAGGONS, &c.

All kinds of GALVANIZED SHEET IRON ditto, expressly prepared for Tinmen's use; General Ironmongery and Iron Goods in stock, or galvanized to order.

The Trade supplied wholesale with Galvanized Water buckets, Wire, Poultry, and other Nettings, of every size; Best and Charcoal Wire, of all gauges; Wove Wire for Ventilation, &c.; Galvanized Water-pipes, Eaves Gutters plain and moulded, Gas Tubing, much cheaper and more durable than lead; Water Cisterns, Wire Ropes, Window-sash Cords, Signal Cords and Pullers; Copper Rope Lightning Conductors, with Points and Attachments, complete.

Fencing Wire and Telegraph Wire, in long lengths.

The inventors of the PATENT WIRE STRAND FENCING, which is supplied and erected complete, at per yard.

Wrought-iron FIELD GATES, CATTLE and SHEEP HURDLES, and DEER FENCING of every description.

The PATENT ASPHALTED ROOFING FELT, at 1d. per square foot. Dry-hair Felt for Deadening Sound, for Boilers and Steam Pipes, made in rolls 20 yards long, at a greatly reduced cost.

Contractors for all kinds of Wrought and Cast-iron FENCING, PALISADES, ENTRANCE-GATES, and VERANDAHS.

Ships fitted with Wire Rope Rigging, Galvanized Chains, Anchors, &c.

THE TRADE SUPPLIED ON LIBERAL TERMS.

Head Offices: 13, JAMES-STREET (late Coalbrookdale Company's Premises), LIVERPOOL;

Also 18, ST. MARY'S-GATE, MANCHESTER.

N.B. All kinds of Iron and Ironwork Galvanized, and Sheet-iron Corrugated at very moderate prices.

TO ARCHITECTS AND BUILDERS.

PATENT CLIMAX DOOR-SPRINGS.—The attention of architects, builders, and ironmongers is particularly directed to the above patented improvements in door-springs, being the most perfect and durable yet invented. Their power is equal to doors of any size and weight, and they are warranted to stand the wear and tear of any bank, public building, or business establishment in the kingdom.—Drawings, with full particulars, may be had from the manufacturers, WEBB and GREENWAY, Steelhouse-lane, Birmingham.

TUCKER and REEVE'S LOCKS afford absolute security at a moderate price.

"The novel and evidently effective principle of security on which these locks are constructed, places them at once in the foremost rank of such inventions; in the present state of the art, picking them would seem to be impracticable."—*Standard.*

Depôt: 181, FLEET-STREET; where also may be had PRICE'S FIREPROOF SAFES, &c.

COPYING PRESSES, CASH AND DEED BOXES.

Lists and Prospectuses free.

HOBBS'S PATENT AMERICAN AN... ENGLISH LOCKS.

Messrs. HOBBS, ASHLEY, and CO. are now manufacturin... their celebrated American and English Locks, on the premise... 97, Cheapside, and 33, Lawrence-lane, London; where, by t... introduction of their patent steam machinery, they are enabled ... guarantee superior workmanship, combined with greater securit... at a moderate price, than in any locks produced either in town ... country.

EVERY LOCK being MADE and FINISHED at the MAN... FACTORY, is warranted, and bears their OWN STAMP, witho... which none are genuine.

These Locks can be procured by order through any respectab... Ironmonger in the United Kingdom; or at the Warehouse, ... above, Wholesale and Retail.

PATENT FIRE and BURGLAR-PROO... SAFES MILNER'S PATENT), fitted with HOBBS'... PATENT POWDER-PROOF LOCKS, form the strongest Sa... guards against Fire and Robbery; they are made of vario... dimensions, adapted for the security of Money, Plate, and impo... tant Documents, Parish Registers, &c. Lists of prices and dime... sions can be had on application to HOBBS, ASHLEY, and CO., ... Wholesale and Retail Warehouses, 97, Cheapside, and 33, Lawrence... lane, London.

A PRIZE MEDAL for SUPERIOR LOCK... was awarded to J. H. BOODBYER at the Great Exhibition ... of 1851, who invites the attention of Builders, &c. to his Stock ... Ironmongery, Brass Foundry, Nails (wrought and cut), Copp... and Zinc; Patent Locks of all descriptions; China, Glass, a... Wood Furnitures of all kinds, with Patent Shifting Spindles; ... Arnott's Ventilator, 4s.; and the new registered Venetian Ve... tilator, so much admired, &c. &c. 6s. 6d. each.

J. H. BOODBYER (late STURCH and BOODBYER), estab... lished nearly 200 years, for the supply of Goods from the be... Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

No. 1704, BRITISH SECTION, HARDWARE DEPARTMENT, ... PARIS EXHIBITION, 1855.

FIRE-PROOF CONSTRUCTION.—... FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been m... extensively adopted, and its application has been extended ... nearly EVERY DESCRIPTION OF BUILDING, whether pub... or private.

The system combines ECONOMY, with great simplicity ... construction, perfect security from fire, increased durability, a... many other important advantages.

The floors and roofs are formed by a combination of joists ... wrought or rolled iron with concrete; so constructed that ea... floor becomes in effect a beam of artificial stone, with ribs of iron ... the structure possessing great strength and rigidity, and forms ... a fire-proof foundation adapted to receive a finished surfa... either of the ordinary flooring-boards, or of cement, asphal... tiles, slate, or other material.

Some of the largest and most important buildings in t... kingdom are now in course of erection upon this principl... which is recommended to the notice of all who are interested ... building, both as superseding the necessity for cast-iron gird... and brick arches, and as bringing the great desideratum of fi... proof construction, even for ordinary dwelling-houses and lomes... buildings, within the reach of every one.

Further information may be obtained of the Proprietor of t... patent,—Mr. BARRETT, 12, York-buildings, Adelphi.

DESTRUCTION of WAREHOUSES ... MANCHESTER, by FIRE.—Messrs. Rylands and So... SAFES, after fourteen hours' exposure to intense heat. ... COPY OF MESSRS. RYLANDS AND SONS' TESTIMONIA...

"34, High-street, Manchester, March 6th, 1854.

"Messrs. Chubb and Son,

"GENTLEMEN,—We have great pleasure in communicating ... you, that the large 'Patent Fire-proof Safe' that we purcha... from you 12 years ago, for our late offices in New High-street, ... been the means of preserving our books, cash, notes, &c., enclo... therein, on the evening of the 1st of March, when our entire p... mises were destroyed by fire. The safe, after being subject to fo... teen hours' intense heat, was unlocked on the morning of the ... of March; the locks all answered to their respective keys, and ... the damage the contents received (water excepted) was that o... some of the books were slightly singed at the edge.

"You are at liberty to make what use of this communicat... you may think proper.

"We are, Gentlemen, yours respectfully,

"RYLANDS and SONS.

PIMLICO MARBLE WORKS,
BELGRAVE-WHARF,
LOWER BELGRAVE-PLACE.

SAMUEL CUNDY.

THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL.
PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

MARBLE.—Mr. B. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.

MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account. Mr. Thompson being no longer his agent.

Mr. B Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.

N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors, and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their STOCK of MARBLE is received direct from the principal quarry-owners in Italy and Belgium, for SALE on COMMISSION ONLY, and that they can consequently supply the Trade with the finest marbles at the lowest prices. Sawn Slab, Mortars, Vases, &c.; Yorkshire and Portland Stone for sale on commission.

The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

TO BUILDERS, MASONS, AND OTHERS.

THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Bardilla, dove, black, black and gold, Sienna, St. Ann's, statuary, serpentine, verd antique, &c. Portland, Harehill, Park Spring, and other stone, in blocks, slabs, landings, and headstones. Yorkshire paving, granite curb, &c. All goods carefully packed and forwarded to any part of England.—THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London.

YORKSHIRE STONE.

GEO. VINT and BROTHERS beg respectfully to inform Architects, Surveyors, Contractors, Builders, Masons, &c. that they can supply to any extent all kinds of YORK STONE of the very best quality, direct from their Quarries, to all Railway Stations and Ports in the Kingdom, on the most reasonable terms.—GEO. VINT and BROTHERS will gladly forward prices by post on application.—Address, Idle, near Leeds.

BATH STONE DEPOT, BOX STATION.
ROBERT STRONG, STONE MERCHANT, Box, Wilts.—Box Ground Stone, Scallett Block, Ashlar, Rangework, &c. &c. Supplied direct from the Quarries; also every description of Stonework for Building purposes, both plain and ornamental, prepared ready for fixing, and forwarded to any part of the Kingdom with despatch. Estimates always on view; Urns, Fountains, Chimney-pieces, Tombs, &c. &c.

BANGOR WHARF, King's-road-bridge, Camden-town.—WRINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, laths, plaster, Roman, Portland, and Keene's cement, blue lias, Dorking, and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, sewer pipes, closet-pans, and traps, Welsh fire-bricks, gravel and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

By Her Majesty's Royal Letters Patent.

SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in this most durable material. A large Stock kept of Mantel-pieces, Chimney-shafts, Quoins, Tombs, Fonts, &c. at the new premises, Whitehall Wharf, Cannon-row, Westminster.

HAYTOR GRANITE COMPANY.—Incorporated by Royal Charter.—London Agent, C. HOAR, 4, Millbank-row, Westminster.—This Granite was used exclusively in the Nelson Monument, Trafalgar-square; King William Monument, City; and extensively for the plinth and steps at the Royal Exchange, and terraces at the Crystal Palace, &c.

TO FURNACE, OVEN BUILDERS, AND OTHERS.

THE GODSTONE STONE COMPANY will supply the best description of FIRE STONE in large or small blocks, Oven Tiles, Backs of Grates, and all descriptions of furnace work, at prices about half those quoted for other goods of the same description offered to the public. The price of this Fire Stone is erroneously stated in Builders' Price Books for 1855, at 5s. per foot cube; whereas any quantity can be supplied at the Bricklayer's Arms Station, at 1s. 9d.—Apply at the Offices of the Company, 31, New Bridge-street, Blackfriars.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

Mast of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late LUARD, BEEDHAM, and CO.) Caen Wharf, Rotherhithe, London, General Stone Merchants and Quarrymen, continue to deliver from their Wharf and Steam Mills CAEN STONE, AUBIGNY, PORTLAND, ANCASTER, GODSTONE IN BLOCKING, BLOCK, and RUBBLE STONE, BLOCK and BURR HEARTH STONE, also RUBBLE BUILDING STONE, direct from the Caen and Aubigny quarries, at very moderate charges, to compete with the price of Brickwork.—For information, direct to Caen Wharf, Rotherhithe; or to Albemarle-chambers, London-bridge, Borough.

CAEN and AUBIGNY STONE.—J. P. FOUCARD, Stone Merchant and Quarryman. Cargoes expected to order from Caen to any port. Contracts taken for quantities. Depôts: Granite Wharf, East Greenwich; Lett's Waterloo-bridge. Offices: 246, High-street, Southwark, near the Borough.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Scotland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. COLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—J. S. J. PRATHAN, Liskeard
This Granite is selected for the New Westminster-bridge

TO BUILDERS and Others in Town or Country.—For PRICES of BANGOR SLATES, apply to SCOLES and WOOD, Market Wharf, Regent's park.

FREESTONE.—Architects and Others are reminded that they can obtain the CASTERTON FREESTONE, in Blocks of any portable size, at the Quarries, or at the Railway Stations of Stamford, Essendine, or Tallington, and which, from its price, and the facility with which it is wrought, offers immense advantage to the purchasers.—Apply to FRAS. and OCTS. N. SIMPSON, Stamford.

N.B. Specimens in plan blocks, and in elaborately carved Bosses, from Ely Cathedral, may be seen, and other particulars obtained, at the Offices of Messrs. PINDER, SIMPSON, and SONS, 23, Saville-row, Burlington-gardens, London.—May, 1855.

NORTH-WESTERN STONE DEPOT, Hampstead-road Bridge, Camden-town.—W. ASPINALL, begs to call the attention of Contractors, Builders, and Masons, to his Stock of Portland, Park Spring, Potternewton, Newton, Harehill, Bath, Caen, and other Block Stone; York Paving, Landings, Steps, Sinks, Sills, &c.; Park Spring, Robin Hood, Hare-hill Landings and Slabs. Also, Aberdeen, Guernsey, and Haytor Granite Curb and Pitching, all at the very lowest prices.

N.B. Estimates given for Masons' Work.

TO ARCHITECTS, BUILDERS, IRONMONGERS, &c.

ENAMELLED SLATE CHIMNEYS, of elegant designs and superior workmanship, in great variety, at prices from 21s. to 10 guineas. Slate Cisterns made to any size.—J. HOWELLS, Manufacturer, 5, Cook's-grounds, King's-road, Chelsea, Middlesex.

ENAMELLED SLATE. — REDUCTION IN PRICE.—Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in price in the shape of a large and increased discount to the TRADE. His best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work.—PIMLICO SLATE WORKS, 39 and 40, Upper Belgrave place, Pimlico.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Maltins Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

BOW-BRIDGE SLATE WORKS, Stratford, near London.—A. A. ROBINSON begs to inform Architects, Contractors, Builders, and others, that his PRICE LISTS for SLATES and SLAB WORK for 1855 are NOW READY, and can be had on application, inclosing a postage-stamp.
N.B. A liberal discount to the trade.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the ascension and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 50, 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, Whitehall Wharf, Cannon-row, Westminster.

IMPROVED WINDOW BLINDS.—SAXBY'S PATENT ECCENTRIC CLEAT, manufactured solely by THOMAS PEMBERTON and SONS, and may be had of all ironmongers. It is the only perfect method yet introduced of suiting a Venetian blind, on releasing the cord, and avoiding winding on hooks. For calico blinds its action is perfectly noiseless, as it works on centre pins, and the blind is raised and lowered by a single line without a centre cord.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

GUTTA PERCHA TUBING.—May be buried for years, without injury, and it is therefore valuable for conveying water, chemicals, &c. It is peculiarly valuable for liquid manure, drain, and soil pipes. Being a non-conductor, it is not affected by the frost of winter or drought of summer, like metal or leaden pipes. Its strength is extraordinary; the small half-inch diameter tubing having resisted a pressure of 250 lbs. on the square inch, without bursting. The smaller sizes may be had in 100 feet. lengths, and larger in 50 feet lengths. The joints are easily made. As a conductor of sound it is most valuable for conveying messages in lieu of bells. ELECTRIC TELEGRAPH WIRES INSULATED WITH GUTTA PERCHA. The GUTTA PERCHA COMPANY, Patentees, 18, Wharf-road, City-road, London.

TO WATER AND DOCK COMPANIES, CONTRACTORS, &c.

PARSEY'S PATENT REVOLVING PUMP will throw as much water with one third the labour as any other pump. One of these pumps at work at No. 70, Strand.

To LOCAL BOARDS of HEALTH and GAS and WATER COMPANIES. — FREEMAN ROE'S PATENT SLUICE VALVES, acknowledged to be the best in use; hydrants or fire-plugs; wells sunk and bored; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all works connected with hydraulics or gas. Pumps let on hire.
W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.

ORGAN for CHURCH, CHAPEL, CONCERT, or PRIVATE ROOM; built by Bates. On great organ, CCC to G G G, 7 open stopped, flute, principal (with fifteenth) Cremona, sequialtra, cornet; on swell (separate row of keys), fiddle G to F, dulciana stopped, principal and hautboy coupler, three composition pedals, octave of German pedals C C C to G G G. It is very fine Spanish mahogany case, gilt front pipes; 10 feet 7 inches high, 3 feet 6 inches deep, 6 feet front; the property of a gentleman. Cost 250 guineas. Price, 120 guineas. Any clergyman or gentleman wanting such an instrument in the best possible condition, should see it.—Apply, if by letter, post-paid, to J. R. at Mr. Griffin's, Stationer, 6, Crawford-street, Bryanston-square.

DAYLIGHT REFLECTORS. — GREAT NOVELTIES.—The Profession is hereby informed that Messrs. CAPPE and CO. of 45, Skinner-street, Snowhill, London, are in possession of the FIRST PATENT ever granted for DAYLIGHT REFLECTORS. To this they have added two subsequent Patents of their own, embracing all the recent improvements down to the latest date. Messrs. CAPPE and CO. forward estimates, plans, &c. as usual, free of charge. The profession is warned that these are the only Reflectors which can with safety be recommended for adoption, as they never tarnish or become discoloured. The usual liberal allowance to architects, builders, decorators, &c.

FREEHOLD BUILDING LAND TO LET, abutting on the Barking station of the Tilbury line, twenty minutes from Fenchurch-street, where moderate-sized houses are greatly in demand, and a first-class public-house urgently wanted for the accommodation of the station and neighbourhood.—Apply to H. WILLIAMS, Esq. Arch tect, 54, Great Ormond-street, Queen-square.

VALUABLE FREEHOLD BUILDING LAND in the best part of Dulwich, with every local advantage within five minutes' walk of the railway station. Roads and sewers made, and water and gas laid on. Two lines of omnibuses within three minutes' walk. Bricks, &c. will be advanced if required.—Apply to Messrs. HABERSHON, Architects, 38, Bloomsbury square.

BUILDING LAND TO BE LET for 300 Years.—Lease Sites for Villas, commanding views of great extent and beauty, within a hundred yards of the Carshalton Station of the Epsom Railway. Trains to and from London in half an hour.—Apply to Mr. FOWLER, Architect, 4, Garden-court, Temple.

HIGHBURY NEW PARK.—FREEHOLD BUILDING GROUND TO BE LET, in this desirable locality, commanding extensive views. To gentlemen desirous of selecting a site for the erection of villa residences, this affords an excellent opportunity. Money advanced to responsible persons, if required. For particulars apply to Mr. C. HAMBRIDGE, Architect, 73, Coleman-street, City.

TO BUILDERS AND OTHERS.

BUILDING FRONTAGES TO BE LET, for detached or semi-detached VILLAS, in BLESSINGTON-ROAD, Belmont, Lee, Kent, close by the church. This is the most attractive, picturesque, and respectable locality on any side of London, from which it is only distant one quarter of an hour by railway, and five minutes' walk from the Blackheath Station of the North Kent Railway. Accommodation will be afforded to respectable men.—For particulars, apply to Messrs. J. and C. W. TODD, Milner-street, Brompton; or at their Office in Church-lane, Lee; or to Messrs. NELSON and INNES, 6, Whitehall; or to Mr. TYERMAN, Wellington-chambers, Strand.

CAMDEN TOWN CEMETERY BUILDING ESTATE.—TO BE LET on Building Leases for ninety-nine years, very eligible SITES upon the above estate, having good frontages into Camden street, Pratt-street, and Haybarn-street. There is a great demand for houses and shops of the third rate in this locality, which is enhanced by its near proximity to the North-Western and North London railway stations, and the Hampstead-road.—Plans may be seen, and particulars obtained by application to H. E. KENDALL, Esq. Architect, 17, Suffolk-street, Pall-mall East; or to JOHN DANGERFIELD, Esq. Solicitor, 26, Craven-street, Charing-cross.

LEE, near LEWISHAM.—TO BE LET, on Lease for Eighty Years, a valuable PLOT of BUILDING LAND, with a frontage of 163 feet to Belmont-hill; a dry gravelly situation near to Lee Church, Blackheath, and within a few minutes' walk of the railway stations. Apply to Mr. W. MOXON, Land Agent and Surveyor, West Strand, Charing-cross.

TO BE LET, or the LEASE TO BE SOLD, of an ENGINEER'S SHOP, conveniently situated near Oxford-street, and well suited for any Mechanical Trade. The Fixtures, and a portion of the Tools, may be had if required, at a moderate rate.—Apply at 20, Marlborough-Mews.

AUGUSTUS SMITH, Auctioneer to Engineers, Machinists, and the Metal Trades, 255, Blackfriars-road, near the bridge, respectfully invites all persons having Premises, Machinery, Foundries, Plant, or Consigned Business to dispose of, to forward the particulars thereof for insertion in his REGISTRY-BOOK, for which NO CHARGE will be made unless sales be effected.

TO ENGINEERS, MACHINISTS, and OTHERS.—A first-rate PREMISES in the above line, on the Surrey side, TO LET, fitted up with an excellent 3-horse engine boiler, 3 furnaces and fans, screw-cutting and other lathes, benches, anvils, blocks, tools, &c. The foregoing spacious premises are in full work, and will be supplied, and may be had on advantageous terms.—Apply to AUGUSTUS SMITH, Auctioneer to Engineers, Machinists, and the Metal Trades, 255, Blackfriars-road, near the bridge.

KENSINGTON GORE.—Valuable SITES for first-class MANSIONS, in the new (Prince Albert's) road, Kensington Gore; with frontages to the Park like property purchased by the Royal Commissioners for the Exhibition of 1851, and for institutional requirements with science and art, may be obtained upon 99 years' lease, by application at Mr. W. JACKSON'S Office, 10, Kensington Gore.

MAITLAND-PARK, HAVERSTOCK-HILL, Hamp-stead-road.—LAND TAX REDEEMED.—TO BE LET, upon Building Leases, for ninety-nine years, desirable BUILDING SITES upon the above Estate. The continued demand for houses in this locality, and the picturesque position of the property adjoining the grounds of the Orphan Working School, render this a desirable opportunity for builders or gentlemen wishing to erect villas for themselves. For terms and to view plans, apply to the Secretary of the Orphan Working School, 39, Ludgate-hill; Messrs. TEBBELL and CHAMBERLAIN, 30, Basinghall-street; the Architects, Messrs. WEBSTER and ASHDOWN, 42, Charing-cross; or at the Porter's Lodge, on the Premises.

FREEHOLD BUILDING GROUND, Old Ford, TO BE LET, with liberal advances, in this rapidly-improving locality. Houses let and sell as soon as finished.—For further particulars apply to Mr. GEO. CLARKSON, Surveyor, 43, Penton-street, Pentonville.

REPAIRING LEASES.—TO BE LET, for Thirty years, from Midsummer next, Nos. 8 and 10, FEATHERSTONE-BUILDINGS, Holborn, and Nos. 11, 12, 13, and 14, GREEN-STREET, Theobald's-road.—For further particulars, apply to Mr. LAVENDER, Surveyor to the Bedford Charity Estates, No. 29, Bedford-row, Gray's-inn.

TO BE LET, on a building lease, an eligible PLOT of GROUND, situate in the HIGH-STREET, CAMBERWELL, having two frontages (making together about 468 feet in length), and a large quantity of valuable MATERIALS, comprised in an old family house and others, boundary wall, &c., standing thereon. Apply to WILLIAM C. REED, Architect, 91, Old Broad-street, City, where a plan of the estate can be seen, and an order to view obtained.

CHELSEA.—TO BE LET, at 100l. rent, reducible to 50l. by paying 250l. for a lease of eleven years, with prolongation for building, an ACRE of GROUND, on gravelly soil, with very large house for family residence, school, or business purposes, near the Pier. Apply at 8, Upper Cheyne-row.

BIRKBECK FREEHOLD LAND SOCIETY.—Lower Norwood Estate, near Tulse-hill.—Persons desirous of TENDERING for the FORMATION of the ROADS, &c. on this estate, can see the plans, sections, and specifications at the Offices of Messrs. BROOKS and Co. Surveyors, 2, Piccadilly, on and after WEDNESDAY, 6th inst. The Tenders must be sent in by THURSDAY, 21st inst. addressed as under: "Tender for Norwood Roads, Mr. FRANCIS RAVENSCROFT, Birkbeck Freehold Land Society, London Mechanics' Institution, Southampton-buildings, Holborn."

PAPIER MACHE AND CARTON PIERRE ENRICHMENTS MANUFACTORY,

49 & 50, RATHBONE-PLACE.

GEORGE JACKSON AND SONS

Beg the attention of Architects, Builders, Decorators, and others, to their large assortment of ENRICHMENTS in every style, executed in the highest class of art. Enrichments for ceilings of every period, classic or simple, Gothic, Elizabethan, pedestative or flat, Louis XIV in much variety, and to any degree of cost; Italian and Greek, Renaissance, and many modified characters, executed for the first houses, and from designs of architects of the highest eminence; wall dressings, rich panels of every period, rich Elizabethan and Gothic Dados, in many designs. Door-cases, mouldings, and dressings.

A large assortment of Gothic Bosses to many varied intersections of all sizes, tracery and panel headings for church works, organ dressings, of most periods, and faithfully executed to the traits of each. The general decorations of Drawing and Dining Rooms, Libraries, &c. of very considerable extent, as furniture, glass frames, tables, window cornices, screens, cassiellars, and the whole range of accompaniments to reception-rooms of the first class, as well as more subdued.

The facilities and repeated enlargement of means enable GEORGE JACKSON and SONS to announce the execution of works of the above descriptions in these advantageous materials at a cost considerably below any known method, while for quality, relief, and finish, they flatter themselves they stand unrivalled.

DESIGNS MADE FOR ANY WORKS.

PAPIER MACHE AND CARTON PIERRE WORKS, 49 & 50, RATHBONE-PLACE, LONDON.

WATERLOW and SONS, MANUFACTURING AND EXPORT STATIONERS,

65 to 68, LONDON-WALL, AND 49, PARLIAMENT-STREET, LONDON.

MILL AGENTS FOR WHATMAN'S DRAWING PAPERS.

OFFICES, suitable for Architects or Others, TO BE LET, at the recently-erected Building, CHANDOS-CHAMBERS, corner of Duke-street and Buckingham street, Adelphi.—To view, apply to the HOUSEKEEPER, on the Premises; to treat, to Mr. ROBERT GRAY, Estate Agent, 30, Southampton-street, Strand.

GUILDHALL, London, 24th May, 1853.

BUILDING LEASES, NEWGATE-STREET.—The Committee for letting the Bridge-House Estates, will meet at Guildhall, on FRIDAY, the 22nd day of JUNE next, at TWELVE o'clock precisely, to receive TENDERS for BUILDING LEASES of THREE PLOTS of GROUND, on the north side of Newgate-street, in the City of London, adjoining Christ Church-passage.—A plan of the ground and conditions for letting may be seen at the Architect's Office, Guildhall.

FERDINAND BRANDT, Comptroller.

TO BE SOLD, within a few minutes' walk of the Kilburn Station, on the North-western Railway, and immediately adjacent to the intended line of the Hampstead Junction Railway, about EIGHT ACRES of COPYHOLD LAND, having a frontage next West-end-lane of more than 300 feet. The estate, which is beautifully situated, is at present let on a yearly tenant, and immediate possession may be had. The soil is capable of being made into bricks, and a specimen of the earth may be seen at the Office of Mr. BOWNALL, 97, Bloomsbury-square, where lithographed plans and further particulars may be obtained; or of R. B. ARMSTRONG, Esq. 6, Staple-inn.

TO ENGINEERS and OTHERS.—TO BE SOLD by PRIVATE CONTRACT, the valuable BUSINESS PREMISES, held under lease for 99 years, from the 24th of June, 1851, and the GOODWILL of the BUSINESS carried on at, and known as the West London Ironworks, Latimer-road, Notting hill, on the side of the West London Railway, now in operation, and which connects the Great Western and London and North Western railways. The works consist of offices, storehouses, fitting and tool shops, with good assortment of tools erecting shop and sheds, smiths' shop, pattern-makers' shop, and pattern loft, engine and boilers, stable for two horses, large yard, with five-ton crane, the whole in good condition and repair There is a good connection to the business, and there is a foundry next door.—Further particulars may be obtained of, and Tenders made to, Messrs. TREHERN and WHITE, Solicitors, 13, Barge-yard Chambers, Bucklersbury, London, who will also give an order to view the premises if required.

TO ARCHITECTS AND SURVEYORS.

TO BE DISPOSED OF, upon moderate terms, a small but increasing PRACTICE, in a rising and beautiful watering-place.—For particulars, address, S. S. 9, Studley-terrace, Larkhall-lane, Stockwell, Surrey.

KENTISH-TOWN.—TO BE SOLD, several well-built six-roomed CARCASES, with garden-ground, in a first-rate situation, and in great demand.—For particulars apply to S. TAYLOR, Plumber, &c. 2, Albany-place, Kentish-town-road.

ST. MARGARET'S MANSION, on the Banks of the Thames, near Richmond.—Persons desirous of VIEWING this magnificent MANSION, prior to its sale at the City Auction Mart, on the 28th of June, by direction of the Executive Committee of the Conservative Land Society, are requested to apply to the Clerks in the Society's Offices, No. 34, Norfolk street, Strand; or to Messrs. Chinnock and Galsworthy, the Auctioneers, 23, Regent-street, Waterloo-place. The Mansion and Grounds may be seen between the hours of TWELVE and FIVE o'clock daily, and may be reached by three stations on the South-Western Railroad, namely, Richmond, Isleworth, and Twickenham; by the Richmond steamers; and by omnibus.

PREMISES.—WANTED, good BUSINESS PREMISES, suitable for a manufactory. They must have good space of ground, to erect machinery, light and airy, or a PLOT of GROUND, where such could be erected.—Address, with full particulars, to Messrs. HARRISON and SCARBOROUGH, 6, Bloomsbury-square.

PLUMBER'S, PAINTER'S and GLAZIER'S BUSINESS TO BE DISPOSED OF, doing a good and increasing business; also the furniture of one room; in consequence of the proprietor going abroad.—Apply by letter to Mr. PURSEY, 9, Dorset-street, Manchester-square.

TO IRONMONGERS and OTHERS.—TO BE DISPOSED OF, instantly, the STOCK in TRADE and BUSINESS of a FURNISHING IRONMONGER, situate in the principal street of Warrington, Lancashire. The whole of the stock has been recently purchased, and is worth from 700l. to 900l. and is to be immediately sold owing to the serious illness of the proprietor.—For particulars apply to Messrs. MACKENZIE, BARBER, and CO. Birmingham; or on the Premises, to Mr. H. B. HEATH, No. 61, Bridge-street, Warrington.

TO CARPENTERS, JOINERS, UNDERTAKERS, AND OTHERS.

MR. MORLEY is instructed to SELL an old-established, ready money JOBBING BUSINESS in the above line, which has been successfully carried on for many years by the present occupier. The connection is respectable and can be ensured. The premises comprise a roomy residence, with two good workshops, yard, stable, side entrance, &c.; situate on the borders of town, in a very healthy locality. Rent, 28l. Premium, 100l. Fixtures &c at valuation, not exceeding 50l. Apply to Mr. MORLEY, 1, Sidmouth-street, Gray's-inn-road, London.

TO BUILDERS, CARPENTERS, and OTHERS.—TO BE DISPOSED OF, an old-established BUSINESS in the suburbs. A man of business may realize a handsome income with ease. Premium, 100l.—Particulars of Mr. BAKER, 11, Kennington-cross, Surrey.

TO CEMENT MANUFACTURERS and OTHERS.—FOR SALE, in consequence of the death of the proprietor, a FREEHOLD CEMENT and PLASTER MANUFACTORY, situated in one of the largest seaport towns on the southern coast. It comprises, besides the usual plant, a whiting mill, kilns, steam-engine, saw-pit, &c. and three dwelling-houses, the whole in excellent repair and working order. No one need apply who cannot command 2,500l.—Address to Mr. HUTTON, 2, Arundel-street, London; Hants; or to Mr. SWEET, 5, Clyde-hill road, North Brixton, Surrey.

LAMBETH and PROVINCIAL FREEHOLD LAND SOCIETY.

Enrolled as the "Borough of Lambeth Benefit Building Society."

PRESIDENT.

The Hon. John Locke King, M.P.

TRUSTEES.

George Singer, Esq. James Innes, Esq. S. Etches, Esq.

Offices 211, High-street, Borough.

Open from Ten A.M. till Seven P.M.

SECRETARY.

Entrance fee, 1s. Payments, 4s. monthly.

Allotments distributed by rotation, ball 5, and to completed Shares in the order of their completion.

No Fines on unadvanced Shares. No back payments.

This Society within four years has divided five estates, satisfying 1,814 shares out of 3,756. The value, as divided amongst members, being 67,797l.

A Bonus of 8 per cent. in addition to 5 per cent. interest, in all 13 per cent. was declared up on all unadvanced Shares at the annual meeting of 30th January last.

WM. BANKS, Secretary.

211, High-street, March 1, 1853.

FOR SALE, a new INVENTION to RAISE, by a caloric process, WATER to the height of 25 to 30 feet above the level, by which system warm or cold water may be obtained in any quantity, according to the power of the apparatus. The invention is particularly applicable to places where waterworks are not established.—Apply by letter, to P. C. care of Baily, Brothers, 3, Royal Exchange-buildings, London.

SMOKE CONSUMED,

AS REQUIRED BY ACT OF PARLIAMENT.

A COMPLETE, SIMPLE, and EFFECTIVE SMOKE CONSUMER,

At a small expense, which has undergone a close examination, on several occasions, by the GOVERNMENT SMOKE INSPECTORS, who have passed the same as being effective.

Reference to persons who have been in constant operation are as follows:—

Easton and Amos, Engineers, Grove, Southwark—applied to six boilers.
Farman and Co. Dyers, Old Ford applied to six boilers and pans.
Erith and Son, Dyers, 89, Goswell-street.
Truman, Hanbury, and Co. Brick-lane.
Pontifex and Wood, Millwall.
Scott, Russell, and Co. Millwall.
London Dock Company.
Beckh and Co. Bricklayers' Arms.
Dyer, Miller, Battlesbridge.
Robson and Son, Liquorpond-street.
Elmslie and Co. Leather-lane.
Trouse, Leatherlane.
Yallop Grace, and Co.
John Cassel, 30, Fenchurch-street.
S. Courtauld and Co.
Quick and Norman, Brewers.
Mew and Co.
Edward Welch and Co.
Ryde Waterworks, Ipswich do., Brighton do. } By Easton and Amos.
East London Waterworks.
Thames Plate Glass Company, Blackwall.
Taylor, Walker, and Co. Brewers, Limehouse.
Parker, Southampton.

For further particulars, apply at the RECIPROCATING FIRE-BAR and SMOKE-CONSUMING FURNACE OFFICE and STORES, near the Post-office, Bow; or to JOHN CHANTER, Sole Licensee and Patentee, 2, Arnold-terrace, Bow-road, London.

Third Edition.

THE BUILDER'S FRIEND, Price One Shilling.

Office of "The Builder," and of all Booksellers.

THE FREEMASONS' MONTHLY MAGAZINE. Price 1s. A Specimen Number will be sent on receipt of six postage-stamps (the cost of postage). No. VI. for June, just published.

GEO. ROUTLEDGE and CO. Farringdon-street; and R. SPENCER, 314, High Holborn.

Now ready, Gratis, and Postage free,

A LIST of NEW and CHOICE BOOKS, recently added to MUDIE'S SELECT LIBRARY. Also, a LIST of SURPLUS COPIES of RECENT WORKS withdrawn from circulation, and offered at greatly reduced prices for cash.

CHARLES EDWARD MUDIE, 510, New Oxford-street, London, and 76, Cross-street, Manchester.

Just Published, fcap. 8vo. price 1s. 6d. by post 2s.

A PLEA for PAINTED GLASS; being an Inquiry into its Nature, Character, and Objects, and its Claims as an Art.

By FRANCIS W. OLIPHANT.

Oxford: JOHN HENRY PARKER, and 377, Strand, London.

Just published, in 18mo, price 5s. cloth,

THE SINGING-BOOK; or, the Art of singing at Sight taught in Progressive Exercises.

By JAMES TURLE, Organist of Westminster Abbey; and EDWARD TAYLOR, Gresham Professor of Music.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

In 4to with numerous Plates and Woodcuts, price 38s.

A TREATISE on the SCREW PROPELLER: with various Suggestions of Improvement.

By JOHN BOURNE, C.E.

A New Edition, thoroughly revised.

Edited by Mr. BOURNE. 4to. Plates, &c. price 27s.

THE ARTISAN CLUB'S TREATISE on the STEAM ENGINE.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

WILLIAM HOWITT'S NEW WORK ON AUSTRALIA.

Now ready, in 2 vols. post 8vo. price 21s. cloth,

LAND, LABOUR, and GOLD; or, Two Years in Victoria: with Visits to Sydney and Van Diemen's Land.

By WILLIAM HOWITT, Author of "Visits to Remarkable Places, &c."

London: LONGMAN, BROWN, GREEN, and LONGMANS.

PHOTOGRAPHIC WAREHOUSE.—A complete Apparatus for 3l. taking portraits 4½ inches and under, including a double achromatic lense, beautifully mounted in brass, with rack and pinion (warranted to produce as perfect a picture, and to be as good as the most costly), and exchanged, if not found every way satisfactory); superior made Camera, with two dark slides and focussing glass, Tripod Stand, with brass top, scales and lenses, two Porcelain vases, bath and dipper, glass funnel and measure, book of instructions, and all the necessary chemicals, packed and sent to any part of the kingdom. Cheaper sets than the above can be had, but not recommended. Next size, 5l. 5s. including every article as above, but larger in proportion, taking portraits 6½ inches and under; next size, 11l. 11s. taking pictures 9 inches and under. Every Article in Photography cheaper than any wholesale house in London, at GILBERT FLEMING'S, 488, Oxford-street.

FIRST STEPS in PHOTOGRAPHY, by Gilbert Fleming, now ready, price 6d.; by post, 7d.

OPENING of the NEW CATTLE-MARKET, Copenhagen-fields.

JUNE 13th will be published, a BIRD'S-EYE VIEW, showing the whole of the Arrangements of the Market. Size of print, 40 by 27. Printed in colours, suitable for framing, price 10s. in the best style, by DAY and SON, Lithographers to the Queen, 17, Gate-street, Lincoln's-inn-fields.

ROYAL POLYTECHNIC INSTITUTION. The Lectures and Exhibitions, as delivered before her Most Gracious Majesty and his Royal Highness Prince Albert, the Patron of the Institution, will be continued. Last week but two of the First Part of the Optical Diorama of Sindbad the Sailor. Lecture on the Telephonic Concert, by invisible performers, by J. H. Pepper, esq. Monday Evening, Lecture by Dr. Trevethan Spicer, "On the Ante-Diluvian World." Mrs. Clara Balfour's Lecture on Thursday Evening, "Summer Hours with the Poets." The Diorama of "Sam Slick's Trip across the Atlantic," &c. &c.

INDIA-RUBBER SPRINGS for DOORS, and for WINDOW BLINDS.—H. E. HODGE'S PATENT INDIA-RUBBER ACCUMULATORS, each supplied with proper metal fittings, and printed directions for fixing.

Size A for Single Light doors ..... 1s. 0d. each.
" B for strong house-doors ..... 1s. 3d. "
For Window Blinds ..... 1s. 0d. "

They are easily fixed, work soft as air, and may be stretched to six times the length of the rubber, if required.

N.B. A liberal allowance to the Trade. Warehouse of the Patentee, 44, Southampton-row, Russell-square.

THE PERMANENT WAY COMPANY, 26, Great George-street, Westminster, holding a large number of patents relating to the construction and reparation of the permanent way of railways, are at all times ready to communicate on the subject, and to grant licenses for their use. From the facilities thus afforded to companies to negotiate for a number of inventions, much trouble and chance of litigation is avoided. The Company undertake arrangements for bring new inventions on the subject before the public, upon terms advantageous to the proprietors of patents.—Applications may be made to CHARLES MAY, F.R.S. the Manager; or to WILLIAM HOWDEN, Secretary.

MONEY.—TO BUILDERS and OTHERS requiring money on security.—3,000l. ready to be immediately advanced in various sums of not less than 50l. by way of mortgage or annuity, on every description of finished leasehold, freehold, and copyhold property. Also on life and reversionary interests, derivably by will.—Apply to Mr. DIGGS, 9, Adam-street, Adelphi.

The Builder.

SATURDAY, JUNE 9, 1855.

THE return to the Universal Exhibition at Paris. The area of the great nave being 100,000 feet, and the whole area of the main building but little exceeding 300,000 feet, it is obvious, that the difficulties of their position drove the authorities into an arrangement of glass-cases and counters, which greatly encroaches upon the amount of space covered by the noble central roof. That they were bound to sacrifice artistic effect to the demands made upon them for exhibiting area, is unquestionable, and the intrusion, into what would otherwise have been a magnificent apartment of about 160 feet by 600 feet, of a 50-feet depth of counters and stalls all round it, is therefore to be overlooked; but, for the overpowering height and bulk of those stalls which project farthest into the main area, we can find no possible excuse. It is, indeed, to be doubly regretted that the regulations of the Imperial Commission, through its officers, should have imposed as an absolute condition upon the occupants of these prominent situations, that their glass-cases should rise to their present unnecessary height; since not only did it entail very serious additional expense upon such exhibitors, for no end really useful to them, but it blocked up and lessened the apparent dimensions of the building to a most serious extent. The really judicious policy would have been to have kept the most prominent objects low, and to have risen gradually to the greatest height (which should have been limited except in a few cases to 15 feet) on a face with the gallery frontage. In that way the same amount of space might have been utilized, and those obstructions avoided which on the day of opening deprived a large proportion of the visitors of any possibility of enjoying what should have been a great national spectacle, but what really degenerated into a fête enjoyed only by a comparatively limited number of invited guests.

A rough approximate idea may be formed of the way in which the space has been divided and allotted by assuming that the building is separated by its longitudinal axis into two halves, of which one has been given to foreign countries and the other retained for France itself. Supposing the foreign half to be equally divided by the transverse axis, one portion is occupied by Great Britain and its colonies, and the remainder is subdivided among the other contributing countries,—the relative order of importance of whose displays stands about as follows;—the Zollverein, including Prussia, Bavaria, Saxony, Wurtemburg, Hanover, &c. first; Belgium, second; Austria, third; Spain and Portugal, fourth; Tuscany, fifth; and several others, including China, America, Turkey, Sweden and Norway, &c. at present nowhere.

The visitor, entering by the great central doorway from the Champs Elysées, finds himself at once among the French goods. Advancing into the nave he will see, directly opposite him, the efforts America will doubtless make to vindicate her manufacturing and commercial reputation, which, large assumption, and comparatively small performance, in 1851, and the unsatisfactory results of her own Industrial Exhibition, have combined to tarnish in the eyes of at least the superficial observers of Europe. We regret to be obliged to use the future tense advisedly; nor are we likely to be among those by whom this regret must be most poignantly felt, for the protracted nonentity of America in this great gathering of the nations cannot but be mortifying to the multitude of her intelligent citizens, who now absolutely throng the great highways of the Old World. On the left of America, stretch away to the end of the building the British possessions, with India itself in the far east. On the ground-floor of that side of the building, England allies itself with France, while, in the gallery, India fraternises with Turkey, which, in its turn, stands near, and yet aloof from Tuscany. America has, as neighbours on her right, Belgium, Austria, and the Zollverein, which completely fill up the remainder of the southern half of the building as far as the western wall. On that side, Spain and Portugal, and some other countries, the geographical features of which are as yet scarcely defined, occupy corresponding positions to those held by Turkey and Tuscany at the eastern end of the structure.

Of the staircase Pavilions, of which there are one at each of the four angles of the building and one in the centre of each of its too long sides, that is to say, six in all—one is appropriated to English stained glass, and a selection of colonial produce; one to artistic objects, principally Prussian; and the remainder almost entirely to French stained glass, of which there is a goodly show. Each country is allowed an amount of frontage to the central area, and of space in it for the exhibition of isolated objects, proportionate to the number of its exhibitors and the total space granted to it. At the date of the opening, the central hall was by no means unpleasantly filled, and low and high objects were so happily placed, as rather to assist than interfere with the effect of one another. Since then the tendency has of course been to rather agglomerate; but it is earnestly to be hoped that a judicious rigour will be enforced, and that no more will be admitted than can be efficiently and agreeably displayed.

Whilst upon this subject, we cannot but remark the gross injustice which is now being shown to those who have really made sacrifices to comply with the regulations of the commissioners as to time. At the present moment numerous houses of great commercial importance are holding back their goods, obtaining thereby an opportunity of modifying the character of their exhibition, so as to more successfully compete with and overpower their more punctual and straightforward rivals. Why, for instance, should the Imperial Manufactory of Sèvres be allowed some five or six weeks longer than Mr. Minton, to prepare its goods for exhibition. If the international jury only does its duty, one of its first acts should be to exclude from competition all objects not publicly exhibited within some very limited period after the date fixed for the opening of the Exhibition. It is in the department of machinery that the lax administration of definite rules will give rise to the most serious difficulties, and the position of those is by no means to be envied who, sensitively anxious to do strict justice to each, will have to listen to the complaints of A, who will declare that B was allowed two months more time to complete and finish off his machinery than he was;—of C, who will urge that his original idea was uncovered six weeks before D's, and has been pirated in the interval by the latter;—of B, who will declare that A is taking advantage of his having been first, to endeavour to make out that his clumsy work is as good and as worthy of reward as B's beautifully-finished engine;—of D, who will declare that his application of power, or mechanical combination, is just as original as C's, and even more perfect, and so on, *ad infinitum*. No one who ever took an interest in an honourable race will deny "that with a false start no running can be fair." It is only by a determined adherence to just conditions that the juries can hope to escape a very painful series of recriminations.

It is a relief to turn from this subject, pregnant with apprehensions for the future, to the very delightful present furnished us by the beauties of much that is exhibited by our distinguished allies, for whose land art as well as nature may have fairly earned the title of "*La belle.*" As yet it is true her strength is not fully put out: we miss her Lyons, Sèvres, Gobelins, Aubusson, Beauvais, and other great manufacturing establishments: still, much of what we have is eminently distinguished by the same good qualities which have won for her artist-workmen their world-wide reputation. Conspicuous in the great nave are the bronzes of Collas and Barbedienne, the furniture of Tahan, the Carton pierre of the Maison Hubert; the laces, "Point d'Alençon" and "Chantilly" of the *fournisseurs de l'impératrice*; the military trophy of the national ordnance departments, bristling with mischief; glass rivalling Osler's, and china not quite equal to Copeland's, Minton's, and Daniell's. Among the isolated objects in the nave are several illustrating the progress which has been made lately in France in elaborate revivals of the technical arts of the Middle Ages. The most important is a gilt altar designed by M. Viollet le Duc, and executed by M. Ponssielgue-Rusand, of Paris. The reputation possessed by both has been well maintained, but will not be materially advanced by this work, which, though wrought out with extreme care, and enriched with enamels of perfect execution, yet lacks spirit and that crispness of handling which characterises ancient work. It is to be regretted that Messrs. Hardman have not yet attempted a work in metal of an equally ambitious character: it would have been interesting to have had an opportunity of comparing their work with that of M. Rusand. In all small objects Messrs. Hardman have always hitherto had the best of it; and we cannot but fancy that they would do so also in such a specimen as M. Viollet le Duc's altar. Of stone and wood carving as applicable to church fittings, there are several samples, but most of them show that the French artists in relinquishing the antique have lost much of their strength, and that they have substituted for it rather the caricature than the grace of nature, as seen through mediæval spectacles. In point of bulk the great lighthouse, one of the central objects in the nave, attracts most attention. Its glass and apparatus are said by those learned in such matters to be first-rate; but what most attracts the artist's eye are the paintings by Gerome, of French maritime towns, which surround the pedestal upon which the "pharos" has been erected. They are agreeable and dignified, and in their subdued and bas-relief treatment of shadow and colour, show how well the French apprehend the true conditions of mural painting, as no doubt adopted by the Greeks. Among the other leading French objects in the nave are some pretty fountains in cast-iron; and two which are amenable to criticism as tainted by two rather prevalent distempers in Gallic art. In M. Ferrat's Falling Angel we have an instance of the graspings after extravagance in pose, by which too many modern artists endeavour to make their laboured academic treatment of the figure appear bold and original. In this instance the spectator has to judge of the angel upside down, and the desire naturally felt to turn it up the other way is so strong, that it is really exceedingly difficult to fix the attention upon the merits of modelling which the figure certainly possesses. In M. Cain's Eagle and Vulture destroying a Crocodile, we have one of those painful subjects in which agony and savage nature are all the stimulants offered to the imagination. Whether in their literary, pictorial, or plastic productions, our brilliant friends have often a little too much relish for this very strong excitement. True tragedy may justifiably give you the distant groan of the sacrifice,

but it is careful to keep the garbage off the stage.

When we turn from the outside of the French space to its inside, we feel how sadly behind-hand matters really were at the date of the opening, since, although considerable exertions have been made to whip in the exhibitors, but few parts can be said to wear an aspect even approaching completion. The most advanced and satisfactory are the fine art publication courts, which contain beautiful specimens of photography, engraving, chromolithography, &c.: in the first and last, Bissou and Lemercier may be expected to shine conspicuous over their fellows. One of the most important exhibitions, as affecting architecture, is that of terra cotta. A large Byzantine doorway, with complicated details thoroughly worked out, and a window and cornice burnt with almost every line in it as true as if it had been wrought in stone, attest the capabilities of the material in skilful hands.

The British display is eminently satisfactory, its lions being India, Minton, Australia, and Hunt and Roskell. Over the first Dr. Royle presides as representing the East-India Company, who have done themselves great credit by the way in which they have caused the continent over which they rule to be represented. The architectural and artistic arrangements were entrusted by the Company to Mr. Digby Wyatt, who, although very late in the field, so put his shoulder to the same wheel with Dr. Royle that, on the day of opening, the East-Indian Court was generally pronounced by the press to be the success of the day. In his arrangement advantage was taken of four considerable openings in the floor, so as to obtain the effect of a large open area; and in that way was gained for India an appearance of spaciousness no other portion of the Exhibition is calculated to present. The centre feature is a gorgeous tent made up with Indian fabrics, and arranged with the most costly furniture, as for a Durbar, or native reception of foreigners of distinction. Around the tent, and at some distance from it, a complete bazaar in the Hindoo style has been erected, and the goods are displayed in their respective shops, so as to give, as far as possible, a real Oriental aspect to the scene. Gay cases for the brilliant fabrics and jewellery complete the picture, and the style of the whole has come upon the Parisians as an entire novelty. To point out the lessons in industrial design which are to be picked up from the objects exhibited were to open on an almost endless theme: it may suffice to call the student's especial attention to the subject.

Mr. Minton sustains his well-earned reputation for the highest class of table and ornamental china, as well as for every variety of encaustic and tesselated paving: it is, however, in Majolica, and Luca della Robbia ware, that his great stride has been made. The goods he exhibits of these classes are both admirably designed and executed, and are especially suggestive to the architect who would endeavour to enrich his art by the introduction of elegant and legitimate novelty.

Australia shows her monster nuggets, which seem continual loadstones to the "*flaneurs*" of the palace, in the British Pavilion at the head of the stairs. The windows in this gallery are filled with very clever windows by Hardman; some exceedingly well but a little over painted, by Ballantine; and some which are not quite what might have been expected from so important a firm as that of Chance, Brothers, of Birmingham. On the whole, the English stained glass furnishes but an inadequate idea of our national powers in this department. This deficiency is by no means to be attributed to any apathy on the part of the officers of the Board of Trade, as we have reason to know that considerable exertions were made to obtain a more fitting display. Restrictive, and, indeed, prohibitory duties no doubt damped the energies of many whose hands are happily now so full of work as really to be indifferent to a further extension of business.

Messrs. Hunt and Roskell are only one out of many exhibitors of metal-work who have done themselves great credit. Messrs. Elkington's, Garrard's, and Hancock's cases all show excellent manufacture, and often excellent design as well. Vechte, of course, stands out from all others, and his wonderful beauty and dexterity enrich Messrs. Hunt and Roskell's display, so as to make it constantly thronged.

We have singled out some few salient points from the British Exhibition, and could dwell on many more did our limits permit it. Necessity, however, bids us generalize, and restrict ourselves to complimenting London, Glasgow, Manchester, Birmingham, Sheffield, the Potteries, Bradford, and, indeed, most of the great manufacturing centres of the country, upon the zeal and ability with which they have caused their respective localities to be represented.

The Zollverein shines much as it did in Hyde-park. A marked improvement has, however, taken place in the Prussian terra-cotta work. The large fountain in the nave in this material is an exceedingly graceful affair. Architects will also be interested in the Cologne stone carving, which includes a Brobdignagian finial from the Cathedral.

Belgium maintains its old superiority in wood carving, lace, and embroidery: the position it has more lately acquired as a great carriage-building, and typographic, country is also worthily vindicated. D'Hoy, of Ghent, shows by his excellent photographs, that her citizens are keenly alive to the progress of the application of science to art, and by and by we may expect great things from her display of arms and machinery.

Austria does not appear to have changed much since 1851. Most of her ornament is in the florid style of her furniture, and her manufactured goods, such as textile fabrics, are for the most part neither as good as the English, nor as tasteful as the French. The exclusion of regular sculpture from this building isolates her from the Milanese school, and materially diminishes the attraction of her present display as compared with that of 1851. Her strong point appears to be her Bohemian glass, of which Count Harrach makes an abundant show.

Tuscany is rich in straw bonnets, and *pietra dura* tables: her exhibition this time is rather commercial and industrial than redolent of the fine arts.

To allude to any of the other countries of the world in their present inchoate state, would be to be little less unjust to them than they have been by their tardiness to themselves. Enough is, however, "looming in the future," to make us feel confident that, at some later date, the "Universal Exhibition at Paris" will justify its title, and offer lessons of paramount importance at once to the philanthropist, the politician, the men of science and of commerce, the artist, and, last not least, the artizan.

OFFICIAL ARCHITECTURE.

THE just published number of the "Council of Education," contains in the report of the Rev. Mr. Kennedy, a suggestive commentary on the growing practice of superseding local knowledge, talent, and all individual responsibility by "*office plans.*"

It is high time that professional men, whether architects or engineers, should resist the encroachments of irresponsible "commissions," and "boards" issuing arbitrary regulations, founded on purely theoretical data.

Mr. Kennedy observes that, some time since, the plans of schools sent out of the Council-office were "very much too large: now they are in the other extreme too small,"—first vast halls, now hovels. Then it appears that the office of the Privy Council have taken up "some theory about the points for obtaining light in a school." The result is, that schools are frequently dark. "Local obstructions in towns will often render it necessary to get light from some point theory will condemn." "But even in an open country district, in the Isle of Man, a plan sent from the Council-office is ridiculously dark. I was compelled to make a new window, which I fear may theoretically be incorrect in every respect, but which, practically," (that means if the children are to see their letters), "cannot be dispensed with."

I must compliment the committee of the Privy Council for their candour in printing this sly hit at the stereotyped despotism of their architect, probably a *dilettante* amateur behind the scenes. There are official bodies who profess to treat matters of practical science, and take care to admit no evidence into their Blue Books that does not square with their fixed theories.

But Mr. Kennedy is a plain-speaking man, with some courage: he passes from windows to floors, and dares to question one of the theories of the Board of Health.

In Lancashire the country people wear wooden-soled clogs, and live in houses with stone floors: as a Lancashire clergyman neatly expresses it, "every child stands on a couple of little wooden floors of its own." Coals, it must be remembered, are cheap in that part of the world: fires are kept burning night and day; so stone floors are not so likely to be cold as they are in a southern county.

The Board of Health, which has theories about everything, has two which affect Lancashire—against wooden-clogs and stone floors. Of course, they have a large body of medical evidence to support their objections: that sort of evidence is not hard to find against many habits and customs incident to the life of those who live on weekly wages: we cannot all indulge in broughams and cork-soled boots. In order to put down Lancashire prejudices, the Board of Health have induced the Council Committee to issue an order withholding assistance from those Lancashire schools that have stone or tile floors until they are changed to wood.

As Lancashire is a county where large populations have gathered together round mining or manufacturing districts within the century, without the advantage of wealthy landowners to support schools for them; this peremptory order will close many schools now with difficulty supported by the exertions of a few zealous individuals—and that without putting down clogs—(it would be just as easy to put down tobacco-pipes, or cigars, or long speeches)—or encouraging wooden floors, because, "nice tiled floors are cheaper, neater, cleaner, and less noisy than wood in a clog-wearing district." The local architect or builder settles to have a tiled floor in his plan, because he has an eye to economy in construction, as well as to the ordinary feet coverings and deep muddy lanes of his county; but his plans are upset by a gentleman whose notions are founded on Paris boots, American over-shoes, and London pavement.

Mr. Kennedy says very decidedly,—"There is no prospect whatever of abolishing clogs in Lancashire. The people are very much annoyed at the order from your lordship to substitute wood for tile floors, which will be and are kept cleaner than wooden floors. The plan of dry-rubbing, suggested by the secretary of the Board of Health, for schools, is found useless and impracticable. It may suit the clean oak planks on the staircase of a private mansion, but is not precisely adapted to the deal floor of a Lancashire National School!"

And he quotes letters from the patrons of schools to the same effect, couched in very amusing terms.

We used to be considered an eminently practical people, able to learn by experience; but if the present retail meddling of boards, commissioners, and official *dilettante* officers is to spread, we shall end in being rocked and dandled, clothed, fed, lodged, apprenticed, and buried, under rules issued annually in a Blue Book, framed by gentlemen who learn the business they teach and regulate, "one lesson daily in advance." Boards, if not closely watched and early checked, fall into the track of the old order of thief-catchers, who improved their income by creating crimes, and then earned the reward for catching the criminals.

A SCHOOL SUPPORTER.

PROPOSED SCHOOL OF ART IN SHREWSBURY.—On Friday before last a meeting was held in the Town-hall, Shrewsbury, to consider the best means of establishing a School of Art and Design there, in accordance with the government plan, a suite of rooms having already been provided for that purpose. The chair was taken by the mayor, and appropriate resolutions, as to formation of committee, &c. were passed.

THE LANDORE VIADUCT, SOUTH WALES RAILWAY.

INSTITUTION OF CIVIL ENGINEERS.

ON the 15th May the paper read was a "Description of the Landore Viaduct, on the line of the South Wales Railway," by Mr. L. E. Fletcher.

The viaduct was described as a timber structure, erected for the purpose of carrying the line of the South Wales Railway across the valley of the Tawe, about three miles above the spot where that river fell into Swansea Bay. The entire length of the viaduct was one third of a mile, or 1,760 feet: the opening in the clear of the span crossing the river, measured between the piers, was 100 feet; and the span of the truss itself, from centre to centre, of 107 feet: the spans of the remaining trusses were 73 feet, 64 feet, 50 feet, 42 feet, and 36 feet respectively. The height from the surface of the river, at low water, to the line of rails, was 88 feet six inches; and from the bed of the river to the top of the structure, 110 feet 6 inches. The transverse width, from out to out of the truss of 107 feet span, was 35 feet; and that of the other trusses was 29 feet 2 inches, the clear width between the parapets being 28 feet.

Some of the local causes rendering the erection of the viaduct necessary were,—the number of openings required; the height of the line of rails enforced by the Act of Parliament; the marshy character of a considerable portion of the ground, which rendered it unfit for the foundation of a high railway bank; and the high rate of compensation demanded for the land. Piles were used for the foundations of the supports in the marsh, and also for that of the truss crossing the river, as the construction of masonry piers in that position would have rendered coffer-dams necessary. The viaduct terminated at both ends in masonry abutments, the intermediate supports or legs being all of timber, with the exception of five masonry piers, which, from local considerations, were found desirable.

The roadway was generally carried on the top of the trusses, but in the case of the span over the river, on account of the headway required, the trusses rose above the roadway, which passed between them.

It was pointed out that, in the structure, the timbers on which the transverse rigidity depended were not subject to the alternate strain of compression and extension, all the tensile strains being taken by wrought iron tie-bolts, and timber only being employed for the struts.

In considering the strains and stability of the structure, together with the cost of construction and maintenance, it was shown that the viaduct was calculated to carry one ton per lineal foot on each rail; the wrought iron tie-bars to bear a strain of five tons per square inch; and the compressive strain upon the timber was about one-sixth of a ton per square inch.

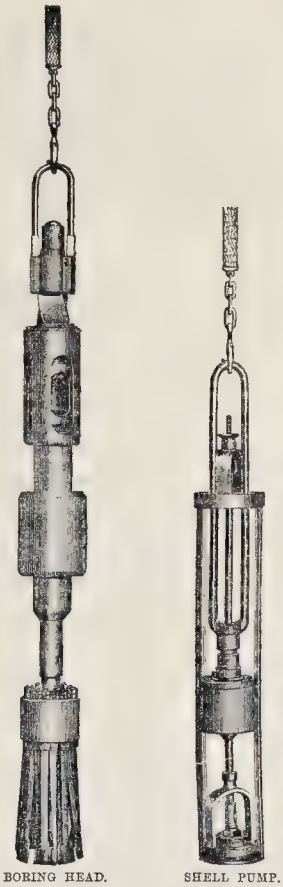
Without supports or planking, the weight of the truss of 107 feet span was 24 cwt. per foot run, and the cost 23*l.* per foot run.

Ditto of 73 feet span was 8 cwt. per foot run, and the cost 9*l.* 15*s.* per foot run.

Ditto of 64 feet span was 6 cwt. per foot run, and the cost 9*l.* 2*s.* 6*d.* per foot run.

Ditto of 42 feet span was 9 cwt. per foot run, and the cost 2*l.* per foot run.

The trusses of 107 feet span deflected about half an inch under the weight of a luggage engine, and immediately regained their normal position. Those of 73 feet span deflected about one and a half inch under a load of 125 tons, laid over 36 feet 6 inches, at the centre of the span, on the south line of rails only. Those of 42 feet span deflected about half an inch under a load of 110 tons, laid on one line of rails only, and dispersed from the centre of one span to the centre of the next span, so that the centre of gravity of the load was directly over the legs or supports.



The expenditure upon the structure was 28,720*l.*; the cost per foot run (the average height from the surface of the ground to the line of rails being 55 feet) was 16*l.* 6*s.*: the cost per square foot on plan, in the clear between the parapets, was 12*s.*: that of the entire structure, per superficial foot of area of elevation, measuring from the surface of the ground to the line of rails, the area being 103,600 square feet, was 5*s.* 6*d.* per square foot of the area; and the cost per cubic foot of the entire structure was 2*s.* 3*d.*

The direction of the portion of the line in which the viaduct was situated was confided, during its construction by Mr. Brunel, the engineer-in-chief of the line, to Mr. Robert Brodie, assisted by Mr. Samuel Jones, of Neath, and the whole of the drawings and details of construction were worked out by Mr. Fletcher, the author of the paper, who set out the work and superintended its execution from the commencement of the contract to its close.

EARTH-BORING MACHINERY.

A PAPER on this subject, by Mr. Colin Mather, was read at the Society of Arts on the 30th ult. in the course of which various modes of boring artesian wells were described, and especially a new plan now being brought into operation by Messrs. Mather and Platt.

The construction of the boring head and shell pump, and the mode of acquiring the percussive motion, constitute the chief novelties of the system and machine. The couple-cylinder engine, with the reversing or link motion, is used for winding and lowering apparatus, but an ordinary winding-engine, similar to those used in collieries, may be applied.

BORING HEAD. SHELL PUMP.

The boring-head consists of a wrought-iron bar, about 8 feet long, on the lower part of which is fitted a block of cast iron, in which the chisels or cutters are firmly secured. Above the chisels an iron casting is fixed to the bar, by which the boring-head is kept steady and perpendicular in the hole. A mechanical arrangement is provided, by which the boring-head is compelled to move round a part of a revolution at each stroke. The loop or link by which the boring apparatus is attached to the rope is secured to a loose casting on the wrought-iron bar, with liberty to move up and down about 6 inches. A part of this casting is of square section, but twisted about one-fourth of the circumference. This twisted part moves through a socket of corresponding form on the upper part of a box, in which is placed a series of ratchets and catches, by which the rotary motion is produced. Two objects are here accomplished—one the rotary motion given to the boring-head, the other a facility for the rope to descend after the boring-head has struck, and so prevent any slack taking place, which would cause the rope to dangle against the side of the hole, and become seriously injured by chafing.

The shell-pump is a cylinder of cast-iron, to the top of which is attached a wrought-iron guide. The cylinder is fitted with a bucket similar to that of a common lifting-pump, with an India-rubber valve. At the bottom of the cylinder is a clack, which also acts on the same principle as that in a common lifting-pump, but it is slightly modified to suit the particular purpose to which it is here applied. The bottom clack is not fastened to the cylinder, but works in a frame attached to a rod which passes through the bucket, and through a wrought-iron guide at the top of the cylinder, and is kept in its place by a cotter, which passes through a proper slot at the top of the rod. The pump-rod, or that by which the bucket is worked, is made of a forked form, for the twofold purpose of allowing the rod to which the bottom clack is attached to pass through the bucket, and also to serve as the link or loop by which the whole is suspended.

The wrought-iron guide is secured to the top of the cylinder, and prevents the bucket from being drawn out when the whole is so suspended. The bottom clack also is so arranged that it is at liberty to rise about six inches from its seating, so as to allow large fragments of rock, or other material, to have free access to the interior of the cylinder when a partial vacuum is formed there by the up-stroke of the pump.

The percussive motion is produced by means of a steam cylinder, which is fitted with a piston of 15 inches diameter, having a rod of cast-iron 7 inches square branching off to a fork, in which is a pulley of about 3 feet in diameter, of sufficient breadth for the rope to pass over, and with flanges to keep it in its place. As the boring-head and piston will both fall by their own weight when the steam is shut off, and the exhaust-valve opened, the steam is admitted only at the bottom of the cylinder: the exhaust-port is a few inches higher than the steam-port, so that there is always an elastic cushion of steam of that thickness for the piston to fall upon.

The valves are opened and shut by a self-acting motion derived from the action of the piston itself, and as it is of course necessary that motion should be given to it before such a result can ensue, a small jet of steam is allowed to be constantly blowing into the bottom of the cylinder: this causes the piston to move slowly at first, so as to take up the rope, and allow it to receive the weight of the boring-rod by degrees, and without a jerk. An arm which is attached to the piston-rod then comes in contact with a cam, which opens the steam-valve, and the piston moves quickly to the top of the stroke. Another cam, worked by the same arm, then shuts off the steam, and the exhaust-valve is opened by a corresponding arrangement on the other side of the piston-rod. By moving the cams the length of the stroke can be varied at the will of the operator, according to the material to be bored through. The fall of the boring-head and piston can also be regulated by a weighted valve on the exhaust-pipe, so as to descend slowly or quickly, as may be required.

The general arrangement of the new machine may be described as follows:—

The winding-drum is 10 feet in diameter, and is capable of holding 3,000 feet of rope, 4½ inches broad and half an inch thick: from the drum the rope passes under a guide pulley, through a clam and over the pulley which is supported on the fork end of the piston rod, and so to the end which receives the boring head, which being hooked on and lowered to the bottom, the rope is gripped by the clam. A small jet of steam is then turned on, causing the piston to rise slowly until the arm moves the clam, and gives the full charge of steam: an accelerated motion is then given to the piston, raising the boring-head the required height, when the steam is shut off, and the exhaust opened in the way described, thus effecting one stroke of the boring-head as regulated by a back pressure valve in the exhaust pipe. The exhaust port is 6 inches from the bottom of the cylinder: when the piston descends to this point it rests on a cushion of steam, which prevents any concussion. To increase the lift of the boring-head or compensate for the elasticity of the rope, which is found to be 1 inch

in 100 feet, it is simply necessary to raise the cams on the cam shaft whilst the percussive motion is in operation. The clam which grips the rope is fixed to a slide and screw, by which means the rope can be given out as required. When this operation is completed, and the strata cut up by a succession of strokes thus effected, the steam is shut off from the percussive cylinder, the rope unclamped, the winding-engine put in motion, and the boring-head brought up and slung from an overhead suspension-bar by a hook fitted with a roller to traverse the bar. The shell-pump is then lowered, the *débris* pumped into it, by lowering and raising the bucket about three times, which the reversing motion of the winding engine readily admits of. It is then brought to the surface and emptied by the following very simple arrangement. At a point in the suspension-bar a hook is fixed perpendicularly over a small table in the waste tank, which table is raised and lowered by a screw. The pump being suspended from the hook hangs directly over the table, which is then raised by the screw till it receives the weight of the pump. A cotter, which keeps the clack in its place, is then knocked out, and the table screwed down. The bottom clack and the frame descending with it, the contents of the pump are washed out by the rush of water contained in the pump cylinder. The table is again raised by the screw, and the clack resumes its proper position: the cotter is then driven into the slot, and the pump is again ready to be lowered into the hole as before. It is generally necessary for the pump to descend three times in order to remove all the *débris* broken up by the boring head at one operation.

The following facts, obtained from the use of the machine in boring in the new red sandstone at Manchester, will show its actual performance, and enable us to compare it with the other systems mentioned in this paper. The boring-head is lowered at the rate of 500 feet a minute: the percussive motion is performed at the rate of twenty-four blows a minute; and, being continued for ten minutes, the cutters in that time penetrate from 5 to 6 inches: it is then wound up at 300 feet a minute. The shell-pump is then lowered at the rate of 500 feet a minute, the pumping continued for one minute and a half, and being charged, the pump is wound up at 300 feet a minute. It is then emptied, and the operation repeated, which can be accomplished three times in ten minutes, at a depth of 200 feet. The whole of one operation, resulting in the deepening of the hole 5 to 6 inches, and cleansing it of the *débris* ready for the cutters or boring-head being again introduced, is seen to occupy an interval of twenty minutes only. The value of these facts will be best shown by comparing them with the results by the old method.

At Highgate the boring has occupied two years in attaining a depth of 680 feet from the bottom of a well 500 feet deep from the surface. Their progress at present is at the rate of 6 inches per week, working night and day. At Warwick, thirteen months were occupied in boring 400 feet through red marl; at Saltaire, two years in going 80 yards.

Some of the more important public uses to which the new machine can be applied may now be briefly enumerated.

Sanitary questions deservedly occupy at the present time a large share of public attention. Water, as is well known, is the chief agent in sanitary reform. It is necessary for flushing sewers, for supplying baths and washhouses, as well as for meeting the domestic wants of all classes of the community. The importance of cleanliness cannot be overrated, as a means of promoting the general health, and it imposes the necessity for a much more copious supply of pure water than is as yet enjoyed in most towns. Many small towns which are so situated that they cannot command a supply of water from natural sources, are prevented from obtaining it by boring, on account of the great expense, and still more the vexatious uncertainty of the process. The corporation of Manchester have expended upwards of a million sterling in supplying that city and its neighbourhood with water, and they sell it to the corporation of Salford at the rate of threepence per thousand gallons. It is confidently believed that by the new method of boring an abundant supply of water could be procured on the spot at half that price. Thus, in a sanitary point of view, the new machine is of the utmost value, since it enables us to procure a much greater supply of water in far less time, and from depths which were all but inaccessible on the old method of boring. For example, the work at Highgate, which has occupied two years, could have been done in thirty-three days. That at Warwick, which has occupied thirteen months, could have been done in twenty days. That at Saltaire, to supply the workpeople with drinking water, which has occupied two years, could have been done in twenty-nine days.

MR. RUSKIN'S REVIEW OF THE ACADEMICIANS.

THE author of "Modern Painters" has issued a circular letter on some of the principal works in the present Exhibition of the Royal Academy, and proposes doing so on subsequent occasions.* He has fallen foul of the Academicians in unmeasured terms, and has not discovered a redeeming work proceeding from any member of the body. The review is abusive and uncandid, but contains, nevertheless, useful teaching. We extract those portions which relate to the Academicians:—

(78) "The Wrestling" in *As you like it*, D. Maclise, R.A.—Very bad pictures may be divided into two principal classes—those which are weakly or passively bad, and which are to be pitied and passed by; and those which are energetically or actively bad, and which demand severe reprobation, as wilful transgressions of the laws of all good art. The picture before us is of the last class. Mr. Maclise has keen sight, a steady hand, good anatomical knowledge of the human form, and good experience of the ways of the world. If he draws ill, or imagines ungracefully, it is because he is resolved to do so. He has seen enough of society to know how a duke generally sits—how a young lady generally looks at a strange youth who interests her; and it is by vulgar choice, not vulgar ignorance, that he makes the enthroned duke straddle like a village actor, and the young lady express her interest by a cool, unrestrained, and steady stare. It is not worth while to analyse the picture thoroughly, but let us glance at the two opponent figures—Charles and Orlando. The spectator can certainly see nothing in this "Charles," but a grim, sinister, sinewy monster, wholly devoid of all gentleness or humanity. Was Shakspeare's Charles such an one? So far from it, that into his mouth is put the first description of the love of Rosalind and Celia—"The duke's daughter, her cousin, so loves her, being ever from their cradles bred together, that she would have followed her exile, or have died to stay behind her: never two ladies loved as they do." So far from it, that he comes to Oliver especially to warn him against allowing his brother to wrestle with him. "Your brother is but young and tender; for your love, I would be loth to foil him." Then, on Oliver's execrable slander of Orlando, poor honest Charles is "heartily glad I came hither: if he come to-morrow, I'll give him his payment;" this being not in cruelty, but in honest indignation at Orlando's ascribed villany: nevertheless, when the trial comes, although flushed with victory, and haughty in his supposed strength, there is no bitterness in his question —"Where is this young gallant?" Poor Charles is as much slandered here by the painter as Orlando was by his brother. Well, but what of Orlando himself? He folds his hands, and turns up his eyes like a lover in his last appeal to his lady's mercy. What was the actual fact? Orlando had been but that instant called before the princesses: he had never seen them before in his life. He is a man of firm, calm, and gloomy character—the sadness having been induced by injustice: he has no hope, no thought of Rosalind or her love, at this moment: he has challenged the wrestler in quiet resolve to try with him the strength of his youth—little caring what comes of it. He answers the princesses with deep and grateful courtesy, but with a despairing carelessness of his fate—"If I be foiled, there is but one shamed that was never gracious; if killed, but one dead that is willing to be so. I shall do my friends no wrong, for I have none to lament me—the world no injury, for in it I have nothing." Imagine the calmness and steady melancholy of the man who would speak thus, and then compare the sentimental grimace (as of a fashionable tenor in a favourite aria) of the Orlando in the picture. Next to pass from imagination of character to realisation of detail. Mr. Maclise is supposed to draw well, and realise minute features accurately. Now, the fact is, that this work has every fault usually attributed to the pre-Raphaelites, without one of their excellences. The details are all so sharp and hard that the patterns on the dresses force the eye away from the faces; and the leaves on the boughs call to us to count them. But not only are they all drawn distinctly, they are all drawn *wrong*. Take a single instance in a simple thing. On the part of the hem of the duke's robe, which crosses his right leg, are seven circular golden ornaments, and two halves, Mr. Maclise being evidently unable to draw them as *turning* away *round* the side of the dress. Now observe, wherever there is a depression or fold in the dress, these circles ought to contract into narrow upright ovals. There *is* such a depression at the first next the half one on the left, and that circle ought to have become narrowed. Instead of which it actually widens itself! The second is right. Then the third, reaching the turn to the shade, and all those beyond it, ought to have been in narrowed perspective—but they all remain full circles! And so throughout the ornament. Imagine the errors which a draughtsman who could make such a childish mistake as this must commit in matters that really need refined drawing, turns of leaves, and so on! But to pass from drawing to light and shade. Observe, the light falls from the left, on all the figures but that of the two on the extreme left. These two, for the sake of effect, are in "accidental shadow." Good; but why then has Oliver, in the brown, a sharp light on the left side of his nose! and on his brown mantle? Reflected lights, says the apologist. From what? Not from the red Charles, who is five paces at least in advance of Oliver; and if from the golden dress of the courtier, how comes it that the nearer and brighter golden dress of the Duke casts *no reflected light* whatever on the yellow furs and red hose of the wrestler, infinitely more susceptible of such a reflex than the dress of Oliver?

(94) "The River's Bank;" T. Creswick, R.A.—This, like most other of the landscapes hung on the line, is one of those works so characteristic of the English school, and so little creditable to them, in which everything is carelessly or ill painted—because it is in a landscape. Nothing is really *done*. The cows have imperfect horns and hides: the girl has an imperfect face, and imperfect hands: the trees have imperfect leaves; the sky imperfect clouds; the water imperfect waves. The colour, of a heavy yellow with dim green, is worse than imperfect; for colour must either be right—that is, infinitely beautiful; or wrong—that is, *less* than beautiful. All tame and dead colour is *false* colour.

(120) "Beatrice;" C. L. Eastlake, P.R.A.—An imitation of the Venetians, on the supposition that the essence of Venetian painting consisted in method: issuing, as trusts in method instead of fact always must issue,—in mere negation. Sir Charles Eastlake has power of rendering expression, if he would watch it in human beings,—and power of drawing form, if he would look at the form to be drawn. But when, because Giorgione and Titian draw broadly, and sometimes make their colours look broken, he supposes that all he has to do is to get a broken breadth; he ends, as all imitators must end, in a rich inheritance of the errors of his original, without its virtues. Titian and Giorgione have a slight tendency to flatness; but Giorgione's G Flat has accompaniments, Sir Charles's C Flat stands alone. The real source of the error may be sufficiently seen in the distance: Titian paints his distances in pure colour,—but at least indicates what is grass, and what is stone. The distant ground here, with its white spot for a castle, is a mere space of dim brownish-green paint, which can by no possibility stand for grass, or moss, or any other natural thing. It seems to me, however, that there are some points in the execution of the picture, considered as an example of certain textures, which are instructive. The whole is careful, and the draperies well cast. But who is the lady? Dante's Beatrice, or Benedict's? She can hardly be either: her face indicates little piety, and less wit.

(149) "Lear recovering his Reason at the Sight of Cordelia;" J. R. Herbert, R.A.—As No. 78 furnished us with an instance of the class of picture which is actively bad, we have here an equally important instance of the passively bad; which, had it been in a less prominent place, might kindly have been passed without notice; but, since it is thus recommended to the public by its position, it must needs be examined. In the whole compass of Shakspeare's conceptions, the two women whom he has gifted with the deepest souls are Cordelia and Virgilia. All his other women can speak what is in them. These two cannot. The "Nothing, my lord," of Cordelia, and the "gracious silence" of Virgilia, are the everlasting seals by the master of the human heart upon the most sacred writing of its folded and golden leaves. Shakspeare himself could not find

* "Notes on some of the Principal Pictures exhibited in the Rooms of the Royal Academy, 1855." By the Author of "Modern Painters." London: Smith, Elder, and Co. 65, Cornhill. 1855.

words to d what was in these women. And now, cast dow at her father's feet, the alabaster vase is broken—he house of life is filled with the odour of the oin ment—all Cordelia is poured forth in that infinite "am" of fulfilled love.* Do but think of it for o quiet instant. Think of the rejected creature, so l g disallowed from daughter's word and act; unsig ed also—all her sisterhood changed into pale fla e of indignation—now at last, in consummation , all sorrow, and pity, and shame, and thankfulness, nd horror, and hope long delayed, watching the veil grow thin, that in those eyes, wasted with grief, was still drawn between her father's soul and hers. Think of it! As for imagining it—perhaps Danté might have imagined it, with the winds of paradise yet upon his brow. As for painting it——. And yet, in the midst of the Royal Academy Rooms of England, and in the midst of the nineteenth century, that profile of firwood, painted buff, with a white spot in the corner of the eye, does verily profess to be a painting of it. It is a thing not a little to be pondered upon, that the men who attempt these highest things are always those who cannot even do the least things well. Around the brow of this firwood figure there is a coronet, and in the coronet four jewels. I thought that, according to Royal Academy principles, in a "high art" picture, this Rundell and Bridge portion of it should have been a little less conspicuous. However, as we find these unideal emeralds and rubies thus condescendingly touched, let us see *how* they are touched. Each stone has a white spot, or high light, upon it. Now, that flash is always the reflection of the highest light to which the jewel is turned; and here, in a tent, it must be of an opening in the tent on the left-hand side. Now, as the jewels are set round the brow, each in a different position, each would reflect this tent door from a different spot of its surface. This change in the position of the reflection would be one of the principal means by which nature would indicate the curve of the coronet. Now, look at the painting. Every gem has actually the high light in the same spot, on the left hand side, all round the brow! The dimness of pictorial capacity indicated by such a blunder as this is very marvellous. For a painter of the slightest power, even though he had not drawn the gems from nature, would infallibly have varied the flash, for his own pleasure, and in an instinctive fulfilment of the eternal law of change. It is nevertheless a fact that, although from some peculiar idiosyncracy, not comprehending the passage in *King Lear*, Mr. Herbert has feeling; and if he would limit his work to subjects of the more symbolic and quietly religious class, which truly move him, and would consider himself by no means a great master, but a very incipient student, and paint everything from the fact and life, faithfully, he would be able to produce works of some value.

(201) "Penserosa;" C. W. Cope, R.A.—The young lady appears to be reading, may possibly be thinking, is certainly passing under a Norman arch, and is very pretty. This *ensemble* is interesting, but had better have been put into the architectural room, as it may materially promote the erection of Norman arches in the gardens of the metropolis, for the better performance of pensive appearances to morning visitors.

(228) "In Betchworth Park;" W. F. Witherington, R.A. (240) "The Bird Keeper;" R. Redgrave, R.A.—We have here two interesting examples of another fallacious condition of landscape—that which pretends to pre-Raphaelite distinctness of detail; but is in all detail, industriously wrong. In Creswick's work the touches represent nothing: here they represent perpetual error, assuming that all leaves of trees may be represented by oval, sharp-pointed touches of yellow or green,—as if leaves had not their perspectives, shadows, and changes of hue, like everything else! There is great appearance of fidelity to nature in these works, but there is none in reality: they are mere mechanical accumulations of similar touches, as a sempstress mechanically accumulates similar stitches. If the spectator desires to know the difference between right and wrong in this matter, let him first examine Mr. Witherington's oval touches, and then cross the room to No. 321, in which the flowers in the window are truly and properly painted, and look at the way the leaves are set and worked there; and if it be supposed that this is only to be done in a cabinet picture, the question is well worth settling at once by merely walking out of the Academy into the National Gallery next door, and looking at the leaves which crown the Bacchus, and the little dancing faun, in Titian's "Bacchus and Ariadne," in which every turn of the most subtle perspective, and every gradation of colour, is given with the colossal ease and power of the consummate master. Examine further, the vine-leaves above on the right, and the flowers in the foreground, and you will return to the Academy with an eye so instructed, as hardly thenceforward to accept, in such matters, fallacies for facts.

(594) "Rome;" D. Roberts, R.A.—This is a large architectural diagram, with the outlines executed sharply in black, the upper half being then painted brick-red, and the lower green-grey. (Note the distinctness of the mannerism in the *outlined* statues and pillars of the chapel in shade upon the right.) I can hardly understand how any man, devoting his time to painting, ever comes to suppose that a picture can be right which is painted in two colours! or by what reasoning he persuades himself that, because seen under the red light of sunset, the purple trunk of a stone pine, the white stucco of house walls, the scarlet of tiles, and the green of foliage, may all be of the same colour. Imagine a painting of a beautiful blue-eyed female face, by sunset, which represented its blue eyes, its nose, its cheeks, and its lips, all of the same brick-red! Mr. Roberts was once in the habit of painting carefully finished cabinet pictures, which were well composed (in the common sense), and fairly executed in the details. Had he continued these, painting more and more, instead of less and less, from nature, he might by this time have been a serviceable painter. Is it altogether too late to warn him that he is fast becoming nothing more than an Academician?

Mr. Ruskin's opinion of the Academicians, as a body, is further conveyed by his concluding remark, touching a picture mentioned to him by a friend, but which he had not himself seen:—

"My friend says it contains the 'unity of perfect truth with invention.' I cannot answer for its doing this, which would place it in the first rank of works of art; but, as it is hung in a place where it is not easily caught sight of, I have little doubt it must be a work of merit."

* "——— I think this lady
To be my child, Cordelia.
Cordelia.—And so I am; *I am.*"

ON BOILER EXPLOSIONS.

WILL you permit me, through the medium of your pages, to call the attention of scientific men to the subject of boiler explosions, their cause, and method of prevention, as not a month passes which does not give us some new instance of their fatal effects; and as almost in all cases the explosion occurs when the steam is comparatively at a low pressure, it must be the effect of a strange force that has by some means or other introduced itself into the boiler, and which instantaneously raises the pressure from several atmospheres to several hundreds, and against which force the safety-valve is nothing. My firm conviction is, Mr. Editor, that this force is electricity.

It is a well-known fact, that boilers contain more or less of the electric fluid, and that the maximum is formed with a low pressure, which fact tends to verify my hypothesis. Now, whatever may be the cause which makes it fulminant, if it could be conducted safely out of the boiler the explosion would not take place, and I see no reason why the application of the lightning-conductor could not be made with success. For example, if several insulated *conductors*, terminating with points made of a metal inoxidable, were introduced into the boiler, the electricity could be carried through the sides of the boiler (as fast as it developed itself) with safety, into the tank or elsewhere.

EDWARD COMBES.

THE CRYSTAL PALACE.

THE flower-show here on Saturday, the 2nd inst. was a great success: the day was fine, the flowers splendid, and the visitors numerous and well-dressed—better dressed, we should say,—more artistically, than we ever saw the same number of English people together before. This opinion may be mere fancy or the result of a particularly easy frame of mind at the moment, but certainly the impression exists. Amongst the flowers there was a perfect blaze of azaleas, gigantic in size and dazzling in colour. The upper range of fountains played for the first time, as we announced would be the case, to the perfect satisfaction, we believe, of those concerned. We must endeavour before long to give some detailed information as to the water-works generally. The concert on Monday was to some extent less successful than the flower-show, insomuch as the music could not be perfectly heard: nevertheless there was enough to delight any reasonable being. On a future similar occasion it might be worth while to try the effect of a properly constructed canopy, or other arrangement, at some height above the heads of the performers.

Mr. Owen Jones has completed his restoration of the Hall of the Abencerages, in the Alhambra Court, and has produced one of the most extraordinary effects of colour ever seen. The ceiling, "scooped into ten thousand cells," and illuminated only through small openings filled with stained glass, is like one enormous jewel.

ARCHITECTS' CHARGES AND BRIDGEWATER CHURCH.

SIR,—The charges in this case, which you have given, must cause great concern to the profession; and, as they are calculated to reflect discreditably upon the body, I shall take the liberty of stating what I conceive should have been the proper charges, and my reasons, leaving it to the architect employed to adduce the grounds upon which he justifies his departure from the usual practice of, at all events, London practitioners, whether for provincial or London jobs.

The largest charge for design, drawings, specification, and professional supervision is 5 per cent. which would have made the first item 197*l.* 10s. instead of 259*l.* 19s. 2d.

But there appears to be an anomalous combination, in one and the same individual, of architect and clerk of the works,—*a course perhaps necessary in provincial parts*, but most irregular. However, if accepted, the party in question must abide by the consequence; and, in consideration of his two guineas weekly salary for *personal* supervision as clerk of the works, forego his claim for remuneration for *professional* supervision as architect; consequently 2 per cent. more should be deducted from the first item, equalling 79*l.* The account, therefore, should have stood thus:—

For necessary designs, drawings, and specification, 3 per cent.....	£118 10 0
For personal superintendence as clerk of the works	216 7 0
I presume that the small subsequent items of surveys, reports, and estimates had no reference to the works previously stated as amounting to 3,946*l.* 3s. and charged for; consequently they may be considered genuine	29 11 0
	£364 8 0

The charge for taking out quantities for builders for new chancel roof was met by previous charge of 7*l.* 14s. for drawing and estimate of repairs of the same; and the sum of 24*l.* 13s. 10d. charged for estimating value of works proposed, and measuring up works performed, appears already included in the first item at the head of the bill.

Consequently, judging from the face of the account, and with one further explanation, the charge for the architect and clerk of the works, as combined, should seemingly have been 364*l.* 8s. instead of 570*l.* 7s. 4d.

If, on such occasions, the parties who feel themselves aggrieved would only agree to refer such matters to the council of the Royal Institute of British Architects, the employer would be protected from any irregularity of practice, and the professional man upheld in every legitimate charge for "*bonâ-fide*" services; for that Body are too deeply sensible that the true interests of the profession consist in that which is fair, equitable, and high-minded, to protect oppression, or to justify extortion.

T. L. DONALDSON.

THE WALL OF OLD LONDON.*

BEFORE the reign of Edward IV. the City wall was continued in a straight line from the angle a little north of Newgate to the Thames. Leave was, however, given for the removal of it from Ludgate to the river, in order to afford space for the erection of portions of the Blackfriars monastery. The engraving, fig. 4, p. 223, shows an interesting fragment of the old wall, and parts of the monastic buildings erected upon it, which are still preserved below the offices of the *Times* newspaper.

The whole of this neighbourhood was destroyed by the Great Fire of 1666, and afterwards, on part of the site of the Blackfriars, the King's printing-house was erected. Here the first *Gazette* and the royal proclamations were printed in the reign of Charles II. In 1688 the King's printing-house was attacked by a mob, which had risen against the Papists, and a large quantity of printed and other materials destroyed. In 1738, the printing-house was burnt almost to the ground, but soon afterwards rebuilt. On the removal of the King's printer, these now well-known premises came into the possession of the proprietors of the *Times*, and here, on November 29, 1814, was produced the first newspaper ever printed by a mechanical apparatus, and the first newspaper printed by steam. While making some of the alterations which from time to time have been required to

* See p. 221, *ante*.

meet the extraordinary increase in the circulation of the *Times*, the piece of old wall just mentioned was found. One part of this interesting relic is evidently much older than the other, and the most ancient was found to be so hard, as to set at defiance the tools of the workmen. During the alterations, several encaustic tiles, two finials of the fleur-de-lis shape, a Roman tile, and in the neighbourhood of the printing-office, several melting-pots and pieces of glass, mostly in a half-manufactured state, were found. These are carefully preserved at the *Times* office,—the parties having charge of them considering it a duty to do so: doubtless, however, they would gladly deposit them in some public place, provided they would be properly cared for. An ancient drain formed of the materials of the old wall, was also discovered. The melting-pots and pieces of glass are worthy of notice, for in Glass-house-alley, close by, James Verselyn, stranger, a Venetian, about the year 1580, or perhaps somewhat before, was the first that set up a glass-house in London for making Venice glasses, for which the queen granted him a privilege under the Great Seal. But the glass-sellers in London were much aggrieved at this, and showed the Lords of the Privy Council that it was the overthrow of fifty householders, using only the trade of selling glasses. There was a prohibition in the patent, that none should sell such glasses but the said Verselyn alone.

Let us, however, now retrace our steps to the Old Bailey; and having seen that in a plan of Farringdon Ward (without), engraved in Strype's edition of Stowe, published in 1720, there is a street called the Little Old Bailey, which branches from the Old Bailey towards St. Sepulchre's Church, and from which the *Green Arbour* runs (this street is now removed), we will, from the Old Bailey, enter Green Arbour-court, and at the bottom we come to a steep flight of steps, which in a small way serves to remind us of Edinburgh and Newcastle-upon-Tyne. These are the "Break-neck Steps," mentioned by Ward in his "London Spy."

Oliver Goldsmith lived for two years at not a long distance from the steps: the house has for some time past been removed, and the site occupied by stables and waggon offices. During the time he resided here, he wrote the "Inquiry into the State of Polite Learning in Europe;" and here Bishop Percy, who was then collecting materials for his "Reliques," called upon Goldsmith, whom he found in "a wretchedly dirty room, in which there was but one chair;" and when, says Percy, "from civility he resigned it to me,—he was himself obliged to sit on the window. While we were conversing some person gently tapped at the door; and being desired to 'come in,' a poor ragged little girl, of very decent behaviour, entered the room, who, dropping a curtsey, said,—'My mamma sends her compliments, and begs the favour of you to lend her a potful of coals.'"

At the bottom of Breakneck-stairs, is a portion of old masonry, marked in the plan. This has been supposed to be a portion of some outward defence: it seems, however, to be more like the remains of a building formerly connected with the Chancery, which in old times stood somewhere about this spot. Before leaving the Old Bailey, it may be worth while to mention that in Ship-court, three doors from Newgate-street, on the west side, Hogarth's father kept a school; and at No. 68, the second door south of Ship-court, the notorious Jonathan Wylde for some time resided.

From the bastion, a little to the north of Newgate, the wall continued in a north-east direction through St. Ann's Churchyard to Noble-street. On this were, including the above, five half-circular bastions, or towers. A part of the wall is left in the churchyard: it does not, however, present any remarkable features: from the angle at Noble-street, the wall runs nearly north to Cripplegate Churchyard, where the most perfect portion still remains. Nothing can be more picturesque than these venerable remains of former times. There were three towers on this part of the wall; and our engravings show that two of these remain,—that to the south forming part of Barber Surgeons' Hall: the wall stretching along the churchyard shows the peculiarity of the construction, and the various repairs and additions which have from time to time been made.

The interior of the principal tower which overlooks Cripplegate Churchyard, can be easily reached by passing along Monkwell-street, and then through the gate of Lamb's Chapel.

In former times, the site of the parish of St. Giles, Cripplegate, was a fen or moor; and the houses and gardens thereupon were accounted a village without the wall of London, called Mora; which in process of time increased in number of buildings, and was constituted a prebend of St. Paul's Cathedral of that appellation; "and now," says Chamberlain, "this village is totally swallowed up by London and the prebendary of Mora, or Mora without the wall of London, which hath the ninth stall on the right side of the choir in St. Paul's Cathedral, of whom it is said Nigellus Medicus was the first prebendary."

After leaving Cripplegate, the next fragment is a portion of Aldermanbury postern (see engraving). Here, behind the gate of the White Horse-yard, the groove in which the hinges of the old gate formerly worked are distinctly visible. The wall can be traced for some distance along this yard, wherein is the part engraved which, by showing the section, gives a good idea of the thickness and additions at different times.

At a short distance from Aldermanbury postern, in New Basinghall-street, was a second postern.

The next visible part of the wall is that, also engraved, in the churchyard of St. Alphage, on the wall. Here the outward stonework is much decayed, and crumbles to dust in large quantities to the wind and weather. A gentleman, living near the spot, says that the inner work of the wall is extremely hard, and that, in making an incision into the wall, for the purpose of fixing a safe, it cost 30s. to sharpen and repair the tools of the workmen.

From hence past Moorgate-street, Bishopsgate, Bevis Marks, Duke's-place, Houndsditch, to near the Tower, no appearance of the wall is to be discovered, until we come to that in the flax warehouses and mews; and the part, also engraved, which immediately adjoined the Tower postern: the engraving shows the west side, which, until lately, was one of the most perfect and extensive fragments of the wall, but it is now hidden by stables, &c. At the base of this the Roman work was distinctly visible. In passing from Tower-hill to the east, the narrow passage, in which are still the posts, was formerly the site of the Tower postern: this, some centuries ago, fell down, and was never replaced, except by a strong barrier of timber.

Chamberlain, in his "History of London," published about 1770, mentions that at that time there remained opposite the end of Gravel-lane, on the west side of Houndsditch, a tower 26 feet high, much decayed, and of similar construction to that mentioned by Dr. Woodward. Within the wall of this tower was a door in Shoemakers'-row, fronting the passage into Duke's-place.

Maitland says, that in searching for this tower, about 80 paces south-east towards Aldgate, he discovered another of the same construction, 21 feet high, perfectly sound and much more beautiful than the former, the bricks being as sound as if but newly laid, "while the stones in some parts have fallen a sacrifice to time:" that tower stood at the top of Rose and Crown-court, in Houndsditch.

Maitland also informs us that on the south of Aldgate, at the lower end of a street called the Vineyard, is the basis of "another Roman tower," about 8 feet high, which supports a new building of 3 stories in height, in the wall of which is fixed a large stone, with the following inscription:—

"Glory be to God on high, who was graciously pleased in a wonderful manner to preserve the lives of all the people in this house, 12 in number, when the ould wall of this bulwark fell down, 3 stories high, and so broad, as two carts might enter abreast, and yet without anie harm to any of their persons. The Lord sanctify this his great providence unto them. Amen, and amen."

"It was Tuesday, the 23rd September, 1651."

In Chamberlain's time the inscription was quite legible.

Exclusive of the city of London within the wall, there is a large space of ground without the wall, and this is encompassed by an irregular line, called the line of separation, by which the City is divided from the county of Middlesex. This line begins at Temple-bar, where it abuts westward, upon the liberty of the Duchy of Lancaster, which is without Temple-bar. It extends itself by many turnings and windings through parts of Shire-lane, Bell-yard, Chancery-lane, by the liberty of the Rolls, &c. into Holborn, almost opposite Gray's-Inn-lane, where there was a bar—that is, two posts with rails and a chain to fix across, on any emergency.

From Holborn-bars the line continues, with various windings, by Brook-street, Furnival's-inn, Leather-lane, Hatton-garden, Ely-place, Field-lane, and Chick-lane, and so on to Smithfield-bars. It runs between Long-lane and Charter-house-lane to Goswell-street, and up that street to the *Bars*.

From the bars in Goswell-street (where the manor of Finsbury begins) it extends itself, by windings, across Golden-lane to Whitecross-street, and Milton-street. In each of the above streets were bars. From Milton-street it is continued through Ropemaker's-alley to where the posts and chains were, in the high road from Moorgate, and thence by the north side of Moorfields, where it turns northward up to Norton Folgate, and there meets the bars in Bishopsgate-street, whence it runs eastward into Spitalfields, all abutting upon Norton Folgate. From Norton Folgate it runs southward by Spitalfields, and thence south-east, by Wentworth-street, to the bars in Whitechapel.

From Whitechapel-bars it winds southerly, by the Little Minories and Goodman's-fields, whence it returns westward to the Minories, and thence inclines more to the west until it comes to London-wall, when it abuts upon the Tower Liberty, and there it ends.

The whole length of this line of separation is called 21,370 feet, and yet the ground comprehended between the line of the City wall and this line of separation is only about 300 acres.

The circumference of the wall of London is stated to be as follows:—From the Thames, along Fleet-ditch, to the first north angle, 270 yards; 140 yards east to Ludgate; 330 yards to the angle north of Newgate; then eastward 390 yards, to 55 yards eastward of Aldersgate: thence it runs northward 240 yards, to Cripplegate-churchyard; from thence to Cripplegate; and so continuing eastwardly 1,000 yards, to Bishopsgate; and thence south-eastwardly 480 yards, to Aldgate; whence it runs still south-eastwards 465 yards, to within 20 yards of the middle of the north part of the Tower-ditch; in the whole 3,315 yards; to which adding the distance from the Tower to the Fleet-ditch, which is 2,170 yards, the whole circumference of the City within the walls appears to be 5,485 yards, or 3 miles and 205 yards.

The whole ground within the walls of the city of London amounts to 373 acres and four-fifths of an acre.

MODEL DWELLINGS FOR WORCESTER.—The committee of the new association for the erection of improved dwellings at Worcester have decided that the laying of the first stone of their model dwellings in Copenhagen-street shall take place on the 18th of June instant, and that Mr. John Dent will lay the stone. Among the public bodies invited are the mayor and corporation, the Company of Clothiers, the fraternity of Freemasons, and the clergy of all denominations in the city. The assistance of the cathedral choir has been promised, and the band of the Worcestershire Militia will be in attendance.

CHURCH-BUILDING NEWS.

Colchester.—A new church, in the rural parish of Myland, was consecrated week before last. The edifice, which is dedicated to St. Michael and All Angels, was erected according to plans supplied by Mr. Hakewill, the builders being, for the stone and brick work, Mr. White, of London; and for the wood-work, Mr. S. Grimes, builder, Colchester. The church is in the Early English style of the thirteenth century, and comprises chancel, nave, and aisle, with broached spire of oak shingles. The body and tower are of Kentish rag-stone, with Caen stone dressings for the windows and porch. The width of nave and aisle is 37 feet, and length 61 feet; height from floor to pitch of open-timbered roof 39 feet. The chancel—in length, 32 feet—in width, 21 feet—is elevated one step above the nave, and on each side are the chancel stalls, formed of stained wood, with benches surmounted by carved angels; the back bench on each side being crowned with a group of angelic figures, executed in stone. The tower, containing one bell, is 40 feet high, and from it springs a broached spire 50 feet in height, to the summit of the cross. The church is fitted up for 400 persons, mostly free. The internal arrangements are very simple. All the seats are open, and formed of polish-stained wood. On either side of the chancel are six stained windows, three being memorials erected by the widow of the late Rev. P. T. Strong, thirty-two years rector of the parish, but the donor of the remaining three is unknown. Miss Strong has also contributed a stone baptismal font, erected by Mr. Crisp, of this town. The former rector, the Rev. A. Æ. Julius, presented a stained-glass window for the eastern end of the church. It consists of five compartments, the centre containing a figure of our Saviour, to whom on the right and left the Law and the Prophets do homage, and the remainder is filled up with incidents illustrative of the ministry of angels. The necessity for the erection of a new edifice had long been felt in this parish, the old church being in a most dilapidated condition; and when this matter was brought under the notice of Earl de Grey, the patron, his lordship most liberally offered to provide a site for the erection, and to contribute 500*l.* towards the requisite funds. This formed the nucleus of the subscription. Upwards of 2,000*l.* were accumulated, and in the early part of last year the building was commenced.

Treswell.—The reopening of the parish church of Treswell, near Retford, took place on Tuesday in week before last. This church, which is dedicated to St. John the Baptist, has been undergoing restoration, and is now completed. The tower remains in a bad state of repair. The interior of the church is furnished with about forty benches, capable of holding 200 people. There was originally a mixture of style of windows, but the Early Decorated has been fully carried out in the restoration of the church. The whole has been new roofed; and the old brick porch has been replaced by one of stone of Perpendicular character. Mr. A. Wilson, of Peterborough, was the architect, and Mr. Lees, of Retford, the contractor, for the restoration.

Tiptree.—The Tiptree Church Committee opened the following tenders on Monday week:—

B. Wells	£1,897
Cubitt	1,996
W. Higgs	2,112
Wilson	2,269
R. Banham	2,270
Gardener	2,287
Battesbury	2,367
Scarborough	2,436
G. Day	2,468
Cooper	2,511
Wardle and Baker	2,630

The tender of Mr. Wells, of Bermondsey, was accepted. The church is to be roofed in about October, and completed before the last day of June, 1856. Mr. Christian is the architect.

Braintree.—An attempt is now being made to obtain a fund by voluntary contributions, wherewith to restore the parish church here. The estimated expense will be 4,000*l.* The patron, Mr. R. Lindsay, has subscribed 100*l.*

Romsey.—The contracts for the construction of the nave of the Abbey Church have been taken by Messrs. Gover, of Winchester, and R. Huder, of Romsey.

Weymouth.—The foundation-stone of the chapels belonging to the cemetery here was laid on Wednesday week.

Birmingham.—The foundation-stone of the new church of St. Matthias, in the parish of St. George, at the junction of Wheeler-street and Farm-street, was laid on Wednesday week. The contractor is Mr. James Wilson, of Handsworth. The estimated cost of the building, with endowment, &c. was 6,430*l.* The plan of the church is rectangular, and it consists of nave, aisles, chancel, north and south chapels, with sacristy. It will accommodate 1,151 adults, 741 free. The style is Middle Pointed, with clerestory. It is to be constructed of brick, with Bath stone dressings, from the design of Mr. J. L. Pedley, of Birmingham, architect.

Smethwick.—The foundation of the new Wesleyan Chapel, Smethwick, was laid on Monday in week before last, by Alderman Ratcliff, of Edgbaston. The building is designed in the Italian style, to be of brickwork, with stone and Portland cement dressings. The gallery is constructed at one end; the other end recessed for the orchestra. The accommodation is for 960 sittings, 350 free. Mr. G. B. Nicholls, of Westbromwich, is the architect, and Mr. J. Hanley, of Smethwick, the contractor for the whole of the works. The total cost of the erection will be about 2,500*l.*

Liverpool.—The Hanover Independent Chapel, at the corner of Warwick and Mill-streets, Toxteth-park, was destroyed by fire on Friday last. The building was in course of repainting and repairing; and a plumber who was repairing a gas-pipe immediately under the organ, in order to test the soundness of the pipe, turned on the gas at the meter, applying a light at same time to the pipe, when an explosion underneath the organ took place, and the flame ignited the woodwork in proximity to it. The dryness of the wood caused the flame to spread rapidly, and, instead of turning off the gas at the meter, the plumber tried to extinguish the flame itself, but finding his efforts unavailing, he gave the alarm, but the whole building was gutted by the fire, the outside walls alone remaining standing. The loss is estimated at 800*l.* to 1,000*l.* but the building is said to be insured for 1,500*l.*

Hartlepool.—The repairs of Greatham Church have been contracted for by Mr. M. Proud, of Stranton, and were commenced week before last. The amount of Mr. Proud's tender is said to have been 500*l.*

Hull.—The organ of Holy Trinity Church here has been restored by Messrs. Forster and Andrews, of this town. The instrument, indeed, appears to be mostly new, although all the old pipes that were not really past restoration have been retained and carefully restored, and the new pipes "voiced" to correspond in tone.

PROVINCIAL NEWS.

Norwich.—The new workhouse question remains very much *in statu quo*. The guardians have re-affirmed that a new house is necessary, and nothing more.——The new building for the Free Library is rapidly progressing, and will be finished, probably, according to contract, in October. A meeting of the committee was held last week, and a proposal considered for raising the building a story higher, in order to afford accommodation for the School of Art. The surveyor submitted a plan and estimate, showing that this could easily be accomplished for a comparatively small expenditure.

Chelmsford.—A trial of the waterworks connected with the Chelmsford Board of Health has been made, to ascertain the nature of the supply in the event of a fire occurring in this town. A stand pipe was affixed to two of the fire-plugs near the Shire-hall, and hose being attached to one, a stream was thrown up higher than that building; and a trial of two jets playing at the same time showed but little diminution in the height and force.

Kempston.—The completion of the new school at Upend, in this parish, with residence for a mistress, at the cost of upwards of 900*l.* was celebrated, on Wednesday before last, by an entertainment given in the old National School-room by Mr. Talbot Barnard, of the Hoo, to the contractor, Mr. John Conquest, and the workmen employed in its erection, to the number of forty. The plans were by Mr. Horsford, of Bedford. The village bells rang throughout the evening.

Dudley.—The Bill for the construction of the new Dudley tunnel on the Old Birmingham Canal Company's line, recently passed through the House of Commons. The tunnel is to commence near Dudley Fort, and be carried under the Rowley Hills nearly to Tividale. The expense of construction will amount to about 230,000*l.* including a double towing-path. The length of the tunnel will be 2,567 yards, and its width 28 feet.

Taunton.—The foundation-stone of the new Assize Court, at Taunton, will shortly be laid by Lord Portman.

Birmingham.—The decoration of the Town-hall, under the superintendence and from the designs of Mr. Ingram, is in progress. The ceiling is now covered with a series of designs in accordance with the architecture of the Hall. On the ribs of the ceiling arabesques are already painted, and the gilding of the cornice has made considerable progress.

Coventry.—The new schools for St. Michael's parish were opened on 31st ult. by the Bishop of Worcester.

Lichfield.—The foundation-stone of new parochial schools at Alrewas, was laid by Mrs. Levett, of Wichnor Lodge, on 29th ult. Mr. Christian is the architect, and Mr. T. Andrews, of Barton, the builder.

Liverpool.—The new borough jail at Walton is nearly completed. It comprises all the modern improvements, and no expense has been spared to render it complete in all its departments. "Viewed from Walton," says the local *Times*, in describing its general appearance, "the gaol has the appearance of a strong and powerful fortress, begirt with lofty walls, loop-holed towers, and commanding turrets, surmounted by a flagstaff." Approaching by the new street, on the east and west sides of the entrance, are two mansions, the governor's and the chaplain's, each approached by flights of steps, with ornamental gardens around; the boundary wall being depressed so as to place the houses on the exterior of the prison. This arrangement gives an improved aspect to the entrance. Between these houses is the central entrance, in the Norman style of architecture.—Here is lodged the deputy-governor, whose residence is built of red brick and Bath stone, and flanked with massive castellated towers. The Bath stone, however, according to the paper just quoted, does not give good promise of a lasting reputation in these northern climes. The base is of red sandstone, from Runcorn, which material is also used in the main structure. The entrance is spanned by a Norman archway, leading to a courtyard and groined vestibule. The corridors of the prison are commanded from central halls, in four directions. These corridors diverge from one another at right angles, are open from the floor to the roof, lighted by skylights, and bay windows terminate the extremities of the corridors. The junction corridor runs the entire length of the building, from east to west, and from it branch off nine wings, as well as the debtors' two divisions: in the centre, however, are doors to separate the males from the females. Flights of stairs at the ends, of iron and slate, and circular stairs, of the same material, in the central-halls, communicate with three tiers of galleries running round the interior, and communicating with the cells, a fourth gallery reaching the cisterns and other appliances for sanitary purposes, above. The central halls are two in number,—the east and the west: they are covered with lantern-lights of iron and rough plate-glass. A balustrade of iron encircles the galleries on either side of the corridors, along which food for the prisoners is conveyed to the respective cells, having previously been hoisted on trays from the kitchen in the basement. Each gallery possesses a traversing railway, working on the balustrades, and, in addition, is furnished with bell and tube for instantly communicating with the kitchen. At the angles of the central-halls are the officers' day-rooms, where, by stepping

outside the door, they can command the whole of their department, almost at a glance. The corridors are lighted at night by gas sunlights, placed in the ceiling, one in each corridor. The flooring is laid with blue Caithness flags, and the ceiling, where skylights do not intervene, is varnished, and the woodwork displayed. Binding arches, placed in the roof at intervals, add strength to the building, and support the extraction shafts for carrying off foul air. The margins of the doors are of a deep red; the floors laid with slates; the arched brick ceiling whitewashed; the walls of stone-colour. The dimensions of the cells are 13 feet 7 inches by 10 feet high. The cells, with their gong wires and indicators, and their various conveniences, are more like studios than felons' prisons. The cells in the debtors' wings are dismal and cheerless in comparison, these being, it seems, an afterthought. The visiting stalls for felons are strongly-barred cages, friends and relatives communicating across a passage 3 or 4 feet wide, which an officer meantime perambulates. The separate system prevails throughout the entire establishment. The chapel is in the centre of the main building, and at the back of the grand entrance. The Norman style has been carried out in the decoration, which is very plain. The four angles of the prison are flanked by towers, tenanted by warders, and the whole is encircled by two walls, the inner 18 feet high, and the outer 7 feet. Ventilation is effected by immense air shafts, which surmount the summit of the building and communicate with the flues. The cells are warmed and made comfortable in winter by hot air. The locks, gates, hinges, and other appliances, of that class, have been furnished by Mr. C. Smith, jun. of Birmingham; the brickwork, masonry, and joinery, by Messrs. Furniss and Kilpin; the plumbing by Messrs. Knight and Son; the carpenters' work, by Mr. Burroughs; ironwork, by Messrs. Pearson and Co.; gas, by the United Gas Company; and some of the lamp-posts by Mr. Rankin; the clockwork, by Mr. Condliff; and the cooking and heating apparatus, by Mr. Haden, of Trowbridge. —— The estimated cost of the proposed great Landing Stage, the largest of the kind ever erected, will be from 110,000*l.* to 115,000*l.* The area of deck space, according to the local *Journal*, will amount to nearly two acres, affording room for the erection of light buildings of wood and corrugated iron, to any extent that may be required. It is to be moored in the river opposite the Prince's Pier, and will be 1,000 feet long by 82 feet wide, supported chiefly by pontoons.

Preston.—The market-place and new town-hall building committee report to the council that "the following may be considered an estimate of the probable cost of the buildings:—

Mr. Armstead's tender	£11,715
Iron-work for fire-proof portion of building	1,100
Warming and ventilating	130
Iron shutters	491
Grates, gas-pipes, and other fixtures and contingencies, as stated by Mr. Hill, say	1,200
Architect's charges, say	800
Clerk of the Works, say	100
Total	£15,536."

CASH ADVANCES FOR THE POOR.

SOME years ago a correspondence on this subject appeared in your columns in which I had the honour to bear a part. I observe that the subject is re-opened, apparently by the same writer as on the former occasion. * * * In this country the *Mont de Piété* system is an impossibility, for every man of business knows that the red tape and routine of a Government establishment can never successfully stand its ground against private enterprise. For the service of the public such institutions are peculiarly inefficient: departments are multiplied, and the system of check and counter-check carried to such an extent, that the time of the pawner is occupied to a degree exceeding by four or five times the space occupied in pledging and redeeming an article in London,—and time is money. Besides this, its charges, although apparently lower, are in practice higher than the English rate. The writer of "Cash Advances" evidently does not observe the distinction between per cent. *per annum* and per cent. upon the sum lent, yet between the two there is a very important difference. As most of his figures are mis-stated, I will here describe what the charges of the London pawnbrokers and of the Paris *Monts de Piété* really are. By the 39 & 40 Geo. 3, c. 99, the English pawnbroker is, under a very heavy penalty, limited to the following rate of profit upon his loans:—Not exceeding 2*l.* 2s. it is 20 per cent. per annum, or 4d. per pound per month: above 2*l.* 2s. and not exceeding 10*l.* it is 15 per cent. or 3d. per pound per month. Beyond 10*l.* the severe restrictions of the Pawnbrokers' Act do not apply;—one reason why, "the merchant and trader can obtain money at 5 or even at 3½ per cent." The charges of the *Monts de Piété* are not what is stated in your paper of the 19th ult. but 9 per cent. per annum (nearly 2d. per pound per month), while the commissioner's fees are three per cent. upon the sum advanced, without regard to the duration of the loan. In order to understand the working of the two systems, it must be borne in mind that a very large majority of the pledges in London are redeemed within the first month, and not more than 15 per cent. remain over the fourth month. The following are the charges:—

	One Month.	One Year.
LONDON.—A loan of 4*l.* Interest at 15 per cent. ...	s. d. 1 0	s. d. 12 0
Ticket money	0 2	0 2
	1 2	12 2
PARIS.—A loan of 100 fr. (4*l.*)	fr. c.	fr. c.
Interest at 9 per cent....	0 75	9 0
Commission fees	3 0	3 0
	3 75	12 0

	0 11½ (about 1½d.)	0 36 (3½d.)

From this it will be seen that while there is a saving on the French system in transactions for long dates; upon the short periods, which form the bulk of the English trade, the *Mont de Piété* charges much more than the pawnbroker.

There is another point upon which the writer of "Cash Advances" does not give a perfectly correct statement; that is, in describing the pledge as "redeemable at twelve months, *then to become forfeit.*" Now the pawner is entitled to an additional three months' grace if he chooses to demand it, while in the case of pledges for more than 10s. the pawnbroker is bound to sell them by public auction, duly advertised, and to keep a record of the result; the pledger being entitled at any time within three years to claim whatever surplus may have been realized beyond the amount of the loan and interest. The reason why this rule is not applied to pledges of lower value is this, that it does not answer to sell pledges of such small worth by public auction, and the enforcement of the rule would only have the effect of preventing small loans altogether.

With respect to the storage of furniture, to which the writer alludes towards the close of the article, I can assure him that there are very few pawnbrokers in London who will take in furniture at all, unless of a very costly description; and this because the rate of interest which the law allows them is *less* than the value of warehouse-room. Suppose a chest of drawers pawned for 1*l.* the interest would be 4d. per month, less than 1d. per week; and who would *warehouse* it at that rate?

So far from the rate of interest allowed by the Pawnbrokers' Act upon small loans being exorbitant, the reverse is the case. The working cost of every pledge received by a London pawnbroker averages about 1½d. to 2d. The Irish *Monts de Piété* found their average expense per pledge nearly 4d.; and as their trade lay in goods of a low value—their loans averaging only 3s. 3½d. per pledge—they were ruined by the excess of their expenditure over their income, although charging interest at 25 per cent. per annum (their expenses being 30 per cent.). In the Paris *Monts de Piété*, the expenditure—including interest upon a portion of its capital borrowed at 3½ per cent. —is about 9d. per pledge. Now the English Act restricts the pawnbroker to a charge of only 0½d. for loans of 2s. 6d. and under, if redeemed (as most of them are) within the first month. The natural effect of this limitation is, that the pawnbrokers, to a great extent, decline the business of small loans, which philanthropists deem so profitable, but which experience proves to be ruinous. Let us now glance at the result.

The poor must have money: if the pawnbroker refuses an advance, they will obtain it elsewhere. In London and the great manufacturing towns there is a swarm of shops—generally marine-stores, or chandlers',—wherein an illicit system of pawnbroking is practised. They are called "dolly-shops," "leaving-shops," &c. and their system of trade is this:—they profess to *buy* the article which it is sought to pledge, upon the understanding that they will *resell* it to the original owner within a certain time—ordinarily one month—and at an increase of price equal to the profit that it is desired to make. The details of this bargain are tacitly understood: no ticket or acknowledgment is given; and pains are taken to render the transaction as distinct as possible from pawnbroking, in order to avoid coming under the regulations of the Pawnbrokers' Act. In practice the system amounts to this, that money is advanced to the poor, under pretence of a fictitious sale and resale, at the rate of one penny *per week* for each shilling; and this without any security that the dealer will fulfil the implied contract of resale at all. In London, Glasgow, and other towns, this illicit traffic exceeds in number—though of course not in value—the operations of legitimate pawnbroking, and the law is practically powerless to interfere, for it cannot restrict the right of buying and selling. It is a remarkable fact that these illicit pawnshops are unknown in Ireland, the reason being, that there, in addition to the interest, the pawnbroker is allowed "ticket money" upon small pledges, while in England and Scotland he is not allowed any fee of this kind, unless the loan is of 5s. and upwards.

I believe the only remedy for these very crying evils would be the abolition of the restriction on the pawnbroker's rate of interest, which, like all laws against usury, are only productive of disaster to those whom they were intended to benefit. The English pawnbrokers would be very glad to receive small pawns upon the terms allowed to their Irish brethren, but the law does not allow this; and as a consequence we have the "dolly-shop," charging at the rate of 400 per cent. per annum on transactions which the pawnbroker would be happy to execute at 40. The reason of this is obvious: as a large capitalist employing from 4,000*l.* to 10,000*l.* he would be satisfied with a smaller profit than the dollyman, who has to live and keep a house over his head upon the profits realized on a capital of 50*l.* or 100*l.*

BARDI.

FALL OF ARCHES, LAMBETH WATER-WORKS.

AT the inquest on the bodies of the unfortunate men who lost their lives by the fall of twelve arches at the Lambeth Waterworks, Brixton (p. 263, *ante*), Samuel Burgess, a carpenter, said he saw the whole of the arches go down in a mass, and the men go down with them. He first saw the concrete in the spandrill move up 2 or 3 inches, and then the arch fell, and the others followed. Some of the centres had been struck, and some had been eased in the twelve arches that fell. The concrete had been placed between each spandrill. To the best of his knowledge, no one was doing anything in removing the centres when the arches fell. The width of each arch was about 18 feet between the walls. They were 4 feet wide from the spring, and from 16 to 17 feet in the centre. The centres had been eased last Saturday, after the concrete had been put in, and removed on Monday. The labourers were putting clay on the top of the arches to protect them, and prevent the water from penetrating. The materials were good. The arches were 9 inches thick.

Mr. James Simpson said, that he was the engineer to the Lambeth Water Company, and had been so for many years. The works were at Ditton, but the company had reservoirs at Brixton for the reception of water. In consequence of the Act of Parliament the company are compelled to cover the reservoirs over. For that purpose he was consulted, and a variety of plans were laid before the company, but nothing seemed so desirable as bricked arches. Witness prepared a plan and specification, and it was agreed that the works should be carried out by Messrs. Locke and Nesham. The area of water is nearly three acres, comprised in four compartments. To carry out the covering, walls were to be erected across the reservoirs, and arches sprung over the tops, at the height of 16 feet in the middle of the reservoir, and 14 at the side. He had from time to time inspected the works as they were progressing, and he was quite satisfied with them. He considered the works were sufficiently strong for the arches. He had had great experience in water-works for different companies. He had had formed two reservoirs in Cambridge, covered over in the same way, and another at Malvern.

By the Coroner.—I cannot form any opinion as to what gave rise to the fall. The reservoirs had been built many years, and were cut out of the solid clay.

None of the witnesses examined could offer any explanation of the cause of the occurrence.

The verdict was,—"That the deceased persons were accidentally killed by the fall of certain arches at the Brixton reservoirs of the Lambeth Water-works, and the jury are of opinion that the cause of the fall of the arches arose from the fact of the centres being

removed before the wheeling and placing the earth had been completed, and we (the jury) would suggest that a half-brick course more of brickwork should in future be used in the formation of the arches."

COMPETITIONS.

The Meadows, Edinburgh.—The first prize, 50*l.* has been awarded to the design of Mr. Thomas Davies, of that city, for laying out the meadows as a public park, and the Police Commissioners have approved of the report by the joint committee recommending the adoption of the general features of that design. A reduced copy of the plan has been published by its author.

Dudley Workhouse. — We have received seven letters on this subject, condemning the course pursued by the guardians, and asserting, unhesitatingly, that the plans of some of the competitors were voted for by name, although supposed to be anonymous.

Newcastle Cemeteries.—The competition for the third of the cemeteries proposed, that for the parish of St. Andrew and Jesmond, has been decided in favour of Messrs. Middleton and Pritchett, of Darlington.

Bridport.—The Burial Board have accepted the designs of Mr. H. Hall for the cemetery, chapels, and lodge, and have awarded the second premium to Mr. Boyce, of Tiverton.

Sherborne.—The plans of Mr. H. Hall, we are told, have been accepted for the National Schools here. The competition was in this case confined to a limited number.

Peterborough.—It is said with reference to the proposed new church here, that 106 architects had applied for the particulars!

Soham Cemetery.—In response to the advertisement issued by the Burial-board, thirteen designs were sent in, and the Board selected one by a London architect, at a restricted outlay of 950*l.* The builder's tender, however, amounts to 1,852*l.* One of the designs exhibited quite a new feature in architectural arrangement, and, to a certain extent, appropriate, the windows and doors throughout being coffin shaped, and the spire formed of skeleton persiatides in acrobatic position, the vane representing a ten-pound note, the liberal premium offered by the Board to the successful candidate! "ANIMO NON ASTUTIA."

Miscellanea.

ROMAN CATHOLIC SCHOOLS IN LIVERPOOL.—The report for 1854, by a Government inspector, on Roman Catholic schools in the north-western division of England, appended to the minutes of the Committee of Council on Education, just issued, contains some interesting information on the present condition of the schools of that kind under inspection in Liverpool. Among the new schools, those of Holy Cross, and St. Thomas and St. William, are said to be fine and even costly buildings, spacious in extent, and constructed with the best materials. But, with regard to plan and organization, they cannot, in the opinion of the inspector, be considered as proper models for schools of the largest class. "Indeed, it would appear," he says, "that architects, if they would not force the promoters of schools into an abandonment of the Gothic style, must prove its suitability by an exercise of greater ingenuity than they have yet displayed, and must conceive of a school some more exact idea than that of a church with one or two floors introduced into it. A better model," he adds, "will be afforded by the Liverpool St. Francis Schools, now completed; but I consider that even in this case the omission of class-rooms renders the plan imperfect."

NORMAN FONT IN NEWENDEN CHURCH, KENT.—The picturesque but dilapidated little church of Newenden, with its village of half a dozen cottages, a toll-bar, and the never-failing alehouse, stands, half hidden in a hollow, scarce a stone's throw from the Rother, which divides alike the parish of Newenden and the county of Kent from Sussex. Curtailed of its chancel and the spire of its tower, some century and a half ago, it presents little worthy of notice. It has, however, a font, the relic of a more ancient church than the one it now stands in, which will repay the traveller for his visit. It is of the Norman period, raised on three steps, and has some characteristic sculptures on the four sides of the upper part.—G. C.

THAMES TUNNEL.—In the week ending 2nd of June, 23,269 passengers passed through, and paid 96*l.* 19s. 1d.

SCHOOLS, HACKNEY.—Schools are about to be erected for the Committee of the New Gravel Pit Chapel, Hackney. The tenders delivered showed a strange difference. They were as follows:—

Fox (Hackney)	£700	0	0
Lwrence (London).....	642	0	0
Harwood (Hackney) accepted...	438	10	0

TRADE MUSEUM AT SOCIETY OF ARTS.—An interesting selection of Samples of Animal Produce and Manufactures is now exhibiting in the Model-room of the Society of Arts. It is designed as the commencement of a general Trade Museum, or collection in illustration of the productions, industrial resources, manufactures and commerce of all countries, and comprises—1. Wool Series; 2. Silk Series (including the silk-worm and its economy; the wild silk-worms of India, allied moths, cocoons, manufacture of waste silk — silk-hat making); 3. Skin Series; 4. Horn and Bone Series; 5. Fur Series; 6. Bristle Series; 7. Feather Series; 8. Horsehair Series; 9. Lac Series; 10. Wax Series; 11. Oil Series; 12. Shell Series; and 13. Refuse Matters, derived from the previously illustrated arts, and showing the uses to which they are applied.

CHURCH BELL-HANGING.—Messrs. Hooper, of Boston, U.S. write touching an article in a recent number of the *Builder*, on some alterations in bells and bell-machinery, as follows:—It is a great while since the bell-founders of England have made improvements in bells, or mode of suspending them: hence it is gratifying to learn that their ingenuity is now exercised to overcome some of their clumsy contrivances in this branch of mechanics. Over twenty years ago our firm introduced a change in the style of suspending bells, and at that time adopted substantially the same method as that alluded to in the *Builder*. We did not think it expedient to construct the apparatus, in ordinary cases, so as to admit the clapper to strike the sounding bow of the bell at different points, although we made a bell for the City of New York, some years since, which weighed eleven tons, and was suspended so as to produce that result. We enclose a rude cut of a bell and hanging apparatus, which conveys some idea of the method adopted by us. The yoke is of cast iron, fitted with wrought iron gudgeons cast into the yoke, and accurately turned. The yoke is fitted to the bell crown with flat surface, and securely bolted through. Our firm invariably fit relieving springs, which remove the clapper from the sounding-bow of the bell when inverted, thus leaving it free to vibrate while at the set."

A "STEAM HORSE," CARRYING ITS OWN RAILWAY.—Messrs. Boydell and Glazier, of Camden Works, Camden-town, have been exhibiting their "Steam horse" performing various feats of strength. "On Saturday," says the *Morning Chronicle*, "we saw it draw, on a very rough and uneven road, eight tons of fire-brick with ease." The engine is a seven-horse common portable one reversed, the wheels being furnished with Boydell's "endless railway." On one of the last wheels, 6 feet high, a driving-wheel 5 feet in diameter is fixed, into which a small pinion on the end of the fly-wheel crank-shaft works, while the "endless railway" prevents the wheels either from slipping or sinking in soft ground. The fore-wheels are steered by means of a pole with wheel, chain, and pulleys, the same as a steam-boat; and a man at this wheel has entire control over the engine, turning, without the tender, in the narrow circle of 40 feet in diameter. At Carlisle, Mr. Boydell, the patentee, proposes showing its capability of drawing or working ploughs, diggers, grubbers, wagons, thrashing machines, &c.

APPOINTMENT OF SUPERINTENDENT OF STREETS AND BUILDINGS AT EDINBURGH.—In accordance with an intention which we have already noted, the Edinburgh Police Commission, at a recent meeting, elected a superintendent of streets and buildings, for which office there were twenty-three candidates. The following names were formally proposed by members of the Commission;—Mr. W. A. Jardine; Mr. C. M'Pherson, of Egremont, Cheshire; Mr. J. T. Thomson, Berwick; Mr. T. Knox, Holyrood, and Mr. R. Kirkwood, Edinburgh. No other candidates having been proposed, the vote was taken. Mr. Thomson and Mr. Kirkwood had the fewest votes at the first division, their numbers being four each. The latter was struck off the roll. The next vote excluded Mr. Thomson, and the third Mr. Jardine. The final division was betwixt Mr. M'Pherson and Mr. Knox, when seventeen members voted for Mr. M'Pherson, and fourteen for Mr. Knox.

ROYAL INSTITUTE OF BRITISH ARCHITECTS.—The closing meeting of the session will take place on Monday evening, the 18th instant, when a paper by Mr. G. R. Burnell, C.E. will be read, entitled "Practical Observations on Pile Foundations." Mr. Tite, M.P. will take the chair as Vice-president, and bring the proceedings of the present session to a close.

MR. TITE, THE ARCHITECT OF THE ROYAL EXCHANGE.—Our readers will have seen, many of them with great satisfaction, that Mr. Tite has been returned to serve in Parliament for Bath, and has taken his seat. With great determination and courage, a clear head, and large information, he is well adapted for the honourable position which he has attained. Good health to him!

ELECTRO-TELEGRAPHIC PROGRESS.—The following account of the successful inauguration of Chevalier Bonelli's invention — the locomotive telegraph — has been received from Piedmont:—"The inauguration of the electric telegraph, acting between engines in motion, took place on May 24, between Turin and Montcalieri, in the presence of the ambassadors of France and England. A long and animated conversation was held between two locomotives going at full speed, and also between these locomotives and the telegraph-office."——Lord Palmerston, to show the uselessness of employing spies in an age of telegraphs and newspapers, said lately in the House of Commons, that he believed every column of the *Times* was reprinted at St. Petersburgh, by means of the electric telegraph, within twelve hours of the time when it appears in London.

LECTURE ON ART AT WREXHAM.—On Thursday evening before last, Mr. Davidson, head master of the Government School of Art in Chester, gave a lecture at Wrexham, on the History of Ornamental Art in connection with Drawing, preparatory to establishing a School of Art in that town. The lecture was respectably attended, and was listened to throughout with the most marked attention. In the course of his lecture Mr. Davidson said,—Let a workman be taught to understand that building is not simply piling stones, bricks, and timber on each other: let him understand the principles of construction, give him a knowledge of practical geometry, and he will become interested in the proportion which one part bears to another. Give him a knowledge of perspective, and he will enter with a much greater degree of intelligence into the forms of the building he is engaged upon. Give him a knowledge of colour, and I feel convinced that not only will the interior and exterior of our buildings improve architecturally, but the spirit of the beautiful will shed her lovely influence over the dress, deportment, and manner of the artizan. Raise the workman's intellectual position, and he will soon work with you in his own elevation. The lecturer then proceeded with the history of Ornamental Art, dividing the subject into ancient, middle age, and modern—explained the characteristics of the various styles, illustrating each by drawings; and, in conclusion, said,—As in a literary point of view, every one can be taught to write his thoughts in a manner sufficiently plain to be understood, and also to read and understand the writing of others, so I have found that every one can be taught to express his ideas by drawing in an intelligible manner, and to understand a drawing when placed before him; and experience has shown me that the first manual difficulty once overcome, the cords which, as it were, bound the fingers, severed, the mind flows forth in a manner truly surprising—and each success, however small, nerves the industrious student to future trials, each to be crowned with similar victories. Let no one say drawing is unnecessary to him or to his children, because people have until now done without it. Unfortunately, the people of this country have done without it too long by far, until they have been often called "a people without taste."

CLERKENWELL POLICE-COURT: GREENHOUSES.—What is there to prevent (as the building is decided by the police magistrate not to be within the jurisdiction of the district surveyor,—in other words, not amenable to the rules and regulations of the Buildings' Act),—what is there, I beg to ask, to prevent the builder next week boarding over the whole of this building,—making a wooden erection of it? The decision of the magistrate is so manifestly absurd, and against the law, as to render comment superfluous, and affords one more practical illustration of the folly of asking police magistrates to decide on building matters,—or matters involving a certain amount of professional knowledge as a *sine qud non* for their proper jurisdiction.—SPES.

IMPROVEMENTS ON THE BLACKWALL RAILWAY.—The extensive improvements on the Blackwall line are progressing towards completion. At the Stepney station, the carriage-way has been enlarged. The whole of the railway arches, from Crutched Friars, Minories, to the station at Limehouse, and from thence to the extent of the line, will be widened. These improvements will cost the company about 100,000*l.*

AN ARCHÆOLOGICAL CURIOSITY.—On the farm of Knockiebay, in Galloway, there is to be seen a ponderous stone block, with these words cut out on its upper side:—

"Lift me up, and I'll tell you more."

Obeying the enticing injunction, strangers and simple people, unsuspicious of practical jokes in archæology, have, at various periods, exerted their strength with the view of revealing the hidden mystery, when they find a cooler to their stimulated curiosity and their accelerated circulation, in the dry request to—

"Lay me down as I was before."

THE METROPOLITAN COMMISSION OF SEWERS.—A return moved for by Mr. Williams, M.P. shows that the gross total amount of rates levied by the Metropolitan Commissioners of Sewers in the several parishes of the borough of Lambeth, from 1848 to 1854, both inclusive, was 91,368*l.* making, together with loans, contributions, and other receipts, a gross total receipt of 152,844*l.* in the seven years. Of the rates levied, 50,238*l.* were collected in St. Mary's, Lambeth; 20,373*l.* in St. Giles's, Camberwell; and 20,755*l.* in St. Mary's, Newington. The grand total expenditure in the seven years amounted to 129,372*l.* of which 43,366*l.* was appropriated to the cost of new works executed; 4,230*l.* to repairs; 20,907*l.* to cleansing; 4,440*l.* to surveys; 20,253*l.* to management, including local supervision; and 31,351*l.* to the repayment of loans and interest. In the seven years already mentioned, 72,283*l.* were expended in St. Mary's, Lambeth; 27,595*l.* in St. Giles's Camberwell; and 29,493*l.* in St. Mary's, Newington. In 1854 the total receipts in St. Mary's, Lambeth, were 35,692*l.* and the expenditure 26,754*l.*: in St. Giles's, Camberwell, the receipts amounted to 12,854*l.* and the expenditure to 8,827*l.*; and in St. Mary's, Newington, the receipts amounted to 13,065*l.* and the expenditure to 11,000*l.* The rates varied from 3d. to 8d. in the pound.

LOW LEVEL STATION AT WOLVERHAMPTON.—This structure is now approaching completion. It has been built at the joint expense of the Great Western, Oxford, Worcester and Wolverhampton, and Shrewsbury and Birmingham Railway Companies; but since the amalgamation of the latter with the Great Western, this company possesses two-thirds of the station. The design is the joint production of the three engineers of these companies; Mr. Brunel, who we believe designed the roof; Mr. Fowler, engineer of the Oxford and Worcester line, who is understood to have designed the station buildings; and Mr. Robertson, engineer of the Shrewsbury and Birmingham Railway. The range of buildings is 380 feet in length, and consists, in its front elevation, of a central block projecting towards the front, in which is the vestibule for booking,—a hall, 45 feet by 36 feet, and 32 feet in height, lighted both by side windows and a skylight,—and the booking offices on each side, by means of which passengers may book for different trains at four distinct places. On the south side of this central block are the second and third-class waiting room, 36 feet long by 22 feet broad,—an arched gateway for exit, the kitchen, first-class refreshment-room, ladies' waiting-rooms, offices, &c. Another block of building projects to a less extent than the centre one at each end. On the north side of the booking offices are inspectors' office, telegraph and station masters' offices, arched gateway for exit, parcel office and cloak-room, lamp-rooms, porters' rooms, &c. The building is of blue Tipton brick, with stone dressings for entrances, windows quoins, &c. The contractor for the station is Mr. Jerram, of Leicester.

MR. MONTI'S LECTURES ON SCULPTURE.—The course was commenced on the 30th ult. Mr. Monti pointed out at starting that the aim of the lectures was to further a just appreciation of the works of sculpture by the internal evidence presented by the works themselves. To do this efficiently, it was necessary to discard,—First, the idea that sculpture is only the result of an instinct for imitation, and a desire to produce decoration and pleasure: these are only the means by which sculpture is made to exist,—Secondly, the standard of *beauty*, taken in a literal sense, applied indiscriminately to judge of art: rather have the standard of *truth*, as leading to a more just result;—Thirdly, the prevalent habit of applying in the judgment of works of different ages and nations the same and only standard of individual sympathy or predilection: being the expression of different conditions, every one of them must be judged according to those conditions that have originated them. Egyptian and Assyrian art were discussed. The second lecture treated in a very interesting manner of the Indian, Mexican, and Pelasgian-Greek sculptures, and was well illustrated by drawings.

NEW DISTRICT SURVEYORS.—On the 31st ult. Mr. John Turner was elected surveyor for the district of East Islington; and Mr. Charles Fowler, jun. surveyor for the district of Bloomsbury and St. Giles.

ILLUMINATING GAS FROM PEAT.—Messrs. Campbell, of Mary-street, Dublin, says the local *Express*, have been for some time past engaged in solving a very important problem as regards this country—the production of illuminating gas from peat: the difficulties are at length surmounted, and a quality of gas can be produced which will burn with sufficient brilliancy for all useful purposes: with half a pound of ordinary turf peat about a cubic foot of gas was made in the space of a few seconds, while all the ordinary deposits remained, such as charcoal, gas tar, &c.

PAINTINGS IN CULFORD CHURCH.—Some ancient medallions have been discovered in Culford Church, on the splays of two narrow round-headed lights in the east end, which formed the extremes of the original range, the rest of which had been removed to make way for a larger window, at which time it is supposed the extreme lights were built up. There are three medallions in each window. The chief characters seem to be, a king, a "persecutor" in dark red, a bishop in light red, and a saint in white, with the tonsure. A gridiron appears in one, with the saint laid out on it; but the whole, it is said, does not suit the story of St. Lawrence.

FIRE AT MESSRS. PENN AND SONS'.—On 1st inst. the pattern-stores of Messrs. Penn and Sons, the Government Engineers, at Deptford Pier, were destroyed by fire, the origin of which has not been ascertained. No Government work will be hindered on account of this fire, as all the business on hand for the Government is carried on at the Greenwich factory. Every one has noted the certainly "curious coincidence" of several fires having broken out of late in factories belonging to firms employed in the fabrication of war material. It is to be hoped that special watchmen will be employed to keep a constant look-out in such establishments. Had this been the case in a recent instance, it is not easy to see how it could have occurred. In the present case, however, it is imagined that "oily wipings" may have been the *spontaneous* cause of the conflagration; and the present season certainly seems to be one in which a more than ordinary tendency to such fires may be expected in London, if there be any relation of sequence in those great fires which have repeatedly occurred *after* great pestilence, as if from compensatory excess of ozone, or active oxygen, in the atmosphere, after a season of unusual deficiency; and already ozone appears to be rising into average excess, compared with its state some months since.

TO SOFTEN AND PURIFY WATER.—"An analytical chemist" recommends the following:—Mix well, 40 grains of dry oxalate of ammonia with 90 grains of peroxide of manganese, adding thereto, 350 grains of powdered charcoal. Agitate one imperial gallon of the water with one ounce of the above mixture: allow it to settle, and (after an hour or two) pour off the clear liquid. The first-named ingredient throws down all the lime present, as oxalate, which carries with it the mechanically-suspended organic matter. The oxide of manganese oxidizes and destroys the organic matter in solution, the deleterious gases from which are entirely absorbed by the charcoal. Water treated in this manner, he adds, becomes sweet, wholesome, and soft as rain-water, without the use of a filter, and even (what are called) "permanently hard" waters, can be made by this process beautifully soft, and adapted alike for lavatory or culinary uses,—economising soap in washing, and fuel and time in cooking. Last year, he states, a relation of his in the country, on changing her residence, found herself and child constantly attacked with a violent diarrhœa, the cause of which he at last traced to the impurity of the water used, and since his process has been employed (July last), nothing of the kind has been experienced.

RATEABLE VALUE, ETC. OF THE METROPOLITAN DISTRICTS.—A return moved for by Sir Benjamin Hall, M.P. shows that with a population (in 1851) of 2,363,405, and inhabited houses to the number of 306,088, the rateable value of the property assessed in the metropolitan districts to the property-tax (Schedule A) amounts to 13,462,067*l.* In the City of London the population is 127,869, inhabited houses 14,590, rateable value 1,584,351*l.* In Westminster the population is 241,611, houses 24,755, rateable value 2,420,116*l.* In Marylebone the population is 370,957, houses 40,513, rateable value to income-tax 2,510,167*l.* In Finsbury the population is 323,330, houses 37,353, rateable value 1,687,763*l.* In the Tower Hamlets the population is 539,111, houses 75,710, rateable value 1,665,429*l.* In Southwark the population is 172,863, houses 23,751, rateable value 677,826*l.* In Lambeth the population is 258,808, houses 40,317, rateable value 1,170,222*l.* In Greenwich the population is 99,365, houses 14,383, rateable value 353,609*l.* In sundry other places in Middlesex, Kent, and Surrey, not included in any city or borough, and comprising Chelsea, Kensington, Fulham, Hampstead, Clapham, Tooting, Streatham, Battersea, Putney, Charlton, Lee, Eltham, Lewisham, &c. the population in 1851 was 228,991, houses 34,714, rateable value 1,392,582*l.*

NEW CHURCH IN LAMBETH.—On 30th ult. the foundation-stone of St. Andrew's District Church, Lambeth, was laid by Admiral Lord Radstock (in the absence of the Earl of Shaftesbury). The new church, which is to be situate in Princes-street, leading out of Stamford-street, will be in the Pointed style, from designs by Mr. Teulon, and will accommodate about 1,100 persons, a large proportion free.

THE CHALON EXHIBITION, SOCIETY OF ARTS.—The Society of Arts have done so many good things that they must be pardoned one mistake: we shall, therefore, say nothing more of this "Exhibition" than to advise the council to close it at the earliest possible opportunity.

MEANS OF LOWERING SHIPS' BOATS.—Mr. C. Clifford, in a recent letter to the *Times*, draws public attention to the difficulties attending the plan of lowering ships' boats at present in use in the mercantile marine, and even in the navy, and refers to the Parliamentary report of the committee on the loss of the *Amazon* as bearing out his assertions, that the indifference of sailors to keeping their boats on board ship in a fit state for use in case of emergency, arises mainly from these difficulties. Mr. Clifford, who declares himself to be a landsman, states, that his plan, which he says has been favourably reported on by a number of nautical and scientific men, is so simple and effectual that he unhesitatingly challenges any six sailors, by the present system of blocks, tackles, and hooks, to a trial against him, single-handed, to lower and entirely free from the ship a boat laden with any freight varying in weight from 10 cwt. to four tons, either from two davits or a single yard or spar, and from any height, with the vessel going at any speed. The whole operation, he adds, is performed by one man only in the boat, who by simply paying off a rope, unlashes and frees the boat from the ship's gripes, lowers her levelly into the water, and entirely disengages her as well, whatever her weight or the number of her crew; and in such a way that it is impossible for her to cant or turn over in her descent, or for a rope to tangle or catch in its passage through the block he uses. For the sake of humanity, it is to be hoped that some opportunity will be afforded to test the efficiency of this as well as other systems that have been at different times devised for the same purpose. Government has published the necessity for some remedy for this national want: surely it is bound to take some steps to effect it without any further delay.

[ADVERTISEMENT.]

To the Editor of "The Builder."

SIR,—Numerous inquiries having been made of us daily respecting the Revolving Shutters adapted to our Premises by the Patentees, Messrs. CLARK & CO. 15, Gate-street, Lincoln's-inn-fields, we feel but too happy in having the opportunity of doing them the justice their novel and useful invention deserves. In consequence of the magnitude of our frontage, which embraces about 30 feet of Oxford-street, one entire quarter of Regent-circus, and between 40 and 50 feet of Regent-street, the process of closing with the old wooden shutters was not only a tedious, but also a very laborious task—five porters requiring forty minutes to effect that object. All this loss in time and trouble is now obviated by the above-mentioned invention,—an entire establishment being closed in every evening by one porter, in the incredibly short space of three minutes. In order to lead others to a just estimate of the superiority of this patent, it may be requisite to state that one of our shutters alone is 700 feet in superficial measurement, composed of 27,345 pieces, united by 2,900 hinges, weighing somewhat over two tons, and yet obedient to the hand of one porter! Messrs. CLARK & CO. having also executed other work for us, such as Brass Sashes, &c. &c. we feel much pleasure in recommending them: the lowness of their charges, and rigid punctuality, entitling them to the support of all those with whom durability is economy, and time saved money made. Our shutters may be seen in active revolution, nightly, at Half-past Eight o'clock.

SOWERY, TATTON, and COMPANY,
Regent-circus, Oxford-street. Linen Drapers.

ADVERTISEMENTS.

TO PARENTS AND GUARDIANS.

AN Eminent Architectural Firm, in a large manufacturing district, in one of the midland counties, have now a VACANCY in their Offices for an OUT-DOOR ARTICLED PUPIL, possessing a good address, and having a taste for drawing; to whom will be afforded peculiar opportunities and advantages.—Address to A. & B. Office of "The Builder."

A CIVIL ENGINEER, Contractor, Architect, Builder, Decorator, or Railway Locomotive Engineer having a VACANCY for an educated YOUTH, with a taste for drawing, with whom a liberal premium will be given, would be treated with immediately. No objection to the continent or the colonies.—Direct full particulars and premium to L. E. 91, Piccadilly.

TO PARENTS AND OTHERS.

A VACANCY for an APPRENTICE, in a Builder's Office.—For particulars, apply, by letter, to the Office of "The Builder."—Premium required.

LEICESTER UNION.—APPOINTMENT of SCHOOLMASTER.—The Guardians of the Poor of this Union will, at their Meeting to be holden on TUESDAY, the 26th instant, at HALF-PAST SIX o'clock in the Evening, proceed to ELECT a SCHOOLMASTER for the Workhouse of this Union, who will be required to perform the duties connected with that office, as set forth in the General Consolidated Order of the Poor-law Commissioners. Candidates must be single persons, or widowers, without incumbrance. The salary will be 40*l.* per annum, with an allowance of 8*s.* per week in lieu of rations, or such further sum as the Committee of Council on Education may direct in their certificate.—Applications and testimonials to be sent to my Office on or before THURSDAY, the 21st instant, and only those candidates who are written to for the purpose need attend on the day of election.—By order,

B. G. CHAMBERLAIN, Clerk.

Leicester, June 8th, 1855

TO SURVEYORS AND ENGINEERS.

WANTED, a Person to discharge the duties of SURVEYOR and INSPECTOR under the Gloucester Board of Health, including the management of the roads and streets, and the overlooking of the Public Sewerage Works, now nearly completed, and the superintendence of the private junction drains to be made in connection therewith, and the performance of other duties under the local Board, and also the superintendence of the existing waterworks, and the new waterworks when completed. Also to fulfil the duties of CHAMBERLAIN of the city, and generally to take charge of, and manage the corporate estates subject to the directions of the Town Council and their committees. Two surcties in 500*l.* will be required. Salary for the two offices combined, 300*l.* per annum. An assistant will be provided at the expense of the Board. Particulars as to the duties required may be had on application by letter to Mr. A. H. JENKINS, Town Clerk, or Mr. R. S. FRYER, Clerk to the Local Board of Health, Gloucester, to whose office written applications from candidates must be sent on or before the 23rd day of JULY next, under cover, addressed to "The Gloucester Board of Health," marked "Surveyor's Tender." An intimation will be given at a future time to such candidates whom the Board may desire to attend personally.

TO POTTERS.

WANTED, a thoroughly experienced and practical POTTER, to take the Management of a Pottery in the south-west of England for the manufacture of pipes, pans, and other articles of common ware. He must be well acquainted with the trade, have a thorough knowledge of clays, must be a fair accountant, and in other respects be quite competent to the entire superintendence and management of the manufactory. To such a person a liberal remuneration, with other advantages, would be given.—Address, stating age, number of years' experience in the trade, and other particulars and references, to B. & Co. Mr. Smyth, 31, Parliament-street, London.

TO JOURNEYMEN CARPENTERS.

WANTED IMMEDIATELY, FORTY GOOD HANDS.—Application to be made at the Royal Small Arms Factory, Enfield Lock.

TO ARCHITECTURAL DRAUGHTSMEN.

WANTED, a DRAUGHTSMAN, who is thoroughly conversant with exterior and interior perspective, and the preparation of working and detail drawings. Address, with references, and stating age and salary required, to O. W. S. care of Mr. Steel, News-agent, Spring-gardens, Charing-cross.

TO GLASS PAINTERS.

WANTED, a FIRST-CLASS HAND; one accustomed to figure painting; who can grow tolerably, and understands light and shade—Apply, if from the country, by letter, stating qualifications and experience; if in London, personally, at 14, Salisbury-place, Newcastl.—Room for an Apprentice; some proficiency in drawing indispensable.

WANTED, a CLERK in a Surveyor's Office, a young MAN who has been educated to the profession, and has a general knowledge of building, and the routine business. Address, with particulars, to M. care of Mr. Buck, Stationer, Mount-place, Westminster-bridge-road, Lambeth.

TO FOREMEN.

WANTED, an active and experienced MAN, to superintend about twenty men of all trades, engaged in jobbing repairs. Answers to state age, how long a similar situation has been filled, what trade by apprenticeship, and the salary expected for a permanency.—Address, S. Office of "The Builder."

TO FOREMEN OF JOINERS.

WANTED, an experienced WORKING FOREMAN. One used to Gothic work would be preferred.—Apply by letter to Q. P. Post-office, Nottingham, stating qualifications, age, and salary required, with reference.

WANTED, a STEAM-MILL SAWYER, capable of managing and working a country Saw-mills, both frame and circular bench.—Apply by letter, pre-paid, F. STIFF and CO. 64, Beggin-street, Dover.

TIMBER TRADE.

WANTED, in a Wholesale Timber-Yard, a MAN, capable of undertaking the duties of FOREMAN. None need apply but those who are well acquainted with the trade, and whose character will bear the strictest investigation.—Apply by letter, prepaid, to Box 436, Post-office, Bristol.

WANTED, an ASPHALTE SPREADER. Apply to Messrs. GOGGS, Swaffham.

TO MASTER PAINTERS, BUILDERS, &c.

WANTED, by a first-rate Painter, a permanent SITUATION as FOREMAN. Is thoroughly acquainted with the details of the trade. Can measure and abstract accurately, and can have good references for ability, &c.; or, as Grainer and Writer, specimens can be seen. No objection to the country.—Address, A. B. Z. 2, Old Gravel-lane, St. George's-street, East.

TO MANUFACTURING IRONMONGERS, BUILDERS, AND HOT-WATER APPARATUS.

WANTED, by the Advertiser, a SITUATION as FOREMAN. Has been many years used to the manufacturing of all kinds of smiths' work, and is thoroughly acquainted with every description of hot-water apparatus, bath work, gas cooking-stoves, &c.—Address to C. J. B. 49, Lee-street, Kingsland.

TO BUILDERS AND PLUMBERS.

WANTED, by a respectable Young Man, a SITUATION as a good PLUMBER, and will fill his time up in painting, if required. Good references can be given.—Address, post-paid, to A. B. 62, East-street, Marylebone, London.

TO MASTER PAINTERS AND BUILDERS.

WANTED, a constant SITUATION by a Painter. Can turn his hand to the graining. Wages not so much an object.—Apply to J. W. Office of "The Builder."

TO GLASS MANUFACTURERS.

WANTED, by a respectable Young Man, who thoroughly understands his business, a SITUATION as GLASS CUTTER, or CUTTER and GLAZIER; can also superintend the silvering department, and is capable of taking the entire management of the above branches.—Address, A. B. 21, Denbigh-terrace, Westbourne-grove West, London.

TO ARCHITECTS AND BUILDERS.

WANTED, by a Young Man (a Joiner), a SITUATION in either of the above offices. Can make out working and finished drawings; understands taking out quantities. Salary not so much an object.—Address, A. D. Post-office, High-street, Camden-town.

TO ARCHITECTS, BUILDERS, &c.

WANTED, a SITUATION as CLERK of WORKS or Foreman to a Builder or Public Contractor. Has had long experience in conducting work; is a carpenter by trade. Satisfactory reference can be given. No objection to the country.—Address, C. W. Ampton-street, Gray's-inn-road.

TO MASTER PLUMBERS AND BUILDERS.

WANTED, a SITUATION as IMPROVER to the Plumbing Business. Good references given.—Address to E. G. S. The Royal Tent, Silver-street, Regent-street.

WANTED, an ENGAGEMENT, as CLERK of the WORKS, by an experienced Person. Is quite capable of making fair and working drawings, and can produce excellent testimonials.—Apply to X. Y. Post-office, High-street, St. John's-wood.

TO SURVEYORS, BUILDERS, &c.

WANTED, by an experienced practical Man, a SITUATION in a Surveyor's or Builder's Office. He is proficient in measuring, estimating, taking out quantities, bookkeeping, drawing, superintending works, and all office duties. Partial or temporary employment would not be objected to.—Address, A. B. No. 23, Upper Cross-street, Islington.

TO ARCHITECTS, BUILDERS, AND OTHERS.

WANTED, by a respectable, persevering, married Young Man, of good abilities, possessing a thorough practical knowledge of bookkeeping by double entry, is extremely quick and correct in all calculations of measurement, &c. the management of an office, or to keep the books of an estate. Can produce satisfactory and pleasing testimonials, and has no objections to the country.—Address, O. S. Post-office, King William-street, City.

TO BUILDERS, SURVEYORS, AND OTHERS.

WANTED, a SITUATION as CLERK, by a person of experience in pricing, and the general office duties of the building trades and material firms, wharfs, &c. Terms moderate. No objection to the country, or temporary employment.—Address, L. P. Office of "The Builder."

TO BUILDERS, ARCHITECTS, &c.

THE Advertiser, a Youth, aged 17, having been accustomed to the routine of a BUILDER'S OFFICE, wishes for a SITUATION in the above line. Respectable references can be given.—Address, E. W. H. 7, South Wharf-road, Paddington.

TO ARCHITECTS AND SURVEYORS.

THE Advertiser who has just completed his Articles with an Architect and Surveyor, in the country wishes for an ENGAGEMENT in a London Office. Salary not so much a consideration as improvement. Good references will be given.—Address, B. R Office of "The Builder."

TO ARCHITECTS.

THE Advertiser, an Architect of great experience, practising in London, not having his time fully occupied, OFFERS his SERVICES in getting out Perspective Drawings, in Tinting the same, or in preparing Finished and Working Drawings, in any style. Terms moderate.—Address, P. Y. Office of "The Builder."

TO BUILDERS.

THE Advertiser is desirous of TAKING the JOINER'S WORK of one or more houses (piecework), or would act as Foreman in a small shop. Satisfactory references can be given.—Address, J. C. 3, George's-cottages, George's-place, Holloway.

PAINTER and GRAINER.—WANTED, by a Young Man, a CONSTANT SITUATION in the above line, in town or country; wages moderate.—Address to A. C. T. 5, Woodland-place, Kentish-town.

CLERK of WORKS.—An efficient Clerk of Works will be disengaged in a fortnight, and would be happy to meet with a RE-ENGAGEMENT; is conversant with Gothic details.—Address, CLERK of WORKS, Cemetery, Holbeach, Lincolnshire.

TO STATUARY AND MARBLE MASONS.

AN experienced CARVER is in want of a SITUATION. Has had long practice in monumental and chimney-piece work, arms, &c. and can give good reference.—Address, W. A. Office of "The Builder."

TO BUILDERS AND OTHERS.

A YOUNG MAN, aged 23, wants a SITUATION in a BUILDER'S OFFICE. Writes a good hand, is quick at accounts, and would make himself useful at the bench or otherwise. Can give good references.—Address, Y. Z. 10a, Charles-street, Middlesex Hospital.

A THOROUGHLY Practical Builder's Clerk is open to an ENGAGEMENT. He is an excellent draughtsman and book-keeper, and can measure and take out quantities.—Address, A. B. 24, Cathcart-street, Newcastle-upon-Tyne.

TO ARCHITECTS AND BUILDERS.

AN experienced Man, who will leave his present situation at Midsummer, wishes for a RE-ENGAGEMENT, as CLERK of WORKS, or BUILDER'S FOREMAN. Salary moderate, and good reference.—Address, J. D. S. Post-office, Ruardean, Gloucestershire.

TO GRAINERS, WRITERS, &c.

A YOUNG MAN, aged 21, wishes to place himself permanently with a grainer, writer, &c. Wages not considered so much as improvement. Conversant with accounts and measuring work.—Address, R. N. 51, Ironmonger-row, St. Luke's.

TO ARCHITECTS, SURVEYORS, AND BUILDERS.

A PLAIN and ornamental Draughtsman, accustomed to prepare finished, working, and detail drawings, perspectives, &c. is desirous of a RE-ENGAGEMENT. Salary moderate.—Address, E. F. Post-office, Worcester.

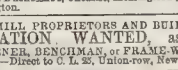
TO PAINTERS AND BUILDERS

A MIDDLE-AGED MAN wishes for a SITUATION as HOUSE-PAINTER and GRAINER. A good character can be given from his last employer.—Address to J. W. H. No. 33, Norland-road, Notting-hill.

AS CLERK of WORKS or FOREMAN, a middle-aged Man; will be disengaged within a week, and wishes to RE-ENGAGE as above. Good references can be given.—Apply to A. B. at Mr. Barker's, Stonemason, High-street, Kensington.

A YOUNG MAN of respectability, aged 30, a good penman, and acquainted with mensuration in its application to building accounts (having assisted in the same), is desirous of an ENGAGEMENT.—Address, G. W. 62, Nelson-square, Blackfriars-road.

TO BUILDERS AND OTHERS.



A COMPETENT FOREMAN for either shop or works, a first-rate staircase hand, understands Gothic detail, the theory and practice of carpentry and joinery, the superintendence of building in general, is open for an ENGAGEMENT. Would prefer contract-work. Reference of undoubted respectability.—Address, A. B. No. 1, Staple's-inn-buildings, Holborn-hill, Middle-row, London.

TO ARCHITECTS, SURVEYORS, AND BUILDERS.

A YOUNG MAN, who has a tolerable knowledge of building, understands the general principles of surveying, can assist at taking out quantities, and is a fair draughtsman and colourist, wishes to meet with a situation.—Address, A. Mr. Duchesne's, Chemist, Hemingford-place, Barnsbury-park, Islington.

TO SAW-MILL PROPRIETORS AND BUILDERS.

A SITUATION WANTED, as SAW-SHARPENER, BENCHMAN, or FRAME-WORKER, in town or country.—Direct to C. L. 23, Union-row, New Kent-road.

ROYAL MANCHESTER INSTITUTION.

The Annual Exhibition of Modern Pictures in Oil and Water Colours, and Sculpture, Casts, &c. will open immediately after the close of the Royal Academy. The Council beg to notify that they have an accumulated fund of upwards of 50*l.* applicable to the purchase of approved Works of Art, which may be exhibited at the Institution.

RICHARD ASPDEN, Assistant Secretary.

DECORATIONS for ROOMS, &c. by A. L. AGLIO.—Decorative Paintings designed and executed in Fresco, Encaustic, or Tempera, by A. L. AGLIO, 4, Oral-road, Gloucester-gate, Regent's-park.

TO ARCHITECTS.

COMPETITION and other DRAWINGS.—Mr. THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS, 33, Albany-street, Regent's-park.

TO ENGINEERS, CONTRACTORS, &c.

LEVELS of first-class work, price 6*l.* to be had of the Maker, JOHN DAVIS, Optician, Derby. The Level consists of a 10-inch telescope, focus adjusted by rack; fitted in an excellent case. The legs either tripod or jointed, for use in a pit.

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London-made instruments, and considerably cheaper.—Apply to Mr S. BARLOW, 2, Thavies-inn, Holborn (between 1 and 3 p.m.); or to Mr. H. B. BARLOW, Office for Patents, Ducie-place, Exchange, Manchester.

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 20, Westminster-Bridge-road, Lambeth (near Astley's Theatre), begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, at equally low prices. An illustrated price-list will be immediately forwarded, free, on application.

TO ARCHITECTS AND TEACHERS OF DRAWING.

SOME very superior DRAWING-DESKS, DRAWING-BOARDS, &c. TO BE SOLD.—Apply at 37, Cumming-street, Pentonville-hill, New-road.

For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c and for giving EVENING INSTRUCTION in Architectural and Civil Engineering, Drawing, and Colouring. Making Finished and Working Drawings, Preparing Specifications, Taking out Quantities, Estimating, &c. &c. Terms—Day Pupils, Three Guineas per Quarter; Evening Pupils, One Guinea per Quarter, which includes Drawing Boards, T Squares, Plans, Drawings, Models, &c. For Prospectuses apply at the Offices, 24, Guildford-street, Russell-square.

TO ARCHITECTS AND OTHERS.

MR. EDWARD L. PARAIRE is desirous of Meeting Gentlemen who require COLOURED ARCHITECTURAL DRAWINGS. External, Internal, Isometrical Perspectives got up; outlines of same neatly coloured, with background, on terms that will insure approval. Temporary assistance given in getting up Plans, Elevations, Sections, Detail, and Working Drawings.—Mr. E. L. P. makes a consideration in his charge where competition drawings prove unsuccessful.

Address, 6, Rathbone-place.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

THE LONDON AND MANCHESTER PLATE GLASS COMPANY

Beg to inform the TRADE, that the EXTENSION OF THEIR WORKS being now completed, they are enabled to execute orders to any extent at immediate notice. The Company also beg to intimate that owing to improvements effected in the reconstruction of their Works, the COLOUR and QUALITY of their GLASS will be found considerably improved, and that they can guarantee the maintenance of these essential requirements. They further beg to invite attention to their reduced List of Prices, which may be obtained on application at their London Warehouse, or at the Works

For the convenience of the LONDON TRADE, a large stock of POLISHED PLATE is now kept at the COMPANY'S WAREHOUSE, BARRAUD'S WHARF, WHITEFRIARS.

The Works, Sutton, St. Helen's, January, 1855.

CHARLES WM. WATERLOW AND CO.

MANUFACTURING JOINERS,

121, BUNHILL-ROW, FINSBURY, AND BOW, MIDDLESEX.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is CROSS'S WHOLESALE WAREHOUSE, 23, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

NOTICE to BUILDERS.—BED-ROOM PAPER-HANGINGS, 4d. for 12 yards; good Satin Drawing-room Papers, 11½d. for 12 yards.—at W. ROBINSON'S Wholesale Paper-hanging Warehouse, 23, High-street, Islington.

ARTESIAN WELLS, Boring for Water, Sinking Shafts, &c.—The nobility, gentry, water-companies, towns, baths, brewers, and manufacturers of every description, may be supplied with any quantity, by DAVID GREENLEY, Civil Engineer and Patentee of Boring Tools, 10, Cumming-street, Pentonville. Pumps and machinery for raising water from deep wells, boring-tools, and well-pipes for exportation. Men and tools supplied to bore for railroads, minerals, &c.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers of White Zinc Paint on a large scale in this country, are enabled, by a process, which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Those direful maladies, paralysis and painters' colic, will be entirely avoided. It is entirely free from any poisonous or pernicious property. Neither exposure to heat, nor tropical climates act upon it. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. To be had of the Wholesale Paint-dealers in Original Packages, each cask stamped—HUBBUCK LONDON PATENT. And if not so marked, the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers in this country. Paint and Varnish Works, Upper East Smithfield, opposite the London Docks.

THE VIELLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of producing it, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark on Hull by Messrs. ALSOP, JELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agents, In London, Messrs. CHARLES DEVAUX and CO., Wholesale Agents, 82, King William-street, City; FREDERICK BRABY, Wholesale and Retail Agent, 8, Tottenham-court, New-road. In Manchester and Liverpool, by R. CLAY, 8, Merrey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-merchants, and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 13, Manchester-buildings, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their Works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality,—a desideratum never before obtained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which, its eminent hydraulic properties stamp it at once as the first Cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by R. CREAVES, Sen. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Asphalte Cements, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in use market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured by the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster, who prepare one quality only of Portland Cement.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brick work, Blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

ROMAN and PORTLAND CEMENT of the first quality, manufactured at the ELMLEY CEMENT WORKS, Isle of Sheppey, Kent; also, STOCK and KILN BURNT BRICKS, hand-moulded and machine, made for shipping or otherwise.—Apply to G. BOOTH, Agent, 11, George-yard, Lombard-street, City.

BATH CEMENT.—This Cement is equal to Portland in strength and durability, does not vegetate in damp situations, is perfectly hydraulic, of a reddish and warm colour, resembling the Bath stone.—CHARLES RICHARDSON, 6, South Wharf, Paddington.

FRONTS of HOUSES.—GREENE and CO.'S PORTLAND CEMENT WASH, equal to oil paint for durability in coats, less cost.

DAMP WALLS.—GREENE and CO.'S OXIDE SOLUTION PAINT, a sure and effectual remedy for damp, salt, or rotted walls, price 12s. per gallon, which will cover 2s square feet.—Prepared only by GREENE and CO. Original Inventors, 22, Norfolk-street, Islington.

SOUTHAM. — BLUE LIAS LIME, and CEMENT WORKS.—OLDHAM and TATHAM'S Blue Lias Lime, Portland, Roman, and Lias Cements.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfactio n constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS', STOCKS, and other BRICKS.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 30, 1855.

CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

GREY STONE LIME WHARFS, 13, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF-ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester, March 31, 1855.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street (City)-road Basin, Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor, and, thirdly, that the "REPORTS OF THE JURIES," page 70, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 35s. 6d. per 1,000; floor bricks and 6-inch pavings, at 28s. per 1,000; 6-inch pavings, at 60s. per 1,000; 9-inch pavings, at 72s. 6d. per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties Railway.

GREAT NORTHERN WHARF, York-road, King's-cross. WHITE BRICK and TILE DEPOT.—L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants and Builders, contractors, and others supplied with every description of building material at the lowest market prices.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his Stock and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

Depôt, Acar Wharf, Kingsland, St. Pancras.

VITRIFIED STAFFORDSHIRE BLUE BRICKS, Paving, Roofing, and Ridge Tiles, Sanitary Pipes, &c. Stourbridge Fire Goods, &c. of all descriptions, and of best quality.—WOOD and SON, Manufacturers, Portway, Oldbury, near Birmingham. Agent — Mr. J. UNWIN, Private Residence, 99, Nelson-square, Blackfriars-road.

WHITE SUFFOLK and RED FACING BRICKS.

COWLEY, KENT, and ESSEX BRICKS.

Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.

KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE, fancemongers to Mr. Benjamin Gough 5, ADELAIDE-PLACE, LONDON-BRIDGE.

TO BUILDERS and OTHERS.—BRICKS delivered at any part of the River up to Battersea-bridge, at the following prices, viz.—Grey Stocks, 23s. per thousand; Grizzles, 28s. per thousand; Rough Stocks, 30s.; Place, 16s.—Terms, cash on delivery.—Apply to Mr. G. SMEED, Sittingbourne, Kent.

RED BRICKS.—WANTED to PURCHASE, about 80,000 of good kiln-burnt RED BRICKS, delivered at either of the undermentioned places—Paddington Station, Paddington Basin, Great Northern Station, Chalk-farm Station, Regent's Canal, Camden-town.—Address full particulars and price, and where samples may be seen, to A. B. A. post paid, Seale's Library, Portland-place, St. John's Wood.

TO BUILDERS, CONTRACTORS, AND OTHERS.

MESSRS. BARRETT and SHARP beg to inform the trade that they are prepared to LAND STONE, BRICKS, SAND, &c. &c. at their Wharf, at the usual rates. The traveller will land any blocks of stone, timber, or engineering work not weighing more than fifteen tons.—BARRETT and SHARP, "Patent Stone Preserving Works," Holdernesse Wharf, 40, Bridge-place, Harrow-road, Paddington.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¼ inch to 1¼ inch thick, planed to a parallel width and thickness, and at exceedingly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Sills, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S (late W. Cleave's) Fir ring Manufactory, Wilton-road, Pimlico Basin.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings.—A large stock of dry flooring at low prices.—Southwark-bridge Wharf, Bankside.

IMPROVEMENT in WOOD MOULDINGS: J. SIMMONS'S improved WOOD MOULDINGS are acknowledged by all who have tried them to be the best ever produced by machinery. J. S. in returning thanks to his friends and customers for the liberal patronage already bestowed upon him, begs to call their attent on to his large stock of Moulding now on hand, feeling assured that one trial will insure a continuance of their favours. Price lists can be obtained on personal application, or by letter, enclosing six postage stamps, the cost of postage.—Steam Works, 20, North Wharf-road, Paddington.

N.B. Builders supplied with all kinds of Marble and Stone Chimney-pieces, at prices lower than any house in London.

GREAT REDUCTION of PRICES.—SAMUEL PUTNEY respectfully solicits the attention of buyers to the still further reduction, owing to the recent duc-tuations.

"Railway Contractor's Office, Wellington, Salop.
"December 1, 1853.

"DEAR SIR,—We have much pleasure in bearing testimony of the value of your Patent Portable Engine that you fitted for us, for the construction of the tunnels on the Bacup Branch of the East Lancashire Railway in 1851, and have since used for sawing timber, and driving other machinery up to the present time, during which period, although for weeks the fire has never been out, we have no stoppage for repairs.

"We remain, dear sir, yours most faithfully,
"Mr. Gough." "DICKSON and McKENZIE."

VENTILATION.

D. and E. BAILEY beg to call the attention of Architects and others to their improved

CIRCULAR ARNOTT VENTILATORS,

which are more sightly than the square ones in general use, much less liable to get out of order, and the flaps, being hung from the top, do not admit any smoke caused by down draught.

Price, bronzed, from 6s. 6d.

D. and E. BAILEY,
279, Holborn.

SMOKE CONSUMER.—A Patent Smoke Consuming Apparatus supplied for 3l. 3s. and upwards, by Mr. JAMES CARTER, 31, New Bridge-street, Blackfriars.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

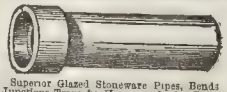
TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

BY HER MAJESTY'S ROYAL LETTERS PATENT, APRIL 27, 1853.

JAS. LEWIS'S PATENT STENCH-TRAP.



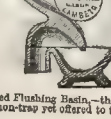
FOR STREET USE.
Price, with Gutter Plate, 18 inches by 12 inches, each 25s.; weight, about 2 cwt.
Larger sizes made, if required.

FOR AREAS, &c.
Price, with Back Plate, 6 inches by 7 inches, each 6s.

FOR COURTS, YARDS, &c.
10 inches by 8 inches, each 10s.

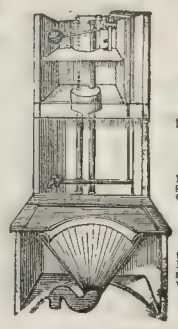
The above articles are protected for the Patentee by the British Government, on account of their construction, for the advantages they possess, being a perfect trap for preventing smell proceeding from itself or the drain, should there be water or not in the pan. When stench-traps are put down (generally speaking) no attention is ever paid to them afterwards, this renders them useless. The above, therefore, are a desideratum, as they require no attention. It is well known when cholera has visited this country, it commences and leaves last those places where the air is vitiated by obnoxious gases proceeding from drains, &c.

Any inhabitant suffering any inconvenience, is entitled, by the Sanitary Act to lay complaint before the public or private authorities of the property, to lay down stench-traps where they are required. Any persons interested in this advertisement will be kind enough to write to the patentee for drawings, and if wishful, testimonials. Please order from any respectable ironmonger, contractor, or the Patentee, JAMES LEWIS, Ironfounder, Abergavenny.



Superior Glazed Stoneware Pipes, Bends Junctions, Traps, &c. Hopper and other Pans with best White Glaze inside.

Pan, 3s. 6d.



Trap, 2s.

Syphon Pan, with or without STEPHEN GREEN'S Patent Air-tight Valve.

IMPORTANT TESTIMONIALS
TO THE EFFICIENT WORKING OF
STEPHEN GREEN'S
PATENT SYPHON FLUSHING BASIN,
AND
SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1853.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

SALES BY AUCTION.

TO IRONMONGERS, STOVE GRATE MAKERS, BUILDERS, AND OTHERS By

MESSRS. FULLER and HORSEY, on the PREMISES 13, Fleet-street, on MONDAY, JUNE 12, and following day, at ELEVEN, in lots, with or without reserve, the STOCK of STOVE and RANGE, BLACK FURNISHING IRONMONGERY, principally manufactured by Messrs Burbidge and Healy, who are relinquishing the retail branch of their business, including seventy register stoves, fine cast, ground, and polished steel, many of elegant designs, and richly mounted in ormolu; seven Sylvester's patent enclosed kitchen ranges, from 2 feet 9 to 6 feet in width; hall, shop, and church stoves; 100 sets japanned trays and waiters, japanned tea services, 100 dozen sets ivory-handled table and dessert knives, fine steel fire irons, bronzed and metal goods, lamps, cutlery, tin and black hollow ware; fifty files and rasps, an assortment of builders' ant cabinet ironmongery and brass work, ten tons wrought and cut nails, six printers' iron imposing tables, with planed surfaces; thirty Sylvester's patent fire and flue doors, shop fixtures, counting-house fittings, iron safes, two lorry, horse, shop-room, and 1 hundredweights, other effects.—To be viewed on Saturday previous to the Sale, when catalogues may be had on the Premises, and of Messrs. Fuller and Horsey, Billiter-street, City.

CAPITAL OAK TIMBER. Broom Wood, Rickling, and Quickley, Essex.—TO BE SOLD by AUCTION, by

MESSRS. NOCKOLDS and KING, upon the PREMISES, on FRIDAY, the 17th JUNE, 1853, at ELEVEN o'clock, in lots, EIGHTY OAK TIMBER TREES, Twenty ditto Saplings, and a quantity of good Topwood. The above Timber has been felled this season, and is lying contiguous to the turnpike road, about equi-distant from the Stansted and Newport Stations on the Eastern Counties line of railway, and will be found worthy the attention of builders, contractors, coopers, and others, many of the trees being of long lengths, good dimensions, and all of excellent quality. Six months' credit will be given, on part to the usual conditions.—May be viewed by applying to George Reed, the Woodward at Rickling-green, of whom catalogues may be had. Also at the Inns in the neighbourhood; and of Messrs. Nockolds and King, Land Agents, &c Saffron Walden, Essex.

Valuable Freehold Building Land, fronting the High-road, Holloway, also an old-established Public House, and other Premises, situate at No. 1, Seven Sisters-road, Holloway.

TO BE SOLD, pursuant to an order of the High Court of Chancery, in a cause Byrd v. Charrington, with the approbation of Vice Chancellor Sir John Stuart, by public auction in that Court (the said cause is attached), at the AUCTION MART, LONDON, on WEDNESDAY, the 24th of JUNE, at TWELVE o'clock, in One Lot, by

MR. BARNES, an important FREEHOLD ESTATE, comprising 6 acres, 2 roods, and 14 perches of very valuable land of the most eligible description, a site ready to be procured so close to the market as possessing an extended frontage to the High-road, Holloway, with roads in the rear, and being nearly square, every foot is available for building purposes, for which there are several additional advantages of the earth, road gravel, good water, abutting roads in several directions, a fine prospect of Highgate and Hornsey, and the land itself, an slight acclivity, with pathways completed on both the back and front sides. It will be sold in one lot, together with an old-established Inn, known as the Crown Public-house, with sundry Tenements, and possessing area of the whole, the estate is freehold, and possesses area of the whole, the estate is freehold, and consecrated from time immemorial. It originally formed part of the Manor of St John of Jerusalem, but has been recently enfranchised.—Printed particulars and plans will be published three weeks prior to the Sale, and may be obtained of Messrs. Clowes Solicitors, 1, King's-bench walk, Temple; Mr Middleton, Solicitor, 28, Fenchurch-street; Messrs. Fry and Lovell, Solicitors, 38, Chapside; and of Mr. Barnes, the Auctioneer, 19, Birchin-lane, Lombard-street.

Very valuable and beautifully-situate Freehold Building Land, at Lewisham, with an approach from the High-street, and also from the Road and Eltham Turnpike-road.

MESSRS. DANIEL SMITH and SON will submit to SALE by AUCTION, on TUESDAY, JUNE 28, unless previously sold by private treaty, about FOURTEEN ACRES of very valuable FREEHOLD LAND, of a rich dry gravelly soil, well watered. It is of a most delightful and picturesque scenery, and offers a singularly-beautiful spot for building, within a few minutes' walk of the railway station.—Particulars and plans may be had at the Mart; at their Offices in Waterloo-place, Pall-mall; or of Messrs. Druce and Sons, Solicitors, Billiter-square.

Freehold Building Land, in Surrey, near the station and village of Weybridge, and between Hersey, Oatlands Park, and Walton

MESSRS. DANIEL SMITH and SON will SELL by AUCTION, unless an acceptable offer shall be previously made, at the MART, on TUESDAY, JUNE 28, about SIX ACRES of valuable LAND, free from all encumbrance, and land-tax, in a most eligible, elevated spot, with an extensive frontage upon the roads leading from the station to the village of Weybridge, and upon the Oatlands drive, capable of being subdivided for the erection of five or six villas. There is good brick loam on part of the ground.—Particulars and plans may be had at the Mart; at the chief Inns in the neighbourhood; of Mr. Hooker, Builder, Weybridge; of Mr. Gutteridge, Solicitor, Angel-court, Throgmorton-street; and of Messrs. Daniel Smith and Son, Land Agents, in Waterloo-place, Pall-mall.

HANWELL, MIDDLESEX. Very valuable Freehold Building Land, in parts ornamentally wooded, and sloping southward and westward to a picturesque sheet of water, with a dock and access to the Grand Junction Canal, affording water carriage to Paddington and the Thames; well worthy the attention of any public company.

MESSRS. DANIEL SMITH and SON will OFFER for SALE by AUCTION, at the MART, at the end of JUNE (unless an acceptable offer shall previously be made), together or in lots, a valuable and highly improvable ESTATE of ROSE BANK, comprising about twenty acres of ruminental building-ground, with extensive frontages upon the road to Brentford, near the railway station at Hanwell. It offers a choice site for any public institution or cemetery, and contains a vein of particularly fine brick earth, and a gravel pit, with the great advantage of a dock and canal bounding the lower side of the property. It can only be viewed by special written order.—Particulars and plans may be had, three weeks prior to the Sale, at the Chief Baths, Builder, Hanwell; at the Auction Mart; of Messrs. Colley, Smith, Hunter, and Gwatkin, Solicitors, Lincoln's-inn; and of Messrs. Daniel Smith and Son, Land Agents, in Waterloo-place, Pall-mall.

TWICKENHAM, near Sir William Clay's Park.—Freehold Building Plots, on the Staines-road.

MESSRS. FOSTER and SON will SELL by AUCTION, at the MART, on THURSDAY, JUNE 23rd, at TWELVE, in the afternoon, in lots, PREHOLD BUILDING PLOTS, having shrubbery, and forming the most eligible opposite to houses of importance, which have been built here many years, besides frontage to two cross-roads, within ten minutes' walk of the station. May be viewed, and particulars had ten days before the sale, at the Prince Blucher; of W. P. Padmore, Esq. Architect, 16, Great Marlborough-street; of — Stacey, Esq. Solicitor, 17, Bloomsbury-square, and (Two days preceding) of Paul-mall.

TO BUILDERS. - Five Freehold unfinished Residences, the corner of Lansdowne-road North, and Ladbroke-road; also Two Freehold Plots of Freehold Building Land, on the best part of the Kensington-park Estate, at Notting-hill.

MR. ROBINS is directed to SELL by AUCTION, at the MART, on THURSDAY, JUNE 23rd, at TWELVE, in seven lots, FIVE FREEHOLD RESIDENCES, uniform of handsome stone elevation, three storied bich, stuccoed fronts, being Nos. 52, 54, 56, 58, and 60, the corner of Lansdowne-road North, and the Ladbroke-road, the most beautiful part of the Kensington-park Estate, at Notting-hill. The position of the houses, and their attractive appearance, at once recommend them for completion as a profitable investment; also two corner Plots of Freehold Building Land close by, upon which three villas on each may be erected; the situation most excellent. Particulars, with plans, may be had at the Clarendon Hotel, on the estate; of Messrs. Roy and Cooper-night, Solicitors, 4, Lothbury, at the Auction Mart; and at Mr. Robins's Offices, Covent-garden.

SALES BY AUCTION.

The Enmore Park Estate, comprising about thirty-three Acres of Building Land, beautifully situate at Woodside, between Norwood and Addington, in the county of Surrey

MESSRS. WINSTANLEY are directed to SELL by AUCTION, at the AUCTION MART, in a short time, in one or more lots, a valuable FREEHOLD ESTATE, land-tax redeemed, and free from all tithe, consisting of PERTY, land-tax redeemed, and free from all tithe, consisting of about thirty-three acres of most eligible building land, commanding very extensive views of the distant and immediate picturesque scenery, the Crystal Palace, &c. It is approached from the high road from the Norwood Station, from which it is only a short distance. Three principal roads (40 feet wide) have already been formed, extending through the land, on two of which the farm cottages, stabling, &c., fronting the green will be included. The farm cottages, stabling, &c., fronting the green will be included in the sale. There are two churches in the vicinity. A plentiful supply of spring water is already in the premises, and the pipes of the Thames Ditton Water Company are laid within a few yards of the estate. In the hands of a building society or capitalist this property offers attractions of no ordinary character. The estate may be viewed upon application at the cottage.—Printed particulars, with plans annexed, may be obtained twenty-one days previous to the day of sale, which will be shortly announced, of Messrs. Dickinson, Brenton, and True, Solicitors; Messrs. Blake, Auctioneers; and at the Greyhound Inn, in Croydon; at the Windmill Inn, St James's-road, Croydon, the Jolly Sailor and White Lion Inns, at Norwood; the Crooked Billet, Penge; the Greyhound, Dulwich; and, in London, at the Place of Sale; of Mr. Draper, Globe Tavern, Hatton-garden; and of Messrs. Winstanley, Land and Estate Agents, 10, Paternoster-row

An important Tract of Freehold Building Land, tithe-free and land-tax redeemed, comprising about 100 acres, in a beautiful situation, about four miles from the City, in the county of Surrey.

MESSRS. WINSTANLEY are directed to SELL by AUCTION, at the MART, on WEDNESDAY, JUNE 29th, in numerous lots, unless previously sold in three lots, about 100 acres of eligible FREEHOLD BUILDING LAND, commanding extensive and beautiful views, situate at East Dulwich, in the parish of St. Giles, Camberwell, in the county of Surrey, and possessing a frontage of 4,000 feet to the high road from Gosecrross to Forest hill, Sydenham, and the Crystal Palace, and ample site to lands belonging to Dulwich College. Also, very extensive frontages on the same road to the north have been formed and extend through the property for nearly three-quarters of a mile. The water is already laid on, both by the South Lambeth and Vauxhall Water Companies, and through large parts of the property, the Inns at Peckham rye, Camberwell, and Denmark-hill, the Place of Sale; and of Messrs. Winstanley, Patern sterrow.

Freehold Building Land, near the City.

MR. ALFRED PECK, on JUNE 27, will SELL a very valuable PLOT of GROUND, between Whitecross-street and Golden lane, upwards of HALF an ACRE in extent, and capable of containing from Twenty-five to Fifty Houses. Neighbourhood tolerably populated.—Particulars and admission tickets from the Auctioneer's Offices, 68, New Broadstreet. Fo 3,5+3

To Stationary Marble-Masons, Builders, and Others.

MESSRS. EVERSFIELD and HORNE have received instructions from the Proprietor, to SELL by AUCTION, on the PREMISES, Curzon-wharf, Thames-bank near Vauxhall-bridge, on SATURDAY, JUNE 18, a valuable STOCK of MARBLE; consisting of about 350 tons of very superior Statuary, Veined, Sicilian, Dove, Breccy, and Black, and Gilt in Bl ck Veined, Sicilian, Dove, Breccy, and Black, and Gilt in Bl ck and Sanding; and about 2,000 feet in Slab of various thickness; also, several pieces of Ital ar, sculptured Figures and Monuments Approved bills at four months for sums over £10, or five per cent. May be viewed two days previous to the sale; and catalogues had on the Premises, and of the Auctioneers, 40, Parliament-street, Westminster, or Coal exchange.

ARUNDEL-STREET, STRAND. Building Materials.

MESSRS. EVERSFIELD and HORNE are instructed by H. R. Abraham, Esq. Assignee of the Aruvelt Estate, to SELL by AUCTION, on the PREMISES, late the Whitebait Club House, Arundel street, Strand, on SATURDAY, JUNE 9th, at TEN for ELEVEN, about 1,000 loads of Old Bricks, paving, Purbeck steps, sash lifts, hole-ay-rading, &c.—May be viewed one day previous, and catalogues had on the Premises; of H. R. Abraham, Esq. 11, Howard-street; and of the Auctioneers, 40, Parliament-street, Westminster.

NEW-ROAD.—The excellent Manufactured Stock of Messrs. Nokes and Morse, Builders, Mason, in consequence of the retirement of the Senior Partner.

MESSRS. EVERSFIELD and HORNE have received instructions to prepare for SALE by AUCTION, on the PREMISES, No. 9, near St. Pancras, during the month, the excellent manufactured STOCK of CHIMNEY PIECES, Monuments, Vases, Pedestals, &c.; a detailed notice of which will shortly appear.—66, Parliament-street, June 7th, 1853.

WIMBLEDON HOUSE SURREY, with beautiful gardens grounds, and park, For many years the residence of the late Mrs Marryat, deceased, and long known as one of the most delightful and desirable retreats in the neighbourhood of the metropolis, a portion of the land having been most attractive and eligible sites for the erection of detached villas and other residences, without interfering with the present reclusion of the mansion and grounds.

MESSRS. RUSHWORTH and JARVIS beg to announce that that they will SELL by AUCTION, at GARRAWAYS, on FRIDAY, JUNE 29th, at TWELVE o'clock, in one lot, the above much-admired and truly important FREEHOLD ESTATE, consisting of a capital and elegant spacious mansion, with offices, stabling, and buildings, combining every requisite accommodation for a large establishment, extensive and beautiful pleasure grounds, with lawns and shrubberies choice flower and kitchen gardens, conservatory, orangery, fountains, and fish-ponds, a small but beautifully undulated and well-timbered park, with a large sheet of ornamental water, alcove, grotto, summer houses, ice house, gate lodge, cottage, farmyard, lodge-entrances, &c. comprising altogether about eighty-six acres, bounded on three sides by a lofty brick wall. The property is suited to the residence of a minister of state or family of distinction, a merchant prince, or it offers to a speculative capitalist a very eligible opportunity for a safe and profitable investment, as from the extent of frontage to the common a portion of the land might be most advantageously appropriated for building.—May be viewed by cards, to be obtained of Messrs. Smith and Co. 27, Albemarle-street; or of Messrs. Farnworth and Jarvis, Sawbow, Accountants, Bedford-street, and 19, Change-alley, Cornhill, and printed particulars, with plans may be had fourteen days previous to the sale, as above; also of W. E. Oliver, Esq. Solicitor, 16, New Bridge-street, Blackfriars; and on the Premises.

TO SHIPBUILDERS, GOVERNMENT CONTRACTORS, TIMBER MERCHANTS, AND OTHERS.—GREAT BILLING, near Northampton.—Important Sale of Oak Timber.—To be SOLD by AUCTION, by

FREEMAN and SON, on TUESDAY, JUNE 12, 1853, without reserve, on the estate of C. C. Elwes, Esq. at Great Billing, about SIXTY very large OAKS, of fine quality, and amongst which will be found trees of sizes, varying from 100 to 300 feet measurement. Also, a number of large OAK ARMS, from the above trees. Great Billing is about three miles from Northampton; one mile from the Billing-road Station, on the Northampton and Peterborough Branch of the London and North-Western Railway, and there is also water carriage within the same distance.—Catalogues may be had on application to the Auctioneers, Market-square, Northampton.—A train stops at Billing Station at 11h. 30m. a.m.

SALES BY AUCTION.

TO BUILDERS and OTHERS.—Building Materials, belonging to the South-Eastern Railway Company, adjoining the Bricklayers' Arms Station.

MR. MARSH has received instructions from the Directors of the South Eastern Railway Company, to SELL by AUCTION, on the PREMISES, 6, GREYHOUND-PLACE, old Kent-road, on FRIDAY next, 13th JUNE, at TWELVE o'clock, in lots, the MATERIALS and FITTINGS of the House and Premises as above, comprising about 650 bricks, a quantity of timber, in roof joists, quartering, &c.; plain and pan tiling, stone-coping, paving, &c.; iron-railings, fixtures, &c., the ground being required for use by the South Eastern Railway Company.—May be viewed the Thursday and Friday previous to the sale, and catalogues had on the Premises; of Mr. Lowe, 19, Rupert-street, Haymarket; at his Offices, London-bridge Terminus; and at Mr. Marsh's Offices, 2, Charlotte-row, Mansion-house.

Valuable Building Materials, York-crescent, Lower Norwood, Surrey.

MESSRS. HAMPTON COURT.—BUILDING LAND

TO BE LET, for ninety-nine years, with option of purchase, near the above station, and close to East Moulsey Church. A portion of the estate has been laid out for villa residences (some erected), with gardens running down to the river Mole. There is also a plot containing about 3 acres, very eligible for a first-class house, and a very moderate price. The plots vary in depth from about 180 feet to 400 feet; and in price from about 2s. 8d. to 3s. per foot frontage. A small portion has been devoted to cottages (which are much required in this locality), at extraordinarily low rates. The residue of the estate is remarkably adapted for shops or small houses.—Apply to Mr. FREDERIC LETT, Architect, 59, Essex-street, Strand, London.

BUILDING LAND TO BE LET, at HALLSVILLE.... Term 1,000 years, for small cottages.
CANNING-TOWN .... " 1,000 " for small cottages.
NORWOOD .... " 100 " for villa residences.
STRATFORD .... " 100 " for small cottages.
POPLAR .... " 98 " for fourth-rate houses.
Advances 70l. to 100l. at 5 per cent. on each cottage.—Mr. WM. ELLISON, Architect, Stainsby-row, Limehouse.

SOMERSET.—TO BE LET, with immediate possession, a remarkably compact and convenient DWELLING-HOUSE, called Brook House, with all suitable offices and excellent garden and shrubbery, situated in the midst of the beautiful scenery of Stourhead, within easy distances of the towns of Wincanton, Mere, and Bruton, at which last place there will be a station of the Wilts, Somerset, and Weymouth Railway.—Further particulars may be obtained of JOHN WAYNE, Esq. Wilton, near Salisbury; or of Mr. COOPER, Solicitor, Wincanton.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing office of COX Brothers & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 1, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, June 9, 1853.

Radcliffe, near Manchester, June 8th, 1855.

[*For remainder of Contracts see next page.*

CONTRACTS.

TO SCAVENGERS, CONTRACTORS, AND OTHERS.

THE Commissioners for Paving, &c. the East Division of Southwark meet on THURSDAY, the 31st day of JUNE next, at Two o'clock, at their Board-room, to CONTRACT for the CLEANSING and CARTING AWAY from all the streets, lanes, and places within the said Division all DUST, SOIL, DIRT, SOOT, rubbish and other matter, rubbish for filth, straw, and ashes; and to empty and cart away the soil or dirt from and out of the several cesspools of the street gratings within the division; and also to collect and remove from the premises of the inhabitants all ashes, dust, clinkers, vegetable and other matter to which he will be entitled, that is to say, from Duke-street, Doyle-street, Johnson-street, so much of Bermondsey-street as is within the division, Friesh-street, Bank-street, Horsleydown, Gainsford-street, Shad Thames, and Thurlston-street, three times a week in every week, and oftener when required; and the remainder of the streets, lanes, and places four at least in every week, and oftener when required, from Michaelmas-day, 1855, to Michaelmas-day, 1856. Proposals to be sent, directed to the Commissioners, before FOUR o'clock on the day of meeting, when the parties tendering may personally attend. Two securities for 100 each, for the due performance of the contract will be required, and the penalties for the non-performance of the contract will be rigidly enforced. The expenses of the contract and bond to be paid by the person contracting.—By order of the Commissioners.

ROBERT SLEE, Clerk.

28, Back-street, St. John's, Southwark, June 12th 1855.

The Commissioners do not find a vestal, and they will not be bound to accept the lowest or any Tender. The form of Contract may be obtained at the Clerk's Office, where the draft of the contract may be seen. A sheet of the waterside in the division has been provided, but the Commissioners do not bind themselves to find one.

POOLE GASWORKS.—The Directors of this Company are willing to receive TENDERS for the ERECTION of an additional GAS-HOLDER and CAST IRON TANK at their works. The gas-holder to be not more than 54 feet in diameter, and to contain from 15,000 to 20,000 cubic feet of gas. The above to be fitted with 6 inch inlet and outlet, with syphons and valves, and connected in working order with the existing works. Persons desirous are required to send in sealed specifications to the Office of the Company, on or before SATURDAY, the 23rd of JUNE. The Directors do not bind themselves to accept the lowest or any Tender.

By order of the Directors,

Poole June 8, 1855. JOHN BUDDEN, Clerk and Engineer.

HATFIELD FOREST INCLOSURE, ESSEX. To ROAD CONTRACTORS and OTHERS.—The Commissioners of CONTRACTING I. MAKE certain PUBLIC CARRIAGE ROADS, OPEN DRAINS, and other WORKS, to be made under the Inclosure Act, may inspect the plans of the work required, at the Office of Mr JOHN CLUTTON, at No. 8, Whitehall-place, Westminster, to whom Tenders must be sent on or before TWELVE o'clock at noon, of SATURDAY, the 23rd day of JUNE, 1855.—Printed specifications may be obtained on application.

JOHN CLUTTON.

June 7, 1855.

TO BUILDERS AND CONTRACTORS.

BUILDERS desirous of CONTRACTING for the ERECTION of the VESTRY-HALL and OFFICES, for the parish of Edmonton, are informed that the plans, specifications, and general conditions, may be seen at the Offices of Mr FREDERICK W. FIDLER, Architect, 4, Bennett's-hill, Birmingham. Tenders must be sealed, and addressed "G. SMART and H. MOSS, Esqrs., the Churchwardens," and delivered at the Office of the Architect, on or before the 25th day of JUNE next. The Churchwardens do not bind themselves to accept the lowest Tender.—4, Bennett's-hill, Birmingham, May 28, 1855.

GRIMSBY LOCAL BOARD of HEALTH. WATERWORKS and DRAINAGE To CONTRACTORS, ENGINEERS, IRONFOUNDERS, and OTHERS. The Great Grimsby Local Board of Health give notice, that they are prepared to receive TENDERS from parties willing to undertake either of the following CONTRACTS:

CONTRACT No. 1.—For the supply of about 2,500 tons of CAST IRON WATER-PIPES, and other CASTINGS.

CONTRACT No. 2.—For the supply of SLUICES, HYDRANTS, GRATINGS, and other STREET FITTINGS.

CONTRACT No. 3.—For the excavation of a WELL and ADITS, and for BORING into the CHALK STRATA for the SUPPLY of WATER.

Drawings, specifications, and forms of Tender, may be seen, and also obtained, on and after the 1st of JULY next, at the Offices of Mr. SYMONDS, Town Clerk, Dorchester; or at the Offices of Mr. A. WHITEHEAD, Engineer to the Board, 4, Dyke-field, Hexter. Duplicate specifications, and forms of Tender for each of the Contracts, may be had on payment of 1s. each. Sealed Tenders are to be delivered at the Town Clerk's Office, Dorchester, before TEN o'clock on the 16th day of JULY next. The Local Board do not bind themselves to accept the lowest, or any Tender.

C. SYMONDS, Town Clerk.

Dorchester, June 11, 1855.

TO BUILDERS AND OTHERS.

THE TRUSTEES of SAINT THOMAS'S HOSPITAL, in SANDWICH, Kent, are desirous of receiving plans and estimates for the ERECTION of an ALMS-HOUSE, to contain twelve rooms, of dimensions not less than 14 feet by 12 feet, with outer room, or pantry, to feet by 8 ft. 6 in. to each, and all other requisite conveniences, such building to be divided into two compartments, for the use of eight brothers and four sisters, and with or without a common hall. The proposed site contains by admeasurement 100 feet towards the north, 120 feet towards the east, 70 feet towards the south, and 105 feet towards the west, contiguous to the town of Sandwich. The plans for the above are required to be on the most improved and sanitary principles, and of Materials, and to scale of 8 inch to a foot. Tenders, with estimates, to be sent, free of carriage, to the undersigned, on or before the 31st day of JUNE instant. The trustees do not bind themselves to accept the lowest Tender.

SURRAGE and EMMERSON.

Sandwich, June 4, 1855.

TO IRONFOUNDERS, &c.—The Town Council of Tenby intend to lay down CAST IRON WATER PIPES, to be delivered on Tenby quay. Persons desirous of tendering must send in sealed tenders at my office, on and after MONDAY, the 4th JUNE instant, and not after that day. The tenders will be opened in the Council Chamber, on MONDAY morning, the 11th JUNE instant.

GEO. THOMAS, Town Clerk.

Carmarthen, 1st June, 1855.

CONTRACTS.

WIGAN LOCAL BOARD of HEALTH. WATERWORKS.—To ENGINEERS, IRONFOUNDERS, BRASSFOUNDERS, CONTRACTORS, EXCAVATORS, and OTHERS. The Local Board hereby give Notice, that they are prepared to receive TENDERS from parties willing to undertake either of the following CONTRACTS:

CONTRACT No. 1.—For the supply of about 1,500 tons of CAST IRON WATER-PIPES, and other CASTINGS.

CONTRACT No. 2.—For the supply of SLUICE VALVES, HYDRANTS, and STREET FITTINGS.

CONTRACT No. 3.—For the supply and erection of Duplicate STEAM ENGINES, BOILERS, PUMPS, and RISING MAIN. Each Engine to be capable of raising ONE MILLION GALLONS of Water, ONE HUNDRED FEET high, in TWELVE hours.

CONTRACT No. 4.—For the construction of a COVERED SERVICE RESERVOIR.

CONTRACT No. 5.—For the formation of a TUNNEL about 500 yards in length, and 18 feet internal diameter with SHAFTS, and TUNNEL ENTRANCES.

CONTRACT No. 6.—For Masonry and other work in STONE IMPOUNDING WALL for STORAGE RESERVOIR.

CONTRACT No. 7.—For EARTHWORK, PUDDLING, &c. in EMBANKMENT for STORAGE RESERVOIR, including MASONRY, BRICKWORK, &c. in VALVE and OUTLET WELLS, GAUGE BASINS, and RETAINING WALLS; also a TUNNEL under site of Embankment.

The drawings and specifications may be seen, and any further information may be obtained on and after the 4th day of JUNE, on application at the office of the Local Board of Health, Wigan, or at the offices of ROBERT RAWLINSON, C.E. 31 Parliament street, Westminster. Specifications and duplicate forms of Tender, Schedules, and Bills of Quantities, for Contracts Nos. 1 and 2, may be had on payment of 10s. each; and for Contracts 4, 5, 6, and 7, on payment of 1l. 1s. each. Quantities supplied. Sealed Tenders to be delivered at the Office of the Local Board, Wigan, before TWELVE o'clock, on MONDAY, the 18th day of JUNE, endorsed "Tender for Contract No. 1, 2, 3, 4, 5, 6, or 7," as the case may be. The Local Board do not bind themselves to accept the lowest or any Tender.

(Signed) WILLIAM ACKERLEY,
Wigan, 14th May, 1855. Solicitor to the Local Board.

TO GASHOLDER MAKERS.

THE DIRECTORS of the CHELMSFORD GASLIGHT and COKE COMPANY are prepared to receive TENDERS for the SUPPLY and ERECTION of an additional GASHOLDER, with guide-frame, connections, &c. Copies of plans and specification can be seen at the Company's Office, Chelmsford, or by application to Mr. CHURCH, Phœnix Gasworks, Vauxhall, London. Any further information required may be obtained of the Engineer, Mr JAMES CHURCH, Chelmsford, to whom Tenders are to be sent not later than the 21st day of JUNE inst.

June 1st, 1855.

TENDERS are required for the ERECTION of FIVE FOURTH-RATE HOUSES, in Bethnal-green.—Plans and specifications may be seen on and after the 18th inst. between the hours of TEN and FIVE daily, at the office of Mr W. E. WILLIAMS, Architect, 75, Coleman-street, City. Mr. W. does not bind himself to accept the lowest or either of the Tenders.

STEAM PILE-ENGINES.—WANTED, One or Two Second-hand STEAM PILE-ENGINES.—Address, by letter, to Mr. MORRIS, 3, Bridge-street, Westminster.

HART AND SON,
IRONMONGERS AND MANUFACTURERS,
53, 54, 55, & 57, WYCH-STREET, STRAND.

An Illustrated Catalogue on receipt of six postage-stamps.

WANTED to RENT, a small FOUNDRY, ready fitted up.—Apply by letter, stating particulars, at No 6, Carlton-place, Stoke Newington.

CANNON IRON FOUNDRY, 80, Goswell-street, St. Luke's. JONES and BLANTON, having made great additions to their STOCK of PATTERNS, beg to inform the Trade that they can now supply them with Plain and Ornamental Iron Columns, Girders, Railings, Gates, Iron Copes, Balconies, Window Guards, Verandahs, Ornamental Staircase Panels, Iron Staircases, Tomb Enclosures, Trellis Panelling, Lamp and other Brackets, Cantilevers, Newel Ends, Water Closet Work, Area Gratings, Fly and other Wheels, Wheel Plates, &c.

BAKERS' OVEN WORK, Forge Backs and Troughs, Rain Water Pipes and Gutters, Sash Weights, Furnace Bars, Stoves, Ranges, &c. always in stock.

FOUNDRY AND IRON WORKS,
69, DRURY-LANE, and CHARLES-STREET, DRURY-LANE.
GLOVER, BROS.,

Solicit the attention of the Trade to their extensive Stock of PATTERNS for CASTINGS of EVERY DESCRIPTION, either street or ornamental.

Patterns of Girders, Columns, Balconies, Railing, Ornamental Gates, and Park Palisades, Lamp and Street Posts, Brackets, Pipes Wheels, Pinions, Lathes, and Steam-engines; Range and Hot-plate Metal. An improved Soot Door, adapted for internal work.

A large stock of Rain-water Pipes, Plain and O G Gutters, Air-bricks, Sash Weights, Air-tight Sewer Grates, Stable Fittings, Hurdles, &c.

Plain and Ornamental Vases 30 per cent. cheaper than Terra-cotta.

Estimates given for Iron Buildings, Wrought-iron Roofing, Girders, Joists, Staircases, Wrought-iron Girders, Fireproof Doors, Book-safes, Iron Bedsteads, Mangles, and Bedsteads of every description. Drawings made to specification, and the work executed with every attention to quality and despatch.

GLOVERS' IRONWORKS,
168, DRURY-LANE, and CHARLES-STREET.

IRON FOUNDRY, HARROW-STREET, LANT-STREET, SOUTHWARK.—W. R. BARTLETT, manufacturer of Girders, Columns, Cantilevers, Newel and Railing Bars, Panels, Iron Coping, Hot Plates, Tank Plates, Area Gratings, Sash Weights, Fly and other Wheels, Spurgers, Pinions, Engine and Lathe Castings, Forge Backs, Furnace Bars, Kilns, Pans, and other castings, to patterns or drawings.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply fabricating Conductors, with the point and all staples complete for fixing, at 2s. 6d. shilling the foot.

If S. NEWALL and CO's Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

OFFICES.—Gateshead-on-Tyne, 13a, Strand, London,
67, Hyde-park-street, Glasgow.
27, Duke-street, Manchester.

BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY at PEILE and SEDALL'S.

Nos. 5 and 6, BROAD-STREET, BLOOMSBURY.

The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON.—House and Coach Builders, Joiners, Planemakers, and others, doing similar work, are invited to call at the Patentees', POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

TO BE DISPOSED OF, cheap, a 10-feet IRON WINDING STAIRCASE.—For cards to view apply to J. FOWLETT, Builder, 3, Northumberland-place, Bow-street Bishopsgate.

HOBBS'S PATENT AMERICAN and ENGLISH LOCKS.

Messrs. HOBBS, ASHLEY, and Co. are now manufacturing their celebrated American and English Locks, on the premises, 97, Cheapside, and 33, Lawrence-lane, London; where, by the introduction of their patent steam machinery, they are enabled to guarantee superior workmanship, combined with greater security, at a moderate price, than in any locks produced either in town or country.

EVERY LOCK being MADE and FINISHED at the MANUFACTORY, is warranted, and bears their OWN STAMP, without which none are genuine.

These Locks can be procured by order through any respectable Ironmonger in the United Kingdom; or at the Warehouse, as above Wholesale and Retail.

PATENT FIRE and BURGLAR-PROOF SAFES (MILNERS PATENT), fitted with HOBBS'S PATENT TUMBLER PROOF LOCKS form the strongest Safeguards against Fire and Robbery, they are made of various dimensions, adapted for the security of Money, Plate, and important Documents, Parish Registers, &c. Lists of prices and dimensions can be had on application to HOBBS, ASHLEY, and CO.—Wholesale and Retail Warehouses, 97, Cheapside, and 33, Lawrence-lane, London.

CHUBB'S LOCKS & FIREPROOF SAFES.

INEFFECTUAL ATTEMPT UPON THE STRONG ROOM OF THE LONDON AND NORTH-WESTERN RAILWAY, LIVERPOOL.

"London and North Western Railway Company,
"Liverpool, May 7, 1855.

"Gentlemen,—I have much pleasure in bearing testimony to the efficiency of the iron door and locks of your make, which secure the strong room at this office, and which completely baffled the efforts of one or more burglars to get at the money chest on the night of Tuesday last, although it is evident that considerable force was used to break open the door. I am, gentlemen, your obedient servant, "GEORGE PALMER.

"Messrs Chubb and Son."

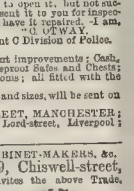
FROM MR. OTWAY, SUPERINTENDENT OF POLICE, C DIVISION.

"5, Great Vine-street, May 3, 1853.

"Gentlemen,—I have the pleasure to inform you, that having one of your locks on the street door of my house prevented my being robbed last night. The thief tried to open it, but succeeding in the manner described that I have sent it to you for inspection, and shall feel obliged if you will have it repaired. I am, gentlemen, your obedient servant, "O. OTWAY

"Superintendent C Division of Police.

"Messrs. Chubb and Son."



CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Packet Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock.

Complete Illustrated Lists, with prices and sizes, will be sent on application.

CHUBB and SON, 16, MARKET-STREET, MANCHESTER; 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; and Horsley-fields, Wolverhampton.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.

JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trade, to the inspection of his immense stock of ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.

Elliptic Stoves, double backs, 3d. per inch, and upwards.

Self-acting Ranges, with circular ovens and back boilers, best wrought bars and brightened fronts.

3 ft., 9l. 10s.; 3 ft. 6 in., 8l. 5s.; 4 ft., 8l. 18s.

3-feet Cottage Ranges, with ovens and back boilers, 38s. each.

3-feet self-acting ditto, 4 ditto, 46s. each.

Air Bricks, 1s. per doz.

Best Town Glue, 56s. Ditto, Scotch, 66s. per cwt.

Best Patent Sash Line.

1	2	3	4	5	6
4s. 6d.	5s.	6s.	7s. 6d.	8s. 6d.	11s. per gross.

And every material required in the building, bell-hanging, upholstery, and brass-foundry trades on the most reasonable terms.

List of Prices had on application at the Warehouse, or by letter prepaid

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,

THE BEAR GARDEN LEAD WORKS, SOUTHWARK,

Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

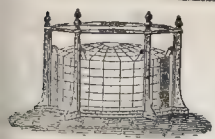
Many roofs covered with zinc thirty-five years ago have never required repairs.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS



FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service-Pipes, Lamp-Posts, Lamps, and Castings

WATERWORKS FOR THE SUPPLY OF TOWNS,

WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark; and numerous Churches, Chapels, &c.

Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

FLAVEL'S PRIZE KITCHENER.

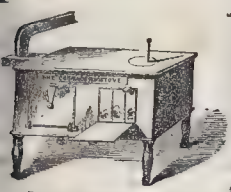
The only Kitchen Range which obtained a Prize Medal and special approbation at the Great Exhibition, 1851.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.



SOLE AGENTS:

BENHAM AND SONS,

19, WIGMORE-STREET, LONDON;

and at the Crystal Palace, Sydenham.

THE COTTAGERS' STOVES.

Testimonial.

"Lord Hardinge presents Messrs. BAILEY will be so good as to inform him how much he is in their debt for the stoves which they supplied to him. He is happy to inform them the stoves have proved VERY GOOD ones in the Camp before SEBASTOPOL

Horse Guards, 26th Feb. 1855."

D. and E. BAILEY, Ironmongers, 372, Holborn.

Price 30s.

HEATING BY HOT WATER.

JOHN WEEKS and CO. King's-road,

Chelsea, solicit the attention of architects, &c. &c. to their APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating buildings measuring 1,000 feet in length, at the small expense of 1s. 3d. per hour and labour of 3s 3d. This achievement in heating by hot water is unprecedented.

WARMING and VENTILATING.—

COTTAM and HALLEN, 2, Winsley-street, Oxford-street, having had thirty years' experience, and having warmed the circulation of hot water upwards of 4,000 buildings, consisting of churches, prisons, lunatic asylums, halls, and staircases, conservatories, forcing-houses, &c. can with confidence recommend their system, which, by the various improvements they have made, has perfected the construction and economised the expense of Greenhouses, conservatories, verandahs constructed entirely of iron or wood, and of iron and wood combined. Estimates upon application.—COTTAM and HALLEN, Engineers and Ironfounders, 2, Winsley-street, Oxford-street.

ECONOMIC COOKING-STOVE.—

DEANE, DRAY, and CO. recommend with confidence the IMPROVED COOKING-STOVE to the notice of the public as cheap in first cost, simple in construction, easy of management, capable of using a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the kitchen and fender department of Deane, Dray, and Co's establishment, where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO. opposite the Monument, London-bridge. Established A.D. 1700.

ROYAL POLYTECHNIC GAS FIRE.

BACHHOFFNER and DEFRIESS'S PATENT.—The public are respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming churches, shops, public buildings, &c. Smoke, dust, ashes, and sulphurous fumes are effectually prevented by its use, while securing all the comfort and appearance of an open coal fire, and at the same time perfect ventilation. To be seen in action at DEFRIESS'S Office, 142, Regent-street, London.

COLLINGE'S PATENT HINGES.—

Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, removed and replaced in an instant. Rising and double-acting spring Hinges and superior gate fastenings, at moderate prices. Beware Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axle-trees, sugar-mills, &c.

PATENT IRON ROOFING and IRON BUILDING MANUFACTORY (late the Coalbrookdale Company's premises), 13, James-street, Liverpool.—N.B. Parties are particularly requested to note the address. LIVERPOOL.

FRANCIS MORTON and Co. will supply estimates, plans, &c. for Iron Roofs and Iron Buildings, painted or galvanized, to be erected in any part of the United Kingdom. Roofs and buildings prepared for shipment abroad. F. M. and Co. possess advantages from their long experience, and are enabled to execute work on the most moderate terms consistent with good materials and workmanship.

N.B.—The attention of Agriculturists and Landed Proprietors is particularly invited to their Corrugated Iron Farm Buildings, Sheds, Roofs, &c.

UNDER PATRONAGE of the ENGLISH and FRENCH GOVERNMENTS.

Portable Galvanized or Painted Corrugated Iron Dwellings, Barracks, Hospitals, Stables, Warehouses, Theatres, Billiard and Concert Rooms, &c.

IRON ROOFS.

Patent Corrugated, Galvanized, and Painted, Wrought-iron, principal, Glass and Slated Roofs, to any span.

Wrought and Cast-Iron Bridges, Girders, Fire-proof Floorings, Shutters, Doors, &c.

Engineers' and Builders' Castings of all kinds manufactured by

JOHN WALKER,

Builder, Contractor, and Ironfounder, Mill-wall, Poplar.

Offices—Arthur-street West, London-bridge, where experienced draughtsmen are kept to furnish designs and estimates, which may be obtained on application.

N.B. Galvanized and painted Sheet-Iron, both plain and corrugated, supplied at the lowest possible prices, and a considerable allowance made to the trade.

SAMUEL HEMMING'S PATENT much approved PORTABLE BUILDING and ROOFING MANUFACTORY, REMOVED from BRISTOL to BOW, near London, close to the Bow Railway Station. A large variety of buildings always on view, churches, chapels, shooting boxes, lodges, banqueting rooms, ornamental villas, dwelling houses, farm buildings, and fire-proof stores. Also, railway stations, trucks, and carriages made to any plan on the shortest notice.

JACKSON and COOK, Ironfounders and Manufacturers of CORRUGATED and GALVANIZED IRON ROOFS and BUILDINGS, beg to call the attention of Architects, Builders, and others, to their Patent Corrugated Roofing, to the simplicity of its construction, its durability, and to the fact that purchasers, in point of lightness, cleanliness, durability, cheapness of construction, and being fire-proof. Drawings and estimates furnished.

Lland Foundry and Ironworks, Millwall, London.

Offices: 12, Fenchurch-street, City.

TUPPER and CARR, Contractors and Manufacturers of all sorts of IRON ROOFING.

PLAIN, CORRUGATED, PAINTED, or GALVANIZED.

Estimates and Drawings furnished on application.

Experienced Workmen sent to all parts of the Country.

3, MANSION-HOUSE PLACE, and LIMEHOUSE, LONDON; BERKLEY-STREET, BIRMINGHAM.

TUPPER and CARR'S (Craufurd's) PATENT GALVANIZED IRON,

For Roofs, Flats, Cisterns, Gas Tubing, Gutters, Pipes, Fencing, &c.

To be obtained only at

TUPPER and CARR'S WAREHOUSES, REGENT'S CANAL DOCK, LIMEHOUSE, LONDON; or BERKLEY-STREET, BIRMINGHAM.

Sheets, Bars, Rods, Hoops, Nails, Rivets, Screws, Wire, and Manufactured Articles, Pails, Coal-scoops, Buckets, Pumps, &c. always in Stock.

N.B. An allowance to the trade.

Address all letters to TUPPER and CARR, 3, MANSION-HOUSE-PLACE, CITY, LONDON.

SKAIFE'S GALVANIZING WORKS,

Commercial-road, Limehouse, London.

Skaife's process is the most effectual preventive against rust, and is extensively used for all purposes where Iron not liable to rust is required.

Patent Galvanized Iron supplied in every form.

Sheets plain and corrugated.—Roofs fixed complete.

J. Skaife is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, Plumbic Zinc, and Tiles.

An Allowance to the Trade.

A. MOREWOOD and CO. (late Morewood and Rogers),

Dowgate Dock, Upper Thames-street, London, and Baskerville Works, Birmingham.

PATENT GALVANIZED TINNED IRON, and GALVANIZED IRON, in Sheets

Plain or Corrugated, and Cut to all Gauges.

Manufactured articles always kept in stock, such as pails, scoops, bowls, trunks, skips, &c. of all sizes.

Also the Patent Galvanized Tinned Iron Tube, Gas and Water Tubing, Stamped and Moulded Gutters, Wire, Wire Netting, Hooping, Nails, Rivets, &c.

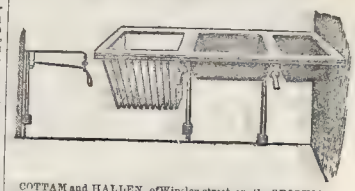
Estimates given for Roofs, and every description of Galvanized Building, at the

OFFICES and WAREHOUSE, DOWGATE DOCK, LONDON.

TO ARCHITECTS, BUILDERS, AND THE TRADE.

PATENT PLUMBIC ZINC.

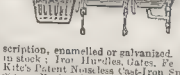
GREAT REDUCTION IN PRICE.



PLUMBIC ZINC is a perfect combination of Lead and Zinc, and not requiring to be more than one-fourth or one fifth as thick as Sheet Lead, is consequently very much cheaper than that material, and at the reduced price costs but little more than Sheet Zinc.

No 11 gauge weighs about	18	oz.	per foot	super.
12	"	"	20	"
13	"	"	24	"
14	"	"	28	"

Full particulars and the reduced price sent by post on application to



A. MOREWOOD and CO. DOWGATE-DOCK, LONDON, to whom all letters must be addressed.

COTTAM'S NEW PATENT for STABLE REQUISITES.

COTTAM and HALLEN, of Winsley-street, are the ORIGINAL INVENTORS of this arrangement of MANGER, RACK, and WATER-TROUGH as ONE FITTURE; they are universally approved of, and obtained the Great Exhibition Prize Medal. The New Patent embodies all the improvements which, from practical experience, have been found desirable. No well-managed stable should be without these fittings. Economy, durability, appearance, cleanliness, safety, comfort to the horse whilst feeding, and being removed impervious to infection, are some of the advantages of Cottam's improved Fitments. May be had either plain, galvanized, or enamelled. Every article for the harness-room and stable kept in stock.—Descriptive catalogues and estimates on application to COTTAM and HALLEN, 2, Winsley-street, Oxford-street.

BARTON'S PATENT SAFETY STABLE FITTINGS, and ENAMELLED MANGERS.

This the original Patent for important improvements in stable fittings, including a more safe and pleasing all others for conveying the straps and halter-weights to the back of the fittings, to prevent the horse biting cast in the stall. Stable Fittings of every description, enamelled or galvanized. All kinds of Stable Furniture in stock; Iron Hurdles, Gates, Fe ces, &c. &c. Manufacturer of Kite's Patent Noiseless Cast-Iron Smoke-Curing Chimney Cans.—Post-office-square.

JAMES BARTON, Iron Founder, &c. 320, Oxford-street, a few doors East of the Pantheon.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, &c.

THE following are the PRESENT PRICES of PATENT SASH LINE:—

No.				
3	4	5	6	
8s. 3d.	6s. 6d.	8s.	9s. 9d.	per gross.

At JOHN YOUNG'S, Birmingham and Wolverhampton Agent, Factor, and General Ironmonger, 18, Bloomfield-street, Manchester-square, running out of Baker-street, Portman-square. Every other article equally reasonable.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE.

Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-Iron Girders, and STEWART'S PATENT CAST-IRON GAS and WATER PIPES.

Office, No. 7, Size-lane, London.

TO ARCHITECTS AND BUILDERS.

PATENT CLIMAX DOOR-SPRINGS.—The attention of architects, builders, and ironmongers is particularly directed to the above patented improvements in door-springs, being the most perfect and durable yet invented. Their power is equal to doors of any size and weight, and they are warranted to stand the wear and tear of any busy public building, or business establishment in the kingdom.—Drawings, with full particulars, may be had from the manufacturers, WEBB and GREENWAY, Steelh use-lane, Birmingham

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spandles; Dr. Arnott's Ventilator, 4s.; and the new registered Venetian Ventilator, so much admired, &c. 6s. 6d. each.

J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

No. 1704, BRITISH SECTION, HARDWARE DEPARTMENT, PARIS EXHIBITION, 1855.

CLARK'S PATENT SMOKE-BURNER: an improved means of perfecting Combustion, and thereby destroying Smoke.

This invention is now in operation upon Steam-engine Furnaces, of Cornish and Waggon Boilers, and upon Ovens. It is adapted to other descriptions of Furnace, such as Marine Boilers, Coppers, Coke Ovens, Bakers' Ovens, Potteries, Chemical Works, &c. Its efficacy is acknowledged by Government Inspectors to be amongst the most perfect of the inventions extant in subduing the Smoke Nuisance, and in many instances with a diminished consumption of fuel.

Ten furnaces, of various construction, to which it has been successfully applied, may be seen in operation at the Cement Works of Messrs. FRANCIS, BROTHERS, Nine Elms, London.

Address, THE SMOKE-BURNER COMPANY, Nine Elms, London.

TO IRONMONGERS, BUILDERS, &c.

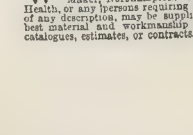
PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's improved ventilators.—HULETT and CO. 55, High Holborn.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Cornice-poles, Rings and Lacquered Case Tube for Picture Rods, Desk Rails, &c. &c.

Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. &c.

RICHARD EVERARD'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London

TO IRONMONGERS AND THE TRADE GENERALLY.



D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show—every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete and pattern-book and price list, 1s. 55 and 56, High Holborn.

ESTABLISHED 1817.

Dr. Arnott's Ventilators, 4s. 6d. each.
An extensive stock of bar, rod, hoop, and sheet iron.
Brick Moulds kept in stock. Any size made to order.

NAILS and IRONMONGERY, from BIRMINGHAM direct.
Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the
LOWEST BIRMINGHAM PRICES,
for which
will be forwarded upon application.
FREDERICK BLYTH,
Nail Manufacturer and General Factor,
Regent-parade, BIRMINGHAM;
or at 16, Gresham-street, LONDON.

WILLIAM BATLEY, Engineer and Boiler Maker, Northampton.—Manufacturers, Local Boards of Health, or any persons requiring Engines, Machinery, or Boilers of any description, may be supplied with the same of the very best material and workmanship on the shortest notice.—For catalogues, estimates, or contracts, apply as above.

EDWARD RUSSELL, ALMA TUBE WORKS, WALSALL, Manufacturer of Wrought Iron Tubing for Gas, Steam, and Water; Stocks, Taps, and Dies, and all kinds of Gas Fittings.

SERPENTINE.—The LIZARD SERPENTINE COMPANY MANUFACTURE and also SELL STONE in BLOCK or SLAB. The Serpentine now raised is from the lower beds, and as sound as the coloured marbles, with which it competes in price.—Offices and Show Rooms, 20, Surrey-street, Strand

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors, and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their STOCK of MARBLE is received direct from the principal quarry-owners in Italy and Belgium, for SALE on COMMISSION ONLY, and that they can consequently supply the Trade with the finest marbles at the lowest prices. Sawn Slab, Mortars, Vases, &c.; Yorkshire and Portland Stone for sale on commission

The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge

MARBLE.—Mr. B. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black Marbles, at CARRARA WHARF, THAMES BANK, and Gold Marbles, at the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.

MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the Marble trade solely on his own account.

Mr. Thompson being no longer his agent.

Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.

N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

PIMLICO MARBLE WORKS,
BELGRAVE-WHARF,
LOWER BELGRAVE-PLACE.

SAMUEL CUNDY,

THE STOCK OF LOW PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIALS,

PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.

THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble bold, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Verd Antique, Brocatella, Dove, St. Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a general variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast Rooms, best and second-story Bed-Room, &c. Also, Monuments, Tombs, Tablets, and Bed-stals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

YORKSHIRE STONE.

GEO. VINT and BROTHERS beg respectfully to inform Architects, Surveyors, Contractors, Builders, Masons, &c. that they can supply to any extent all kinds of YORK STONE of the very best quality direct from their Quarries, to all Railway Stations and Ports in the Kingdom, on the most reasonable terms. GEO. VINT and BROTHERS will gladly forward prices by post on application.—Address, Idle, near Leeds.

By Her Majesty's Royal Letters Patent.

SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in this most durable material. A large Stock kept of Mantel-pieces, Balustrades, Quoins, Tombs, Fonts, &c. at the new premises, Whitehall Yard, Cannon-row, Westminster.

HAYTOR GRANITE COMPANY.—Incorporated by Royal Charter.—London Agent, C. HOAR, 4, Millbank-row, Westminster. This Granite was used exclusively in the Nelson Monument, Trafalgar square; King William Monument, City; and extensively for the plinth and steps at the Royal Exchange, and terraces at the Crystal Palace, &c.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

VALUABLE SANDSTONE for PIER and DOCK PURPOSES.—TO STONE MERCHANTS and CONTRACTORS.—To be SOLD, by PRIVATE CONTRACT, about 300,000 CUBIC FEET of SANDSTONE of the best quality. The quarry is situated at Golden Bank, Horsforth, near Leeds. The quarry is situated at Golden Bank, Horsforth, near Leeds, half a mile from the North-Eastern Railway Station. The stone has been extensively used in the construction of Government dock and harbour works. The barrug is not above 5 feet in depth, and as the quarry has been wrought upwards of twenty years, the entire breadth and depth of the bed of stone is open for working. Blocks of from one to twenty tons may be cut, and can be carted from the lowest level of the quarry. A purchaser at a distance would readily meet with competent and trustworthy persons near the spot, who would contract to get and deliver the stone.—To learn the time allowed for removing the stone, and other particulars, apply to Mr. C. L. DRESSER, Land Surveyor, Leeds; or to Mr. EDWARD BUTLER, Solicitor, Leeds.

4, Park-row, 7th June, 1855.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late LUARD, BEEDHAM, and CO.) Caen Wharf, Rotherhithe, London, General Stone Merchants and Quarrymen, continue to deliver from their Wharf and Depôts CAEN STONE, AUBIGNY, PORTLAND, ANCASTER, GODMANCHESTER, BUILDING, BLOCK, and RUBBLE STONE IN BUILDING, BLOCK, and RUBBLE BUILDING, and BURR HEATH STONE; also RUBBLE BUILDING STONE, direct from the Caen and Aubigny quarries, at very moderate charges, to compete with the price of Brickwork.—For information, direct to Caen Wharf, Rotherhithe; or to Hibernia-chambers, London-bridge, Borough.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Waterloo-bridge. Offices: 246, High-street, Southwark, near the Townhall.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.

London Agents of TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard.

This Granite is selected for the New Westminster-bridge

TO BUILDERS and Others in Town or Country.—For PRICES of BANGOR SLATES, apply to SCOLES and WOOD, Market Wharf, Regent's park.

BOW-BRIDGE SLATE WORKS, Stratford, near London.—A. A. ROBINSON begs to inform Architects, Contractors, Builders, and others, that his PRICE LISTS for SLATES and SLAB WORK for 1855 are NOW READY, and can be had on application, inclosing a postage-stamp.

N.B. A liberal discount to the trade.

TO ARCHITECTS, BUILDERS, IRONMONGERS, &c.

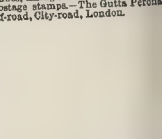
ENAMELLED SLATE CHIMNEYS, of elegant designs and superior workmanship, in great variety, at prices from 21s. to 10 guineas. Slate Cisterns made to any size. J. HOWELL, Manufacturer, 5, Cook's-grounds, King's-road, Chelsea, Middlesex.

ENAMELLED SLATE.—REDUCTION in PRICE.—Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in price in the shape of a large and increased discount to the TRADE. His best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work PIMLICO SLATE WORKS, 39 and 40, Upper Belgrave-place, Pimlico.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

SLATE PAVING, 4½d. per foot superficial, averaging 5 feet, in a slab planed well one side, squared, fitted to lay without additional labour, warranted stronger and more durable than 3-inch York. The above has only to be seen to ensure its active sale. Bangor slate paving, 2 inches thick, planed both sides, 9d. per foot. Roofing slates at extremely low prices.—HANNAFORD'S WHARF, Radcliff cross.

FREESTONE.—Architects and Others are reminded that they can obtain the CASTERTON FREESTONE, in Blocks of any portable size, at the Quarries, or at the Railway Stations of Stamford, Essendine, or Wansington, and which, from its quality, and the facility with which it is wrought, are of immense advantage to the purchasers. Apply to FRAS. and UCTS. N SIMPSON, Stamford.



N B Specimens in plain blocks, and in elaborately carved Bosses, from Ely Cathedral, may be seen, and other particulars obtained, at the Offices of Messrs. HINDER, SIMPSON, and SONS, 20, Saville-row, Burlington-gardens, London.—May, 1855.

IMPERISHABLE STONE.—TRICKETT and PERKINS having erected new and powerful machinery at their extensive quarries, are now able to execute orders to any extent with that much esteemed RAWDON-HILL STONE which, from its strength and durability, together with its beautiful colour and readiness of conversion, renders it one of the most desirable stones used, being at once useful and ornamental Architects and others are requested to test its qualities for strength and durability, either for external, internal, or ornamental purposes. Samples and prices furnished by SAMUEL TRICKETT, Stone Wharf, Isle of Dogs.

NOTE.—Can be got any size, or delivered to any part by rail or water carriage.

TERRA-COTTA.—Statues, Statuettes, Vases, Tazze, Busts, Consoles, Bas-reliefs, &c. by J. M. BLASHFIELD, of Millwall, near the West-India Docks Station, and 1, Pine-street, Paddington-basin, where prices and designs can be obtained. Examples of Terra cotta, by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham; in the Mint; C. ...the Statues of Australia, Venus di Medici, and the colossal Tritons in the gardens at Sydenham, are in Terra cotta, so are the fountains at the Renaissance Court, and the Fountain of the Athenian Court. The Pompeian roof is of Terra-cotta and red cement combined. Since the execution of these works J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

JOHN WARNER and SONS, Patentees and IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, strictly in tune.

TUNED BY MACHINERY.

Stocked and wheeled ready for hanging. Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which is a superior tone and facility for ringing.

TARPAULINS for COVERING ROOFS during Repairs, SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive immediate attention.—WILLIAM PIGGOTT, 115, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of this tubing, the Gutta Percha Company have pleasure in drawing attention to the following letter received from Mr C. Hacker, surveyor to the Duke of Bedford:—"Office of Works, Woburn-park, Jan. 18.—In answer to your inquiries respecting the gutta percha tubing for pump suctions, I find that the water has not affected it in the least, although it will eat lead through in two years; we have adopted it largely, both on account of being cheaper than lead, much easier fixed, and a more perfect job. Yours, &c. C. Hacker." N.B. The Company's Illustrated Circulars, containing instructions to plumbers for joining tubes, lining tanks, &c. will be forwarded on the receipt of three postage stamps.—The Gutta Percha Company, Patentees, 18, Wharf-road, City-road, London.

THE LONDON AND MANCHESTER PLATE GLASS COMPANY

Beg to inform the TRADE, that the EXTENSION OF THEIR WORKS being now completed, they are enabled to execute orders to any extent at immediate notice. The Company also beg to intimate that owing to improvements effected in the reconstruction of their Works, the COLOUR and QUALITY of their GLASS will be found to be considerably improved, and that they can guarantee the maintenance of these essential requirements. They further beg to invite attention to their reduced List of Prices, which may be obtained on application at their London Warehouse, or at the Works

For the convenience of the LONDON TRADE, a large stock of POLISHED PLATE is now kept at the COMPANY'S WAREHOUSE, BARRAUD'S WHARF, WHITEFRIARS.

The Works, Sutton, St. Helen's, January, 1855.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

January 1, 1855. *** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 49 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor of SONOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'s PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

ANCIENT·HOUSE·FURNITURE

In order to supply the deficiency which has hitherto existed in Furniture suitable for the many Mansions that have been erected or restored in the MEDIÆVAL STYLES, Messrs. CRACE have directed their particular attention to this subject, in addition to their other works, and have prepared appropriate specimens in the various branches of Furnishing.

STUFFS for HANGINGS, in simple Worsted Damask, in Silk; also in Tapestry of Bauderkin.

WATERLOW and SONS, MANUFACTURING AND EXPORT STATIONERS,

65 to 68, LONDON-WALL, AND 49, PARLIAMENT-STREET, LONDON.

MILL AGENTS FOR WHATMAN'S DRAWING PAPERS.

THE BUILDER'S FRIEND, Third Edition. Price One Shilling. Office of "The Builder," and of all Booksellers.

THE FREEMASONS' MONTHLY MAGAZINE. Price 1s. A Specimen Number will be sent on receipt of six postage-stamps (the cost of postage). No. VI. for June, just published. GEO. ROUTLEDGE and CO. Farringdon-street; and R. SPENCER, 314, High Holborn.

FRONTS OF HOUSES, SHOP-FRONTS, NEW DESIGNS. Just published, price 25s. full sized Imperial 4to

STREET ARCHITECTURE. By VICTOR DELASSAUX and JOHN ELLIOTT, in a Series of Designs for Shop-fronts and Facades. In Twenty two Steel Plates, elaborately engraved, with explanatory Letterpress.

London: JOHN WEALE, 59, High Holborn.

PEOPLE'S EDITION FOR THE USE OF MECHANICS, &c In a neat pocket volume, price 1s. 6d.; or post-free on receipt of one Queen's head extra.

COMPOSITION and PUNCTUATION familiarly explained, for those who have neglected the study of grammar.

By JUSTIN BRENAN.

"Something of the kind has long been wanted, and the want is most ably supplied. We shall ourselves present copies to mechanics and others, in whose progress we take interest."—*Edinburgh Literary Journal.*

London: EFFINGHAM WILSON, 11, Royal Exchange.

MENSURATION FOR MECHANICS AND ARTISANS. Third Thousand, with important additions, 1s.; or bound in cloth, 1s. 6d.; post-free, one Queen's head extra.

MENSURATION MADE EASY; or, the Decimal System for the Million, with its Application to the Daily Employments of the Artisan and Mechanic. By CHARLES HOARE.

"To those who desire to make themselves acquainted with the sciences on which it treats, without the aid of a master, it would be impossible to overrate its importance."—*Morning Advertiser.*

London: EFFINGHAM WILSON, Publisher, 11, Royal Exchange.

SECURITY TO EMPLOYERS.

THE TIMES ASSURANCE COMPANIES. To Clerks and others guarantees at the lowest rates. Plate Glass Assurance.—Win lows, mirrors, &c insured again breakage. Every description of life and fire assurance. Apply to the Manager, 32, Ludgate-hill.

THE ALBERT ASSURANCE COMPANY (Established in 1836.) MORTGAGE and other LOANS in connexion with life assurance are granted by this Office, either for long or short periods, on freehold and leasehold property, reversionary interests, and on good personal security.—EASTERN BRANCH, 7, Finsbury-square. W. S. VARDY, Manager.

HOUSEHOLDERS and GENERAL LIFE ASSURANCE COMPANY, 15 and 16, Adam-street, Adelphi. Money received at interest at 5 per cent. per annum, payable in April and October Agents (with references) may apply. R. HODSON, Secretary.

ROYAL POLYTECHNIC INSTITUTION. The Magnificent Silver Candelabrum, 17 feet high, one of four made for the Egyptian Government, by Messrs. Wilkins of 223, Oxford-street, will be on view, by special favour, for fourteen days only. The Lectures and Exhibitions as delivered before her Most Gracious Majesty and his Royal Highness Prince Albert, the Patron of the Institution, will be continued. Lectures by Mrs. Clara Lucas Balfour: "Summer Hours with the Poets," on June 18th, 21st, 28th, and July 2nd, at Eight o'clock in the Evening.

TO ARCHITECTS

EXHIBITION and COMPETITION DRAWINGS, coloured or tinted and superior LITHOGRAPHY, in its various branches, executed by Mr. T. J. RAWLINS, author of Elementary Classes, adopted at Marlborough House, &c. &c. 20 Lithographs (including all charges) from £1 cash.—38, University-street, University College, London.

FREEHOLD BUILDING LAND TO LET, abutting on the Barking station of the Tilbury line, twenty minutes from Fenchurch-street, where moderate-sized houses are greatly in demand, and a first class public-house greatly wanted for the accommodation of the station and neighbourhood.—Apply to H. WILLIAMS, Esq Arch test, 84, Great Ormond-street, Queen-square

HIGHBURY NEW PARK.—FREEHOLD BUILDING GROUND TO BE LET, in this desirable locality, a most fine extensive views. To gentlemen desirous of selecting a site for the erection of villa residences, this affords an excellent opportunity. Money advanced to responsible persons, if required.—For particulars apply to Mr C HAMBRIDGE, Architect, 73, Coleman-street, City.

CAMDEN TOWN CEMETERY BUILDING ESTATE—TO BE LET on Building Leases for ninety nine years very eligible SITES upon the above estate, having good frontages into Camden-road, Prestwood-street, and Barrow-street. There is a great demand for houses and shops of the third-rate in this locality, which is enhanced by its near proximity to the North-Western and North London railway stations, and to the Hampstead-road. Plans may be seen, and particulars obtained by application to H. E. KENDALL, Esq. Architect, 17, Suffolk-street, Pall-mall East; or to JOHN DANGERFIELD, Esq Solicitor, 26, Craven-street, Charing-cross.

AUGUSTUS SMITH, Auctioneer to Engineers, Machinists, and the Metal Trades, 285, Blackfriars-road, near the bridge, respectfully invites all persons having Engines, Machinery, Foundries, Plant, or Ironmongery businesses to dispose of, to forward the particulars thereof for insertion in his REGISTRY-BOOK, for which NO CHARGE will be made unless sales be effected

TO ENGINEERS, MACHINISTS, and OTHERS.—A first-rate PREMISES in the above line, on the Surrey side, TO LET, fitted up with an excellent 3 horse engine boiler, 3 furnaces and fans, screw cutting and other lathes, benches, anvils, blocks, tools, &c. The foregoing spacious premises are in full work, and it will be supplied, and may be given possession of immediately.—Apply to AUGUSTUS SMITH, Auctioneer to Engineers, Machinists, and the Metal Trades, 285, Blackfriars-road, near the bridge.

MAITLAND-PARK, HAVERSTOCK-HILL, Hamp tead-road. -LAND TAX REDEEMED—TO BE LET, upon Building Leases, for ninety nine years, desirable BUILDING SITES upon the above Estate The continued demand for houses in this locality, and the picturesque position of the property adjoining the grounds of the Orphan Working School, render this a desirable opportunity for builders or gentlemen wishing to erect villas for themselves.—For terms and to view plans, apply to the Secretary of the Orphan Working School, 32, Ludgate-hill; Messrs. TERRELL and CHAMBERLAIN, 30, Basinghall-street; the Architects, Messrs WEHNERT and ASHDOWN, 42, Charing cross, or at the Porter's Lodge, on the Premises.

GUILDHALL, London, 24th May, 1855.

BUILDING LEASES, NEWGATE-STREET.—The Committee for letting the Bridge-House Estates, will meet at Guildhall, on FRIDAY the 22nd day of JUNE next, at TWELVE o'clock precisely, to receive TENDERS for BUILDING LEASES of THREE PLOTS of GROUND, on the north side of Newgate-street, in the City of London, adjoining Christ Church-passage.—A plan of the ground and conditions for letting may be seen at the Architect's Office, Guildhall.

FERDINAND BRAND, Comptroller.

GUILDHALL, June 11, 1855.—The Committee for Letting the City's Lands will meet at Guildhall on WEDNESDAY the 20th day of JUNE instant, at ONE o'clock precisely, to receive PROPOSALS for LEASES of a HOUSE, No. 3, on the east side of Broad street buildings; a House, No. 28, on the south side of New Broad-street; a House, No. 2, on the north side of Southampton-place; Four Houses, Nos. 58, 59, 60, and 61, on the south side of Banner-square; and a House No. 7, on the west side of Milton-street, Finsbury. Further particulars and plans may be seen, and forms of Tender obtained, at the Architect's Office, Guildhall. FERDINAND BRAND, Comptroller

BUILDING LAND TO BE LET, in the GLOUCESTER-ROAD and PRINCES-TERRACE, Regent's-park, and on the East of Primrose-hill, a first rate situation for third-rate 8 roomed houses, which are much in request in that locality, for purchase or hire The ground rent very low Term, 99 years. Money advanced if required.—Inquire of F. ELLIART, Esq No 9, Harrington-square

BUILDING GROUND TO BE LET, in the best part of Euston-square, with a frontage of 170 feet; a populous and respectable neighbourhood; suitable for a church, chapel, public building, or dwelling-houses.—For particulars apply to Mr. GRAHAM, No. 23, Taviton-street, Euston-square.

BUILDING FRONTAGE.—TO BE LET, on a Building Lease, a frontage to the Kingsland-road near Shore ditch Church), having a depth of 57 feet, and having a right of a side entrance; it is deemed to be exceedingly adapted for a pawnbroker, or any other trade for which manufacturing premises are required For terms, apply to Mr. W. F. BRAY, Jun. 15a, King's road, Bedf rd row.

NEWBURY, BERKSHIRE.—TO BE LET, all those capital BUSINESS PREMISES, for many years in the occupation of Mr. Wm. Bowyer, deceased, whose lease expires at Midsummer next. The premises are well adapted for the business, and will be let at a moderate rent.—Apply to Mr. KING, Globe Inn, Newbury.

KENSINGTON GORE.—Valuable SITES for first-class MANSIONS, in the new (Prince Albert's) road, Kensington Gore; with frontages to the park-like property purchased by the Royal Commissioners for the Exhibition of 1851, as a site for institutions connected with science and art, may be obtained upon 99 years' lease, by application at Mr. W. JACKSON'S Office, 10, Kensington Gore

FREEHOLD BUILDING LAND, at Redhill, Surrey, Land-tax redeemed

MR. CHARLES J. BAKER has received instructions to DISPOSE OF a valuable PLOT of FREEHOLD LAND, containing an area of 7 acres, most eligibly situated on a rising ground three quarters of a mile from the Redhill Station, having a frontage to the road from Reigate to Bletchingley of 330 feet, and a mean depth of 1,000 feet. The site commands an extensive prospect of the beautiful scenery for which the neighbourhood is so justly famed, and is admirably adapted for the erection of a gentleman's residence of the first class, or semi-detached villas.—Further particulars to be obtained, and plans seen, at the Office of Mr. CHARLES J. BAKER, Auctioneer and land Agent, 31, Moorgate-street, Belgrave-square.

WANTED, for about a Twelvemonth, in the vicinity of London, near a railway station preferred, PREMISES for a scholastic establishment, consisting of about Fifty children, Others' pupils, &c.—Address, S. S. Messrs. Faudell and Phillips's 49, Newgate-street.

TO ENGINEERS and OTHERS.—TO BE SOLD by PRIVATE CONTRACT, the valuable BUSINESS PREMISES, held under lease for 98 years, from the 24th of June, 1851, and the GOODWILL of the BUILDING BUSINESS carried on at, and known as the West London Iron-works, Latimer-road, Notting-hill, by the side of the West London Railway, now in operation, and which connects the great Western and London and North Western railways. The works consist of offices, storehouses, fitting and tool shops, with good assortment of tools, erecting shop and sheds, smiths' shop, pattern-makers' shop, and pattern loft, engine and boilers, stable for two horses, large yards, with five-ton crane, the whole in good condition and repair. There is a good connection to the business, and there is a foundry next door. Further particulars may be obtained of, and Tenders made to Messrs. TREHERN and WHITE, Solicitors, 15, Bargo-yard Chambers, Bucklersbury, London, who will also give an order to view the premises if required.

KENTISH-TOWN.—TO BE SOLD, several well built six-roomed CARCASES, with garden ground, in a best rate situation, and low ground-rents. For particulars apply to S. TAYLOR, Plumber, &c. 4, Albany-place, Kentish-town-road.

CARCASES at DULWICH.—TO BE LET. FOUR HOUSES and TWO SHOPS, intended as a butcher's and baker's, partly built, on advantageous terms. Bricks, &c. may be advanced, if required for finishing.—Apply to Messrs. W. G. and E. HABERSHON, Architects, 38, Bloomsbury-square.

TO ARCHITECTS.

COMPETITION and other DRAWINGS.—Mr. THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen, &c and of "London a. it is," offers his services in Tinting Backgrounds, Landscape Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr BOYS, 33, Albany-street Regent's-park.

TO ENGINEERS, CONTRACTORS, &c.

LEVELS of first-class work, price 6l. to be had of the Maker, JOHN DAVIS, upticians, Derby. The Levels consists of a 5 inch telescope, focus adjusted by rack; fitted in an excellent case. The legs either tripod or jointed, for use in a pit.

SWISS DRAWING INSTRUMENTS equal in quality to the very best London-made instruments and considerably cheaper.—Apply to Mr. S. BARLOW, 3, Thayer-um, Hollborn (between 2 and 3 p.m.); or to Mr. H. B. BARLOW, Office for Patents, Ducie-place, Exchange, Manchester.

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 39, Westminster Bridge-road, Lambeth (near Astley's Theatre), begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An illustrated price-list will be immediately forwarded, free, on application.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES. Established by Messrs. DAVIDS, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c and for giving EVENING INSTRUCTION in Architectural and Civil Engineering, Drawing, and Colouring Maps Finished and Working Drawings Preparing Specifications, Taking out Quantities, Estimating, &c. &c. Terms—Day Pupils Three Guineas per Quarter; Evening Pupils One Guinea per Quarter, which includes Drawing Boards, T Squ res, Plans, Drawings, Models, &c. For Prospectuses apply at the Offices, 24 Guilford-street, Russell-square

TO BRICKMAKERS, BUILDERS, and BUILDING SOCIETIES.—To be immediately DISPOSED OF, entirely from want of capital, a first rate BRICK and TILE WORKS, licensed under Beart's Patent, now in full operation, worked by steam-power, producing sixty thousand bricks a week, from the finest bed of white clay in England.—For particulars apply to Mr. GLENN, Cambridge-terrace, Liverpool-road, Islington.

The Builder.

SATURDAY, JUNE 16, 1855.

THE Parliamentary Committee on the new Metropolitan Buildings Bill have again met, and the measure is beginning to assume a more practicable shape, although it still contains many objectionable provisions, amongst which we must continue to place the reference of matters in dispute under the Act to the police courts. So many alterations, too, are made from time to time, that we cannot venture to say what its provisions actually are at this moment. One great question still under discussion is the mode to be adopted for determining the thickness of walls, and we shall best bring this before our readers by giving a full report of the discussion of this point at the Royal Institute of Architects on Monday evening last, when Mr. Hesketh read a paper "As to the method which it is most advisable to adopt in the Metropolitan Buildings Bill for regulating the thickness of walls."

The reader said, together with other district surveyors, I feel deeply anxious that the Bill for the regulation of the buildings of this vast metropolis should be efficient, and, at the same time, acceptable to the respectable part of the public immediately interested in it, and yet, from the shape in which it has been brought forward, I entertain great doubts whether it will prove either the one or the other. If not, the officers under the Act will bear, as they now do, the odium as well of its deficiencies as of its oppressive enactments.

These officers have been accused, in high quarters, of neglect and apathy in the discharge of their duties with regard to certain sanitary regulations; and, though they have disproved the facts alleged against them, and though, if these facts were admitted, they have clearly pointed out that the law does not enable them to interfere, or even to enter upon premises, for the purpose of inquiry, yet the accusation remains recorded against them with the following special recommendation:—"Should any amendment of the (Buildings) Act be in contemplation, this general neglect of duty on the part of the surveyors, and this apparent apathy of all concerned in the administration of the measure with relation to the only provisions of it directly bearing on sanitary matters, ought not to be lost sight of." To any one at all cognizant of the Act, the accusation confutes itself, and I cannot help quoting, with gratification, one of the resolutions just passed by the Builders' Society, to show that it does not weigh much with them, viz.—"That the duties of the district surveyor could not be as well fulfilled by any but competent professional men, and that the interests of the public could not be protected efficiently by any arrangement which would throw these duties on a less educated class of men."

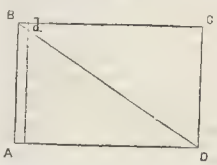
This is the gratuitous testimony of that class which has most concern in the operation of the act; those on the other hand who have had the charge of the new Bill, have thoroughly carried out the *former* recommendation, for not one of the officers serving under the present Act has been consulted in the preparation of this measure. The result of this unmerited distrust is, I submit, that we have in the new measure not a reform of what is faulty and oppressive (which is greatly needed), but many totally new regulations subverting even the very things most approved by those who are cognizant of the working of the Act. These are my reasons for seeking this opportunity of entering upon that subject, which is amongst the most important to have properly settled, namely, the rules for determining the thickness of the walls of buildings.

The story of the Bill and its changes on the subject before us, since its first appearance about six weeks ago, seems to me sufficient of itself to occasion some diffidence in the minds of those who do not profess to judge of its scientific and practical merits. It was printed at the end of April, read a second time, and referred to a select committee. Previously, however, to its coming before the committee in the middle of May, all the rules relating to the thickness of walls had been struck out, and new ones *on totally different principles* were substituted, in order to meet the outcry against their being complex, and giving erroneous results. The district surveyors, however, and perhaps others, pointed out to the framers of the Bill, that besides the difficulties of working out such complicated rules, they were seriously defective in many points which they particularized. The consequence was, that before any discussion on them took place in committee, a third edition was printed, in which these defects were thought to be remedied by means of special rules intended to meet the objections. This not being the case in the minds of the objectors, at the request of one of the framers of the measure, I discussed the subject with him, and afterwards with him recast the schedule in a new form, to which I at first thought he agreed, though (it appears) in error. This recast was put in by the district surveyors, and is now printed by order of the committee, as well as the framers' schedule, which has now assumed a fourth edition.

It has, however, been put in by the district surveyors, with the express understanding that they do not assent to the rules which still remain for determining the thickness of walls of public buildings, where any story is more than 20 feet in height. These rules merely remain because under the altered constitution of the Bill they were not able at once, in so short a time as has been allowed them, to propose a substitute. As they stand, the rules cannot work well.

One important improvement, however, has, I think, been introduced into this Bill, by allowing buildings to be built in compartments, separated by cross walls, the thickness of the walls being regulated by the size of the compartment, and not of the whole building, as in the present Act. The advantages of this are, amongst other things, that it will conduce to economy of space and cost, by allowing thinner external and party walls, and to sounder construction and greater stability, by encouraging brick internal walls, instead of wooden partitions, thereby also causing a great diminution in the risk and extent of fires, and in the end, probably to the reduction of premiums of insurance.

I may perhaps be allowed to say, that I first suggested this system to Lord Seymour, then First Commissioner of Works, in March, 1851, when I carefully pointed out all its advantages.



The cross walls are to be at least two-thirds of the thickness required for external and party walls; but not less than $8\frac{1}{2}$ inches thick; to have the openings limited to a third of the vertical area in each story, and to be carried up at least two-thirds the height of the building: I think four-fifths would be better.

We come now to the rules proposed by the framers of the Bill for determining the thickness of external and party walls.

One professed object of the framers is to simplify the Act, by dispensing with the system of *rating* buildings, which was introduced into the first Building Act passed in 1667, the year after the fire of London, and said to have been framed by Sir C. Wren. I must assert, that there is a complete declension in the new Bill from the framers' original intention. In the first Bill, it is true, it was completely carried out; but it was so by introducing a far more complex system, by losing sight of many matters which past experience had shown to be proper and requisite, and by permitting many defects and anomalies in practice. These having been pointed out (and I will presently show some which remain after the last revision), a most complex system of rating, actually, though not nominally, has been introduced into the new editions. There are, besides the general rule, no less than seven special ones, according to seven different sorts (why not call them rates?) of walls: warehouses, and that class of buildings, have likewise another system of rates of walls. And more than this, while the present Act gives but one rate to each building, this Bill would give a separate rate to almost every *wall* of a building. This must, then, surely negative any advantage said to be gained in this respect, and moreover, give the comparative merit of simplicity to the present Act. I am not sure that I might not go one step further, and submit that this complex system of the Bill ought, in this respect alone, to prevent its adoption for ordinary buildings.

But it will probably be said by many, that if the result obtained is right, it will be worth this complex machinery, and into this result will therefore inquire.

Now, the system proposed in the Bill purports to be founded upon the principles set forth by Rondelet, which he based upon, as he says, "an infinity of experiments, observations, and calculations." His first rule, which is that adopted in the new Bill, with a modification in the denominator, is as follows:—

Let A B C D be the elevation of a wall of a building between return walls at A B and C D. Draw the diagonal B D and set off on it B d, equal to a twelfth part of the height A B, and draw a line through d parallel to A B, and the space between this line and A B is the required thickness of the wall. The height A B, be it observed, is from the floor to the tie of the roof, not to the top of any parapet or gable, as in the Bill. The following formula gives the same result. The thickness $= \frac{l \cdot h}{12 \times d}$. l, h, and d being respectively the length A D, height A B, and diagonal B D. This, though only a rule of thumb, seems to be founded on some degree of reason; for it is evident that in walls of the same height the longer a wall is between return walls the thicker it ought to be between certain limits; nevertheless, the thickness ought not to increase so fast as its length, because the height must be the principal element in determining the thickness. This is attained by the rule where the length is much in excess of the height, inasmuch as, supposing the length to increase from A towards D, and onwards by equal increments, the corresponding increments of the ratio of the height and diagonal would be continuously diminishing. In the same case the thickness would increase nearly in proportion to the increase of height. But the rule fails more and more as the height becomes more and more in excess of the length, till it gives absurd results, as in the walls of towers. The formula of Rondelet is, as I have said, the thickness $= \frac{l \times h}{12 \times d}$.

That of the last edition of the Bill is for public buildings, the thickness $= \frac{l \times h}{18 \times d}$.

Now my impression is, that the divisor 18 will make the walls too thin for safety when in one story, and that Rondelet's divisor 12 is better. It is, however, a subject which requires great consideration. I give a few examples of calculations on both formulæ, in the diagrams suspended, in which are three instances of the aisle walls of churches with galleries. In these Rondelet's rule comes nearer than that of the schedule to the actual thickness; but I think that a mean between 12 and 18 will be found better than either for brick walls of public buildings in one height.

The formula ought, as I have shown, to be discontinued when the height is much in excess of the length; otherwise a wall, say 60 feet high and 20 feet long, would have its base no thicker than one 20 feet high and 60 feet long, and the Bill does so when the height exceeds twice the length, by requiring the thickness to be one-fortieth of the height. Yet I think this also gives too slight a wall, and requires the fraction

to be increased. For myself, I certainly think that, for public buildings with a high story, a formula ought to be introduced for determining the thickness of the walls, instead of the undigested rule of the present Act, though such formula may not be applicable on every occasion, and then special calculations must be resorted to. At the same time I think a far more perfect formula may be obtained by varying the thickness with reference both to height and to the square root of the length, which is founded on the reasons I have before given, and would not require abandonment in certain cases, as Rondelet's and the framers' rules do. I venture to submit the following formula, therefore, for consideration, though it is but a rule of thumb :—

$$\text{Thickness} = \frac{2\,h}{5} + \sqrt{l} \text{ in inches.}$$

Many speak against any such rule as being complicated; but this would not be the case, because of course, directly the Act should be passed, tables would be formed just as we now have with reference to bearings of timbers.

But where I venture entirely to differ from the framers of the Bill is in their not limiting this rule to *public buildings where there are lofty stories*, and then only to such *lofty stories themselves*. Rondelet himself, in giving this rule, limits it to *walls in one height without the ties or abutments* given to it by intermediate floors or roof. In the case even of the clerestory wall of a basilica, he modifies it by setting off on the diagonal, as at B *d* one-twelfth of the height of the clerestory, added to one-twenty-fourth of that of the part below it; thus diminishing the thickness on account of the aisle roof. But for buildings composed of many stories, he says distinctly, "In ordinary houses where the height of the stories does not exceed 12 to 15 feet, in order to find the thickness of walls, whether internal or external, regard must be had *only to the width of the spaces which they divide, and to the number of stories which they have to sustain*." It is not, however, necessary for me to go into the rules he gives for those buildings in stories, for this reason, that the framers of the Bill have themselves unaccountably forsaken those rules which Rondelet himself prescribes, and have adopted his first rule, which I have explained, and which he most distinctly repudiates for ordinary buildings in stories.

The framers' schedule is consequently still full of serious defects and anomalies, notwithstanding that they have departed from their first principle, and have introduced so many special rules for the purpose of obviating (as before mentioned) some particular inconsistences in the application of their general rule. I will point out two or three defects. First, small houses, now called fourth-rates, if they have *four* stories, are to be allowed *two* stories of 8½ inch walls; whereas if they have only *three* stories, they are allowed only *one* story of the thinner, or 8½-inch walls. This is the reverse of equitable. Secondly, in the larger description of houses, say there are two walls, each 40 feet long, between return or cross walls; and suppose one is 75 feet high, the other 85 feet high, the latter may have a greater height of the 13 inch or thinnest wall than the former. Thirdly, in such buildings, any of the uppermost stories, such as may be used as a gallery or show-room, might have been of any height up to about 10 feet, and yet have had the walls only 13 inches thick. I say *might have been*, because a new edition of the framers' schedule has just been printed, and is now laid on the table of the Institute for the first time. This, I believe, has taken another amendment from the present Act, by introducing a rule of increasing the thickness of the walls of stories when above a certain height, beyond the thickness otherwise required.

Now, under the rules of the present Act, I venture to say that not one such palpable defect or inconsistency can occur; but under the framers' schedule there are many more than I have specially mentioned, which I have not had time to put into shape.

There is one great anomaly, I admit, under the present Act, if the official referees, and with them about three of the district surveyors, are correct in their view of the Act, which is, that the small buildings commonly built in the rear of larger ones, and communicating with them, would require thicker walls than the larger building, because, by the addition of the smaller building, the rate of the whole had been increased. This, however, would be completely remedied by the new system of cross walls.

The Bill then, as I have above shown, is inconsistent and erroneous in its practice, and at variance with its own authority—Rondelet,—in adopting, in spite of him, his first rule for ordinary buildings in stories, and in forsaking his general principle, that in determining the thickness of the walls of such buildings, "regard must be had only to the width of the spaces which they divide, and to the number of stories which they have to sustain." Clearly neither one element nor the other comes into the calculation. I do not say that Rondelet is perfectly right, but at all events he has named two principal elements.

But not only does the new Bill *not* recognise these elements, but the present Act does so in the case of dwelling-houses by rating them according to area, as well as by the height and by the number of stories. In the rating by area, the width of spaces between walls may be deemed to be sufficiently taken into account, for in—

Fourth rates, the extreme width is $\sqrt{400}$—9 in. or about 19 feet, or in ordinary cases, say 15 feet.

Third rates, the extreme width is $\sqrt{600}$—1 ft. 2 in. or about 23 feet, or in ordinary cases, say 17 feet.

Second rates, the extreme width is $\sqrt{1000}$—1 ft. 2 in. or about 30 feet, or in ordinary cases, say 22 feet.

First rates, the extreme width is $\sqrt{1400}$—1 ft. 6 in. or about 36 feet, or in ordinary cases, say 27 feet.

And to meet these progressive widths are these progressive rates, requiring a progressive increase in the thickness of the walls. The number of stories also comes into consideration by the system of determining the thickness, by reckoning from the top of the wall downwards, instead of as in the 14 Geo. III. from the base upwards.

I believe, therefore, that for buildings in stories, the system (I do not say all the details) of the present Act is as perfect as possible, including in it of course the rules for increasing the thickness of walls of high stories, and their substructure. In the recast schedule it is therefore proposed to retain the rules of the present Act, for the dwelling-house class (with the exception of allowing in fourth-rate houses only two instead of three stories of the party-walls, to be built of 8½ inches thickness, as the latter has been found not to be sufficient for stability); also to retain them for warehouses and manufactories, with slight exceptions. It is further proposed, notwithstanding those general rules, that every story of a dwelling-house shall have the thickness of its external and party walls, at least one-fifteenth of the height of the story, and in warehouses and manufactories one-twelfth the height; and that any extra thickness may be disposed in piers, one-third the length of the wall, and that any substructure shall be increased in thickness proportionably to the superstructure. Where public buildings are built in stories not exceeding 20 feet in height, it is intended that they shall follow the dwelling-house class. Where, however, public buildings have any story, or stories, exceeding the height of 20 feet, then to let them follow the rules of the framers' schedule, which, however, I think, might be improved by keeping the rule to a single story, and by decreasing the divisors 18 and 40 to numbers nearer to, say, 15 and 30.

One other new introduction into this Bill, which I think is quite right, and will be attended with perfect security, is the allowance of recesses in party-walls, as well as external walls.

In conclusion I wish to state, that the remarks which I have ventured to offer, have been made with the determination of adhering as far as possible to the Bill before us, because there are, doubtless, wise reasons for adopting the general scheme of the Bill; but with regard to public buildings, the district surveyors have long ago urged the value of the superintendence as to their safety, being delegated, as at present, to more than one architect. Make what rule you will, it will be found that to the large majority of public buildings, excepting those built in stories, they will be totally inapplicable,—in one part proving very obstructive and oppressive; in another, insufficient for safety.

In the former case the architect must get relief by application, as now proposed, to the superintending architect, to whose single decision, perhaps of not equal consideration to his own opinion, he will have to bow. For this object a Board of Architects, as at present constituted, must be far preferable; at all events, till the happy time shall come when public buildings shall in all cases require an architect, and an architect in all cases a diploma to show his qualification for his profession, when official supervision as to safe construction might be probably dispensed with altogether.

At the close of the paper,

The Chairman (Mr. Tite, M.P.) observed, that the real matter for discussion was very simple. It had been a great inconvenience that the existing Act and the previous Bills were indefinite, but the copy of the Bill in its latest form, which he had that day obtained from the Office of Woods and Forests, had his unqualified approval. It contained a clause, suggested by himself, to the effect that the Institute might cause to be examined, by such persons and in such manner as they might think fit, all persons who might present themselves to be district surveyors, and that the Institute should grant certificates of competency, without which no district surveyor should be appointed. This was a point gained, and more might have been gained if the district surveyors had acted with the committee of the Institute. With regard to the thickness of walls, he considered it was idle to occupy time in the discussion of formulæ and principles. As a practical architect, he was sure that the regulations laid down in the Bill would in the main break down; but this did not signify, as the Bill contained two clauses which, with a little amplification, might have superseded the necessity for the schedules. (?) One of these clauses provided that the Board of Works might alter the rules for the thickness of walls; therefore, if the formulæ suggested either on one side or the other did not work well, there was the power to change it, and that power would, in fact, be in the hands of the architect to be appointed by the Board of Works, who would see the necessity of exercising it. The other clause provided, that in the case of "any building whatever, except those mentioned in the last preceding section," namely, buildings of iron and glass,—the builder might either construct the same according to the rules of the Act, or he might represent to the Board of Works the inapplicability of the rules, submitting a plan and particulars, and then the building might be erected in any way which the architect appointed by the Board might direct. To the existing system of "rates," there were some objections; because mathematical rules must be limited, definite, and arbitrary, and they must lead at times to inconvenience; but in the main the schedules of the existing Act were understood and were satisfactory. The question was, whether the meeting wished to retain the present system of rating by area and height, and on this point the committee of the Institute and the district surveyors should be unanimous before the Parliamentary committee.

Mr. C. Barry urged that the schedule of the existing Act had been long in use, and was intelligible, and probably a majority would decide that it had been found to work sufficiently well, and not to need any important change.

Mr. Papworth, Fellow, moved a resolution, urging the adoption of the principle of rating as it exists in the present Act, with certain modifications. He had observed many points in the new schedule upon which a difference of opinion might arise, whereas the existing schedule was clear.

Mr. Jennings, Fellow, observed that there was little to complain of in the schedules of the existing Act, the only difficulty as to the thickness of walls being in the case of public buildings, when it was necessary to apply to the official referees for a modification. The schedules had worked well, but the other machinery of the Act was defective, and prevented its being carried out. It was now proposed that the Government official should have power to alter the rules of the Act as he pleased. The propriety of such an arrangement was rather a question for the

public than for the profession, but he thought architects would object to be liable to the crotchets of any one individual. When he first saw the present Bill, it appeared to him to affect very much the liberty of the subject, and he regretted that it had not, like previous Bills, been sent to the district surveyors and the profession generally, in order that they might have an opportunity of stating their objections to it.

Mr. Penrose, Fellow, said that having acted somewhat as junior architectural counsel, under well-skilled seniors, in the preparation of the Bill, he could assure the Institute that there had been no intention to avoid bringing the measure earlier before them. The delay had arisen entirely from accidental circumstances. The district surveyors had been very much consulted, nearly fifty reports having been received from them some months ago, and carefully digested. Lord Seymour's Bill, which had been much used in the preparation of the present, was also based very much upon the evidence of the district surveyors. The question really was,—rating, or no rating? And on this point the reports of the district surveyors, in many cases, raised a doubt whether the existing system was a good one. It had not appeared right to the framers of the measure to put *all* buildings, as it were, into five boxes of fixed sizes; but rather that they should consider walls in themselves, and in reference to the work which they had to do. Rondelet, as the great authority on this point, was consulted, and both of his systems were worked out with great care, hundreds of examples being tried. Looking at the proposed schedule in its present form (and disregarding the accident which led to the printing of one system, which it was necessary to recall), it was believed that the rules laid down would give the proper thickness of wall in almost every instance,—and where it did not, there was a remedy by application to the proper authority. He knew it was the opinion of many besides himself, that the system of rating was inconvenient, and that a simple rule for determining the thickness of walls by themselves was preferable. The general rule proposed, and which would apply in nine cases out of ten, was, that when the length of a wall did not exceed half its height, then its thickness should be one-fiftieth of its height; and where this was the case, the simplicity of the rule would supersede any reference to the tables; and even in other cases, such reference would be very easy, as the tables were short, and might be carried on a slip of paper in a pocket-book.

Mr. Burnell considered the power of altering the rules of the Act objectionable, as the principle of all law was its certainty. It was, in fact, absurd in logic to make enactments, and to give the power to vary them, especially as that power would be vested in one individual. As far as dwelling-houses were concerned, he did not see any necessity for altering the old schedules: the difficulty only arose with reference to public buildings. Mr. Burnell then referred to the Strasburg Railway Station at Paris (500 feet by 100 feet, and 45 feet high), the walls of which were only 1 foot 10 inches thick; whereas, according to the formula of Rondelet and the proposed schedule, they ought to have been 3 feet 7½ inches, if without buttresses, or 2 feet 5 inches with buttresses. He also cited a polygonal engine-shed at Tours, of which the dimensions were as follows:—radius of the circle, 66 feet 6 inches; span of roof bearing on the external walls, and on internal columns, 33 feet 3 inches; sides of polygon, 25 feet 7 inches, the thickness of the wall being 2 feet. This thickness coincided with the formula of Rondelet; but according to the schedule in the first edition of the Bill under discussion, the thickness need not have been more than 10 inches.

Mr. Alderman Cubitt, M.P. said that when he was asked by the Chief Commissioner of Works to act on the committee on the Bill, he had felt it his duty to consent. He, in the first instance, carefully read the Bill, and was much struck with its merit, as introducing a system of extreme simplicity with regard to the thickness of walls; and he was still of opinion that it was more rational to take the height of each individual wall, and to consider its requirements in reference to its height rather than with reference to the area of the building. He was the more convinced of that by considering the anomalies of the existing law. If a building contained four squares, it was a fourth-rate building; and if it contained more, the walls must be of a greater thickness. But as a building of four squares would not accommodate two families, an "addition" was made to it, the walls of which were allowed to be of the same thickness as those of the building itself. Therefore, the law sanctioned that as an evasion which the proposed new system would permit. Moreover, the evasion gave more trouble to the district surveyor, and the house cost more by reason of the delay for the "addition," and must be let at a higher rent. There was nothing to recommend the existing system, except that architects were accustomed to it, and had been brought up in it. He had been a builder forty years, and ought to have obtained a great deal of experience; and if he were still a builder he was satisfied that by inspecting the drawings and ascertaining the length and height of a wall, he should at once be able to determine its proper thickness under the proposed schedule; and the district surveyors would in like manner find no difficulty in it whatever. He had often had to deplore the necessity of making a wall of an unnecessary thickness, because the building happened to be of a certain rate. The present was an age of reform, in which it would not do to uphold a system because it was old and well understood. On the contrary, all reformers would join in any well-digested scheme, by which the construction of houses could be made better and cheaper, and by which all unnecessary machinery could be got rid of. They were now 200 years in advance of Sir Christopher Wren, and it was strange indeed if they could not improve upon a system which was probably the best which could then be suggested.

Mr. T. Piper, visitor, expressed his opinion that the schedule of the Bill, as that day printed, would be acceptable to builders. The rule of determining the thickness of a wall by its other dimensions must commend itself to all as a simple and practical rule, and far preferable to that of the area which it might enclose. It would be very easy to fix the limit of height before a building was commenced. As an illustration of the difficulty to be expected in applying for any departure from the Act, Mr. Piper stated that, on one occasion, he had received permission to erect a house just four weeks after it was finished and occupied. He preferred the definition of the thickness of walls by inches rather than the number of bricks; for with all the prejudice of education in favour of the existing size of bricks, he was not prepared to say there might not be changes and improvements in bricks hereafter.

The Chairman observed that the great object was to protect the interests of the public, as against the interests of speculative builders. Reform should be carried out, but they must not introduce confusion. The present system was well understood, and was working well; and why, therefore, should it be changed? The technical phraseology of the schedules ["let a right angled triangle," &c. &c.] was enough to confound a plain man before he got half way through them. They were not dealing with cases where architects were employed,—for even in the highest possible quarters it was not now the fashion to employ professional men!

The Chairman then called attention to the terms of the motion, and, after some conversation, an amendment was incorporated with the original motion as follows:—"That the committee of the Institute be requested to urge respectfully upon the special committee of the House of Commons on the Metropolitan Buildings Bill their opinion that it is *not* desirable to change the principle of rating of the present Act, and the thickness of the walls consequent thereon; and that in their judgment it is most desirable to retain the schedules of the existing Act relating to these subjects, except as to the public building class, to which the new schedule may with propriety apply."

The motion being put to the vote of the Fellows present, was carried,—one member alone voting against it.

The following deserves the consideration of those to whom it appeals:—

Sir,—Can any of your numerous readers tell what, amid the changes and chances of this mortal life, is to become of the working body of the office of Metropolitan Buildings? The new Bill contemplates its entire abolition.

Can it be possible that this little band, which has worked the old ship through its earliest storms, and subsequently stuck to it in its water-logged condition, is to go by the board and be cast adrift on a trackless sea without provisions, without a compass, and without a helm, to float irresistibly towards the dark waters of despair?

These corporals and sergeants of the force, who have seen the Almas, Inkermanns, and Balaclavas, of the existing Act—are they to be cast off without even a *medal?*

The public at large, and the district surveyors in particular, can, I am sure, bear witness to the cheerful service by which many a lame dog has been helped over a stile, many a sea of trouble, calmed by the ready assistance, rendered early and late, of these sappers and miners of the Act.

Should these lines reach—as I trust, through your favour—they may—the eyes of some of our legislators, they will not, I feel confident, pass unheeded the peculiarity of their position, after nearly eleven years of faithful service. Well do I remember, how painfully, but earnestly, they contended through the first rough years of the Act, in those murky chambers up three pair of stairs in Trafalgar-square; and shall they, who have borne the burden and heat of the day, meet with no recompense?

It has been suggested that their early career is an apt omen of its close—that as it began in *smoke*, so also will it end.

In the name of humanity, let not this be the case.—A. Z.

We earnestly repeat the hope here expressed, and bear willing testimony to the ability and right-feeling of the gentlemen in whose behalf the appeal is made.

ON THE ARCHITECTURE OF THE PRE-GOTHIC AGE IN GERMANY, OR THE ROMANESQUE DEVELOPMENT OF THE RHINE AND CENTRAL EUROPE.*

IN the roofing of the towers of the church at Boppart, a peculiarity exists which has not been directly imitated in any succeeding style, the walls being finished with very high pitched *pediments*, the horizontal side or base of the triangle having mouldings similar to those which form the raking cornice of the roof. Here we see a remnant of Roman art, which was never carried further, the *gable* of a higher pitch, without the horizontal base, being universally adopted. The square ends of the walling, in any position, are finished in this manner, and the pitch of some of these pediments in the transept ends is still more in accordance with the classic type. The polygonal walls of the apses have often each face terminated by a pediment, and octagonal towers, as at Sinzig, St. Croix Liege; and even the walls which support the immense spire at Bonn are finished in the same fashion. The ridges of the roof being carried up from the apex of these pediments, meet together at an acute angle, and thus form a kind of spire, terminated by a vane and an ornamental cross. The flat surfaces of the roof between the sides of the pediments and the ridges of the spire are consequently of a diamond shape, and when scored with the diagonal lines of slate roofing, have the appearance of being ornamented with scales, the slates being always rounded at the corners. The angle of these roof-ridges varies, but it is generally acute, and more so the nearer the whole approaches the form and character of the spires of a later period.

In England, we have but one solitary specimen, at Sompting in Sussex; but it is a perfect pattern of the Rhenish tower and spire. Whether the spires of St. Martin, Cologne, and Schwartz Rheindorf are original, is uncertain,—but if so, they are the precursors of our common hipped broach spires, being octagonal on a square base. Along the banks of the river Maine, at the Pfarrkirche at Aschaffenburg, the villages of Erlenbach, Miltenberg, &c. are seen small but more elaborate specimens, in which the octagonal spire is complete, with a rib springing from the base as well as from the apex of the pediment. On the borders of Switzerland, by the Lake of Constance, and the upper part of the Rhine—thence to Schaffhausen,—these forms occur, varied according to circumstances. But the pedimented spire is not the universal roofing for towers, but it is reserved for the better class, or the most important of a group. The ordinary eaves roof forms a square spire on a square tower, or a polygonal one on a polygonal base. The example of Laach gives the latter form on two circular towers at the west end and the eastern cupola; and the former on the two at the opposite end, while the square form of the west cupola, being the most important feature, and the highest of all the six, has four pedimented faces. Many examples of (now) isolated towers, occur on the Rhine, one large one near the mouth of the Lahn, nearly opposite the castle of Stolzenfels. It is to be remarked that during the whole of this period the character of the spire was essentially that of a *roof* or covering for protection, and it is not till a much later date that we see it assuming a more important ornamental character, and constructed solidly in stone. The later we see it, the more resemblance it has to those succeeding constructions which were consummated in such masterpieces

* See p. 261, *ante*.

of Gothic lightness and skill as Freiburg Minster.

But there is yet another class of small country church towers, which are found in the plains round the cities of Augsburg and Munich, on the Danube, and towards the mountains of the Tyrol and Switzerland, of a form so common, that twenty or thirty may be counted in a day's journey, and sometimes, when an extensive view is obtained, at least half a dozen can be seen at once. Meyringen and Pasing are two of them, and they have simply two gables instead of four, and an ordinary high pitched roof. The earlier examples have pediments, and not gables. Some on the Rhine have a small gable in the centre of the tower; but this disposition is best seen in the four elegant spire-capped towers of Bamberg cathedral, which are carried up eight stages, and finished with gables and spires of a pink colour (copper), surmounted by an elaborate gilded cross. * * * * *

The interior effect of the Romanesque churches is mainly due to the use of the open *cupola*, which is placed at the junction of nave and transepts, and though of various forms, always gives dignity and power. Acknowledged to be the redeeming feature of the Classic Renaissance, the grandest of the Byzantine and of the Romanesque, it is a matter of surprise that its value seems never to have been duly recognised in the later Gothic. The question of the Gothic dome has been frequently raised of late, and it is not impossible that the present century may see it satisfactorily solved.

At Laach, the eastern cupola is octagonal: the western one is square, with pediments and a spire. At Sinzig, at St. Jacques, and St. Croix, Liege, the central cupola becomes a tower—octagonal, with pedimented faces, and a spire with ridges at the base, not at the apex of the pediments. At Worms, there is one cupola over the transept at the east end (flanked by round towers), which is octagonal, having an ogee-shaped roof (not the original covering). Spires cathedral has an additional circular one at the west end, but it is difficult to say how much of this is original, on account of the many disasters which have happened to this portion of the edifice. The cathedral at Maintz has an octagonal cupola at one end, of a highly mixed character externally; the base being decidedly Romanesque, with the usual gallery; then a stage of later work; upon that another, with a parapet of a different style—the whole crowned by a small octagon, finished with Renaissance work; but the whole being built of the same peculiar red sandstone, has by no means an incongruous appearance at first sight * *

Nothing contributes so much to the lightness and gracefulness of character which some of these buildings possess, as the open galleries surrounding them on the exterior,* and in many cases in the interior also: this latter arrangement, shown in the *männerchor* or triforium, has been previously mentioned. Small shafts resting on appropriate bases, and carrying grotesquely carved and foliated capitals, support small round arches, and form between themselves and the wall a passage way round the building, of which the church at Schwartz Rheindorf is an exquisite example.

The window openings are of a very plain character,—generally single, though sometimes double, or placed side by side; with or without an enclosing arch; in gables, or as a triplet, having the centre opening taller than the side ones, and a round arch enclosing the whole. The wheel windows, large and small, though not a very numerous class, would in themselves form a very interesting study: in some, plain flat tracery is decidedly developed, akin to what may be found in Italy, when "Gotico Tedesco" was first imported at Assisi, A.D. 1228. But, besides these, the later examples, though still comparatively early in the style, exhibit a wonderful play of fancy in the form and arrangement of small openings. The little isolated tower at Laach contains a curious variety—trefoil, quatrefoil, fan-shaped, quatrefoil in a diamond, trelobed, and octagonal; but these are chiefly small openings placed beneath the round arches of the corbel tables.

* Compare San Donato at Murano, Venice; SS. Giovanni e Paolo, Rome, San Felice, Como, Chiaravalle, near Milan, &c. &c.

On looking closely into the details and mouldings of early German churches, we recognise the propriety of the term "Romanesque." In the cornices we find the hollow and round alternating, with the dividing fillet constantly occurring, while all the base mouldings follow the Attic type. The capitals, we admit, though individual and spirited designs, and of great variety, are often carved after Classic models; but the simplicity of the whole, and the richness attained, without the sacrifice of this great virtue, is a principle certainly not copied from the later efforts of the Roman Empire.

We cannot doubt that the interiors of these churches received the best decoration of the age De Lassaulx, in his remarks on St. Gereon, Cologne, speaks of a church on the spot in 595, "named after the Golden Martyrs, probably because this church, like many others at that period, contained mosaic pictures on a gold ground;" and "Bishop Carentius is celebrated in a poem, as the restorer of golden temples." The present decagon of St. Gereon is decorated with colour: traces of colour also remain on the caps of the shafts, &c. at Laach Abbey. It cannot be supposed that large vacant spaces of wall would remain undecorated with fresco, when we remember how they were assigned in the Basilicas and Italian buildings of the same class as these, to display the powers of the artist. The spirit of revival in the present day and the spread of the arts at Munich, the capital of a state which possesses the largest Romanesque Cathedral, at Spires, have been the means of restoring this last-named building to something like its former grandeur, if not indeed surpassing in completeness any previous period of its existence.

After the paper had been read (at the Institute of Architects), Mr. G. G. Scott observed that in his visits to Germany he had generally been in search of architectural specimens of the thirteenth century, and had therefore paid less attention to the interesting edifices described by Mr. Hayward. He might suggest, however, as an interesting inquiry to antiquaries, an investigation of German architecture even before the period now referred to. For example, nothing was known of the architecture of the Franks between the days of Clovis and Charlemagne—a period of 400 years—which, so far as he was aware—was not illustrated by any existing remains. There were also very few examples, indeed, from the time of Charlemagne to that of Otho I. Many existing buildings—as St. Castor at Coblenz, &c.—were mentioned as *founded* in that era; but so small a portion of these buildings, as they now stand, were really of that date, that none but a very careful antiquary could find it. The accuracy of the term "Lombardic," as applied to this style of architecture, was also an interesting question. He confessed that he could not bring himself to believe in the great antiquity assigned to San Michele, &c. at Pavia, in which the style was supposed to have originated. These were ascribed by Mr. Gally Knight to the seventh century; but, inasmuch as the north of Italy was desolated by the Huns in the tenth century, and as the churches of Pavia so closely resembled those upon the Rhine, he (Mr. Scott, thought it more probable that Otho I. had been the originator of the early churches in both countries. The most probable date for the early Romanesque churches of Germany was the period of the three Othos (from about A.D. 960, to about A.D. 1000), although some of them were doubtless founded upon earlier churches In fact, the *best* specimens of Romanesque in Germany were of extremely late date. He imagined that the church of Laach—referred to by Mr. Hayward—bordered upon the transitional period; and the best and richest specimens at Cologne were of the same date. The workmanship of the German Romanesque appeared to be far superior to that of the corresponding style [Norman?] in England; but the style flourished in Germany till a much later date than in this country. The Abbey of Heisterbach (which was pure Romanesque) was, indeed, not finished till about 1230 Notwithstanding these facts, antiquaries had persisted in regarding the Gothic as a German style; whereas Germany was twenty years behind England, and at least fifty years behind France, in its adoption.

Mr Lockyer, Mr. Twining, and Mr. Papworth having made some observations,

Mr. Hayward said that he had been careful in deriving the origin of the Romanesque style from the antagonistic principles of the Basilican style at Rome, and the style of Byzantium itself. He did not derive the Romanesque of other countries from Germany, but spoke of its peculiarly grand development in that empire. Mr. Hayward referred to some dates in support of his views:—S. Sophia, Constantinople, and S. Paul, without the walls, at Rome (both before A.D. 400) might be taken as the two types from which the Romanesque style sprang. S. Vitale, at Ravenna, was copied from S. Sophia, and the church at Aix-la-Chapelle from S Vitale. Charlemagne died in 814, and if he built the parts now remaining of Aix-la-Chapelle, and was also connected with Lorsch, he must have introduced the style into Germany. With regard to the churches of Pavia, he believed that the peculiar style of the ornaments and carving indicated a date very soon after the decline of the Roman Empire. S. Giulia, Brescia, S. Frediano, Lucca, and many other churches were assigned to the same period as the churches of Pavia, the eighth century and the connection between Pavia and the Carlovingian Sovereigns of Italy in the eighth century afforded, as he believed, a good reason for the introduction of Lombard architecture into Germany. Coblenz followed about thirty years after Aix-la-Chapelle, and in the tenth century the great cathedrals of Worms, Maintz, and Spires, were founded, in all of which parts of the original work remained. In the Island of Torcello, near Venice, the cathedral and a neighbouring church, S. Fosca, presented respectively the distinct types of the Basilican and the Byzantine styles; although they were ascribed to about the same date. The year 1100, the age of the first Crusade, is the great central date for the Romanesque development—while *in England*, Tewkesbury Abbey, the Cathedrals of Gloucester, Worcester, Durham, Salisbury, Canterbury, Norwich, and the curious brick Church of St. Botolph's Priory, at Colchester, were in course of erection. *In Italy*, the Cathedral of Modena, &c. *In Sicily*, that of Messina, &c. *At Jerusalem*, the Chapel of Godfrey of Bouillon. *On the Rhine*, Laach Abbey, Maintz, Worms, and Spires Cathedrals, are supposed to have been in progress.

The year 1125—a quarter of a century later, is the date of the Apse of S. Donato, at Murano.

Of the year 1150—after the second Crusade, we have *in England*, Iffley and St. Sepulchre's, Northampton. *In Italy*, the Baptistry of Pisa. *On the Rhine*, the Church of Schwartz Rheindorf.

The year 1175—*In England*, the Galilee, Durham, and parts of the Temple Church. *In Italy*, the Tower of Pisa; and just before 1200, the Cloisters of St. Paul's without the walls, and St. John Lateran, Rome. *In Germany*, the Chapel at Murrhardt.

The year 1200—just after the third and before the fourth Crusade—*In England*, parts of the Cathedrals at Lincoln, Ely, and St. Albans. *On the Rhine*, Boppart, Limburg on the Lahn, &c.

The year 1210—*In England*, Beverley and Salisbury. *In France*, Amiens, Notre Dame, Paris, &c.

The year 1220—*On the Rhine*, Coblenz, Sinzig, Heisterbach, Gelnhausen; *at Cologne*, St. Gereon, &c.; *and in the Breisgau*, that marvel of the next style, Freiburg Munster, commenced after the fifth Crusade.

The year 1230—We have the return of the German influence, southwards; and *in Italy*, the Church of San Francesco, at Assisi, the first built in the style of the "*Gotico Tedesco*."

Thus we see that the great consummation of the style at Boppart and Limburg, was about the year 1200, when England had made a great advance upon the Romanesque. After that period came Heisterbach, &c. and the style went on improving till the German taste was remported into Italy, in the Church of S. Francisco, at Assisi, about the year 1230. There could be no question that that church was built by German architects and German workmen: it was the first really Gothic church in Italy, and the parent of all the others.

Mr. Fergusson remarked, that the history of Lombardic architecture had been more fully investigated by Rumohr, than by any other writer. In his work, a distinction was drawn between the Longobardic and the Lombardic styles. Of the former he stated that no remains now exist. It comprised the buildings erected before the time of Charlemagne (from the sixth to the nine centuries inclusive), but these, as Italy increased in wealth, were all pulled down and rebuilt. San Michele, Pavia, was, in Rumohr's opinion, erected in the eleventh or twelfth century, the materials of the previous church being employed, and these were in many instances reversed. There were many Romanesque churches in Italy, and a complete series of them might be found in the churches about Rome; but there were no *Gothic* churches in Lombardy till after the beginning of the eleventh century. It should be observed, that the Valley of the Po and the Valley of the Rhine belonged to the same empire from the time of Charlemagne downwards; and the same style prevailed in the one district as in the other, the churches being nearly identical. It was not correct therefore to say, that the Rhenish churches were derived from Lombardy, or the Lombard churches from the Rhine. In England the case was different, our Norman architecture being clearly derived from France.

THE STREET OF GLASS, AND METROPOLITAN COMMUNICATION.

THE details of the startling scheme for the improvement of London, to which we briefly referred some weeks ago, were promulgated by Sir Joseph Paxton, at the meeting of the Parliamentary Committee, on Thursday, the 7th, and highly interesting they appeared to be, not only to the members of the committee, but to an influential audience as well. The leading features of Sir Joseph's plan are so daring, and they involve such weighty interests, that he would be a rash man who would venture to pronounce a hasty judgment upon either their complete desirability, or practicability. Certain it is, that this great metropolis cries aloud for some monster remedy for monstrous anomalies, and that the vices of defective arrangement, which Evelyn, Wren, Gwyn, Nash, Pennythorne, and others have successfully denounced, have descended to our own days with accumulations of deficiency quadrupled at least by compound interest. It would be impossible to convey a more just idea of the outline of the scheme to our readers, than an analysis of the projector's own statement would afford, and such an analysis we shall proceed to condense from our note-book.

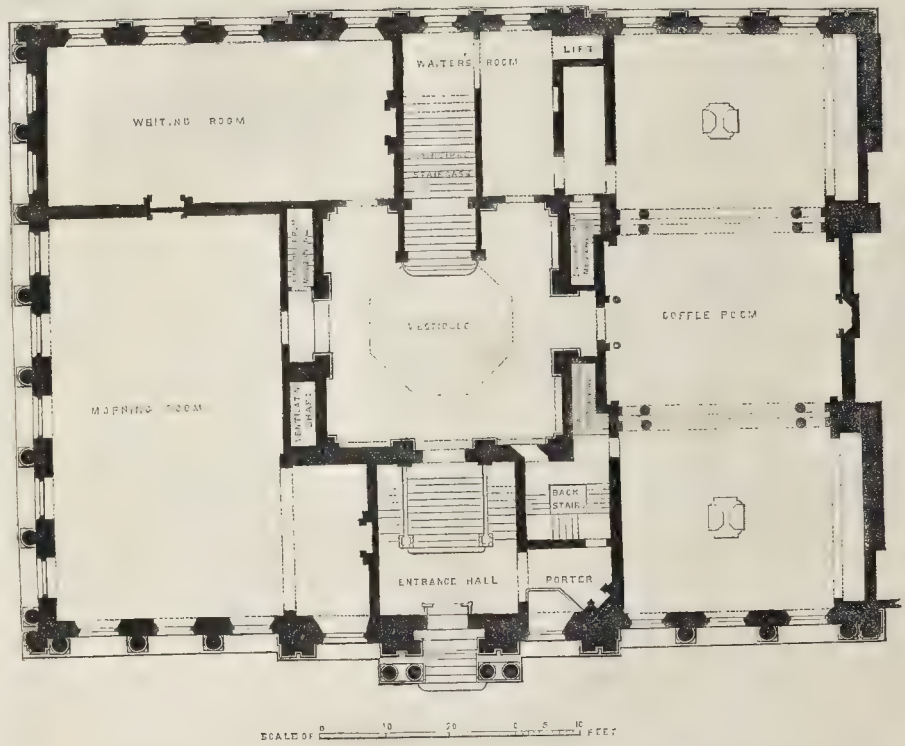
Sir Joseph commenced by stating that London has absolutely overgrown its leading thoroughfares; that at the present time it took as long to get from one side of London to the other as it did to get from London to Brighton; and that it was daily becoming more and more indispensable that adequate means of transport east and west, and from railway terminus to railway terminus, should be provided. The scheme proposed to the committee embraced two distinct and yet connected features—the one a girdle railway of $10\frac{3}{4}$ miles in length, embracing the heart of London, and the other a main artery traversing it nearly from west to east.

Such was the value of ground and vested interests in London, that it became absolutely necessary that all properties should be avoided the fee-simple of which was likely to be excessively costly; and it would be found that the line proposed for both one and the other, carefully avoided interference with existing lines of thoroughfare, or buildings of importance. The girdle was proposed to start from near Moorgate-street, to cross Cheapside and Cannon-street, and pass over the river near Queenhithe: thence it was to traverse Lambeth, to which district it would do infinite good, and effect a junction with the South-Western terminus. It would again span the river near the Houses of Parliament, approaching closely to Victoria-street; thence onward through Brompton to Gore House, and the new National Gallery that may be. From Kensington to Westbournalia it would stretch through Kensington-gardens in the form of a beautiful conservatory, providing at the same time a line of communication more needed than almost any other in the metropolis. After reaching the Great Western terminus, it would diverge a little through Marylebone successively to the North-Western and Great Northern, from which last terminus it would return, by way of Islington, to its starting point. The great artery, one mile and three-quarters long, would run from the South-Eastern station, at London-bridge, to the Regent-circus, crossing the river near the Hungerford Suspension-bridge. The section of the whole of both lines, excepting where the girdle crossed Kensington-gardens, was proposed to be nearly that of the transept of the Exhibition Building of 1851. Of this section, the central portion, 72 feet in width, with its arched roof in glass and iron, 108 feet high, would be reserved for road and footway. The 48 feet width on each side would be filled in as residences, with shops, &c. each having a frontage of 30 feet. The 24 feet widths, on the outside of these, would afford offices, &c. on the ground-floor for the residences; and on the first and second floors of this building, which would be erected independent of, although attached to, the residences, double lines of narrow-gauge railway would be laid. Thus, a noble street, answering to a Boulevard, would be created, in districts where improvement is most wanted; and at the backs of the houses a railway would run, the eight lines of rails provided by which would allow passengers to travel in either direction, at express speed, stopping only at some of the main points on the line, or at an ordinary pace, detaching carriages at short distances, as on the Blackwall line. The railway would be worked on the atmospheric system, for the efficiency of which Mr. Robert Stephenson and Mr. Edwin Clark would vouch, and thus all the puffing and blowing would be avoided. The carriages all running, as it were, in an enclosed corridor, would be of a much lighter description than those in ordinary use. The line would be used during the night for slow goods traffic, which would not be permitted either on the railroad, or on the road-way of the streets, after certain fixed hours in the morning. Sir Joseph went into minute details to show the purity of the air, to be breathed by the inhabitants of the Boulevard, and the light and ventilation of the whole. The superstructure of the bridges was to be similar in section to the general line, and they were to be made one of the most remunerating features of the whole scheme. Intersections on a dead level were to be made with all thoroughfares crossed by the lines of Boulevard, the houses of which were of course to stop, and the railroad alone run over at a height of about 25 feet from the ground.

The amount necessary to carry out the entire scheme, including every expense, was estimated at 34,000,000*l.* sterling! It was recommended that a portion only of the entire scheme should be undertaken in the first instance, *i.e.* the whole of the main artery from London-bridge to the Regent's-circus, and an instalment of the girdle from Moorgate-street to Westminster. This portion, amounting to 3 miles 5 furlongs, had been carefully surveyed and estimated for, at a total expense, including every outlay, of 11,307,941*l.* This estimate was analyzed by the committee, and many curious particulars were elicited. The bridges, for instance, were valued respectively,—the Queenhithe at 406,500*l.* the Westminster at 638,000*l.* and the Strand bridge at 754,800*l.*—a tender for its construction having been obtained at 600,000*l.* The buildings and railway were taken at 1,000*l.* per yard running; and the construction of the roofing for the great Boulevard at 45*l.* per yard forward. On going into the calculations as to the returns on the capital invested, of 11,000,000*l.* and a third in round numbers, it appeared that an annual income of 937,972*l.* might be looked forward to; this income being made up of 124,000*l.* the rental of the houses on the three bridges, 510,000*l.* the rental of the whole of the remainder of the houses on the *boulevard*, and 303,972*l.* from the estimated passenger traffic on the railway,—nothing being taken for the value of goods traffic. The rent of the houses, 30 feet by 48 feet on plan, and about 60 feet high, was assumed at 400*l.* in most cases, and, in some few exceptional instances, at 500*l.* and 600*l.* each. Details were gone into to show that by comparison with the rents of similar houses in leading thoroughfares, these rates were moderate. The estimate for passenger traffic was based upon some interesting statistics of metropolitan locomotion.

Sir Joseph then came to the true "crux" of the whole matter,—the question of "ways and means." He conceived that the requisite capital for such an undertaking might be raised in three several ways: first, by private enterprise; second, by local guarantees given by those whose local interests would be specially affected; and, third, by a Government guarantee of 4*l.* per cent. per annum. The first he considered, at the present moment, impracticable; the second exceedingly difficult, owing to probable jealousies and bickerings, and the want of a general confidence on the part of the public in the parties offering the guarantee; the third he considered would be effectual and justifiable, since the benefit this great junction would effect would be not for London only, but for the whole country. The time of every visitor from the country was now so sacrificed, owing to the difficulties of locomotion, that an annual loss was sustained by the country, the value of which it was really impossible to estimate. Sir Joseph argued that for many years past foreign Governments have been drawing annually millions of capital from this country, by offering guarantees at a high rate of interest, and with what results? In the case of France, the State had guaranteed no less than 32,850,000*l.* sterling, and had never been called upon to pay one franc of indemnity: it had thus obtained the means of developing the resources of the country to an incalculable extent, and contributing to the comfort of the whole population, without drawing a penny from them in taxation on that account. Unless our Government is willing to adopt some similar wise provisions in time, it is certain that those very superabundant means of ours will be drawn off to enrich our neighbour's land, which might with infinitely more beneficial results to us nationally, be expended upon the fertilization and adornment of our own soil.

CHURCH-BUILDING NEWS.



Harrington.—The opening of the church of this village took place on Sunday before last. The old church was found some time ago to be fast falling to decay, and, through the influence of the Rev. R. Cracroft and others, it was resolved to demolish the old structure and erect a new one on the site. The present edifice has not many striking features in its outward appearance, and is unostentatious in design. The old pews of the former edifice have given place to open seats, and the pulpit is replaced by one of stone. The centres of the windows are executed in amber-stained glass, with plain borders running round. A small window, the gift of the architect, on the south side of the chancel, has figures in stained glass, but is not seen from the nave. The churchyard has been planted with shrubs, and a parsonage has been erected. The building was designed by Mr. Teulon, and the whole of the works have been erected by Mr. Dales, of Louth, builder. The church still retains the ancient monuments and records that abounded in the ancient edifice, they having all been carefully replaced.

Bedford.—The new cemetery was consecrated on Tuesday before last. There are two chapels united in one tower: the designs of these, and those of the lodge and laying out of the ground, were provided by Mr. T. Jackson, of Bedford. The cemetery is eighteen acres in extent, on Foster's-hill.

Mollington, by Banbury, Oxon.—The church here is about to undergo a thorough renovation, and to have the addition of a new north aisle and new sacristy. The body of the church will be repaved with black, red, and buff paving-tiles, and rearranged with new open benches, the greater part free. The chancel will be partly rebuilt with new open-timber roof, and will have new fittings and a new east window. The architect is Mr. William White.

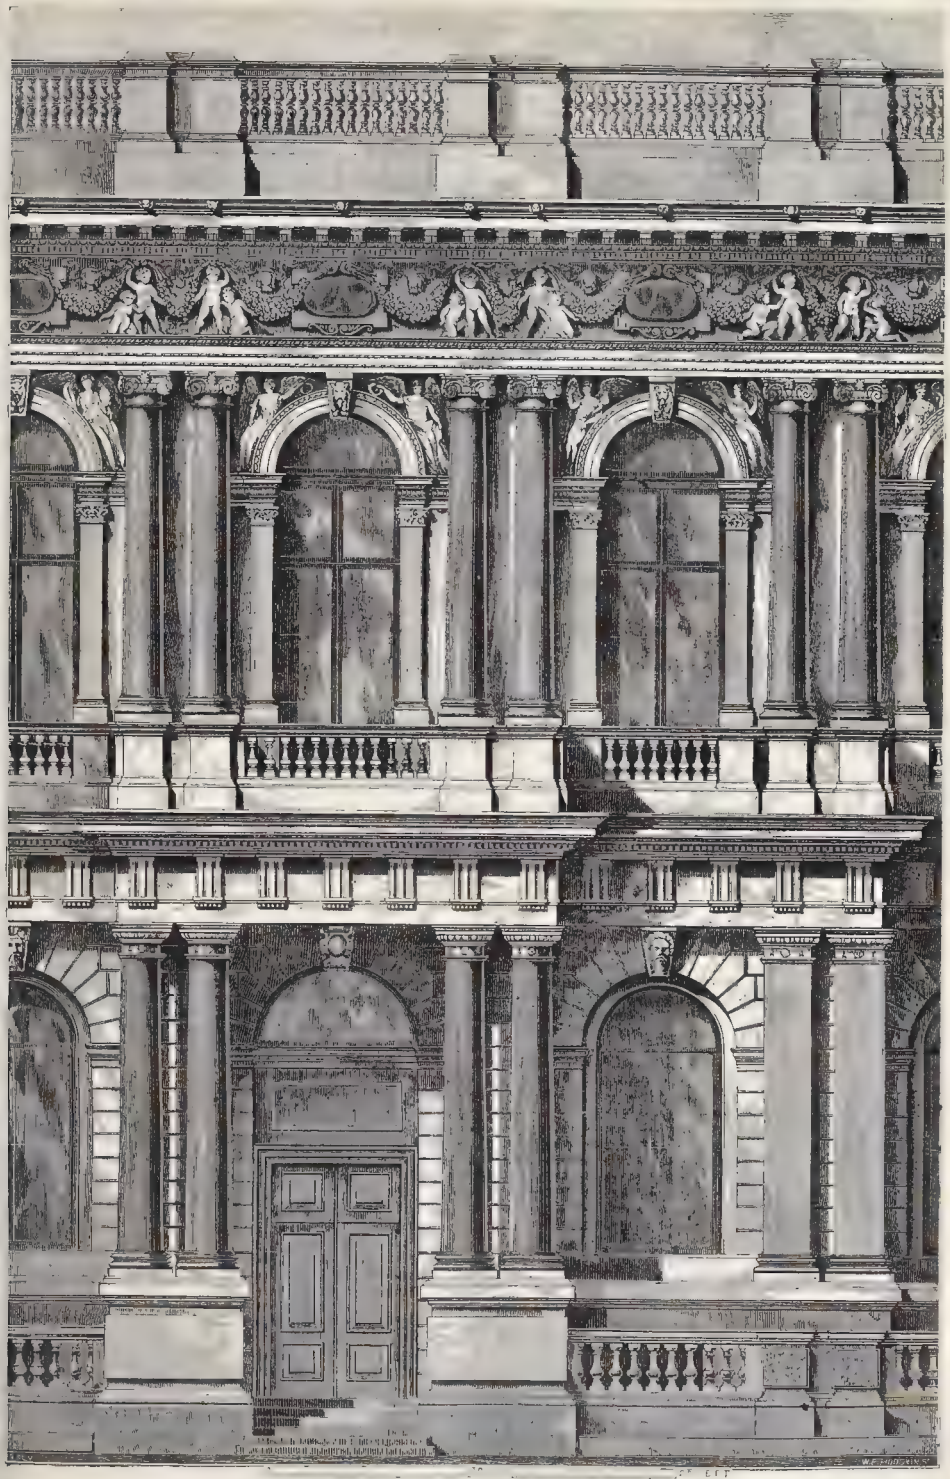
Knightwick-cum-Dodenham.—The church of this village was consecrated on Friday before last, by the Bishop of Worcester. Mr. Freeman, of Gaines, presented the site of the new church, and about 1,000*l.* is raised to defray the cost of erection. The estimate for the church itself was something under 900*l.* but the cost of the new mortuary chapel will be considerable. Mr. Perkins, of Worcester, was the architect: Mr. Norman contracted for the masonry; Mr. Shelswell for the carpenter's work; Mr. Chambers for the plumbing, &c. and Mr. Crump for the ironwork. The site of the church is immediately at the base of the hills, and about midway between the old church and Dodenham chapel. Rubble stone for the walls was got from the hills: a white stone from Bromyard Down was selected for the buttresses; and the facings, bell-turret, and spire are of Bath-stone. The church consists of chancel, nave, and vestry, with entrance porch. The length of the building is 70 feet; breadth, 21 feet; height, 38 feet to the point of the roof. The style of architecture is Early Decorated. The east window is of three lights, with three quatrefoils in the head, and bosses carved by Moyson, of Birmingham. The nave is lighted by three two-light windows on the south, and two on the north; and the west wall has two single lights, with double trefoil heads. There is an open timber roof throughout, that of the chancel resting on moulded stone corbels. Underneath the sittings the flooring is of wood, elsewhere of coloured tiles. Externally the walls are supported by buttresses of two sets-off between each window, those of the east wall being

PLAN OF THE CARLTON CLUB, PALL-MALL.

diagonal and all the others set square. The roof is of steep pitch, surmounted by Broseley ridge tiles, with ornamental points, in triplets. Floriated crosses, in Bath stone, ornament the east gables of chancel and nave. The spire, at the west end, is octagonal, and 62 feet high.

Exeter.—The church of Clyst St. George has for some time past been undergoing thorough restoration, under the superintendence of the rector, with funds contributed by the landowners and parishioners, and subscriptions raised in the neighbourhood. Four of the windows have been given, and lately another in the north aisle has been filled with stained glass, from the establishment of Mr. Ward, of London. The window consists of several small panels, containing figures set in an ornamental pattern, the foliaged scrolls of which run over the quarried ground, and are enriched with flowers and other objects in pot-metal glass. The style adopted is that of the early part of the sixteenth century, to which the material is admirably adapted. The work is well spoken of. It is set up as a memorial to Walter Brydges Ellacombe, late of Oriel College, the youngest son of the present rector. All the figures have been designed and painted, as we are informed, by Mr. Hughes, in connection with Mr. Ward. In a lower compartment of the middle light (for there are three) Christ is represented as comforting the afflicted sisters on the death of Lazarus, with the words, "Thy brother shall rise again;" immediately above which, on a scroll surrounding the brazen serpent—emblem of the atonement—"and I, if I be lifted up, will draw all men unto me." And in an upper panel is a chorus of angels, under which the words, "He shall give His angels charge concerning thee." The bench ends are all variously carved in oak, after old designs; the heraldic devices, where they occur, being blazoned in true colours.

Sheffield.—On Tuesday before last the new church in the thickly populated parish of Moorfields was consecrated by the Archbishop of York. The principal external feature is an octagonal bell turret, which rises to a height of 82 feet. The designs and directions of Messrs. Flockton and Son, of Sheffield, the architects, have been carried out by Mr. George Smith, of Sheffield, the contractor. The accommodation consists of 353 free, 314 appropriated, and 238 children's sittings. The cost of the new edifice is 2,000*l.* exclusive of the bell tower, which is 100*l.* additional, and was given by Mr. J. Grant, of Darnall. To this outlay must be added the cost of the land, 555*l.* and the expense of stoves, gas, church furniture, &c. Somewhere about 100*l.* is the present total deficit. The church is called St. Jude's.——On the same day was consecrated the church of St. Matthew, in the district of Carver-street. The church of St. Matthew has been erected with more than ordinary rapidity. The foundation-stone was laid a year ago, and the edifice is now completed with the exception of the spire, the capital of which remains to be added. The church consists of nave, aisles, chancel, with side chapel for children; vestry, with the tower and spire at the western extremity. The Perpendicular style of English architecture has been adopted. The building occupies the whole of the site, extending from Carver-street to Back-fields, and consequently, there are no windows in the side walls. There are no galleries except a small one in the tower. The spire, which springs from the octagon tower, will, when completed, reach a height of 125 feet. The church contains 273 appropriated and 308 free sittings, and seats for 150 children. It has been erected by Mr. J. Powell, Messrs. Dutton and Heald having executed the carpenters' work. Messrs. Flockton and Son, of Sheffield, are the architects. The cost of the site for the new church was 600*l.* and the total expenditure upon the edifice amounts to 3,164*l.* of which about 300*l.* remain to be subscribed.



THE CARLTON CLUB-HOUSE, PALL-MALL.

THE west wing of the Carlton Club was built in 1846, with a view to form a part of the future design, which has just now been carried out, under the superintendence of Mr. Smirke.

In our volume for 1847 (p. 219), a general view of the design was given, with some particulars: we now publish a view of the central part of the Pall-mall front, to show the details more clearly, together with the plan of the ground floor, comprising the coffee-room (first erected), the hall, vestibule, and staircase, the morning room, and the writing room.

Many predictions were then ventured upon as to the perishable nature of the lustre of the polished granite shafts; but these predictions have been all falsified by time; nine years' exposure having produced no effect whatever on the polished surface. Probably the polish itself is the protection of the granite, by preventing moisture from hanging on the surface. The recent works, now nearly completed, have been performed with great rapidity by Mr. Kelk, eleven months only having passed since the contract works were actively commenced. The carving has been executed by Mr. John Thomas.

The Club will take possession of the building on the 1st of July, with the walls in a bare state,—all the interior painting and decorating being deferred until the autumn. Contracts for these finishings have been entered into with Mr. Bielefeld, Messrs. Collman and Davis, Mr. Webb, and others.

THE CARLTON CLUB, PALL-MALL.—Mr. S. Smirke, A.R.A. Architect.

PROVINCIAL NEWS.

Southampton.—The new jail for Southampton has been completed. It is in the Tudor style, and adapted for the reception of 100 prisoners on the separate system, each having a cell 13 feet long, 7 feet wide, and 9 feet high; sixty-six of these being for males, and thirty-four for females. There is also a separate wing or building for debtors; and thus far the whole may be said to be arranged after the Model Prison at Pentonville. The cells are divided by a wall two bricks in thickness, while the outer walls are two bricks and a half. The ceilings are formed of brick arches in cement, covered over by a bed of hard concrete, upon which is laid the asphalte floor of the cell above. The window-frames are of cast iron, and fixed, glazed with rough obscured glass, having outside two bars of wrought iron, so placed as not to intercept the light, and the doors are of double thickness. Internally, each cell is fitted with a water-closet, and a fixed wash-hand basin of copper, both supplied from a cistern under the roof, into which are measured daily six gallons of water, being the regulation allowance for each prisoner. The boundary-wall is of brickwork, 18 feet 6 inches high, and within it are built the police station for the St. Mary's district, a house for the governor, and two castellated lodges, which flank the entrance gateway. The area enclosed within the walls is nearly two acres. The entire cost, including purchase of ground and other expenses, will be under 22,000*l.* according to the *Hampshire Advertiser*, which names Mr. Critchlow, of Southampton, as the architect, and Mr. Bull, of Southampton, as the builder.

Wolverhampton.—The failures in the iron trade in this district, coupled with the want of confidence caused thereby, have created a great depression in the building trade, which is being severely felt. Most of the large builders are making now for "stock," while the small builders have scarcely work for a man.

Dudley.—According to a correspondent, another *temporary* station has just been put up, in which are now located the South Staffordshire and Oxford lines. A bridge, which has been thrown across all the lines, now gives access from Tipton, &c. as well as Dudley, without making a circuit. The whole of the erections are of timber, apparently designed by a back-woodsman.——Mr. Lee has been appointed consulting engineer to the Local Board of Health, and is expected down in a few days, to arrange the plan of drainage.

Evesham.—A temporary wooden bridge has been erected, the old bridge demolished, and the new bridge is in progress. The new bridge is being built of rock-tooled Littleton stone, regularly coursed, with Derbyshire stone for springers, arch quoins, string courses, fascia, and coping of parapet. It will consist of three arches, the centre one of 66 feet span, and a rise of 12 feet; and two side arches, each of 58 feet span, and a rise of 10 feet 3 inches. The voussoirs will be chamfered. The piers will be 8 feet thick, with semicircular ends that project on each side of the bridge. Between the abutments the bridge will be 199 feet long, and the water-way 182 feet, which is somewhat smaller than the water-way afforded by the old bridge as far as breadth is concerned, but the openings of the arches will be much more capacious for carrying off the floods. The arch will stand about 17 feet 6 inches clear above the level of ordinary low-water; about 6 feet above ordinary floods, and 3 feet above the highest floods. The roadway will be more than twice as wide as the roadway of the old bridge: it will be 30 feet clear inside the parapets. Outside the abutments the approaches will be bounded by wing walls of Littleton stone. The masonry under the road will be coated with asphalte. The plans for the bridge were prepared by Mr. J. Samuel, of London, engineer; and the contract was taken by Mr. Taylor, of London, at 8,865*l.* for the erection of the new bridge, after taking down the old and providing the temporary wooden bridge.

Great Budworth (Cheshire).—New schools and residences are about to be erected near the church, and upon land given by Mr. R. E. E. Warburton, of Arley Hall. The schools are for 100 boys and eighty girls, and in the form of a parallelogram, with class-rooms and entrance-lobbies returned at each end; to be constructed of brick, with moulded jambs, arches, and mullions to windows, and open timber roofs. Red, white, and black bricks will be laid in bands and patterns, both externally and internally. Mr. William White is the architect.

Clitheroe.—The works for the supply of water to this borough are progressing, under the directions of the engineer, Mr. M'Landsborough, of Bradford. Of 20,000 yards of pipe-laying required, upwards of 6,000 have been completed. The supply reservoir has been commenced. The water springs from the sandstone strata of the fells. From these sources it will be conveyed, by means of earthenware pipes, to supply the reservoir, and thence to and through the borough, by iron pipes, coated with enamel. The works are being carried out by a private company, for which an Act was obtained last session.

Gainford.—The new building for the Gainford Literary Institute, says the *Darlington Times*, was opened on Whit-Tuesday. It is of stone, from a design by Mr. Gibson, of Newcastle-on-Tyne, architect; the masonry executed by the late Mr. N. Adamson; and the carpentry by Mr. Thomas Nicholson, jun. both of Gainford. The site was presented by Mr. R. Hodgson, of Beverley, a native of Gainford. The village contains only 600 inhabitants, yet more than 500*l.* have been raised and expended in two and a half years by its Literary Institute.

Chester-le-Street.—The following estimates, says the *Gateshead Observer*, were received by the Board of Guardians for the erection of the new workhouse, designed by Mr. M. Thompson, of Newcastle, architect:—

Dunlop	£4,404
Neil	4,400
Glendinning and Co.	4,265
Pearson	4,145
Curry and Gibson	3,893

Quantities were not supplied. Messrs. Curry and Gibson's tender was accepted.

Wigan.—The foundation-stone of new Wesleyan Sunday and day schools, to cost 2,200*l.* was laid at Wigan on the 30th ult.

MEMORIALS OF OLD LONDON.

SEVERAL leading bibliopoles have made a practice, we observe, for some years past, to accompany their catalogues of old books with sundry bibliographical, biographical, or facetious paragraphs. Picked up, as these are, by the modern Wynken de Wordes from all sorts of curious and sometimes out-of-the-way books, fragments are often to be met with of much more than a passing interest. From the "Fly-leaves" of Mr. Miller, of Trafalgar-square, we have detached some facts bearing upon the dwellings and characteristics of ancient London, such as pertain to our department of antiquarian reminiscence.

Old House in Tothill-street, Westminster.—The "Cock" public-house in this street is traditionally said to have been the pay-table where the workmen received their wages at the building of the Abbey, in the time of Henry III. The rafters and timbers are principally of cedar. It was formerly entered by an ascent of many steps. In the parlour there is a massive carving of the Adoration of the Magi in solid oak, very ancient; and an *alto-relievo* of Abraham offering up Isaac, which is let into a slab, but has less of artistical design in it than the former. There is a curious hiding-place in the staircase. [Illustrations of this house, and some additional particulars, will be found in the *Builder*, Vol. X. pp. 345 and 393.] "This little ancient hostelry," says the Rev. Mackenzie Walcott ("Memorials of Westminster"), "bore probably the sign of the 'Cook' (of St. Peter) upon the pillar." Most of the old signs were religious charges, or the arms of kings or noblemen in the neighbourhood: such as the "Salutation" (of the Blessed), Son); the "Chequers," in Abingdon-street, the bearing of the earls of Arundel, who at one time were empowered to grant licenses to public-houses. We also read in the old parish books of the "Bell," perhaps named after great "Westminster Edward;" the "Maiden Head;" the bust of Our Lady; the "St. George and the Dragon;" the "Swan;" and the "Antelope," the badge of King Henry V.; and the "Sun," that of King Richard II. The "Blue Boar" was the cognizance of the earls of Oxford.

St. James's-square.—The author of a "Tour through the Island of Great Britain" (Daniel Defoe), second edition, 1738, gives us the following particulars of this locality:—"The alterations lately made in St. James's-square are entitled to our particular notice. It used to be in a very ruinous condition, considering the noble houses in it, which are inhabited by the first quality. But now it is finely paved all over with heading-stone. A curious oval basin, full of water, surrounded with iron rails, on a dwarf wall, is placed in the middle, mostly 7 feet deep and 150 in diameter. In the centre is a pedestal, about 15 feet square, designed for a statue of King William III. The iron rails are octagonal, and at each angle without the rails is a stone pillar, about 9 feet high, and a lamp on the top. The gravel walk without the rails is about 16 feet broad from each angle to the margin of the basin. It was done at the expense of the inhabitants by virtue of an Act of Parliament. The house that once belonged to the Duke of Ormond, and since to the Duke of Chandos, is pulled down, and makes three noble ones, besides fine stables and coach-houses behind, and two or three more good houses in the street leading to St. James's Church. This noble square wants nothing but to have the lower part of it, near Pall Mall, built of a piece with the rest, and the designed statue to be erected in the middle of the basin.

Old House in Drury-lane.—In Aggas's and Hoggenburgh's plans of about 1570 and 1584, Drury-lane is represented at the north end, as containing a cluster of farm and other houses, a cottage, and a blacksmith's shop; and the lane in continuity to Drury-place forms a separation from the fields by embankments of earth, something like those of Maiden-lane, Battle-bridge. It was, in fact, a country road to Drury-place and the Strand, and its vicinity. Nearly opposite to Crown-buildings is a low public house, bearing the sign of the "Cock and Pye," which two centuries ago was almost the only house in the eastern part of Drury-lane, except the mansion of the Druries.

Inlaid Floors in England.—In Clavel's "Catalogue of Books," &c. No. 8, June 1676, is the following curious advertisement:—"There is now in the press, and almost finished, that excellent piece of architecture, written by Andrea Palladio, translated out of Italian; with an Appendix touching doors and windows, by Pier le Muet, architect to the French king, translated out of French, by G. R.; also, rules and demonstrations, with several designs for the framing of any manner of roofs, either above pitch, or under pitch, whether square or level, never published before; with designs of floors of variety of small pieces of wood, lately made in the palace of the Queen Mother, at Somerset House; a curiosity never practised in England."

Ancient Mode of lighting London.—John Wardall, by will, dated 29th August, 1656, gave to the Grocers' Company, a tenement called the White Bear, in Walbrook, to the intent that they should yearly, within thirty days after Michaelmas, pay to the churchwardens of St. Botolph, Billingsgate, 4*l.* to provide a good and sufficient iron and glass lantern, with a candle, for the direction of passengers to go with more security to and from the waterside, all night long, to be fixed at the north-east corner of the parish church of St. Botolph, from the feast day of St. Bartholomew to Ladyday; out of which sum 1*l.* was to be paid to the sexton for taking care of the lantern. This annuity is now applied to the support of a lamp in the place prescribed, which is lighted with gas.

John Cooke, by will dated 12th September, 1662, gave to the churchwardens, &c. of St. Michael's, Crooked-lane, 76*l.* to be laid out to the most profit and advantage, for various uses. And amongst them for the maintenance of a lantern and candle, to be eight in the pound at least, to be kept and hanged out at the corner of St. Michael's-lane, next Thames-street, from Michaelmas to Ladyday, between the hours of

nine and ten o'clock at night, until the hours of four or five in the morning, for affording light to passengers going through Thames-street or St. Michael's lane.

St. Martin's-lane.—The house No. 96, in this street, is one of the oldest shops in London: it has one of the very few remaining shop-fronts where the shutters slide in grooves. The street-door frame is of the style of Queen Anne, with a spread-eagle foliage, and flowers, curiously and deeply carved in wood, over the entrance, similar to those remaining in Carey-street, Great Ormond-street, and a few other places about London. The staircase of this house is curiously painted with a number of figures viewing a procession. It was executed for the famous Dr. Misaubon, about the year 1732, by a French artist, named Clermont. Behind the house there is a large room, the inside of which Hogarth has given in his "Rake's Progress," introducing portraits of the doctor and his wife. [A view of this house will be found in the *Builder*, Vol. X. p. 813.]

Peter's-court, turning out of St. Martin's-lane.—In 1710, the goods of Mrs. Selby, sword cutler, are advertised to be sold, "at the Dancing-school, in Peter's-court, against Tom's Coffee-house, in St. Martin's-lane." This dancing-school was afterwards the first studio of Roubiliac, the celebrated sculptor. There, among other works, he executed the statue of Handel, for Vauxhall-gardens. Upon his leaving the studio, it was fitted up as a drawing-academy, supported by a subscription raised by numerous artists. Mr. Michael Moser was the first keeper. The site is now occupied by a Quakers' meeting-house.

THE NEW METROPOLITAN CATTLE-MARKET.

THE new Metropolitan Cattle Market, in what were formerly Copenhagen Fields, was opened on the 13th inst. by H.R.H. Prince Albert, when more than a thousand persons partook of luncheon, within a marquee erected for the occasion, and addresses were read and speeches delivered. The decorations, in the arrangement of which the architect, Mr. Bunning, was aided by Mr. Fenton, were appropriate and effective.

Mr. Bunning well deserves all the applause which was bestowed upon him on the occasion. The new market is a great work, enforcing admiration as well for the excellence of the arrangements as for the largeness of the general design, and we heartily congratulate him on its completion thus far.

A view of the market, with some descriptive particulars, will be found in our last volume,—No. 617, p. 618.

PLAN FOR AN INDUSTRIAL MUSEUM.

I BEG to submit the following outline of a plan for the accomplishment of two great objects. It would be a waste of time to point out the desirability of a cheaper, more sure, and equitable means of securing industrial copyright: that is already as well known to our manufacturers as the desirability of a museum is to the people generally.

1. I would suggest the establishment of an Industrial Museum, wherein all inventions, processes, and designs, for manufacturers, &c. for which a copyright is claimed, are to be deposited.

2. In cases where the cost of the invention or design would be very great, then a working model of the former, and a plaster cast of the latter (with full description of the material of the original, &c.), might be substituted.

3. Every invention or design to pay an annual rent of 10s. in return for Government protection of copyright, to be continued for any length of time the manufacturer shall see fit.

4. All inventions for which copyright is claimed for any term under twelve months, to pay a uniform rent of 1s. per month, for any number of months the manufacturer may wish the copyright to continue

5. No models to be removed after the term claimed, unless satisfactory drawings and descriptions are deposited for the purpose of reference in the museum.

The advantages of this plan would be—1. To reduce the first cost of the copyright, enabling all to secure their inventions or designs, by producing a model, and a prepayment of 10s. 2. It would be a just means of attaining this end, for the invention or design would not cost more than it was worth: so long as it continues to "pay," the inventor will pay the rent; and he has clearly a right to the copyright until he is superseded by a better. 3. If a court were held in the museum for the settlement of all disputes relating to copyrights, the jury would have an advantage which no other place would present. 4. It would be a means of rendering an Industrial Museum self-supporting, and in all probability would become a good source of revenue to Government. 5. The surplus fund of the great Exhibition of 1851 might be expended for this purpose with propriety.

W. L. S.

ARBORAL RECORDS OF BUILDINGS.

I HAVE frequently thought of drawing your attention to an idea which has long had possession of my mind, and which, had I property adequate to the requirement, I should be inclined to carry out myself. Let me now give you a notion of it.

In laying out parks and planting trees, might not interesting results be produced if the trees were arranged to *form models of some of our most interesting ecclesiastical buildings?* Take, for example, Redcliffe Church, Bristol. Plant an oak for each of the buttresses, and an elm for each of the pillars, and poplar, or some other lofty tree, at the angles of the tower. It would, of course, be some years before it became very pleasing: still, for the advantage of future generations, perhaps some might be found to do it. Various shrubs and trees might be planted to fill in and carry out the design of different parts, and gravel walks would represent the aisle. Training and cutting the branches properly would be desirable, and, if done judiciously, might prevent formality and stiffness. T. P.

COMPETITIONS.

Cambridge Conduit.—The Town Council, at a special meeting on the 8th instant, selected the design of which Mr. Gordon M. Hills, of London, is the author. Seventeen designs were sent in, and from these three were selected by a committee in which the Town Council of the University and Hobson's trustees were represented; and these three were submitted for the final choice of the Council with the above result.

Cemetery, Weston-super-Mare.—We are informed that the committee have selected the "Round ground" for the new cemetery, and chosen the design of Mr. Davis, of Bath, for the buildings. The estimate was as follows:—Cost of the land, 1,000*l.*; builder's contract, 1,325; gates, 50*l.*; architect's per-centage and journeys of inspection, 100*l.*; planting the ground, 100*l.*; consecration expenses and bell, 80*l.*; making a total of 2,655*l.*

Kingswinford.—The statement in some of the provincial papers that the design for proposed church here has been selected was premature.

Lincoln Cemetery. — The determination of the burial-board to restrict the expenditure for chapel to 500*l.* is greatly reprobated. We hope the board will revise their determination.

Newcastle: St. John's Cemetery.—The burial-board of St. John's, Westgate, and Elswick, having offered two premiums of 20*l.* and 10*l.* for the first and second best designs for building two chapels, two entrance lodges, gates, fences, &c. at a cost not exceeding 4,000*l.* fourteen designs have been sent in.

Ipswich Cemetery.—The proceedings of the burial-board are exciting animadversion. Out of the numerous designs submitted to competition for the chapels and other buildings required at the new Cemetery, the preference was given to the one furnished by Messrs. Cooper and Peck, of London, subject to a condition as to the cost. With a view to ascertain whether this condition had been observed, the architects were requested to get out the working drawings, so that detailed estimates of cost might be obtained. This was done: tenders were advertised for in our paper; and the following were sent in:—

Reuben Lawrence	£1,846	0	0
Edward Gibbons	1,479	0	0
Samuel Simpson	1,416	0	0
Samuel Baldiston, jun.	1,365	10	0
Henry Luff	1,331	7	0
Searles Cornish	1,330	0	0
John Whight	1,284	0	0

Mr. T. S. Gowing (one of the committee), in a published letter, points out that various alterations have been made in the working drawings, so as to reduce the cost very materially as compared with the design selected, and objects to the allowance of such a course as unjust to the other competitors. The *Suffolk Chronicle*, commenting on the matter, has the following remarks on competition generally:—"On the surface, the principle of architectural competition appears a sound one, and if carried out as it ought to be, it might, no doubt, be made so in reality. It holds out inducements, which stimulate the abilities of architects, and afford a chance for merit to make itself known. Where, then, is the drawback? It is to be found in the general incompetency of those to whom the duty of selection is confided. Only think of a number of gentlemen allowing themselves to be put on a committee of taste without possessing the qualifications necessary to enable them to act. Nothing could exceed the picture of helplessness which the easy, good-natured portion of the committee displayed at the late meeting. They seemed to be conscious of their own insufficiency, and one after the other was fain to shelter himself under the ægis of the consulting architect. The fact is, public taste in this country is not sufficiently advanced to warrant a number of promiscuously selected individuals sitting in judgment upon architectural works. We are deplorably behind our continental neighbours in this respect. People in England are not instructed in the principles of taste: the cultivation of the eye for the picturesque and the beautiful is left to chance: hence, we find in every station men to whom a barn is almost as charming an object as a cathedral, and who can be easily persuaded that to rob a building of all its ornaments, and to alter its proportions, cannot have the slightest effect upon either its external appearance or its internal convenience."

Dudley Workhouse. — The successful competitor desires to say, that he was entirely unknown to the guardians until the envelope was opened.

INSTITUTION OF CIVIL ENGINEERS OF IRELAND.

EXCESSIVE COST OF RAILWAYS.

THE closing general meeting of the institution for this session was held on the 29th ult. Various donations having been announced, a paper was read by Mr. Bower "On the respective Merits of Single and Double Lines of Railway, considered in relation to their Safety, Efficiency, and Cost." The paper advocated the construction of single lines only in this country, they being found sufficient in various parts of the continent where traffic was excessive. He urged their perfect safety with the use of the electric telegraph and under efficient management, and argued that the present distressed state of the railway interest in Ireland was caused by the unnecessary sums expended in construction, to raise which preference shares had in some cases to be issued, to the injury of shareholders, and in others the rates of the country were pledged as security for the outlay. He exhibited a section of a line now before Parliament, 44 miles in length, on which the saving would be 2,500*l.* per mile, or 110,000*l.*

Mr. Hemans stated that he found a single line answer on the Waterford and Limerick Railway, and on the Galway Extension, constructed by him; but he thought it expedient to form double works when money could be had. Mr. Purdon remarked, that a single line was found to answer on the Dublin and Bray Railway, and that in his opinion the Great Southern and Western, or any Irish railway, could be worked with a single track.

USE OF DISINFECTANTS AND DETOXICANTS IN THE CRIMEA.

A FEAR, but too well grounded, prevailed during the past winter and spring, that the immense numbers of the dead bodies of our poor slaughtered fellow countrymen and their allies, French and Turkish, as well as of their horses, slain, as many of their masters were, by starvation, wet, and cold, as well as in battle, would assuredly so pollute the air of the camps, &c. in the heats of summer, as to give rise to deadly disease, unless every care were taken to obviate the evils of imperfect burial, as by the use of quicklime, which could easily be got by burning the limestone strata which abound in the Crimea. Kilns accordingly were formed, and quicklime produced, and we trust profusely spread over the graves of the dead, if not mixed with the remains as it rather ought to be. Under existent circumstances, we think it is to be regretted that a medical man (Dr. Kidd) should have written to the *Times*, condemning this use of lime in the Crimea for the destruction of animal matters. True, lime, as he urges, is not, properly speaking, a disinfectant,—that is, it is not known to be capable of destroying the virus of infectious disease, or of preventing it from being communicated by one diseased but living human being to another, whether directly or through intermediate substances,—and that to this end chloride of lime, as he recommends, is preferable, as the fumes of burning sulphur also, and probably still more so, are; but

that quicklime is a valuable destroyer and fixer of corrupting animal matters there are few who doubt, although Dr. Kidd appears to overlook its fixative power altogether, and speaks of it as merely a dissolver of such matters, leaving them *more active* in producing malaria than ever! Since it *is* a fixative, however, as well as a burner or destroyer of animal remains, and since it can so readily be had in great abundance close at hand, it is certainly indiscreet to throw contempt by wholesale upon its sanitary use, by stigmatising the opinion in its favour as "one of those amiable old-fashioned prejudices which outlive all science." There is a bastard science which is worse than even old-fashioned prejudices. As for chloride of lime, it is certainly an excellent detoxicant, but there will be plenty of other demand for all of it that will ever reach the Crimea, besides the mixing of it with dead bodies, or the covering of graves with thick layers of it. For our own part, so far as regards fevers and cholera, with Dr. Graham we would most earnestly urge the free use of burning sulphur as well as of chloride of lime; and, if to spare, some chloride of lime might, for further security, be sprinkled over the quicklime layers on graves, so as to seize and destroy the volatile poisonous matters that might not be wholly fixed or destroyed by the lime.

ARCHITECTURAL MUSEUM.

WITH reference to Mr. Jopling's paper at the Architectural Museum, we are asked to add to our previous memorandum, that the model full length (101 feet 5 in.) of the curve of the top step, east front, of the Parthenon, and on which is also shown the curve of the *entasis* of the column, will remain until the meeting of the 25th inst. when Mr. Jopling will be in attendance.

On that evening a *conversazione* will be held, when doubtless a report of progress will be made.

Notices of Books.

An Account of the Library of the Division of Art at Marlborough House; with a Catalogue of the Principal Works. By R. N. WORNUM. Printed for Her Majesty's Stationery Office. 1855.

THE librarian at Marlborough House, Mr. Ralph Wornum, has prepared for the Department of Science and Art, and for the use of visitors to the library, a classified catalogue of the principal works now there collected. The library already comprises 5,000 volumes and 100 portfolios of prints, drawings, &c. relating to decorative art and ornamental manufactures of every description; and, as Mr. Wornum truly remarks, "except a special museum of actual manufactures, there can be no more direct agent for conveying palpable ideas to the mind of the artizan; but while the museum is necessarily extremely limited in many respects, the library is in a measure infinite: a single volume might contain more illustrations, in any one department of art, ranging easily over all ages, from the most remote down to the present day, than it would be possible to collect together in any one place at present." To the end, however, that such a library shall be as comprehensively and as promptly useful as possible, a good classified catalogue is an essential. Such a catalogue the students and subscribers connected with the Marlborough House Library have now the good fortune to possess in the present volume of 240 octavo pages, which, therefore, we would recommend one and all of them to purchase. Perhaps it may be advisable, for behoof of those who may or ought to become art-students or subscribers to the museum and library at Marlborough House, to state that all registered students of the central schools of science and art have free admission to this library, as also all subscribers of 1*l.* 1s. per annum to the museum; that the charge for an annual ticket to the library alone is 10s. 6d.; and that occasional students will be admitted on payment of 6d. entitling them to six days' use of the library, or of 1s. 6d. entitling them to a monthly ticket. The library is open every day (holidays and Saturday evenings excepted) from ten a.m. to nine p.m.

An Account of the History and Manufacture of Ancient and Modern Terra Cotta, and of its use in Architecture as a durable and elegant Material for Decoration. By J. M. Blashfield. Weale: High Holborn. 1855.

WE some time since noticed the publication of various engraved copies of modern applications of terra cotta to art manufacture published by Mr. Blashfield. The present pamphlet forms a useful adjunct to such engravings, and gives an interesting account of the ancient and modern applications to which baked clays, &c. have been put, as well as of the proper mode of working and preparing art works in such clays. Amongst other suggestions, Mr. Blashfield says,—

"For terra cotta work a good mould made from the clay is sufficient; but if many moulds are wanted of the same pattern, it is desirable to have a plaster model. For terra cotta work it is not always necessary, when only one or two copies are required, to mould at all: the original models can be built up in a cellular manner, so that it can be dried and removed to a kiln, and baked, being a perfect original work, and the only durable form fit for external use, in which sculpture exists as an original work. If this subject was better understood, there can be no doubt that architects would more freely employ terra cotta, as at the present day they are constantly exposed by the system of moulding to have their designs pirated and stolen. They may design for a public building a piece of decoration to be carved in stone, and from the model casts being made, copies find their way into other hands, and in less than two years they may see the same enrichment in cement adorning a gin palace. Bas-relievi might with great economy be constantly used as decorations, though they are now seldom seen. It would never be necessary to *mould* such work."

Miscellanea.

NEW ORPHAN ASYLUM NEAR BRISTOL.—Adjoining the orphan-house, in which the Rev. Mr. Müller, with the mysterious help of anonymous, and almost unsolicited, donors, has so long supported a host of little orphans, now amounting to 300, additional buildings are about to be erected, as a home for no less than 715 more, who are still to be provided for by Mr. Müller. The addition is to be in two parts, one to contain 400 and the other 300. The cost will be 35,000*l.* and of this large sum Mr. Muller has already managed, by prayer, as he says, to scrape together no less than 23,056*l.* odds. The motto of this man of faith is evidently "Nil Desperandum." Often, he tells us, in his Diary, entitled, "God's Dealings with George Müller," in the morning he had not a penny in hand towards the afternoon's meal of some hundred children, but he had not been long in prayer when some aid, always opportune, but often odd (from the form in which the contribution was made), came to supply the instant need. With a rigid detail, he gives us these timely donations; and we meet with such entries as,—a piece of plate, from a Christian not requiring it; a thousand pounds; a hogshead of treacle; a silver bodkin or thimble; a leg of mutton; a bag of meal, &c. Mr. Muller lately stated, while announcing to an astonished audience his new building scheme, that while there are 6,000 orphans in our jails, there are but 3,764 in all the orphan asylums in England and Wales, thirty-three in number!

EXHIBITION OF THE NORFOLK AND NORWICH FINE ARTS ASSOCIATION.—A fine art exhibition was opened at Norwich on Wednesday before last. If not so extensive as some previous exhibitions, it comprises, according to the *Norfolk Chronicle*, a great many more new and at the same time good paintings than were ever collected together in Norwich. On some former occasions a large proportion of the pictures have been lent merely, but on this occasion, with two exceptions, they are all sent by living artists, and are for the most part for sale, at affixed prices. The gallery presents 300 paintings in oil and 100 in water colours, the greater number being landscapes and scenes from nature, interspersed with some interiors and a few historical as well as dramatic scenes.

OXFORD ARCHITECTURAL SOCIETY.—A meeting of this society was held at Holywell on Wednesday evening before last. The librarian read a letter from the secretary of the Great Western Railway Company, promising every facility on the occasion of another excursion. The secretary of the Worcester Diocesan Architectural Society had communicated the intention of that body to meet in Warwick in July, and members were urged, if possible, to accept the invitation offered. The society was congratulated on the more favourable aspect of its finances. Mr. H. A. Gibson, of Wadham College, then read a paper on "Bells." Mr. Forbes brought before the meeting the state of the Holy Ghost Chapel, at Basingstoke, now completely in ruins, and which some persons are anxious to restore. It was agreed that the annual meeting should be held on June 13th, instead of 18th.

CHIEF STONES.—The foundation-stone of a large building for a Sailors' Home was laid at Dover last week by the Vice-President of the Board of Trade ——The chief stone of the Queen's Free Grammar School at Basingstoke was laid last week by the mayor of the town. The foundation of this charity was laid 300 years since by Lord Sandys, and called the Holy Ghost School, which, till within a few years past, was conducted on the original site contiguous to the old ruins. An inquiry into the charity has led to the erection of the new building.——On Wednesday week the foundation-stone of a new church was laid by the Duke of Bedford, at the west end of the parish of Tavistock, about three miles from the town.—— The foundation-stone of a new church was laid on Monday week on the hill-side of the valley of Tredegar, at Penmaen. Sir Thomas Phillips has given the site, and subscribed 300*l.* towards the building fund. ——On Monday before last, the foundation-stone of a new Wesleyan Chapel, at Harmby, Middleham, was laid.——The foundation-stone of a church which is about to be erected at Teviothead, in the south of Scotland, was laid on the 22nd ult.

TURN-OUT OF CARPENTERS AT CURRAGH.—The carpenters at the Curragh encampment, chiefly Englishmen, in the employ of Messrs. A. and G. Holme, left their work on Monday before last, without notice, and demanded an increase of wages, in consequence of the working hours being reduced to from six a.m. to eight p.m. It appears the men have insisted upon working from four a.m. to half-past eight p.m. claiming one and one-half day's wages; but Messrs. Holme found it impossible for the men thus to do justice either to themselves or their employers, and gave notice that in future the time worked should be from six a.m. to eight p.m. and for which they would be paid one and one-quarter day's wages. After an explanation from Mr. Holme, about 250 of the men returned to work; but about eleven in number summoned Messrs. Holme for expenses back to Liverpool, and also for time lost. The Lord Mayor of Dublin, before whom the case was brought, dismissed it, giving some advice to the workmen. Messrs. Holme are said to have provided every possible comfort for the men, who have a large dining-hall, and are supplied with the best of provisions at Dublin prices, and with beds and blankets at a small charge, besides being allowed to sleep in the buildings, and provided with lights free of cost. The carpenters' rate of wages is said to be 28s. per week, and none less than 26s. and this amount is paid both by Messrs. Holme, and Messrs. Courtney and Stevens, the co-contractors.

CARLISLE SCHOOL OF ART. — A meeting of the subscribers to the Carlisle School of Art, was held in the Town-hall, Carlisle, on Tuesday evening before last, when the secretary read the report of the committee, from which it appears that the school was established in October last, and that its progress has been satisfactory. The average number of students at the Central School of Art has been fifty-nine. Various public and private local schools have availed themselves of the services of the master. At these schools about 366 pupils have received instruction. Some discussion then ensued as to the rules and the funds to be provided. In course of the proceedings, Mr. Hannah reminded the meeting that the art of writing was simply a species of drawing, depending on the cultivation of the eye and the hand, for, in making the twenty-six letters of the alphabet, it was nothing else than making twenty-six imitations. When parents took this into their consideration, seeing that every one thought it essential that their children should learn reading, writing, and a little arithmetic, he had no doubt that eventually they would consider drawing as essential as anything else.

STEAM-BOILER EXPLOSIONS.—Your correspondent "E. C." has drawn attention to a subject which, unfortunately, has for some time been much neglected. Many boiler explosions which have been considered inexplicable, or vaguely referred to a defective safety-valve, I think there is good cause to suppose have proceeded from the water assuming the spheroidal state. How, then, can this be avoided? M. Boutigny proposed the introduction of a great number of metallic points into the interior of the boiler, but this presented many great practical difficulties. I have myself thought that if a number of metal balls were introduced into the boiler, they, by greatly increasing the heating surface, would greatly decrease the danger resulting from this cause. This arrangement would, I think, also reduce the danger to be apprehended from the formation of hydrogen gas.—O. H. H.

IRON STEPS.—Sir, your correspondent, "G. L." of June 2nd, will, I think, find that treads of diamond pattern, constructed with strong wire, and screwed to the main treads, will overcome the difficulties to which he alludes.—C. C.

*** Two other letters on the subject have been forwarded to the inquirer.

THE IRON TRADE.—More failures have occurred in this trade within the last few weeks, but otherwise no material change has taken place in the state or prospects of the trade. There is no talk of any advance next quarter on the lowest price named at last meetings. American orders are not yet returning, but "when the trade has recovered from the effects of illegitimate speculation, it is believed that it will soon exhibit a healthy aspect." Meantime iron has of late been sold at 10s. and even 20s. below the prices fixed last quarter-day.

ARTISTS' BENEVOLENT FUND.—The annual festival of this incorporated association was held on Saturday at the Freemasons' Tavern, the Earl of Harrowby (in the absence of Earl Granville) presiding. The company, although not very numerous, comprised many of our principal artists and patrons of art, including among others Sir C. Eastlake, Mr. C. Stanfield, Mr. D. Roberts, Mr. J. Absolon, Mr. G. Godwin, Mr. G. Clark, &c. The noble chairman, in proposing the chief toast of the evening, "Success to the Artists' Benevolent Fund," dwelt upon the advantage of the institution, which, while it practised benevolence, at the same time inculcated prudence. During the past year the fund had paid annuities of 15*l.* each to fifty-two widows, and granted assistance to twenty-nine orphans of artists to the extent of 137*l.* 10*s.* In former ages improvidence had been regarded as the necessary accompaniment and distinguishing feature of great talent; but that mistake had passed away, and professional men were upon the whole far from improvident. Still the advantages might be greatly increased; and it was, therefore, desirable, now that such great endeavours were being made to foster art among all classes in this country, that the professors of art, as well as its patrons, should give their assistance to an institution which had such peculiar claims upon them. Mr. Godwin, in replying to a toast with which his name was connected, said he considered the Art-Union of London as of the greatest benefit to artists. It had encouraged a taste for art, and many commercial men who commenced their career in art by gaining a prize in the Art-Union had been led on to become assiduous collectors of pictures. The Art-Union, twenty years ago, raised with difficulty 400*l.*: it now had a steady annual income of 12,000*l.* or 13,000*l.* which was all diffused among artists.——A list of subscriptions, exceeding in the aggregate 350*l.* was read, including 100 guineas from her Majesty.—*The Times.*

MIDDLESEX AND SURREY ARCHÆOLOGICAL SOCIETY.—It has been proposed to extend the range of the Surrey Archæological Society to the county of Middlesex, in order to comprehend within the operations of a single institution the entire metropolis, and also to obtain a complete and careful investigation of the archæology of the metropolitan county. The Surrey Archæological Society has itself been very recently established: its members already are upwards of 400 in number, and its career has been hitherto satisfactory. From a union of the counties of Middlesex and Surrey in a single Archæological Society, there would necessarily result both an increase and a consolidation of strength; the proceedings of the society would be at once more complete and more diversified; and, while each county would secure a distinct recognition for every object peculiarly its own, much of mutual advantage would be derived by them both, from their being associated for the purposes of archæological inquiry and research.

NEWCASTLE SOCIETY OF ANTIQUARIES.—A monthly meeting was held on Wednesday before last, at Newcastle. It was resolved that a country meeting be held on 25th July, at Borcovicus, on the Roman wall. A letter was read from Mr. Dobson, the architect, submitting a plan for the construction of a room below the vaulted roof of the great hall of the castle, to be lighted by a glass dome, whereby additional space would be obtained for exhibiting the possessions of the society. It was resolved that Mr. Dobson be requested to furnish an estimate of the expense.

BRIDGEWATER CHURCH: ARCHITECT'S CHARGES.—We have received a statement from the architect, in answer to Mr. Donaldson's letter in our last, but too late for insertion this week.

THE CRUMLYN VIADUCT.—The works on the line between Pontypool and the viaduct at Crumlyn, are nearly completed, the tunnel being all but finished. The erection of the viaduct is rapidly proceeding, the raising of the various sets of iron girders having been successfully accomplished without any further accident. These girders weigh twenty-five tons, and have to be raised to an elevation of 200 feet. A double line of rails will be laid upon the summit of the viaduct, and in less than two months the whole will be completed. From Crumlyn, on the other side, the line is making rapid progress, and when finished, this loop to the Newport, Abergavenny, and Hereford line, will save some twenty-six miles of distance, and prove a most important feeder.

EXHIBITION AT TIVERTON.—The Bath and West of England Society for the encouragement of agriculture, arts, manufactures, and commerce, having decided on holding their meeting this year at Tiverton, advantage was taken of the circumstance to get up a local exhibition of works of art and industry, the proceeds of which it is intended shall be expended in the restoration of the church of St. Peter, at Tiverton, the surplus, if any, to form a nucleus for the foundation of a local hospital. The opening was inaugurated by a *déjeûner*, in the large hall at Blundell's school, the apartment being decorated for the occasion, and the proceedings enlivened by music. The Exhibition, at the Athenæum, was then opened by a procession, with the Mayor and Corporation at its head, and the various rooms were visited by the company. The room marked A is devoted to antiquities, architecture, sculptures, and pictures: rooms B and C contain about 250 oil paintings and engravings, and statuary: in the passages leading to rooms A and B, are works of art and curiosities; in room D, the "Trade Department;" room E, philosophical instruments; and in F (a small apartment), autographic and printing presses, &c.

TESTIMONIAL TO MR. S. C. HALL.—A number of artists, among whom are Messrs. Stanfield, Ward, Foley, Cooke, Goodall, Harvey, Harding, Helmsley, Inskipp, Hulme, Mason, Paton, &c. propose to obtain subscriptions for the purpose of presenting some suitable testimonial to Mr. S. C. Hall, as an indication of their sense of his services to art and artists, and their sympathy with him, more especially while advocating, as he has been doing, not only in the *Art-Journal*, but in the courts of law, the cause of the profession and the public, *versus* questionable picture-dealers. As the subscribers, in their circular, justly remark, the course Mr. Hall has pursued, for a series of years, as editor of the *Art-Journal*, has been of great service to art and artists, and it is only just and right in the artists and art-lovers generally thus to manifest their feeling in this matter. We have not the least doubt but that the proposal will be warmly and promptly responded to. Mr. F. W. Hulme, and Mr. G. P. Nicholls of 54, Paternoster-row, are the hon. secretaries for the proposed testimonial.

STATISTICS OF VICTORIA.—From a Commercial Almanac recently published at Melbourne, it appears that the quantity of fine gold extracted from the gullies in the colony of Victoria during the three years from August, 1851, to September, 1854, was nine million ounces, which, at 4*l.* an ounce, gives more than thirty-six millions sterling as the wealth added to the world by this infant colony in this brief period. Moreover, the previous staple of the colony, wool, in place of being neglected, as was feared, for "the golden fleece," has, during the very same period, been on the increase. In 1854 the quantity of wool exported was 22,598,688 lbs. being an increase of 633,584 lbs. on the previous year. The value of the total exports from the port of Melbourne during that year was 10,109,292*l.*; of the imports, 16,557,404*l.* Up to September 1st, 1854, 1,266,267 acres of land had been sold. The average price per acre has come down from 5*l.* 10*s.* in 1853 to about 3*l.* 10*s.* in 1854. The population of the colony on 26th April, 1854, was 232,873, of whom 17,253 had arrived overland from the other districts of Australia. The town population was 100,891; the mining population 58,046. In 1853 more than two millions of letters and a million and a half of newspapers passed through the Melbourne post-office. The Central Road Board spent, in 1853, 502,078*l.* of which 282,844*l.* were expended on the Mount Alexander road alone. There are two rival educational organizations in Victoria, the national and the denominational, of which the latter is the more flourishing, having under its wing 10,000 scholars and 132 schools, while the former has only 1,753 scholars and 25 schools. In the year 1853, no fewer than 832 mortgages were registered on town and country lands (principally the former) to the amount of 990,797*l.* In Geelong the assessed value of property is 525,020*l.* The general revenue of the colony for the year 1855 is estimated by the Legislative Council at 2,400,000*l.*

THE TYNE DOCK WORKS.—The contracts for making the new docks on the Tyne have been let for about 400,000*l.* The area of the dock will be 48 acres; the basin 9 acres. The directors of the Blyth and Tyne Railway also propose expending 145,000*l.* in coal staiths and other works upon the side of the river opposite to these docks.

TEMPORARY CHURCH, TOTTENHAM.—It is proposed to erect a temporary church, dedicated to St Paul, in Northumberland-park, Tottenham, Middlesex, under the superintendence of Mr. Chas Gray. The following tenders have been received:—Fidler, 599*l.*; Clemens, 595*l.*; Blenkarn, 479*l.*

ARCHITECTS' CHARGES.—A correspondent remarks that, in the case of the Melton Mowbray Corn Exchange, one of the architects acted, and was paid, as clerk of the works as well as architect.

AN OLD ROMAN'S EPITAPH.—Some workmen, in making an excavation at Constantina, in Algeria, a short time back, came on an ancient tomb, which turned out to be that of a Roman citizen. It offered no peculiarity in construction, but the inscription, which is in well-written hexameters and pentameters, is curious:—"I, Procilius, whose remains repose here, state the exact truth in these verses. I have spent a life without annoyance, exercising the calling of silversmith in my house at Cirta. I have always been of the strictest probity, and of the most complete frankness towards every man. I have nothing whatever to complain of, for I was always gay and always happy, until the death of my chaste Valeria. I have celebrated with honour and in prosperity one hundred anniversaries of my birthday; and, at last, my final day arrived when my enfeebled frame rendered it welcome. The lines which you are now reading I composed myself during my lifetime, being permitted so to do by the kind goddess Fortune, who never forsook me. Follow the path which I have taken: I await you here below: come!"

A RAILWAY SPECULATION.—The East Lancashire Railway Company have adopted means similar to those some years since started by some of the metropolitan companies, to induce building operations in the vicinity of their line. To any person who will build houses within two miles of their stations at Maghull, Ormskirk, Burscough, or Town Green, of the clear annual value of 50*l.* per annum, they guarantee the privilege of nominating one resident, who shall travel free, as a first-class passenger, between these places and the Liverpool Exchange station, during a term varying from seven to eighteen years, according to the position of the houses erected.

THE BRITISH INSTITUTION.—The collection of works by the old masters, just now opened, with a sprinkling as usual in the south room of pictures by deceased English painters, although, perhaps, less important than it has sometimes been, nevertheless contains some pictures of great interest by Carlo Dolci, Tintoretto, Velasquez, Rubens, and others. No. 41, called in the catalogue "Portrait of a Man," by Holbein, is inscribed, "Sr Nicolas Pointz." The lines at the side are curious:—

"Je obais à qui je dois.
Je sers à qui me plaist:
Et suis à qui me merite."

ADVERTISEMENTS.

TO PARENTS AND GUARDIANS.

AN Eminent Architectural Firm, in a large manufacturing district, in one of the midland counties, have now a VACANCY in their Offices for an OUT-DOOR ARTICLED PUPIL, possessing a good address, and having a taste for drawing; to whom will be afforded peculiar opportunities and advantages. Address to A. & B. Office of "The Builder."

TO WOOD, PUMP, AND PIPE BORERS.

A GOOD HAND at the above Trade may obtain CONSTANT EMPLOYMENT at Reigate Wharf, King's-road, Reading, Berks.

TO ARCHITECTS' ASSISTANTS.

A VACANCY in an ARCHITECT'S OFFICE in the suburbs of Town, for a Gentleman having a general and practical knowledge of the profession. Age not less than 50 years. The engagement may be permanent.—Apply by letter to C. L. Office of "The Builder," stating salary and where last engaged.

CARMAN WANTED, to take out goods that require great care; he must be a trustworthy man, know how to drive and take care of a horse, also read and write well.—Apply, by letter, to F. A. Office of "The Builder."

TO STONEMASONS.

WANTED IMMEDIATELY, TWENTY GOOD MASONS, who have been accustomed to working Ancaster stone. Liberal wages will be given to good workmen, with full employment for the winter, in covered sheds. Personal application to be made at the Grammar School Works, East Retford, Notts. No society men need apply.

TO PARENTS AND GUARDIANS.

WANTED, in the Office of an Architect, near the Regent's-park, an ARTICLED PUPIL. A premium required, the principal of which will be returned after the first year.—Apply by letter to VERITAS, Office of "The Builder."

TO SURVEYORS AND DRAUGHTSMEN.

WANTED, one who has a good knowledge of Surveying and Levelling, and is a neat hand at Planning.—Communications, inclosing references, to be addressed M. T. Post-office, Leeds, stating age, qualifications, &c. Parties who are thought eligible will be communicated with.

TO SMITHS.

WANTED, a good RANGE and STOVE FITTER; one who can forge and fit up.—Apply to Mr. W. HARMER, 1, New Peter street, Horseferry-road, Westminster.

TO GLASS PAINTERS.

WANTED, a first-class HAND; one accustomed to figure-painting, who is a fair draughtsman, and understands light and shade.—Apply, if from the country, by letter, addressed F. W. G. stating qualifications and experience; if in London, personally, at 14, Salisbury-place, New-road.
Room for an APPRENTICE; some proficiency in drawing indispensable.

TO PLUMBERS, PAINTERS, AND GLAZIERS.

WANTED, an active Man, who understands his business, and can give references as to character.—Apply to Mr. J. TUCKER, 254, High Holborn.

WANTED, a SURVEYING CLERK, fully competent to measure, take out quantities, bring into bill and estimate builders' works. Unexceptionable references as to ability and character will be required.—Apply between the hours of FOUR and SIX p.m. to LUCAS, BROTHERS, Builders, Belvidere-road, Lambeth.

TO INSPECTORS OF WORKS.

WANTED immediately, in the city of HEREFORD, an INSPECTOR of WORKS, who has been accustomed to the practical laying of water and other works connected with Sanitary Improvement. Wages 30s. per week.—Apply by letter, with testimonials to R. JOHNSON, Esq. Town Clerk, on or before the 25th instant.
Hereford, June 12th, 1855. R. JOHNSON, Town Clerk.

WANTED, an OUTDOOR APPRENTICE to the Carpentry and Joining Business. A moderate premium required, and wages will be given.—Address, T. W. 7, St. James's Market, Haymarket.

YOUTH WANTED, in the OFFICE of a CIVIL ENGINEER, near the Royal Exchange. He will not be required to perform any menial office, and an opportunity of progress will be open to him. It is essential he shall write a good hand, and a knowledge of drawing will be a recommendation.—Apply in own handwriting, by letter, to ALPHA, care of Mr. BARKER, 12, Birchin-lane, Cornhill.

TO CARPENTERS AND BUILDERS.

WANTED, by a Young Man, aged 22, a SITUATION, as improver in a Carpenter's and Joiner's shop. Has been at the trade five years. Wages not an object.—Apply, H. D. 23, New-street, Covent-garden.

TO BUILDERS AND OTHERS.

WANTED, by a respectable Young Man, a Carpenter, a SITUATION as TIME-KEEPER and CLERK, or constant employment as Carpenter. Is willing to make himself useful. Town preferred.—Address, J. S. R. Post office, Colney Hatch, Middlesex.

TO BUILDERS, CARPENTERS AND JOINERS, OR CABINET-MAKERS.

WANTED to PLACE, an active, well-educated Youth as an IN-DOOR APPRENTICE. A short distance from London preferred. A moderate premium given.—Apply, post-paid, to T. K. 5, Ann-street, Arlington-street, New North-road, Islington.

TO BUILDERS AND PLUMBERS.

WANTED, by a Young Man, a SITUATION as a good PLUMBER; he is thoroughly experienced in Gothic lead-light glazing.—Address, post paid, T. L. W. H. No. 37, Houpel street, Cornwall-road, Lambeth, London.

TO PLUMBERS AND BUILDERS.

WANTED, a SITUATION as PLUMBER, by a steady respectable Young Man from the country, who can give good references as to character and ability.—Address, C. S. 4, Richmond-terrace, London-road, Southwark.

WANTED, a SITUATION as CLERK or WORKS; is well experienced in all the branches of building, can make plans, working drawings, &c. and has unexceptionable references from previous engagements.—Address to C. D. 6, Little St. James's-street, Pall mall.

TO CONTRACTORS AND BUILDERS.

WANTED, a SITUATION as General Foreman, or Foreman Bricklayer; can furnish first of testimonials.—Address to R. S. No. 3, Tower Royal, City.

TO BUILDERS AND OTHERS.

WANTED, by a respectable young man, who is about leaving his present situation as one of the respectable firms at the West-end, a SITUATION as YARD FOREMAN, or Builder's Clerk. Satisfactory references given. No objection to the country.—Address, A. B. Mr. Cook's, Builder, 60, Poland street, Oxford-street.

TO PLUMBERS, BUILDERS, &c.

WANTED, by a Practical Hand, aged 35, a SITUATION as Plumber, Painter, Glazier, &c.; would be found useful in writing, graining, paper-hanging, &c. Satisfactory reference as to ability, &c. Apply to O. P. 10, Park-street, Dorset-square.

TO BUILDERS AND OTHERS.

WANTED, by a steady, experienced Man, a SITUATION as FOREMAN of PAINTERS. Has been used to extensive works. One likely to be permanent on the establishment of a nobleman or gentleman would be preferred. Can be well recommended.—Address to O. H. at Mr. Allard's, 22, Pleasant-row, Pentonville.

WANTED, a SITUATION, by a perseveringyoung man, aged 23, who has practical ideas of Building, having worked as a Carpenter, at times, for the last six years. Can prepare finished and working drawings, take out quantities, keep builders' accounts, &c.—Address, ALPHA, 56, Bemerton-street, Caledonian-road.

TO BUILDERS AND OTHERS.

WANTED, by the Advertiser, a SITUATION as CHALK LINE FOREMAN and TIME-KEEPER, who perfectly understands booking of materials, having filled the same situation for three years, and can have an unexceptionable character from his late employer.—Address, W. S. 2, Alma-terrace, Camberwell-green, Camberwell, Surrey.

TO ARCHITECTS.

WANTED, an ENGAGEMENT in town (two guineas) or country, by an assistant of eight years' experience, competent to take the management of an office, and a neat and rapid draughtsman.—Address, N. O. Post-office, Throgmorton-street, City.

TO CARPENTERS AND BUILDERS.

THE Friends of a Youth, aged 15, are desirous of PLACING him under a Master, where he can learn the above trade in all its branches.—Address, stating full particulars, to J. U. at Mrs. Collingwood's, 30, Langley-place, Commercial-road East.

TO BUILDERS.

THE Advertiser, having just finished the Joiner's Work of some Houses, is desirous of TAKING MORE.—Address to F. C. 8, Boddy's-bridge, Upper Ground-street, Blackfriars.

THE Advertiser, who is a good Draughtsman and Colourist, and who understands perspective, is desirous of an ENGAGEMENT. In the Office of an Architect of good practice, where he may have opportunities of improvement.—Address, SPES, Office of "The Builder."

TO CARPENTERS AND BUILDERS.

THE Parents of a well-educated Youth, aged 15 years, wish to PLACE him as OUT-DOOR APPRENTICE to the above trade. Please to state full particulars.—Address, Mr. POOLE, 28, Rochester street, Vincent-square, Westminster.

TO IRONMONGERS, BUILDERS, GAS-FITTERS, SMITHS, &c.

THE Advertiser is desirous of obtaining a permanent SITUATION as BELL-HANGER, LOCK-SMITH, GAS-FITTER, and Bath work. Can give testimonials for sobriety and ability. The country not objected to.—Address, W. C. 26, William-street, Park-road, Holloway.

CLERK of WORKS. — A practical Person wishes for an ENGAGEMENT as above. Is quite capable of making plans and working drawings, can measure up work, extract quantities, &c. Can produce first-class testimonials.—Address, A. J. S. 12, Blenheim-terrace, Abbey-road, St. John's-wood.

TO BUILDERS, CONTRACTORS, AND OTHERS.

A PERSON who has just completed some extensive Works, wishes to take BRICKWORK at PER ROD, labour only, or scaffolding, and all materials to any extent. First-rate testimonials from late employers. No objection to country.—Address, W. F. 35, Pickering-place, Paddington.

TO CIVIL ENGINEERS, ARCHITECTS, AND SURVEYORS.

A GENTLEMAN, educated, and of many years' general practice in the above occupations, is desirous of RE-ENGAGEMENT, or to enter into Partnership where an active Partner is required. Satisfactory testimonials and references can be produced.—Address, post-paid, to E. A. 17, Park-street, Camden-town.

TO ARCHITECTS.

A YOUNG ARCHITECT desires an ENGAGEMENT. Can prepare working detail and perspective drawings, and has a knowledge of colouring. Remuneration proportionate to advantages offered.—Address, ZETA, 40, New Bridge-street, Blackfriars.

TO BUILDERS AND GAS-FITTERS.

A GOOD BELL-HANGER and GAS-FITTER wishes to obtain constant EMPLOYMENT. Confidence may be placed in him, being particularly steady. References given if required.—Address, ALFRED PHILPOTT, 5, Hoxton-square.

TO ARCHITECTS, SURVEYORS, AND BUILDERS.

A THOROUGHLY-QUALIFIED ARCHITECTURAL ASSISTANT is accustomed to prepare finished, working, and detail drawings, both in Italian and Gothic, is desirous of a RE-ENGAGEMENT. Unexceptionable testimonials. Salary moderate.—Address to C. M. I. No. 1, Britannia-place, Worcester.

TO BUILDERS, PAINTERS, &c.

A YOUNG MAN, aged 23, who can Grain and Write, wishes to ENGAGE as GENERAL WORKMAN; or as Improver to a Grainer and Writer, at moderate wages.—Address, G. R. 6, Little Carter lane, Doctors'-commons, City.

TO LAND SURVEYORS AND OTHERS.

A YOUNG MAN, of some experience in the profession, is desirous of an ENGAGEMENT. Town preferred.—Address, Mr WINDER, Greenhill, Harrow.

TO BUILDERS AND OTHERS.

A YOUNG MAN is open to an ENGAGEMENT in a Builder's Office, who has filled a similar situation with London builders for some years.—Address, A. B. 78, Talcbrook-street, Pimlico.

A YOUNG MAN, aged 19, who has been articled for three years to a dealer in materials for building in a large country town, is desirous of obtaining a SITUATION in a similar capacity. He understands the measuring and selling timber, bricks, lead, glass, paint paperhangings, &c. and can have a good recommendation.—Address, T. C. at Mr. Thurlow's, 28, Wellington-road, St. John's-wood.

TO ESTATE AGENTS, VALUERS, SURVEYORS, &c.

A GENTLEMAN, who has been for some years with a very experienced Land Agent and Surveyor, and has gained a thorough knowledge of his profession, is desirous of PURCHASING a SHARE in a highly-respectable AGENCY and SURVEYING BUSINESS. The advertiser has considerable private interest, and can give most unexceptionable testimonials. For further particulars apply (by letter only) to DELTA, Post-office, Chaddesley Corbet, Kidderminster.

AS WRITER and GRAINER. — The Advertiser, aged 33, who is a thorough sign writer and good grainer, wishes for CONSTANT EMPLOYMENT. Can give unexceptionable reference.—Address to L. S. Office of "The Builder."

A FRENCH GENTLEMAN, an Architect, who has just published a work on Architecture, and has another nearly ready, is desirous of meeting with a Partner or other interest in an Architect's Office. Being a clever draughtsman, his knowledge of general drawing, mouldings, mathematics, and natural science, would be of some advantage if pupils were kept.—Address, by letter, S. S. 30, Cannon-street, City.

TO BUILDERS AND PAINTERS.

A YOUNG MAN, of good character, is desirous of taking any quantity of OAK GRAINING, &c. by the yard, or of making an agreement for constant employment. No objection to do a little painting.—Address, R. J. No. 4, Princes-terrace, Caledonian-road, Islington.

TO SCULPTORS AND OTHERS.

A YOUNG MAN, aged 27, who has had considerable practice in modelling from life and carving figure and ornament, is open to an ENGAGEMENT either for the whole or part of his time. Satisfactory reference can be given.—Address, G. Office of "The Builder."

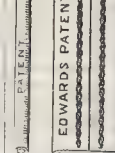
TO BUILDERS.

A GENTLEMAN requires a RE-ENGAGEMENT as COUNTING-HOUSE CLERK and BOOK-KEEPER; he is a thorough accountant, and possesses a knowledge of business generally, and is qualified to take the superintendence of a builder's office, having held a similar situation for the last two years, where reference will be given as to character and qualifications.—Address, F. Office of "The Builder."

TO PLUMBERS AND BUILDERS.

A YOUNG MAN wishes a permanent SITUATION as PLUMBER; has no objection to fill up his time in glazing or painting. Good references can be given.—Direct, A. B. 4, Tyer Cottages, John-street, Upper Holloway, Islington.

A YOUNG MAN, aged 22, desires a RE-ENGAGEMENT. He is a fair architectural draughtsman, can map, plan, and take out quantities, and is thoroughly acquainted with bookkeeping and the principles of levelling and surveying. Salary, 1l. 1s. per week, as the advertiser's object is improvement.—Address, X. Y. Mr. Lowe's, Law Stationer, Bell-yard, Temple-bar.



TO ARCHITECTS, ENGINEERS, AND SURVEYORS.

A THOROUGH PRACTICAL ASSISTANT is OPEN to a RE-ENGAGEMENT. Unexceptionable reference can be given.—Address, A. B. 64, Theobald's-road, London.

TO ARCHITECTS.

PARTNERSHIP WANTED.—A Gentleman, thoroughly conversant with the Profession, is desirous of meeting with a country architect requiring a partner; or a country surveyor with an increasing architectural practice.—Address, A. B Z Office of "The Builder."

PARTNERSHIP.—To ARCHITECTS and SURVEYORS.—WANTED to PURCHASE a SHARE in a well-established BUSINESS; a country practice preferred.—Address, post-paid, to F. Office of "The Builder."

LEATHER BANDS for DRIVING MACHINERY (EDWARDS' PATENT). — Engineers, Mill-owners, Printers, and others using bands for driving machinery, are respectfully invited to inspect
EDWARDS'
IMPROVED FOLDED BANDS,
Which for strength, durability, and straightness in working, surpass any Bands at present in use.
Best STRETCHED SINGLE BANDS, with Cemented Joints.
Improved LEATHER HOSE, SUCTIONS, FIRE BUCKETS, &c.
MANUFACTORY,
33, Great Sutton-street, Clerkenwell.

IMPROVED WINDOW BLINDS.—SAXBY'S PATENT ECCENTRIC CLEAT, manufactured solely by THOMAS PEMBERTON and SONS, and may be had of all ironmongers. It is the only perfect method yet introduced, of sustaining a Venetian blind, on releasing the cord, and avoiding winding on hooks. For calico blinds its action is perfectly noiseless, as it works on centre pins, and the blind is raised and lowered by a single line without a centre cord.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 8s.; perforated zinc blinds, in ditto, 7s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

MILLS for SALE.—A Slate-sawing Machine, powerful Crushing-mills or Edge stone Runners, all complete, price 20l.; two pairs of Horizontal French Stones, and 3 horse Boiler. Can be seen by applying to C. T. CHRISTIE, Millwright and Engineer, 113, Vauxhall-walk, Lambeth.

THREE WHEELED DOBBIN-CARTS WANTED—Letters, stating price and particulars, to be addressed E. P. Office of "The Builder."

TO MACHINE MANUFACTURERS, and all connected with Machinery.—PATENT for SALE, a great improvement on an indispensable part of almost every machine. Now in use, with testimonials as to utility. Sold in consequence of ill-health.—Address, Messrs. NEWTON and SONS, Chancery-lane, London.

TO ARCHITECTS AND BUILDERS.

WM. STARR having for many years been in the constant habit of putting up Staircases and Handrails of every description for the trade, takes the liberty of soliciting favours in that department. Patent Veneered Hand-rails without Joints.—No. 26, Portland-street, St. James's.

DAMP WALLS.

STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,

Is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 2s. 6d.

Prepared only by W. J. STENT, Warminster.

London Agents: Messrs. GEO. and THOS. WALLIS, 64, Long-acre. Agent for Ireland: Mr. S. BOYD, 46, Mary-street, Dublin.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers of White Zinc Paint on a large scale in this country, are enabled, by a process, which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Those direful maladies, paralysis and painters' colic, will be entirely avoided. It is entirely free from any poisonous or pernicious property. Neither exposure to heat, nor tropical climates act upon it. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. To be had of the Wholesale Paint-dealers in Original Packages, excl. cask stamped—HUBBUCK, LONDON—PATENT. And if not so marked the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers in this country. Paint and Varnish Works, Upper East Smithfield, opposite the London Docks.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increase of weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B. HORLEY and CO. and by the Company's Grinding Agents in London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street City; FREDERICK BRABY, Wholesale and Retail Agent, 8, Tottenham-court, New-road; in Manchester and Liverpool by R. CLAY, 8, Mercer-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting stores, warehouses, dwelling-houses, &c. in Leith, by Messrs. R. ANDERSON and CO. Timber-bush; and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 28, and 56 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 13, Manchester-buildings, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Gloucester Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a hard drawing cement of great power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1853.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not operate in damp situations. On account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements, read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster, who prepare one quality only of Portland Cement.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few hours after being laid and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and export trade. Portland cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks of breakwaters, tidal work, or otherwise.—London Wharf, Belvedere road, Lambeth.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent. N.B. These Cements supplied for shipment, on advantageous terms.

BATH CEMENT.—This Cement is equal to Portland in strength and durability, does not require to damp previously, and is perfectly uniform, of a good warm colour, resembling the Bath stone.—CHARLES RICHARDSON, 6, South Wharf, Paddington.

11, George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

SOUTHAM.—BLUE LIAS LIME, and CEMENT WORKS.—OLDHAM and TATHAM'S Blue Lias Lime, Portland, Roman, and Lias Cements.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS', STOCKS, and other BRICKS.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 20, 1853.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

GREY STONE LIME WHARFS, 12, UPPER GROUND STREET, Blackfriars (Surrey side); 7, NORTH WHARF-ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester, March 31, 1853.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for the WARES is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "Errors of our Judges," page 281, of the Great Exhibition, rank the Manufactures known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical, and Alhambric Mosaics, manufactured on the most extensive and unrivalled extreme durability. Slabs and Tiles for Fireplaces and Hearths. Covings for Grates. Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had in great variety at their Warehouse, 9, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke upon-Trent, Staffordshire.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 52s. 6d. per 1,000; floor bricks and 6-inch pavings, at 40s. per 1,000; 9-inch pavings, 55s. per 1,000; 9-inch pavings, at 72s. 6d. per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties Railway.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants Builders, contractors, and others supplied with every description of building material at the lowest market prices.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Face, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any sallow matter, is acknowledged to be preferable to river sand.

Depôt, Agar Wharf, King's-road, St. Pancras.

VITRIFIED STAFFORDSHIRE BLUE BRICKS, Paving, Roofing, and Ridge Tiles, Sanitary Pipes, &c. St. Aubrige Fire Goods, &c. of all descriptions, and of best quality.—WOOD and SON, Manufacturers, Portway, Oldbury, near Birmingham. Agent—Mr. J. UNWIN, Private Residence, 59 Nelson-square, Blackfriars-road.

WHITE SUFFOLK and RED FACING BRICKS

COWLEY, KENT, and ESSEX BRICKS.

Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.

KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE (successors to Mr. Benjamin Gough), 3, ADELAIDE-PLACE, LONDON-BRIDGE.

TO BUILDERS and OTHERS.—BRICKS delivered at any part of the River up to Battersea-bridge, at the following prices, viz.:—Grey Stocks, 28s. per thousand; Grizzles, 30s. per thousand; Rough Stocks, 20s.; Place, 18s.—Terms, cash on delivery.—Apply to Mr. G. SMEED, Sittingbourne, Kent.

TO BUILDERS, CONTRACTORS, AND OTHERS.

MESSRS. BARRETT and SHARP beg to inform the trade that they are prepared to LAND STONE, BRICKS, SAND, &c. &c. at their Wharf, at the usual rates. The traveller will land any blocks of stone, timber, or engineering work, 5 cwt. weighing more than three tons. BARRETT and SHARP, "Patent Stone Preserving Works," Holdnerness Wharf, 10, Bridge place, Harrow-road, Paddington.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

BRICKS.—Best Stocks, &c. delivered by Eastern Counties Railway, at London, or any other Station, by the Manager of the Ware and Railway Brick Works, Squirrel's Heath, Romford.—Address, Post-office, Squirrel's Heath.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from 1 inch to 1½ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Sills, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings.—A large stock of dry flooring at low prices.—Southwark-bridge Wharf, Bankside.

GREAT REDUCTION of PRICES.—SAMUEL PUTNEY respectfully solicits the attention of buyers to the still further reduction, owing to the recent fluctuations.

Fine Planks, 12 ft. 3 in. by 11 in.	from 3s. 6d.	each.
Spruce Deals	3 in. by 9 in.	" 2s. 9d. "
Yellow ditto		" 4s. 0d. "
Honduras Mahogany, in logs		" 0s. 4½d. per foot.
Ditto ditto, in planks		" 0s. 6d. "
Spanish ditto		" 0s. 7d. "

Prepared Flooring, Veneers, &c. at equally low prices. A list forwarded on application.

Borough-road, Southwark, and Elm-street, Gray's-inn-lane.

TIMBER and DEAL YARD.—A large CONSIGNMENT of PREPARED FLOORS (dry), DEALS, BATTENS, &c. for SALE on COMMISSION, at very low prices for cash. Timber Deals, &c. received for Sale on Commission.—THOMPSON and HOLMES, Wood and Stone Brokers, the Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

ACORN TIMBER WHARF and SAWMILLS.

GRAND SURREY CANAL, OLD KENT-ROAD.—The extensive Waterside Premises Improved Sawing Machinery and Drying Warehouses, with a supply of all kinds of Foreign Wood direct from the importers, enable consumers to select from one of the largest stocks in London, at the lowest prices, for cash.

The Monthly Price Current forwarded on application.—RICHARD MAY informs the building public that American Pine and Spruce are cheaper, and Baltic goods are scarce.

ST. PANCRAS SAWING, PLANING, and MOULDING MILLS, Cambridge-street, near the Great Northern Railway Station, King's-cross.

GEORGE NOKES and CO. (late Archbutt and Atkinson) beg to acquaint architects, builders, carpenters, and others, that they have opened the above premises with superior machinery for manufacturing architrave mouldings of any size and design, sashbars, match-boarding, skirtings, flooring, &c. and have always on hand a large stock of seasoned flooring at reduced prices; also, timber, deals, scantling, sash sills, mahogany wainscot, &c. Goods sawn at the mills fetched and delivered free of charge.

May 18, 1853.

MACHINE CARVING, JOINERY, and MOULDED WORKS, Belvidere-road, Lambeth.—The Proprietor of the above works begs respectfully to apprise the nobility, clergy, architects, builders, cabinet-makers, and trades generally requiring Carved and Moulded Works, that he is now enabled to execute any order they may be entrusted to him with the utmost promptitude. Every description of Carved Work and Tracery, roughed out by the machines for the trade only. Pulpits, Lecterns, Reading Desks, Screens, Altar-Rails, Tables, Chairs, &c. executed at the shortest notice. Specimens of Carved Work, suitable for various purposes, can be seen at the Works, and Estimates furnished upon application.

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.

R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,

Your obedient Servant,

WILLIAM CARTWRIGHT.

This effective article has not any Crank or Wire to get out of order, and is all complete and readyfor use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET VALVE No. 7.

Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 100 to 300 feet: they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,

THOS. LAMBERT and SON,

Brass Founders and Engineers,

Corner of Shore-street, New Cut, Lambeth.

N.B. No. 7, combined with a DOULTON'S PAN and TRAP, is the CHEAPEST COTTAGE CLOSET yet produced. Price, complete, 13s. 6d. each.

E. and W. STURGE invite special attention to their reduced LIST of PRICES of Drain Pipes, Junctions, Pans, Traps, &c.; also, to their Paving, Sinks, &c.; Slates of the best quality, wholesale and retail. Country builders and others supplied with all information, on application to E. and W. STURGE, Bridge-wharf, City-road.

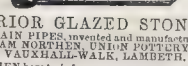
N.B.—The wharf is well situated for carriage by canal boats, or to the railways, to which but a small charge for cartage is made.

January, 1855.

PATTEN'S PATENT HIGH-PRESSURE WATER-CLOSETS and WATER REGULATORS, manufactured upon an improved principle, dispensing with cistern, cranks, wire, lead trap, &c. Any number of Closets can be supplied from one main.

Also PATTEN'S improved powerful FLUSHING LOW-PRESSURE WATER-CLOSETS, patronised by the Board of Health, Government, and other large public establishments, in addition to numerous private individuals. Drawings, testimonials, and references of the highest respectability forwarded by post. Price for Closet and Apparatus complete from 25s. and perfect action guaranteed. Fixed specimens to be seen on the premises of the Patentee, WILLIAM PATTEN, 23, Old Fish-street, near St Paul's, London

Crown Glass, 18 tables, 30s per Crate.



COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES, BENDS, JUNCTIONS, and SYPHONS. This ware, allowed by all to be of the best manufacture, by the unparalleled quality, combined with cheapness, will be found to meet the approbation of consumers.—Sole Agents, L. B. PEARSE and CO., Great Northern-wharf, York-road, King's-cross.

VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,

MANUFACTURER of superior GLAZED STONEWARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on advantageous terms. Also, MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 80, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

SUPERIOR GLAZED STONEWARE DRAIN PIPES, invented and manufactured by WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON-TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the sockets being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and rendering stoppage in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse-shoe Wharf, No. 8, Upper Thames-street. Millwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbett's Depôt, Britten-street, Chelsea; and at the Pottery.

UNDERHAY'S PATENT REGULATOR CLOSETS, for constant or intermittent supply, dispense with Cisterns, Service Boxes, Valves, Levers, Cranks, Wires, &c. &c.; much time is saved in fixing, and a better flush of water obtained in use.

Pan, Valve, Self-acting, and Servants' Closets, on this principle, may be seen at the Works. They are very cheap, their efficacy is guaranteed. 5,000 of them have been sold, and no instance of failure has occurred.

These Stoveless are cheaper, stronger, and more convenient, than any other. Many thousands are in use, and greatly approved of.

Manufactured by

CHARLES BUTLER and SON,

Brass Founders, Crawford passage, Clerkenwell, London.

SALES BY AUCTION.

TWICKENHAM, near Sir William Clay's Park.—Freehold Building Plots, on the Staines road.

MESSRS. FOSTER and SON will SELL by AUCTION, at the PRINCE BLUCHER, TWICKENHAM, near the land, on MONDAY, JUNE 29, at THREE for FOUR in the afternoon, in lots, FREEHOLD BUILDING PLOTS, particularly eligible, on the high road, and opposite to houses of imp rtance, which have been built for many years, besides frontage to two crossroads, within minutes' walk of the station. May be viewed, and particulars had ten days before the sale, at the Prince Blucher; of W. P. Pawsons, Esq. Solicitor, 16, Great Marlb rough street; of — Stacey, Esq. Solicitor, 17, Bloomsbury-street; and of Messrs. Foster, 4, Pall-mall.

An important Tract of Freehold Building Land, tithe free and land-tax redeemed, comprising about 80 acres, in a beautiful situation, about four miles from the City, in the county of Surrey.

MESSRS. WINSTANLEY are directed to SELL by AUCTION, at the MART, on WEDNESDAY, JUNE 28th, in numerous lots, unless previously sold in the following lots of eligible FREEHOLD BUILDING LAND, commanding extensive and beautiful views, situate at East Dulwich, in the parish of St. Giles, Camberwell, in the county of Surrey, and possessing a frontage of 4,000 feet to the high road from Gooseg een to Forest hill, Sydenham, and the Crystal Palace, and opposite to lands belonging to Dulwich College. Also, very extensive frontages on the private roads which have been formed and extend through the property for nearly three quarters of a mile. The water is nearly laid on, both by the South Lambeth and Vauxhall Water Companies, to within a few yards of the estate. The lots will vary from two to ten acres, and offer many eligible and desirable sites for the erection of gentlemen's villas and other purposes. There is a brickfield, comprising about six acres, let on lease at 65l. per annum, together with the Plough public-house and premises, also let at a ground rent, the lease of which will expire in about eleven years.—Printed particulars may be obtained twenty one days previous to sale, of Messrs. Jones, Kensington, and Messrs. Lincoln & Son, of Mr. Bronaxi, Surveyor, 46, Lincoln's inn-fields; the Plough, part of the property; the Inns at Peckham rye, Camberwell, and Denmark-hill; the Place of Sale; and of Messrs. Winstanley, Paternoster-row.

WIMBLEDON HOUSE SURREY, with beautiful gardens grounds, and park, for many years the residence of the late Mrs Marryat, deceased, and long known as one of the most delightful and desirable retreats in the neighborhood of the metropolis, a portion of the land offering most attractive and eligible sites for the erection of detached villas and other residences, without interfering with the present seclusion of the mansion and grounds.

MESSRS. RUSHWORTH and JARVIS beg to announce that that they will SELL by AUCTION, at GARRAWAYS, on FRIDAY, JUNE 26th, at TWELVE o'clock, in one lot, the above much-admired and very important FREEHOLD ESTATE, consisting of a capital and elegant spacious mansion, with offices, stabling, and buildings, combining every requisite accommodation for a large establishment, extensive and beautiful pleasure grounds, with lawns and shrubberies, choice flower and kitchen gardens, conservatory, orangery, fountains, and fish-ponds, a small but beautifully undulated and well-timbered park, with a large sheet of ornamental water, above, grotto, summer-houses, ice-house, gardener's cottage, farmyard, lodge-entrance, &c. comprising altogether about eight-six acres, bounded on three sides by a lofty brick wall. The property is united to the residence of a minister of state or family of distinction, a merchant or banker, or it offers to a speculative capitalist a very eligible opportunity for a safe and profitable investment, as from the extent of frontage to the common a portion of the land might be most advantageously appropriated for building. May be viewed by cards, to be obtained of Messrs. Snell and Co. 27, Albemarle street; or of Messrs. Rosworth and Jarvis, Saville-row, Regent-street, and 19, Chancery-lane, Cornhill; and printed particulars, with plans, may be had fourteen days previous to the sale, as above: also of W. E. Oliver, Esq. Solicitor, 16, New Bridge-street, Blackfriars; and on the Premises.

TO BUILDERS. - Five Freehold unfinished Residences, the corner of Lansdowne-road North, and Ladbroke-road; also Two Freehold Building Plots of Freehold Building Land, on the best part of the Kensington-park Estate, at Notting-hill.

MR. ROBINS is directed to SELL by AUCTION, at the MART, on THURSDAY, JUNE 29th, at TWELVE, in seven lots, FIVE FREEHOLD RESIDENCES, unfinished, of handsome elevation, three stories high, stuccoed fronts, being Nos. 52, 54, 56, 58, and 60, the corner of Lansdowne-road North, and the Ladbroke-road, the most beautiful part of the Kensington-park Estate, at Notting-hill. The position of the houses, and their attractive appearance, at once recommend them for completion as a profitable investment; also two corner Plots of Freehold Building Land close by, upon which three villas on each may be erected; the situation most excellent. Particulars, with plans, may be had at the Chandos Hotel, on the estate; of Messrs. Dey and Chatwood, Solicitors, 4, Lothbury; at the Auction Mart; and at Mr. Robins's Offices, Covent-garden.

MARKET-PLACE, SAFFRON WALDEN. To Builders, Antiquarians, and others. A very large quantity of valuable Building Materials and Fixtures, including some very ancient Carving and Chimney-Pieces, arising from the extensive Premises just taken down formerly of Mr Robert Paul, Ironmonger and Upholsterer, and late of Mr. Shuttleworth, will be SOLD by AUCTION, by

MR. B. T. THURGOOD, Land Agent, Saffron Walden, on or about WEDNESDAY, JUNE 27th, 1855, and following days. Further particulars in our next. Six Month's credit on approved security. For description of the ancient chimney-pieces, &c. see "Cambridge Chronicle" of the 2nd instant, and the "Chelmsford Chronicle" and "Essex Herald" of the same week.

Saffron Walden, June, 1855.

TO PAPERHANGERS, STAINERS, BUILDERS, DECORATORS, &c

MESSRS. DEW MATTHEWS, and KEYSELL will SELL by AUCTION, on the PREMISES, near the Rosemary Branch, Hoxton, by order of the assignees of Mr Norwood, on TUESDAY next, and two following days, the first portion of the STOCK and MATERIALS of this well-known manufacturer, comprising 50,000 pieces of rich papers, decorations, drawings, paintings, 5,000 sets of blocks, &c. The second portion will be sold on THURSDAY, WEDNESDAY following. Catalogues to be had of Messrs. Jacobs and Foster, 6 Crosby-square; and of the Auctioneers, 35, Camomile-street, Bishopsgate-street.

RINGWOOD, HANTS.—Freehold Estate, Fir Plantations.—To Capitalists, Railway Contractors, and Others.

MESSRS. DEW, MATTHEWS, and KEYSELL will SELL by AUCTION, at the MART, on THURSDAY, JUNE 28th, a capital FREEHOLD ESTATE, containing 130 acres of fir plantations of 20 years' growth, one mile from Ringwood and the railway. Part of the estate could readily be converted into a small farm, and other portions let for building purposes, such having extensive frontages to the high road, offering one of the most eligible investments, as the timber alone would return the purchase money immediately. Particulars to be had at the principal Inns at Ringwood, Poole, and Southampton; of Mr Hounsome, Nurseryman, Ringwood; Messrs. Hoare and Son, 5, Gray's inn-square; and of the Auctioneers, 35, Camomile-street, Bishopsgate-street.

WOOD GRANGE ESTATE, STRATFORD, ESSEX. — FREEHOLD GROUND-RENTS, and SIXTY-ONE PLOTS of BUILDING LAND

MR. W. H. DEAN begs to announce that he has been favoured with instructions to SELL by PUBLIC AUCTION, in the early part of JULY next, SIXTY-ONE PLOTS of FREEHOLD BUILDING LAND excavated from land-tax, and most advantageously situate, adjoining the Forest-gate Station of the Eastern Counties Railway, and within a short distance of the Wanstead Forest, and sundry groundrents arising from premises in the locality. Further particulars will appear in future advertisements, and may also be obtained of the Auctioneer, Stratford, Essex.

SALES BY AUCTION.

PRELIMINARY ADVERTISEMENT. - To Land Societies, Builders, and Others requiring to purchase Land near the Metropolis.

MR. W. H. DEAN has received instructions from the Executors of Mr. James Adams, deceased, to SELL by PUBLIC AUCTION, in the early part of JULY next, in Eight Lots, all that valuable FREEHOLD ESTATE, excavated from land-tax, and situate at Plaistow, Essex, about five miles from London, consisting of seventy-two acres of market gallen from London, consisting of seventy-two acres of market garden and pasture land, with capital dwelling-house and homestead, with a frontage of 1,050 feet to the High-road. The estate, with a frontage of 1,050 feet to the High-road. The estate is contiguous to the Victoria London Docks, and, from the advantage of its situation, is eminently adapted for building or immediate purposes.—Further particulars will appear in future advertisements, and may also be obtained of the Auctioneer, Stratford, Essex.

TO IRONMONGERS, BUILDERS, SMITHS, COACH-BUILDERS AND OTHERS.—By

MESSRS. FULLER and HORSEY, on the PREMISES, 78, Upper street Southwark, on WEDNESDAY, JULY 4, and following days, at ELEVEN, in lots, by direction of the Assignees of Mr James Mayer, a bankrupt, the extensive STOCK of IRONMONGERY, bar and rod iron and steel, twenty tons rod, bar, and plate iron; five tons cast, shear, steel, twenty tons rod, bar, and plate iron; five tons cast, shear, steel, twenty tons rod, bar, and plate iron; five tons cast, shear,

COMPETITIONS.

TO ARCHITECTS AND OTHERS.

THE BURIAL BOARD of the PARISH of BUCKINGHAM is desirous to receive PLANS, DESIGNS, SPECIFICATIONS, and ESTIMATES, for LAYING OUT and PLANTING the NEW BURIAL-GROUND in that parish, the freehold of which has been contracted for, and for ERECTING TWO CHAPELS, a LODGE, and RECEIVING-HOUSE thereon. The land contains 3 acres, a plan of which may be seen, and further information obtained, at the office of the Clerk to the Board. The person whose designs shall be accepted will be paid 10*l* for his design, but the Board does not pledge itself to accept any of the designs.—All plans, &c. must be delivered on or before the 9th day of JULY next, at the Clerk's office, in Buckingham.

GEO. NELSON, Clerk to the Board.

Buckingham, June 7, 1855.

COMPETITIONS.

TO ARCHITECTS.

THE COMMITTEE appointed by the Secretary of State for War, to consider the question of BARRACK ACCOMMODATION for the Army, are authorized to offer the following prizes, for PLANS of BARRACKS, which shall embody the recommendation contained in their Report, dated June 18, 1855:—

For the best plans for an Infantry Barrack, to accommodate 1,000 Men	£150
For the second best	100
For the third best	50
For the best plans for a Cavalry Barrack, to accommodate 300 Men	150
For the second best	100
For the third best	50

The candidate who obtains the highest prize of £150 for the best Infantry Barrack, will be employed to execute his plan in the building of an Infantry Barrack. The same for the Cavalry Barrack. Each plan must be accompanied by specifications and estimates, and where plans seem in other respects to possess equal merit, a preference will be given to those which provide the necessary accommodation in the most economical manner.

Plans, specifications, and estimates, must be sent to the Ordnance Office, Pall Mall, on or before the 31st JULY next, addressed "To the Chairman of the Committee on Barracks." All plans sent in, will remain the property of the War Department.

Copies of the Report of the Committee, and of the Evidence, may be had on application to the Barrack Department at the Ordnance Office

Signed MUNCK, Chairman.

June 21, 1855.

CONTRACTS.

Commanding Royal Engineer's Office, Dublin, 15th June, 1855.

NOTICE to BUILDERS.—ORDNANCE CONTRACT.—The Commanding Royal Engineer in Ireland hereby gives Notice, that he will receive PROPOSALS for the following CONTRACT, viz. for the CONSTRUCTION and ERECTION of TWO TEMPORARY CHURCHES at the Barracks on the Curragh of Kildare, in the Dublin District. Persons desirous of Tendering for the same will receive every information on application at the Commanding Royal Engineer's Office, Lower Castle-yard, Dublin; and may obtain specifications, with the terms of contract, upon making a deposit of 1*l*. for the same, which deposit will be repaid when the specifications are returned unopened. The Buildings to be completed within seventy days after the acceptance of the Tender. The letters of Tender to be sealed and transmitted under cover to "The Commanding Royal Engineer in Ireland, Lower Castle-yard, Dublin," so as to be received on or before the 28 h day of JUNE, 1855; and to be marked on the outside, "Tender for Work at the Curragh of Kildare."

ORDNANCE CONTRACT.—To BUILDERS.—Notice is hereby given, that TENDERS will be received at the ORDNANCE OFFICE, Pall-Mall, London, on or before MONDAY, the 2nd of JULY, 1855, from parties willing to Contract for STONEWORK required to be performed at the New Battery, near Fort Monckton, Gosport. Plans and specifications for the work may be seen, and forms of Tender obtained, at the Royal Engineers' Office, No. 11, James-street, Pimlico, between the hours of TEN and FOUR o'clock (Sundays excepted). The Tenders to be addressed to J. WOOD, Esq. Ordnance Office, Pall-Mall, London, and endorsed "Tenders for the performance of Stonework, at the New Battery, near Fort Monckton, Gosport."

Royal Engineer Office, Portsmouth, June 18, 1855.

NOTICE to BUILDERS.—The Commanding Royal Engineer in the London district hereby gives Notice, that sealed TENDERS, addressed to the Secretary to the Board of Ordnance, will be received at the Office of Ordnance, Pall-mall, on or before the 2nd of JULY, 1855, for SUPPLYING, LAYING DOWN, and FIXING the necessary GAS-PIPES and FITTINGS to the several Buildings at Wellington, St. George's, Regent's-park, and St. John's Wood Barracks. The specification and plans for the above service may be seen, and forms of Tender obtained, at the Royal Engineers' Office, No. 11, James-street, Pimlico, between the hours of TEN and THREE o'clock, from the 21st to the 30th of JUNE, 1855. The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineers' Office, London District, June 19, 1855.

TO CONTRACTORS, BUILDERS, &c.

THE COMMITTEE of the STEPNEY GRAMMAR-SCHOOL, Tredegar-square, Mile-end, invite TENDERS for REPAIRS to the PREMISES, to be sent in to us before the 27th instant. Specifications may be seen at the School. The Committee do not bind themselves to accept the lowest or any Tender.

FARNHAM and HARTLEY WINTNEY DISTRICT SCHOOL.—The Building Committee of this School are desirous of receiving TENDERS for the BUILDING of a new SCHOOL, to be erected in the parish of Crondall, Hants, about two miles from Farnham, Surrey. Tenders must be sent to my Office, in Farnham, by the 14th day of JULY next. The plans and specifications can be seen on the 27th JUNE instant, at the present School-house at Hartley-row, three miles from Farnham; and at the BOARD of WORKS Offices, 28 & 29, Bridgman-street, London.

Farnham, June 15, 1855. WM. HOLLEST, Clerk.

Royal Engineer Office, Portsmouth, June 13, 1855.

TO BUILDERS.—Notice is hereby given, that TENDERS will be received at the Ordnance Office, Pall-mall, London, on WEDNESDAY, the 4th day of JULY next, from such persons as may be willing to undertake the ERECTION of BARRACKS, with MAGAZINES, &c. at Hurst Castle, near Lymington, Hants. The plans, specification, and conditions of contract, may be seen, and every information obtained, on application at this Office, between the hours of TEN and FOUR each day (Sundays excepted). Tenders to be endorsed "Tender for the Erection of a Battery, with Magazines, &c. at Hurst Castle, near Lymington, Hants," and to be inclosed to J. WOOD, Esq. Secretary, Office of Ordnance, Pall-mall, London.

CONTRACTS.

SAINT COLUMB MAJOR BURIAL BOARD.—To BUILDERS.—The Burial Board of St. Columb Major, Cornwall, are prepared to receive TENDERS from Builders for the ERECTION of the BOUNDARY WALLS, IRON RAILING, and ENTRANCE-GATES, a LODGE, and TWO CHAPELS, on the site selected for their cemetery. Plans, sections, specifications, and form of Tender, may be inspected until the 29th day of JUNE instant, at the Offices of the Clerk to the Board, in St. Columb; and further particulars may be known at the Offices of Mr. WHITEHEAD, Surveyor to the Board, 4, Dix Field, Exeter. The Tenders must be delivered at the Offices of the Clerk to the Board, before noon on the 30th day of JUNE instant. The Board do not bind themselves to accept the lowest or any Tender. Security will be required for the due performance of the contract.—By order of the Board,

JAMES WHITEFIELD, Clerk.

St. Columb, June 13th, 1855.

TO BUILDERS.

PERSONS desirous of TENDERING for the ERECTION of FARM BUILDINGS at Kirtling and Ashley, Cambridgeshire, for the Trustees of the Hon. W. H. J. North, may inspect the plans and specifications of the works, at the Office of Mr. J. F. CLARK, the architect, Newmarket. Tenders to be delivered and opened in the presence of the parties, on the 10th day of JULY next, and the lowest or any Tender will not necessarily be accepted.

TO WROUGHT IRON TUBE MANUFACTURERS, BRASS FOUNDERS, PLUMBERS, AND OTHERS.

CLITHEROE WATER-WORKS.—The Directors hereby give notice, that they are prepared to receive TENDERS from parties who may be willing to undertake either of the following CONTRACTS

CONTRACT No. 5.—For the supply of PLAIN and GALVANIZED IRON and LEAD PIPING, HIGH-PRESSURE COCKS, FERRULES and other FITTINGS, for HOUSE-SERVICE WATER SUPPLY.

CONTRACT No. 6.—For EXCAVATING the GROUND, TAPPING MAINS, LAYING, JOINTING, and FIXING PIPES, CUCKS, and other FITTINGS for complete HOUSE-SERVICE.

Specifications may be inspected, and forms of Tender obtained at the Offices of the Engineer, Mr. McLANDSBOROUGH, C.E. 24, Queensgate, Bradford; from whom any further information may be obtained.—Sealed Tenders, properly endorsed, must be sent in to us on or before the 14th day of JULY. No tender will be entertained unless duly made upon the printed form.

By order, TRAPPES and EASTHAM, Solicitors.

Clitheroe, June 14, 1855.

WORTHING LOCAL BOARD of HEALTH.—WATER-WORKS.—To EXCAVATORS, CAST IRON PIPE LAYERS, and OTHERS. The Local Board hereby give notice, that they are prepared to receive TENDERS, from parties willing to undertake the following contracts:—

CONTRACT No. 14.—For EXCAVATING the GROUND, and for LAYING and JOINTING CAST-IRON WATER-PIPES FIXING SLUICE VALVES, HYDRANTS, &c.

Specifications, schedules, and forms of Tender (for shillings the set), may be obtained, together with any further information required, on application at the office of the Local Board, Worthing; or at the Offices of ROBERT RAWLINSON, C.E. No. 26, Parliament-street, Westminster. Sealed Tenders to be delivered at the office of the Local Board, Worthing, before TWELVE o'clock, on TUESDAY, the 10th day of JULY, endorsed "Tender for Contract, No. 14."

(Signed) WM. HUGH DENNETT,

Worthing, June 21, 1855. Clerk to the Local Board.

METROPOLITAN COMMISSION of SEWERS.—To BUILDERS, CONTRACTORS, and OTHERS.—The Metropolitan Commissioners of Sewers hereby give Notice, that they will be ready at the Office of the Board, Greek-street, Soho-square, on TUESDAY, the 3rd day of JULY next, at ONE o'clock p.m. precisely, to receive sealed TENDERS from parties who may be willing to CONTRACT for the LAYING DOWN, CONSTRUCTING, and COMPLETELY FINISHING certain intended BRICK and PIPE SEWERS, 3,367 feet in length, or thereabouts, with other Works in connection therewith, in Tanner's hill, Broadway, and New Cross-road, Deptford, Holmesdale, Hanover-street, and Cross-street, Lewisham, in the county of Kent, and for the maintenance of the said works in complete repair for twelve calendar months. Plans, sections, and a specification of the above works, together with the form of Tender may be inspected, and their particulars obtained, at the principal Office of the Commissioners, No. 1, Greek-street, Soho square, between the hours of NINE and FOUR o'clock, until the 2nd JULY. The Commissioners do not bind themselves to accept the lowest or any Tender; and the party whose Tender shall be accepted, will be required to provide two sureties for the due performance of the works. No Tender will be received after the hour above mentioned.

E. H. WOOLRYCH, Secretary.

No. 1, Greek-street, Soho-square,

Dated this 21st day of June, 1855.

TO BUILDERS, CONTRACTORS, and OTHERS, desirous of TENDERING for the EXECUTION of the WORKS to be done in ERECTING EIGHT SHOPS and DWELLING-HOUSES at Milford, and also of BUILDING additional STABLING, COACH-HOUSES, SHEDS, &c. to the Valence Hotel, adjoining, and for enlarging and making additions to the Commercial Hotel, in the principal street at Milford, may see plans, specifications, and obtain forms of contract, at the Office of Mr. W. H. LINDSEY, Architect, 9, Adam-street, Adelphi, and at Milford, on and after the 25th of JUNE. The estimates for the eleven houses and stables to be kept distinct from the estimate for the Commercial Hotel. The Tenders must be sent to me, and endorsed, directed to Mr. W. H. LINDSEY, Estate Office, Milford, Pembrokeshire, on or before the 8th of JULY. No Tender will be received after that date. The lowest Tender will not necessarily be accepted.

[For remainder of Contracts see next page.

CONTRACTS.

TO BUILDERS.

PERSONS willing to CONTRACT for the ERECTION of a PAIR OF SEMI-DETACHED VILLAS, on the St Margaret's Estate, at Twickenham, are desired to see the last page of Specification at the Office of the Architect (GEORGE MORGAN), Esq., 5, Chancery-lane, on and after MONDAY, JUNE 25th. Tenders to be delivered JULY 2nd. No pledge given to accept the lowest Tender.

TO BUILDERS AND CONTRACTORS.

CHESTERFIELD MARKET-HALL.—EXPENSION of TIME for TENDERS.—The Directors of the Chesterfield Market Company are desirous to receive TENDERS for the ERECTION of a MARKET-HALL and other Buildings in the Market-place, Chesterfield. Drawings and specification may be seen at the Office of the Architects, Messrs. SHIPTON and HALLEWELL, Sheffield, and any further particulars may be obtained of Mr. JOHN DAVIES, Chesterfield, to whom Tenders must be sent in to the Secretary by TEN o'clock a.m. on MONDAY, the 2nd of JULY. Bills of quantities may be obtained on payment of 1l. for each copy, from the Secretary, or from Messrs. BATSTONE and HUNT, Surveyors, 11, Parliament-street, Westminster, on and after MONDAY, the 25th JUNE. The Directors do not bind themselves to accept the lowest or any Tender.

By order,
GEORGE WALLIS, Secretary

Chesterfield, June 9, 1855.

GRIMSBY LOCAL BOARD of HEALTH.—WATERWORKS and DRAINAGE.—To CONTRACTORS, ENGINEERS, IRONFOUNDERS, and others.—The Great Grimsby Local Board of Health give notice, that they are prepared to receive TENDERS from parties willing to undertake the following CONTRACTS:—ENGINE BOILER, PUMPS, STAND and PIPE, capable of raising 90 lbs. gallons of water, 75 feet high, in twenty hours, for the SUPPLY of about 200 TONS of CAST-IRON WATER-PIPES, SLUICE VALVES, HYDRANTS, &c.; for LAYING the said PIPES, &c.; for DRAINAGE of the TOWN of GREAT GRIMSBY with BRICK TUNNEL and GLAZED EARTHENWARE PIPES. The Surveyor to the Local Board of Health, on and after MONDAY, the 18th JUNE inst., Sealed Tenders to be sent in to the Office of the Clerk to the Local Board of Health, on or before the 14th JULY next at TWELVE o'clock at noon, indorsed "Tender for Drainage and Waterworks." Copies of the specifications may be obtained on application to Mr. MICKLETHWAIT, on payment of 10s. Tenders will be received for any one of the contracts, but a preference will be given to the persons tendering for the whole. The Local Board of Health do not bind themselves to accept the lowest or any Tender.

By order,
GEO. BABB, Clerk.

Great Grimsby, June 12, 1855.

TO ARCHITECTS AND OTHERS.

THE BURIAL-BOARD for the Parish of WESTBURY, in the county of Wilts, is desirous of receiving DESIGNS, to comprise Plans, Elevations, Sections, and Specifications, for a PLAN for LAYING OUT a NEW BURIAL GROUND of about SIX ACRES, ENCLOSING the GROUND, BUILDING a LODGE, with ENTRANCE GATES, and BUILDING a NEW CHAPEL, one created, and the other not. The party whose plans, &c. may be approved, will be paid a premium of 25l. for the plans, designs, estimates, and specifications, the same to be delivered in, at the office of expense, without the author's name, but with a motto, on or before the 7th day of JULY next. A sealed letter, containing the name and address, should accompany each design, which will be opened after selection made, and the plans not approved will be returned. Further particulars, together with a plan of the site, may be obtained on application to

HENRY PINNIGER, Clerk to the Board.

Westbury, 13th June, 1855.

REIGATE UNION.—To BUILDERS.—Notice is hereby given, that TENDERS are required by the Board of Guardians of this Union for WORKS proposed to be done to the Workhouse at Redhill, Reigate Surrey, in the ERECTION of a WASH-HOUSE for the GIRLS, and ALTERATIONS of AGED WOMEN'S and GIRLS' WARDS, &c. The plans and specification may be seen at the Board-room of the Workhouse, on any day except Sunday, between the hours of TEN and FOUR, and any further information may be obtained of Mr MUGGERIDGE, the Architect, Dorking. The Guardians will not be bound to accept the lowest or any Tender. Tenders to be sent in, postage free on or before the 26th instant, directed to me at Reigate. By order of the Board,

G. CARTER MORRISON, Clerk.

Board-room, June 13, 1855.

DERBY and NOTTINGHAM TURNPIKE ROAD. TENDERS for WORK.—The Trustees of the Derby and Nottingham Turnpike Road are prepared to receive TENDERS for the LOWERING of CHADDESDEN HILL Farms of Turnpike Road, to be laid on and after MONDAY, the 25th instant, at the Office of Messrs. JESSOPP and SON, Wardwick, Derby, where also the plans and specifications can be seen after that date, to see, and all information be obtained. The Trustees do not bind themselves to accept the lowest or any Tender. Sealed Tenders, endorsed "Tender for Work at Chaddesden Hill," to be sent under cover, addressed to Mr FRANCIS JESSOPP, Wardwick, Derby, not later than MONDAY, the 2nd of JULY next.

N.B. No Tender will be received unless made upon the form and quantities supplied at Messrs. Jessopp's Offices.

Derby, June 16, 1855.

TO SLUICE BUILDERS AND OTHERS.

PERSONS desirous of CONTRACTING for CONSTRUCTING a new OUTFALL SLUICE, and executing other WORKS, at Holme one mile above the town of Wisbech, for the drainage of Wisbech, south side, and Elm, west side, may see the drawings and specification at my Office. The Tenders to be sealed and delivered on or before FRIDAY, the 6th of JULY next, at ELEVEN o'clock A.M. The parties putting out the work will not bind themselves to accept the lowest or any Tender

WM. ADAMS, Surveyor, &c.

Wisbech, June 22nd, 1855.

TENDERS will be received on WEDNESDAY next, at FIVE o'clock, at the offices of Mr WILLIAM E. WILLIAMS, Architect, 7, St Jerom street, for the ERECTION of FIVE fourth rate HOUSES. Plans, &c. may be seen daily between the hours of TEN and FIVE at Mr. W. does not bind himself to accept the lowest or either of the Tenders.

GLOUCESTER WATERWORKS.—EXCAVATION for WATER-MAINS, &c. The Gloucester Board of Health are desirous of receiving TENDERS for CUTTING THROUGH, for LAYING the MAIN WATER-PIPE of 12 inches in diameter, in the direction of the intended New Waterworks, for a distance of about five miles and a half, and for CARTING the WATER-PIPES and other CASTINGS from the Railway station at Gloucester, at the line of Trench and for other Works. The specification and form of Tender may be had on application to Mr. BATEMAN, C.E. Manchester; or Mr. R. H. FRYER, Solicitor, Gloucester, the Clerk to the Board. All Tenders are required to be sent in to the Clerk, under a sealed cover, marked "Waterworks Tender," and addressed to "The Gloucester Board of Health," on or before TUESDAY, the 3rd day of JULY next. The Board do not pledge themselves to accept the lowest or any Tender.

K. H. FRYER, Clerk to the Board.

Gloucester, 14th June, 1855.

TENDERS are required for the ERECTION of a THIRD-RATE SEMI-DETACHED VILLA, at Peckham. Plans and specification on view, to be seen daily between TEN and FIVE, at the offices of Mr WILLIAM E. WILLIAMS, Architect, No. 7, St. Colemanstreet. Mr W. does not pledge himself to accept the lowest or either of the Tenders.

CONTRACTS.

FAVERSHAM PAVEMENT.—To CONTRACTORS, PAVIERS, and OTHERS. The Commissioners of the Faversham Pavement are desirous of receiving TENDERS for TAKING UP the ROAD PAVING in Preston-street, and of RELAYING about 350 yards with the best of the stones taken up, and by REPAVING about 70 yards with the best Guernsey granite pitchers. Persons willing to contract for the above work are requested to send Tenders in my Office, at Faversham, where the specification may be seen, on or before MONDAY, the 2nd day of JULY next, endorsed "Tender for Paving." The person whose Tender shall be accepted will be required to enter into a contract, with one or two sureties, for the due performance of the work. The commissioners do not bind themselves to accept the lowest or any Tender

By order of the Commissioners.
JAMES TASSELL, Clerk.

Faversham, June 16, 1855.

TO ENGINEERS AND SURVEYORS.

THE SURBITON IMPROVEMENT COMMISSIONERS require a SURVEY and MAP of the district of Surbiton, in the parish of Kingston upon-Thames, and are prepared to receive TENDERS for the same. Such Survey and Map (the district about 1 mile will the representants of the 49th and 50th sections of the Towns Improvement Clauses' Act, 1847, and show some of the principal roads in the district. Further particulars may be obtained between the hours of FIVE and SEVEN daily, at the Office of the Commissioners, situate at the National Schoolroom, in Surbiton, or at my Office, 147, Leadenhall-street, in the City of London. A Plan of the district may also be seen at the office of the Commissioners in Surbiton. All Tenders to be sent in before 1st JULY next, and the Tender to state the time when the Survey and Map will be completed.

JAMES BELL, Clerk to the Commissioners.

June 18, 1855.

TO GAS ENGINEERS

THE DIRECTORS of the CARSHALTON GAS and COKE COMPANY are desirous to receive TENDERS for the contemplated ALTERATIONS in their WORKS, drawings and specifications of which can be seen on application to their Secretary, Mr. WRIGHT, West street, Carshalton, to whom Tenders are to be addressed on or before THURSDAY, 5th JULY. The directors do not bind themselves to accept the lowest or any Tender.

Carshalton, June 18, 1855.

TO BUILDERS.

SUCH persons as may be desirous of CONTRACTING for the restoration of the PARISH CHURCH of SNETTISHAM, near Lynn, Norfolk are requested to apply by letter, to Mr. J. DAWES, 1, Adam street, Adelphi, London, on or before the 28th inst. The plans and specification will be sent to each person desirous of tendering, and he will be allowed to have them in his possession for two days. Tenders to be delivered, free of expense, on or before the 14th day of JULY next, addressed to the Rev. H. H. BRIDGEWATER, Snettisham, Lynn. The committee do not bind themselves to accept the lowest or any Tender, and no person need apply unless he can figure the whole of the fittings being executed in well-seasoned English oak June 14, 1855.

SERPENTINE, from the Lizard Rocks, Cornwall.—SLAB, HOB for chimney-pieces, Columns, Vases, &c. &c. Orders taken and estimates given.—J. UNWIN, Agar Wharf, King's-road, St. Pancras.

ITALIAN and GALWAY MARBLE QUARRIES. Depôt, Whitehall Wharf, Parliament-street, London.—BUILDERS, MARBLE MASONS, & BUILDERS. Twenty-eight blocks of statuary, Sicilian, &c. now landing at Whitehall Wharf, ex Tanfield, from Leghorn. Mr FRANKLIN begs to call attention to the above, and to his extensive stock of Marble in blocks, consisting of Statuary, Vein, and Sicilian, Best Black and Green, Dove, Bardilla, Sienna, Brocatella, Rouge Royal, St. Anne's, Emperor's Red, Black and Gold, &c. &c. which he is enabled to offer at reduced rates, on advantageous terms.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors, and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their STOCK of MARBLE is received direct from the principal quarry owners in Italy and Belgium, for SALE on COMMISSION ONLY, and that they can consequently supply the Trade with the finest marbles at the lowest prices. Sawn Slab, Mortars, Vases, &c.; Yorkshire and Portland Stone for sale on commission.

The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MARBLE.—Mr. B. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall Bridge.

TO THE MARBLE TRADE.

MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account. Mr. Thompson being no longer in his agent.

Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.

N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

PIMLICO MARBLE WORKS,
BELGRAVE-WHARF,
LOWER BELGRAVE-PLACE.

SAMUEL CUNDY.

THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST STATUARY MARBLE.

PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

TO BUILDERS, MASONS, AND OTHERS.

THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Bardilla, dove, black, black and gold, Sienna, St. Ann's, statuary, serpentine, verd antique, &c. Portland, Hareluil, Park spring, and other stone, in all its stages, and every description of York paving, granite curb, &c. All goods carefully packed and forwarded to any part of England.—THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London.

By Her Majesty's — Royal Letters Patent.

SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in this most durable material. A large Stock kept of Mantel-pieces, Balustrades, Quoins, Tombs, Fonts, &c. at the new premises, Whitehall Wharf, Cannon-row, Westminster.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS,
QUARRYMEN AND STONE-MERCHANTS,
BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

HAYTOR GRANITE COMPANY.—Incorporated by Royal Charter. London Agent, C. HOAR, 4, Milbank-row, Westminster.—This Granite was used exclusively in the Nelson Monument, Trafalgar square; King William Monument, City; and extensively for the plinth and steps at the Royal Exchange, and terraces at the Crystal Palace, &c.

VALUABLE SANDSTONE for PIER and DOCK PURPOSES.—To STONE MERCHANTS and CONTRACTORS. To be SOLD by PRIVATE CONTRACT, about 8,000 CUBIC FEET of SANDSTONE of the best quality. The party to sit sited at Golden Banks, Hotsforth, near Leeds, half a mile from the North-Eastern Railway Station. The stone has been extensively used in the construction of Government dock and harbour works. The baring is not above 5 feet in depth, and as the quarry has been wrought upwards of twenty years the entire breadth and depth of the bed of stone is open for working. Blocks of from one to twenty tons may be got, and can be carted from the lowest level of the quarry. A purchaser at a distance would find it worth his while to send trade-worthy persons upon the spot, who would contract to get and deliver the stone. To learn the time allowed for removing the stone, and other particulars, apply to Mr C. L. DRESSER, Land Surveyor, Leeds; or to Mr. EDWARD BUTLER, Solicitor, Leeds.

4, Park row, 7th June, 1855.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late LUARD, BEEDHAM, and CO.) Caen Wharf, Rotherhithe, London, General Stone Merchants and Carpenters, continue to deliver from their Wharf and Depôts CAEN STONE, AUBIGNY, PORTLAND, ANCASTER, GODSTONE IN, BUILDING, BLOCK, and RUBBLE STONE; BLUE KNOWLE and HARTLEY MILL STONE, also RUBBLE BUILDING STONE, direct from the Caen and Aubigny quarries, at very moderate charges, to compete with the price of Brickwork.—For information apply direct to Caen Wharf, Rotherhithe; or to Hiberna-chambers, London-bridge, Borough.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts—Granite Wharf, East Greenwich; Leith's Waterloo-bridge. Offices: 246, High-street, Southwark, near the Townhall.

MASTER BUILDERS with Capital are offered the GRATUITOUS WORKING of an old Quarry of CAEN STONE for a limited number of years, if they will engage to build the masonry of a small Protestant Church in this town. For further particulars apply to Mr B daily, from TEN to TWELVE, at No. 18, Buckingham-street, Adelphi.

FREESTONE.—Architects and Others are reminded that they can obtain the CASTERTON FREESTONE, in Blocks of any portable size, at the Quarries, or at the Railway Stations of Stamford, Essendine, or Tallington, and which, from its price, and the facility with which it is wrought, offers immense advantage to the purchasers.—Apply to FRAS. and GEO'S. SIMPSON, of Stamford.

N.B. Specimens in plain blocks, and in elaborately carved Bosses, from Ely Cathedral, may be seen, and other particulars obtained, at the Offices of Messrs. PENDER, SIMPSON, and SONS, 29, Saville-row, Burlington-gardens, London. May, 1855.

BATH STONE DEPOT, BOX STATION.—ROBERT STRONG, STONE MERCHANT, Box, Wilts.—Box Ground Stone, Scalloll Block, Ashlar, Rangework, &c. &c. Supplied direct from the quarries; also every description of Stonework for Building purposes, both plain and ornamental, prepared ready for fixing, and forwarded to any part of the kingdom. Vases in elegant variety always on view; Urns, Fountains, Chimney-pieces, Tombs, &c. &c.

BANGOR WHARF, King's-road-bridge, Camden-town.—STRINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, laths, plaster, Roman, Portland, and Keene's Parking, and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, Welsh fire-bricks, gravel and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

YORKSHIRE STONE.

GEO. VINT and BROTHERS beg respectfully to inform Architects, Surveyors, Contractors, Builders, Masons, &c. that they can supply to any extent all kinds of YORK STONE of the very best quality direct from their Quarries, to all parts of the Metropolis or in the Kingdom, on the most reasonable terms.—GEO. VINT and BROTHERS will gladly forward Plan and Prices on application.—Address, Idle, near Leeds.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland, and Caen Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.

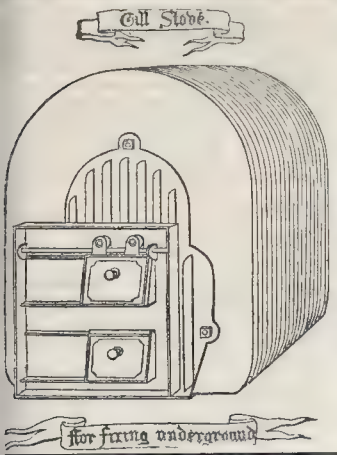
London Agents—BELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard. This Granite is selected for the New Westminster-bridge.

TO BUILDERS and Others in Town or Country.—For PRICES of BANGOR SLATES, apply to SCOLES and WOOD, Market Wharf, Regent's park.

BOW-BRIDGE SLATE WORKS, Stratford, near London.—A. A. ROBINSON begs to inform Architects, Contractors, and others, that his PRICE LISTS for SLATES and SLAB WORK for 1855 are NOW READY, and can be had on application, inclosing a postage-stamp.

N.B. A liberal discount to the trade.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now made in large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Work, Model Prisons, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities at Messrs. FREEMAN, Millbank-street, also by Messrs Sharpe, Cooley-street, and at Messrs. Braby's, Belvidere-road, where terms may be obtained.



SLATE PAVING, 4½d. per foot superficial, averaging 5 feet, in a slab planed well one side, squared, fitted to lay without additional labour, warranted stronger and more durable than York. The above may only to be seen to ensure its active sale. Bangor slate paving, 2 inches thick, planed both sides, 2½d. per foot. Roofing slates at extremely low prices.—HANNAY and WORMALD, Rutcliff-cross.

BANGOR SLATES, of all sorts and sizes; SLABS of all dimensions, and of superior quality.—For prices and particulars apply to J. EASTWOOD and SONS, Surrey Canal-bridge, Old Kent-road.—Export orders supplied promptly.

TO ARCHITECTS, BUILDERS, IRONMONGERS, &c.

ENAMELLED SLATE CHIMNEY-PIECES, of elegant designs and superior workmanship, in great variety, at prices from 21s. to 7 guineas. Slate Cisterns made to any size. J. HOWELL, Manufacturer, 5, Cook's-grounds, King's-road, Chelsea, Middlesex.

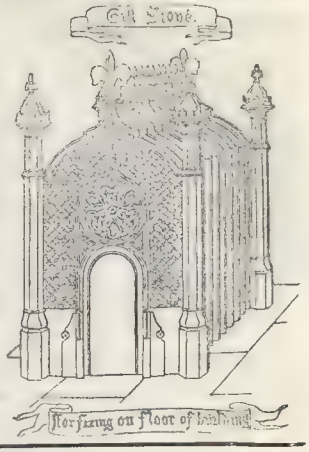
ENAMELLED SLATE.—REDUCTION in PRICE. Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in prices in the shape of a large and increased discount to the TRADE. His best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work. PIMLICO SLATE WORKS, 39 and 43, Upper Belgrave-place, Pimlico.

STUART AND SMITH'S
PATENT GILL STOVE,

FOR

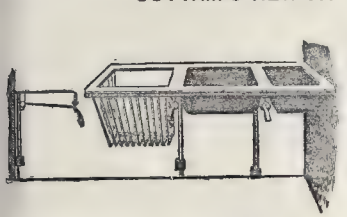
HEATING CHURCHES AND OTHER PUBLIC AND PRIVATE BUILDINGS.

The constant failures, and enormous expense, consequent upon the endless variety of experiments to warm buildings has left the public in doubt as to whether there exists any certain, economical, and safe mode of effecting that object or not.



STUART AND SMITH,

ROSCOE-PLACE, SHEFFIELD,



confidently assert, that the Air-Warmer they recommend, possesses the desired qualifications, and respectfully request Gentlemen interested in the question, to ascertain the fact from the actual working of the invention.

It has been fixed in the following, besides a great many other private and public buildings:—St. Stephen's, Longsight, Manchester; Grassendale Church, Aigburth, Liverpool; St. Ann's, Aigburth, Liverpool; North Wootton, near Lynn, Norfolk; St. Paul's, Alnwick, Northumberland; Bettesanger Church, Sandwich, Kent; St. Mary's, Pitsmoor, and Grimesthorpe, Sheffield; County Lunatic Asylum, Derby, &c. &c. &c.

Prospectuses, and every information, sent on application.

COTTAM'S NEW PATENT FOR STABLE REQUISITES.

COTTAM AND HALLEN,

the original projectors of the above arrangement of MANGER RACK and WATER-TROUGH, AS ONE FIXTURE, which obtained the Great Exhibition Prize Medal, and universally approved of, have added all the latest improvements to their invention (secured by patent), which includes an entirely new method of attaching the halter-ball and rein, giving to the horse greater freedom, and being noiseless in operation, and much to its comfort whilst feeding and convenience when at rest.

COTTAM'S ENAMELLED MANGERS

are constructed in the best possible manner, both as to form and utility, are cleanly in appearance, durable, and impervious to infection; manufactured PLAIN, GALVANIZED, or ENAMELLED.

Improved Stable Guttering, with Moveable Safety Covers.

Loose Box Fittings, Harness-room Appendages, and every Article in Stable Furniture Kept on Show.

Descriptive Catalogues and Estimates on application to

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET, LONDON.

IMPROVED PUMPS,

Of the best Workmanship and warranted.

The VALVES and SUCKERS of these Pumps are constructed upon an entire new and SIMPLE principle; they are not likely to get out of order; should they do so, can easily be repaired, as the Pump is so contrived that the valves can readily be got at.

An Improved CAST IRON TRAP strongly recommended by the Sanitary Commissioners, and suitable for Sugar Bakers, Slaughter Houses, &c. &c. It is so formed that the Trap-plate will pass any matter the top grating will let through, and therefore is not liable to stoppages and well adapted to Stables and Stable-yards, for saving the best part of Liquid Manure.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

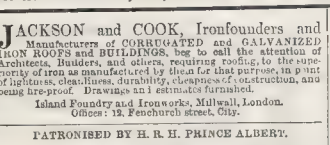
ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

TUPPER and CARR, Contractors and Manufacturers of all sorts of IRON ROOFING.
PLAIN, CORRUGATED, PAINTED, or GALVANIZED.
Estimates and Drawings furnished on application.
Experienced Workmen sent to all parts of the Country.
3, MANSION-HOUSE PLACE, and LIMEHOUSE, LONDON; BERKLEY-STREET, BIRMINGHAM.

TUPPER and CARR'S (Craufurd's) PATENT GALVANIZED IRON,
For Roofs, Flats, Cisterns, Gas Tubing, Gutters, Pipes, Fencing, &c.
To be obtained only at
TUPPER and CARR'S WAREHOUSES, REGENT'S CANAL DOCK, LIMEHOUSE, LONDON; or BERKLEY-STREET, BIRMINGHAM.
Sheets, Bars, Rods, Hoops, Nails, Rivets, Screws, Wire, and Manufactured Articles, Pails, Coal-scoops, Buckets, Pumps, &c. always in Stock.
N.B. An allowance to the trade.
Address all letters to TUPPER and CARR, 3, MANSION-HOUSE-PLACE, CITY, LONDON.



SKAIFE'S GALVANIZING WORKS,
Commercial-road, Limehouse, London.
Skaife's process is the most effectual preventive against rust, and is extensively used for all purposes where Iron not liable to rust is required.
Patent Galvanized Iron supplied in every form.
Sheets plain and corrugated.—Roofs fixed complete.
J. Skaife is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, Plumbic Zinc, and Tiles.
An Allowance to the Trade.

UNDER PATRONAGE of the ENGLISH and FRENCH GOVERNMENTS.
Portable Galvanized or Painted Corrugated Iron Dwellings, Barracks, Hospitals, Stables, Warehouses, Theatres, Billiard and Concert Rooms, &c.
IRON ROOFS.
Patent Corrugated, Galvanized, and Painted, Wrought-iron, principal, Glass and Slated Roofs, to any span.
Wrought and Cast-Iron Bridges, Girders, Fire-proof Floorings, Shutters, Doors, &c.
Engineers' and Builders' Castings of all kinds manufactured by JOHN WALKER,
Builder, Contractor, and Ironfounder, Mill-wall, Poplar.
Offices—Arthur-street West, London-bridge, where experienced draughtsmen are kept to furnish designs and estimates, which may be obtained on application.
N.B. Galvanized and painted Sheet-Iron, both plain and corrugated, supplied at the lowest possible prices, and a considerable allowance made to the trade.

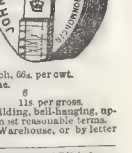
SAMUEL HEMMING'S PATENT much approved PORTABLE BUILDING and ROOFING MANUFACTORY, REMOVED from BRISTOL to BOW, near London, close to the Bow Railway Station.—A large variety of build ngs always on view, churches, chapels, shooting boxes, lodges, bazaars, ornamental villas, dwelling-houses, farm buildings, and fire-proof stores. Also, railway stations, trucks, and carriages made to any plan on the shortest notice.

JACKSON and COOK, Ironfounders and Manufacturers of CORRUGATED and GALVANIZED IRON ROOFS and BUILDINGS, beg to call the attention of Architects, Builders, and others, requiring roofing, to the superiority of iron as manufactured by them for that purpose, in point of lightness, cleanliness, durability, cheapness of construction, and being fire-proof. Drawings and estimates furnished.
Island Foundry and Ironworks, Millwall, London.
Offices: 12, Fenchurch street, City.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plans or estimates.
Castings Warehouse removed from 81 to 68, Upper Thames-street.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace-grates, soot-doors for the same, hot-water pipes, elbows, tees, syphons, throttle-valves, stop-cocks, flange and socket elbows, &c.; also, trough pipes. Drawings and prices of the above, on application to J. JONES, Iron-bridge-wharf No. 6, Bankside, London, near the Southwark-iron-bridge.



ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the store and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post. DEANE, DRAY, and CO. opening to the Monument, London-bridge. Established A.D. 1700.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation. To be seen in action at DEFRIES'S Office, 145, Regent-street, London.

HEATING BY HOT WATER.
JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating buildings measuring 1,000 feet in length, at the small expense per day in fuel and labour of 8s. 8d. This achievement in heating by hot water is unprecedented.

DR. ARNOTT'S SMOKE-CONSUMING FIRE-GRATE is manufactured by F. EDWARDS, SON, and CO. 42, Poland-street, Oxford-street, where one may be seen in daily use. The advantages of this grate consist in the smoke being perfectly consumed, no chimney sweeping being required, and a saving of from 40 to 50 per cent being effected in the cost of fuel.—Prospectuses, with testimonials, sent on application.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.
JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trade, to the inspection of his immense stock of ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.

Elliptic Stoves, double backs, 9d. per inch, and upwards.
Register Stoves, 5½d. 6½d. 7d. 8d. and 8½d. per inch.
Self-acting Ranges, with circular ovens and back boilers, best wrought bars and bright fittings:—
3 ft., 2l. 18s.; 3 ft. 6 in., 3l. 3s.; 4 ft., 3l. 18s.
3-feet Cottage Ranges, with ovens and back boilers, 35s. each.
3-feet self-acting ditto, ditto, 36s. each
Air Bricks, 4s. per doz.
Best Town Glue, 5os. Ditto, Scotch, 66s. per cwt.
Best Patent Sash Line.

1	2	3	4	5	6
4s. 6d.	5s.	6s.	7s. 6d.	8s. 6d.	11s. per gross.

And every material required in the building, bell-hanging, upholstery, and brass-foundry trades on the most reasonable terms.
List of Prices had on application at the Warehouse, or by letter prepaid

THE LIVERPOOL AND MANCHESTER

PATENT GALVANIZED CORRUGATED IRON WORKS,

AND IRON ROOFING MANUFACTORY.

Head Offices: 13, JAMES-STREET (late the Coalbrookdale Company's Premises), LIVERPOOL,

Where all Letters are requested to be addressed.

FRANCIS MORTON AND CO.

Beg to inform ENGINEERS, CONTRACTORS, and the PUBLIC that they have increased their manufacture of Corrugated Iron by the purchase of the machinery and all the working dies of the late firm of Messrs. PORTER, BROTHERS, and STUART, of BIRMINGHAM.

Parties accustomed to use the PARTICULAR SIZES of Corrugations heretofore manufactured by that Firm can be still supplied with the same sizes from the same dies.

FRANCIS MORTON and CO. manufacture now a greater variety of Corrugated Iron either galvanized or black, than any other house in the trade, comprising every intermediate size from 2 inches up to 10 inches each corrugation, in all lengths up to about 11 feet; also the angular or step corrugation.

STRONG PLATES CORRUGATED EXPRESSLY for FIRE-PROOF FLOORS, ROADWAYS, BRIDGES, PARAPETS; also for ALL KINDS of ROOFING, RAILWAY WAGGONS, &c.

All kinds of GALVANIZED SHEET IRON ditto, expressly prepared for Tinmen's use; General Ironmongery and Iron Goods in stock, or galvanized to order.

The Trade supplied wholesale with Galvanized Water-buckets, Wire, Poultry, and other Netting, of every size; Best and Charcoal Wire, of all gauges; Wove Wire for Ventilation, &c.; Galvanized Water-pipes, Eaves Gutters (plain and moulded), Gas Tubing, much cheaper and more durable than Lead; Water Cisterns, Wire Ropes, Window-sash Cords, Signal Cords and Pulleys; Copper Rope Lightning Conductors, with Points and Attachments, complete.

Fencing Wire and Telegraph Wire, in long lengths.

The inventors of the PATENT WIRE STRAND FENCING, which is supplied and erected complete, at per yard.

Wrought-iron FIELD GATES, CATTLE and SHEEP HURDLES, and DEER FENCING of every description.

The PATENT ASPHALTED ROOFING FELT, at 1d. per square foot. Dry hair Felt for Deadening Sound, for Boilers and Steam Pipes, made in rolls 20 yards long, at a greatly reduced cost.

Contractors for all kinds of Wrought and Cast-iron FENCING, PALISADES, ENTRANCE-GATES, and VERANDAHS.

Ships fitted with Wire Rope Rigging, Galvanized Chains, Anchors, &c.

THE TRADE SUPPLIED ON LIBERAL TERMS.

Head Offices: 13, JAMES-STREET (late Coalbrookdale Company's Premises), LIVERPOOL;
Also 18, ST. MARY'S-GATE, MANCHESTER.

N.B. All kinds of Iron and Ironwork Galvanized, and Sheet-Iron Corrugated at very moderate prices.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS

FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service-Pipes, Lamp-Posts, Lamps, and Gasfittings

WATERWORKS FOR THE SUPPLY OF TOWNS,

WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark; and numerous Churches, Chapels, &c.

Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.
DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

FLAVEL'S PRIZE KITCHENER.

The only Kitchen Range which obtained a Prize Medal and special approbation at the Great Exhibition, 1851.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

SOLE AGENTS:

BENHAM AND SONS,
19, WIGMORE-STREET, LONDON;
and at the Crystal Palace, Sydenham.

HOBBS'S PATENT AMERICAN and ENGLISH LOCKS.

Messrs. HOBBS, ASHLEY, and CO. are now manufacturing their celebrated American and English Locks, on the premises, 97, Cheapside, and 33, Lawrence-lane, London; where, by the introduction of their patent steam machinery, they are enabled to guarantee superior workmanship, combined with greater security, at a moderate price, than in any locks produced either in town or country.

EVERY LOCK being MADE and FINISHED at the MANUFACTORY, is warranted, and bears their OWN STAMP, without which none are genuine.

These Locks can be procured by order through any respectable Ironmonger in the United Kingdom; or at the Warehouse, as above Wholesale and Retail.

PATENT FIRE and BURGLAR-PROOF SAFES (MILNER'S PATENT), fitted with HOBBS'S PATENT POWDER-PROOF LOCKS, form the Strongest Safeguards against Fire and Robbery; they are made of various dimensions, a lapful for the security of Money, Plate, and important Documents, Parish Registers, &c. Lists of prices and dimensions can be had on application to HOBBS, ASHLEY, and Co.—Wholesale and Retail Warehouses, 97, Cheapside, and 33, Lawrence lane, London.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, 4s.; and the new registered Venetian Ventilator, so much admired, &c. 6s. 6d. each.

J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the Lowest prices.

14, Stanhope-street, Clare-market, London.

No. 1704, BRITISH SECTION, HARDWARE DEPARTMENT, PARIS EXHIBITION, 1855.

LARK'S PATENT SMOKE-BURNER: an improved means of perfecting Combustion, and thereby destroying Smoke.

This invention is now in operation upon Steam-engine Furnaces, of Cornish and Waggon Boilers, and upon Ovens. It is adapted to other descriptions of Furnace, such as Marine Boilers, Coppers, Coke Ovens, Bakers' Ovens, Potteries, Chemical Works, &c. Its effect is acknowledged by Government Inspectors to be amongst the most perfect of the inventions extant in subduing the Smoke Nuisance, and in many instances with a diminished consumption of fuel.

Ten furnaces, of various construction, to which it has been successfully applied, may be seen in operation at the Cement Works of Messrs. FRANCIS, BROTHERS, Nine Elms, London.

Address, THE SMOKE-BURNER COMPANY, Nine Elms, London.

TO IRONMONGERS, BUILDERS, &c.

PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's improved ventilators.—HULETT and CO. 55, High Holborn.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,

THE BEAR GARDEN LEAD WORKS, SOUTHWARK,

Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Cornice-poles, Rings and Lacquered Case Tube for Picture Rods, Desk Nails, &c. &c.

Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at

RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE.

Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Goods, and

STEWART'S PATENT CAST-IRON GAS and WATER PIPES.

Office, No. 7, Sise-lane, London.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent,—Mr BARRETT, 12, York-buildings, Adelphi.

DESTRUCTION of WAREHOUSES at MANCHESTER, by FIRE.—Messrs. Rylands and Sons' Books, Papers, and Bank-notes preserved in one of CHUBB'S SAFES, after fourteen hours' exposure to intense heat.

COPY OF MESSRS. RYLANDS AND SONS' TESTIMONIAL.

"24, High-street, Manchester, March 6th, 1854.

"Messrs. Chubb and Son,

"GENTLEMEN,—We have great pleasure in communicating to you, that the large 'Patent Fire-proof Safe' that we purchased from you 12 years ago, for our late offices in New High-street, has been the means of preserving our books, cash, notes, &c., enclosed therein, on the evening of the 1st of March, when our entire premises were destroyed by fire. The safe, after being subject to fourteen hours' intense heat, was unlocked on the morning of the 3rd of March; the locks all answered to their respective keys, and all the damage the contents received (water excepted) was that only some of the books were slightly singed at the edge.

"You are at liberty to make what use of this communication you may think proper.

"We are, Gentlemen, yours respectfully,

"RYLANDS and SONS."

CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock. Complete Illustrated Lists, with prices and sizes, will be sent on application.

CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

CAST-IRON PIPES, IRON-WORK FOR OVENS, &c.

RAIN PIPES, &c.—F. A. TIDDEMAN and CO. St. Ann's Wharf, Earl-street, City, near Blackfriars-bridge, keep a large stock of Rain Pipes, Heads, Shoes, Elbows, &c. half-round and O-G Gutters, Socket Pipes for Water or Gas, Flange Pipes, Hot Water Pipes and Connections, Sash Weights, and other castings; Iron work for Bakers' Ovens of every description, fitted complete, to be had in sets or in parts.—Prices equal to all competition. Contracts taken to any extent. Goods landed. A powerful crane.

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coalhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

REDMUND'S PATENT HINGE MANUFACTORY, WELLINGTON FOUNDRY, Charles-street, City-road, near the Canal bridge. Established thirty years.—E. GOLLOP, widow of the late J. Gollop, sole manufacturer of REDMUND'S and GOLLOP'S PATENT, rising and not rising spring, swing, double acting, gate, and other Hinges, Floor Centres, &c. &c. Orders for Hinges only, addressed to Mr. J. WALBY, sole Agent, at the Warehouse, 88, Greek-street, Soho; or at the Foundry, will be promptly attended to.—Every description of Small, Soft, and Malleable Iron Castings.

EDWARD RUSSELL, ALMA TUBE WORKS, WALSALL, Manufacturer of Wrought Iron Tubing for Gas, Steam, and Water; Stocks, Taps, and Dies, and all kinds of Gas Fittings.

CLARK and HUNT'S IRONMONGERY, STOVE, and METAL WAREHOUSE, 159, Shoreditch.

A great variety of Elliptic, Register, and other Stoves, Cottage and Best Ranges fitted, always in Stock.

Improved Self-acting Cottage Ranges, with Large Oven and Boiler.

Patent Line	4½d.	5d.	7d.	9d.	1s. per knot.

6-inch Rd. Ward Mortise, with best Furniture and Patent Spindles, 3s. 6d. each. Light Elliptic and Register Metal, 14s. per cwt.

Dr. Arnott's Ventilators, 4s. 6d. each.

An extensive stock of bar, rod, hoop, and sheet iron.

Brick Moulds kept in stock. Any size made to order.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, is manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only scription of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and URROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS NNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

THE LONDON AND MANCHESTER PLATE GLASS COMPANY

Beg to inform the TRADE, that the EXTENSION OF THEIR WORKS being now completed, they are enabled to execute orders to any extent at immediate notice. The Company also beg to timate that owing to improvements effected in the reconstruction of their Works, the COLOUR and QUALITY of their GLASS will be found to be considerably improved, and that they can guarantee e maintenance of these essential requirements. They further beg to invite attention to their reduced List of Prices, which may be obtained on application at their London Warehouse, or at the Works

For the convenience of the LONDON TRADE, a large stock of POLISHED PLATE is now kept at the COMPANY'S WAREHOUSE, BARRAUD'S WHARF, WHITEFRIARS.

The Works, Sutton, St. Helen's, January, 1855.

RON FOUNDRY,

An Illustrated Catalogue on receipt of six postage-stamps.

VALUABLE PATENT MACHINES FOR WORKING IN WOOD.

PLANING MACHINE

PRIZE MEDALS have been awarded to these celebrated machines, both by the Great Exhibition in London, and many scientific institutions. They are extensively used throughout the United Kingdom, by joiners, contractors, coach and cabinet makers, railway carriage and waggon builders, shipbuilders, agricultural implement makers, shipbuilders; and also by the British and French Governments, for planing and squaring up, moulding, tenoning, mortising, grooving, rebating, sawing, and boring. Their operations are in every respect perfect, either in hard or soft wood, and will perform all the ordinary descriptions of work required in the above trades in a very rapid and superior manner, and at a greatly reduced cost.—Sold only by WILLIAM FURNESS, Patentee, 20, Lawton-street, Liverpool from whom full particulars may be obtained.

TO ARCHITECTS AND BUILDERS.
PATENT CLIMAX DOOR-SPRINGS.—The attention of architects, builders, and ironmongers is particularly directed to the above patented improvements in door-springs, being the most perfect and durable yet invented. Their power is equal to doors of any size and weight, and they are warranted to stand the wear and tear of any bank, public building, or business establishment in the kingdom.—Drawings, with full particulars, may be had from the manufacturers, WEBB and GREENWAY, Steelhouse-lane, Birmingham.

HONOURABLE EAST-INDIA COMPANY,
HONOURABLE BOARD OF ORDNANCE,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK,

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House, in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen and Gentlemen who have extensively used it, sent free to any part of the town or country. A Dry-hair Felt, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the surest means of being supplied with the genuine article, and in lengths best suited to their roofs. They are likewise CAUTIONED AGAINST MISREPRESENTATION, as THE ONLY WORKS in Great Britain where the above roofing is made are F. McNEILL and CO.'s Manufactories, LAMB'S-BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt to be seen at the Factory, also the new Vice-Chancellor's Courts, the passages and offices leading to Westminster Hall, and other buildings at the New Houses of Parliament.—A Liberal Discount allowed to the Trade.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at 6d. shilling the foot.
R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

PAPIER MACHE AND CARTON PIERRE ENRICHMENTS MANUFACTORY,

49 & 50, RATHBONE-PLACE.

GEORGE JACKSON AND SONS

For the attention of Architects, Builders, Decorators, and others, to their large assortment of ENRICHMENTS in every style, executed in the highest class of art. Enrichments for centres of every period, elaborate or simple, Gothic, Elizabethan, Jacobean, or flat, Louis XIV in much variety, and to any degree of cost; Italian and Greek Renaissance, and many modified characters, executed for the first houses, and from designs of architects of the highest eminence; wall dressings, rich panels of every period, rich Elizabethan and Gothic Dados, in many designs. Door-caps, mouldings, and dressings.

A large assortment of Gothic Bosses to many varied intersections of all sizes, tracery and panel headings for church works, organ dressings, of most periods, and faithfully executed to the true style of each. The general decorations of Drawing and Dining Rooms, Libraries, &c. of very considerable extent, as furniture, glass frames, tables, window cornices, screens, candelabra, and the whole range of accompaniments to reception-rooms of the first class, as well as more subdued.

The facilities and repeated enlargement of means enable GEORGE JACKSON and SONS to announce the execution of works of the above descriptions in these advantageous materials at a cost considerably below any known method, while for quality, relief, and finish, they flatter themselves they stand unrivalled.

DESIGNS MADE FOR ANY WORKS.

first, second, and third quality, in cases of 200 feet, at 4d 6d, and 8d per foot. Price-lists for squares cut to order forwarded on application ROBERT METTAM and CO Wholesale British and Foreign Window Glass Warehouse, 30, Princes-street, Leicester-square, London

PATENT and BRITISH PLATE GLASS.—

JAMES HETLEY and CO beg to inform Architects Builders and the Trade generally, that their new Tariff of Prices for the above will be sent on application; they will also on receipt of particulars, furnish estimates for any description of Glass now manufactured. Patent Plate, Sheet, Crown, and Ornamental Window Glass Warehouse 35, Soho-square, London

PLATE GLASS.—The Thames Plate-Glass

Company's Works, Blackwall, manufacture Polished Plate-Glass, ¼ inch to ⅝ inch thick, 18 feet to 16 feet long by 11 feet to 11 feet wide, and any other proportionable smaller size. The Tariff of prices just issued by the Thames Plate-Glass Company, is a great reduction of former prices. Contracts for the supply of large quantities are accepted by the Thames Plate-Glass Company, on the lowest terms of the day.—Address, the Secretary, Thames Plate-Glass Company's Warehouse, Savoy Wharf, Strand.

SUPERIOR BRITISH PLATE-GLASS AT VERY LOW RATES.

THE UNION PLATE-GLASS COMPANY

having recently completed very considerable improvements and additions to their works, take the opportunity of informing their friends that they will now be able to supply orders without delay; and respectfully invite the attention of the trade generally to the low rates at which their now much-esteemed manufacture is sold.

Lists of prices may be obtained on application at

The Works, Pocket Nook, St. Helen's, Lancashire.

The Warehouse, 99, Hatton-garden, London.

" 46, Piccadilly, Manchester.

Messrs. C. and J. Malloch, 30, Turner's-court, Glasgow.

" John Dix and Co. Bath-street, Bristol.

" H. Sidthorpe and Son, Cork hill, Dublin.

ROUGH PLATE-GLASS from 1 to 4 in. thick, suitable for the windows and roofs of mills, mechanics' shops, market halls, railway stations, &c.

Beautiful and highly-finished POLISHED PLATE GLASS, for shop-fronts and all superior glazing purposes, and for silvering.

Superior silvered Plate-glass Mirrors of all sizes.

E. and W. H. JACKSON beg to call the

attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and for glazing, of unrivalled quality and finish; ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and prices furnished for ornamental windows, either for house or church decoration.—All applications for estimates and lists of prices to be made at their warehouse, 313, OXFORD-STREET

ORNAMENTED WINDOW-GLASS, in

squares and borders, with the patterns adjusted to size required, supplied at the lowest prices by the Manufacturer, W. H. JAMES, 37, High-street, Camden-town, London.

FOREIGN and English Sheet, Crown, Plate,

Patent Plate, Patent Rolled, and Cast Glass of all sorts. Sheet lead, Pipe, White-lead, Lead, Iron and Brass Pumps Water-closet Cocks and Plumbers' Brasswork, Paints, Colours, Oil, and Turpentines of the finest quality, at wholesale prices. Lists on application at THOS MILLINGTON'S Warehouse, 87, Bishopsgate-street, London. Established more than 100 years.

CRYSTAL WHITE GLASS, first, second,

and third quality, particularly adapted for pictures and the best description of glazing, being far superior in colour to patent plate. In cases of 200 and 300 feet each, at 4d, 6d and 8d per foot, sizes varying from 24 by 16 to 40 by 28. Also, Foreign Glass of various tints made expressly for CATHEDRAL and CHURCH purposes. T. FORMILOE and SON, 118, St. John street, West Smithfield, London.

WHOLESALE BRITISH and FOREIGN

WINDOW GLASS WAREHOUSE, established upwards of Sixty Years. ROBERT METTAM begs to call the attention of builders and the trade in general to his prices of British and Patent Plate, Rough Plate, Crown, Sheet, and Ornamental Window Glass of every description. Good 15-oz. Sheet Glass, in crates, from 2½d per foot; C C C Crown, 18 tables, 32s. per crate; Foreign Sheet Glass, in cases of 200 feet each, large sizes, 32s. 6d and 40s. per case, Ground ditto, 4d. per foot. Extra size sheet glass of all qualities for shop-fronts, &c.—Estimates and price-lists forwarded, post free, on application at the Warehouse, 30, Princes-street, Leicester-square, London.

London: E. LLOYD, 12, Salisbury-square, Fleet-street.

KERTCH,—the SEA of AZOFF,—the final

OPERATIONS at SEBASTOPOL, the SEAT of WAR.—Messrs. PAUL and DOMINIC COLNAGHI and CO. 13 and 14, Pall-mall East, Publishers to Her Majesty, beg to announce that they will immediately commence the issue of a second series of Sketches by Mr. WILLIAM SIMPSON, to be in every way uniform with the first series, to be completed in ten Parts, each Part with four Plates, price 12s. per Part, plain; 20s. coloured. The first Part will contain the Scenes in the Sea of Azoff, from sketches taken by Mr. Simpson, on the spot.

THE SEAT of WAR. By

WILLIAM SIMPSON.

Messrs. PAUL and DOMINIC COLNAGHI and CO. 13 and 14, Pall-mall East, beg to announce that the First Series of the above work, dedicated by permission to her Majesty, is now complete in Forty Plates, price, neatly bound in cloth, plain copies, 6l. 12s.; coloured, 10l. 12s.

"There is scarcely a subject of life or death in the Crimea that is not descanted upon by this lively and intelligent artist. You may here follow the soldier, finding something novel and characteristic at every stage of your progress."—*Times*, May 28, 1855.

ARCHITECTURAL PUBLICATION

SOCIETY.—Part I. 1854-55, consisting of ILLUSTRATIONS to the DICTIONARY of ARCHITECTURE, will be ready at the end of the month.—Members are requested to forward their subscriptions (1l. 1s.) to the Treasurer, THOMAS L. DONALDSON, Esq. Bolton-gardens, Russell-square; or to WYATT PAPWORTH, Esq. 14a. Great Marlborough-street, Honorary Secretary.

IMPROVED WINDOW BLINDS.—

SAXBY'S PATENT EXCENTRIC CLEAT, manufactured solely by THOMAS PEMBERTON and SONS, and may be had of all ironmongers. It is the only perfect method yet introduced, of sustaining a Venetian blind, on releasing the cord, and avoiding winding on hooks. For Venetian blinds its action is perfectly noiseless, as it works on centre pins, and the blind is raised and lowered by a single line without a centre cord.

WINDOW BLINDS.—TYLOR & PACE,

Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 8d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 3s.; perforated zinc blinds, 4s.; ditto, in gilt frames, 5s.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 20, Westminster-Bridge-

road, Lambeth (near Astley's Theatre), begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An illustrated price-list will be immediately forwarded, free, on application.

The Builder.

VOL. XIII.—No. 646.

ROUTINE, the ready word, flying with the wings of every morning —the phrase of every "*leader*" where official rust, or immobility need the interposition of "the fourth estate,"—what word more appropriate now for the usual capitals to our own first column? For, if not *routine*, "the shackles of precedent," or "professional prejudice," have been terms applied to architects' practice by the *dilettanti* in art;—also by a section of the promoters of those sanitary measures which, indeed, our own columns may have assisted to advance. What, then, so apt as the word ROUTINE, withal to "point the pen" for the shedding of ink about the person of a designer and chief superintendent of military manœuvres, or some commander-in-chief of works in architecture and building?

The difficulties and responsibilities in the two positions are more and more, appearing to us to have points distinguishing them from other cases,—yet with points common to each other. We shall on all grounds animadvert, not on painful occurrences out of our proper path; nor need we turn upon our own friends,—more especially as our parallel would end with what we have just stated.—Habitual misconception on the part of the public is what the architect seems to be heir to; but that is mainly because the collective wisdom of our body attempts no explanation, where the individual and his profession are generally misunderstood. Progress in art and science has found in us,—and we honestly believe in the general profession of architects,—earnest advocacy and support.

We would, however, register a plea against the ascription of all evils, that have befallen public affairs, and works in architecture, to what is liable to be conveyed to some minds by the word *routine*. Order, system, rule, subordination, and division of labours,—these only are the means by which great undertakings—campaigns or buildings—can be accomplished. To have said this, is the result of no new discovery: and the means are comprised in what *may* be, in short, *routine*. Ill-success, perhaps through incapacity, has followed in particular cases;—on one side money may have been laid out in vain; on the other there has been superadded, disastrous loss of life. But—since the time allotted for great works is short—though genius is not to be dispensed with, something less brilliant in its manifestation is necessary. That which brings about the success of those commercial undertakings—given as examples to public departments—is, to all obviously, a certain mechanical distribution of duties in settled channels, proved to be of a labour and time-saving nature. Even where the avocations are mainly dependant upon personal exertion, conclusions from experience must be acted upon—often without fresh reference to reasons. To re-open every question when the time for action arrives, is to live in inactivity and scepticism. Therefore, those are bad teachers who would give *no* importance to precedent; and in architecture, such individuals may be fairly asked to show what they individually have done.

What is meant to be conveyed by the brilliant rhetoric of writers in the newspapers, is something very different from that against which we should have to contend. It would be found that we and they are of one mind. But a careful reader is hardly more common than a good writer,—and it would be unfortunate if ideas were disseminated, tending to give any light importance to organization and system, or even "precedent."

In fact, it is the most difficult of such questions, to say exactly where routine and precedent should cede to the working of genius,—or where they should interpose to moderate or shield. If a man be not prone to invention himself, the world about him is constantly advancing. Taught to cultivate the perceptive faculties, as every good architect is; impressed by what is new, and even impelled to the seeking of it,—it is positively impossible, as it is inconsistent and illogical, to disregard the new inventions which every day brings forth, and the altered position of the art and science of architecture which continually results. So far, it is easy for us to express the complete accordance that architects have with those who have sometimes imputed to them positively a contrary opinion.—But we must say that the onerous duties of architects, and their responsible position with reference to inventions are continually lost sight of. There is scarcely any member of the profession whose name is in the "London Directory," who does not receive at least once in every week, a circular referring to some new material, or building contrivance. Each circular is accompanied by testimonials —of course from individuals known by reputation, if not personally, to the recipient;—each circular deserves, at least, to be read, considered, and located for reference. He who can do only this, and yet not let slip more immediate duties, and who can preserve the fact of the invention in his memory,—that man is of more than ordinary *calibre*. The difficulties, however, of a course, form no reason for *abstaining* from entering upon it, where it is clearly essential to success, and morally right. No duty, whatever there is, but demands effort. For, the possible is discovered only during the act of exertion.

Let it not be thought we are giving too much importance to the trouble we have just alluded to. That would, we must admit, be comparatively slight, if it ended with the reading and filing of a document. To speak the truth, testimonials are given often with such slight regard for the responsibility — we might say the sacredness—of the duty which should be attached to the act of recommendation, that they entrap unwitting architects into mistakes, and so lead to apprehension as to untried inventions, altogether. Now, it is these exceeding difficulties in the way of sufficient trial which are so often forgotten where our profession is spoken of as narrow-minded, or prejudiced. What architect does not recollect how, at one time or another in his professional life, he seized upon and specified every invention that appeared to him an improvement—somewhat priding himself, perchance, that he at least was divested of prejudice, and disposed to employ all the advantages open to an architect of the present age. Bitter in such cases too often is the disappointment. Some of the most promising contrivances we have known not to stand the test of a year's wear. The carcase and finishings of a house should be "good" for a few generations; and the subordinate contrivances and working machinery should be in order for a fair measure of the time. It is certainly difficult enough to ensure this, even with materials of which the properties are supposed to be known; and this is no doubt in itself an argument for the search after what would better answer the purpose. Individual professional experience, however, in all directions, has been unfortunate in its discoveries. One day you shall have a new cement brought before you, calculated for use without the necessity of painting, or possessed of some other long-desired advantage. An odd year or so will not pass without defects, and a visitation from the house proprietor, on the head of you, the unfortunate architect. Or you shall have yourself witnessed experiments at the manufacturer's yard—only to be nullified by adulteration at the dealer's. The latter case, however, we may pass over, as exceptional to the argument, though not to the experience. Indeed—whilst feeling and even strongly maintaining the necessity of improvement in all departments of practical architecture, and in houses especially so—we are surprised at the "run" that some materials or contrivances have had. Were we to look at circumstances restrictedly, we should ascribe to our professional friends the very opposite fault to that imputed against them. Acres of paving have been laid in basements and passages, with materials which seem to shrink and shrivel under atmospheric influence, or are unfitted for traffic that would wear away the hardest stone. One such material we know of, that, if it is not so combustible as wood, is not incombustible like stone; and it appears to us not even capable of bearing the heat from a bucket of hot water. Who again has not in his memory the failures in roof coverings, many of which have been the cause of law proceedings,—to the cost of the architect? Our pages have reported many such cases.

The conclusion, however, to which we arrived, is by no means invalidated. The necessity for keeping up with the inventive genius of the age still remains. The whole tenor of the arguments will show that, if sometimes mistakes result from causes which hardly could have been within mortal prescience, they result as frequently from causes which are within ordinary means of prevention. Further, means now available for testing new inventions, which might save individual labour, and consequent fear of responsibility through unknown risk, are left undeveloped. Commissions of inquiry into promising improvements, such as we lately instanced in the French Institute, are almost unknown in England; though such as have been issued, like that on iron as applied to railway bridges, have produced important results. And we believe that many mistakes would be avoided, were there in the case of our particular branch of study, more of relationship between the designer and the workman—similar to what has lately been advocated in reference to art, and on general grounds—from which so much mutual advantage would undoubtedly accrue. Obstructiveness to improvement indeed is found amongst too large a proportion of the class of building operatives; and others, clever in the department to which they are for the time restricted, forget that they are but contributing a part to the great machinery of a building, which must be devised on comprehensive *data*, and with reference to general principles of science. But the very fact of this general range with us, must necessarily prevent the particular aptitude for every thing, in every trade,—from bricklaying to gas-fitting and bell-hanging. The architect may, or at least should, possess knowledge of the mechanical or other scientific principles upon which unwittingly the workman acts; the latter unquestionably has the *means* of finding out particulars, and of registering—if he be observant—a sum of experience such as the architect can have no like facilities for obtaining.

Here, then, are means—of which advantage has not been taken, through which promising improvements might be tried with some approximate test to that of actual use; and thus might the architect, with less risk and more reason, give his efforts to the improvement of practical construction. There are, however, other means, which are perhaps little known to our readers, and which, if they are calculated to give additional *impetus* to invention, and therefore to increase the number of objects requiring attention, supply also ready information about particular inventions, together with opportunities for comparing them with other inventions directed to similar objects,—which comparison affords the best chance of coming to a right decision.

At the *Great Seal Patent Office*—established in the late Masters-in-Chancery Office—facilities are now afforded for collecting information about any patented invention from the reign of James I. to the present time. On the coming into operation of the new Act, on October 1, 1852, the whole of the important business connected with patents was brought from separate offices: the building now occupied is capable of extension; and the whole measure forms an agreeable variation on "the usual routine" in Government matters, whilst attended with no small advantage to the public. A great number of specifications, under the old law, indeed still remain at the Enrolment Office, Petty Bag Office, and the Rolls Chapel; but the necessity for inspecting these may, as we shall show, now in many cases be avoided. But, as regards the patents for inventions under the new law, copies of the specification of every one of these are printed,—with the drawings lithographed,—though not coloured,—and can be referred to by any one, without charge, within three weeks of the date of the first deposit; and copies can be purchased at the cost of printing and paper,—the average price being about eightpence. As these, however, form only a portion of what constitute the advantages of the place, we shall endeavour to set forth what those are which appear to us deserving of the attention of our readers. The principal of them is the *nucleus* of a library. To the reading-room all persons are admitted between the hours of ten and four—on writing their names, and some general indication of the object of search. The public collection of books is just now limited to a few donations; but we believe it is intended soon to include every important work in science, likely to assist inventors. Meanwhile, Mr. Woodcroft, the "superintendent of indexes, specifications, &c." (to whom we may perhaps attribute most of the improved arrangements which pervade the department) has placed on the shelves his own private library of reference—including sets of the principal patent journals, in which copies of many specifications may be found,—so saving the trouble of going to the Enrolment or other office. A number of specifications under the old law are being printed by the Commissioners, besides the series regularly going on. The whole of this mass of material is made immediately available to any one knowing the date of a patent, or the patentee's name, or the subject of it; and the inquirer can also find, if under the old law, where the specification is deposited, in which of the works of reference it may be found printed, and the different cases of law that have arisen about it. Thus, there are four kinds of catalogues and indexes,—one of the number, the Reference Index, having an appendix, which gives actual copies of the early patents, or those before it was customary to have specifications enrolled. A Journal of Proceedings, published twice a week, gives notices of applications for patents, and of all steps taken,—also of patents which have become void, or forfeited,—together with other useful information, of which the principal portion relates to patents of foreign countries.* The chronological index† has the names and dates in the order of time, and opposite thereto, the title of the patent, with its progressive number prefixed. At the commencement is a table of the years of sovereigns' reigns. The chronological index is of course continued for the patents under the present law.‡ The alphabetical index§ furnishes the names of patentees, the progressive number, date, and subject-matter of the patent in separate columns. There is a separate catalogue of the same kind for for 1852-3, and one for 1854. In the classified catalogue,‖ the subjects of patents are arranged under general classes, and further subdivided: the subject of the patent is given in the first column, taken from the title as recorded; then comes the number of the patent, the date, and in the last column the name of the patentee. A general synopsis of headings at the commencement, allows any subject to be found readily. The whole of this catalogue occupies two thick volumes, in imperial 8vo. small type. A glance through the pages showed a large number of headings for matters in which we were interested. At the first few leaves, we came to "Building Materials," — one subdivision, that of "Bricks, Tiles, and Chimney-pots," being over six pages of titles; another—"Cements, Compositions, Burning Lime," &c.—more than four pages; and so on. "Building and relative Processes," included "Laying Foundations, erecting Structures, &c." "Scaffolding and Ladders," "Walls," "Decorating and Covering Buildings," "Chimneys, Flues, and Guards," "Roofs, Roofing, Slating, Beams, and Girders" (the last, three and a half pages), "Ceilings and Cornices," "Flooring, Stairs, and Rails," and others.—The Reference Index* has the progressive number of the patent in a first column, and opposite to it such entries as "Rolls' Chapel" (designating where the patent itself, if under the old law, is deposited), "Newton's London Journal" (with number of volume, &c. to be referred to), "Mechanics' Magazine," &c. and so forth,—there being often five or six such entries. The whole number of journals, and "Reports" referred to, makes up a long list. The book contains other useful information. The litigated cases are in the Appendix. The patents under the old law amount to 14,359, from which some idea of the labour incurred by Mr. Woodcroft may be gathered. The last entry of a patent in the Chronological Index, happens to be in his own name.

Thus, any one who chooses to take the trouble, *may* now inform himself as to the nature of inventions directed to any of the objects with which the architect is concerned. Formerly, this would have been scarcely possible, even with the payment of heavy fees. We can, perhaps, hardly expect any one who is in search of the best kind of brick or chimney-pot, to read through patents, of which the titles fill six pages; but it is something to have got the first step towards a knowledge of what we possess. Hitherto hidden, so much fruit of mental industry applicable to the advancement of architecture has been scattered, and, for the time, lost; invention has succeeded invention for the same object,—often, of course, involving failure after failure,—all arising from the simple want which is now supplied, for the most part within a small room in Southampton-buildings, Chancery-lane. Further measures in development of the new mine, will, we are sure, be supplied. Already, the Commissioners of Patents have taken some steps which show what might be done for us. The whole of the specifications for reaping machines, from the first in 1799, have been published with their drawings, and, together with an appendix by Mr. Woodcroft, describing the machines in use from the earliest period to the present time. The same has been done with the specifications for fire-arms, cannon, shot, accoutrements, and general mechanical contrivances for warlike in uses. The earliest of these specifications dates 1718. The diagrams show amongst other things, that the "revolver" is not a recent invention. The Board of Admiralty have required the publication of the specifications of inventions for propelling ships; and by direction of the Home Secretary, there are at present in progress, the specifications, with their drawings, of patents for consumption of smoke in furnaces; also, for the making of drainage-tiles applicable to sewerage. Subjects more directly applicable to practical construction, may, doubtless, follow; and there is nothing at the Commissioners' office, to prevent the Architectural Publication Society itself from setting to work. The whole of the publications are to be had at the cost of paper and printing. Perhaps the greatest use of the abundant material which there is in the mere catalogues, is their enabling you to trace the progress of inventions for the same object,—such as there are despite the Patent Laws, and indeed without any culpable piracy. You may almost analyse the thoughts of inventors, and may, that way, to some extent, judge about the merits of their ideas.

Thus, then, we think there are means by which the architect may, without danger, give scope to the resources of science, and yet neither despise, nor be under the tyranny of *routine* or precedent. Since we wrote our opening remarks, a broad sheet of the leading journal has been laid before us, with an article inspired with the same views that, with a less able pen, we had striven to expound. It is indeed the fact, that in architectural practice, as in affairs of government and commerce, there may be two sorts of precedent-rule; to wit, that which supplies the useful groove through which the more or less mechanical, but inevitable drudgery of life must travel, to make much way; the other, that which weights down the intellect—inconsistent alike with progressive science, as with true art. It is the fact, however hard it is for practice, that precedent should be the anchor and stay of genius, yet ever ready to be thrown off. Reynolds spoke of "that false, and vulgar opinion, that rules are the fetters of genius;" adding, that "they are fetters only to men of no genius." We and our contemporarics have been but saying the same thing,—we as to architecture, others as to warlike operations and administrative reform.

Who does not recollect the hardship of the old patent law to inventors, and the restrictions upon all progress in consequence? Fees such as no ordinary mechanic could ever hope to raise, paid to a multitude of functionaries, from the Lord High Chancellor, to Mr. Deputy Chaff-wax; troublesome "forms" to be gone through, at nine different stages, in seven offices at opposite ends of the town. All this, happily, has been remedied. The inventor obtains a patent, applying to the whole United Kingdom, for 25*l.* and this gives him all the advantages for three years. Protection for four years longer may be obtained by the payment of 50*l.* more, and for the remainder of the term by a further payment of 100*l.* Thus, if an invention does not realize much for the patentee, it can be given up without having occasioned expenditure which has brought no result.

A very large increase in the number of patents applied for has been the consequence of the change. In the period from 1st October, 1852, to 31st December, 1853, there were of applications from England, 3,574; from Wales, 43; from Scotland, 251; from Ireland, 76; from France, 263; the United States, 57; besides many from other places. London alone made 1,833 applications; Manchester and Salford, 246; Birmingham, 213; Glasgow, 109; and Liverpool, 72. A number of these, perhaps, are abortive schemes; such as some may consider would not have seen the light under the old system. As regards the *proportion* between such inventions and those of a serviceable nature, we suspect, however, that circumstances are much the same as before.

Whatever the exertion which the general mass of inventions relating to architecture and building—whether patented, registered under the separate Act for the registration of designs, or otherwise—may require from the architect in keeping up acquaintance with them, no architect will desire that progress should be stayed because of the mere trouble which it gives him, in the way referred to, or as to the use of untried inventions; and none will feel that the help which is now afforded is otherwise than important to him, and advantageous to his art.

NEW CHURCH AT WESTMINSTER.—On the 13th instant the Bishop of London consecrated the recently-erected church of St. Andrew, St. Margaret's, Westminster, situated in Ashley-place, south of Victoria-street, Vauxhall-bridge-road, and which has been built at a cost of above 8,000*l.* by voluntary contributions.

THE OXFORD UNIVERSITY MUSEUM: GROUND PLAN.—MESSRS. DEANE AND WOODWARD, ARCHITECTS.

THE UNIVERSITY MUSEUM, OXFORD.

THE first stone of the new University Museum was laid by the Earl of Derby on Wednesday, the 20th instant, in the open ground known as the Parks. The accompanying plan of the Ground Story shows the general arrangement of the building, having the Lecture-rooms and apartments round three sides of the Museum-court, which is 112 feet square. The whole frontage of the museum is 320 feet 7 in. and the depth 178 feet 4 inches. On the right hand side of the Entrance Hall, in the upper floor (above the portion appropriated to Chemistry), is the general library, 81 feet by 25 feet, and on the left-hand side is an apartment for Mr. Hope's Entomological Museum, 82 feet 8 inches by 25 feet. The general lecture-room, 58 feet 6 inches by 33 feet, is on this floor over the portion appropriated to Zoology. We shall give a view of the building in an early number.

It is proposed to adorn the interior of the building with statues of eminent men, by means of individual donations; and Lord Derby stated, that a certain number of these had been already subscribed for by the Queen, the Batchelors of Arts, and undergraduates.

Messrs. Deane and Woodward are the architects.

At the annual meeting of the Oxford Architectural Society, on the 13th instant, Dr. Acland said, with reference to the new Museum, that Oxford was about to perform an experiment: it was about to try how Gothic art could deal with those railway materials,—iron and glass; and he was convinced, when the interior court of this Museum was seen, with its roof of glass supported by shafts of iron, while the pillars and columns around were composed of variously coloured marbles, illustrating different geological strata and ages of the world, and the capitals represented the several descriptions of Floras, that it would be felt that a problem had been solved of the greatest importance to architecture.

THE CITY OF LIEGE, AND WORKS RELATING TO THE PUBLIC UTILITY OF LONDON.

IN the year 1849, the attention of the civil authorities of Liége was directed to the rendering more healthy the crowded localities of the city, and to the improvement of the system of constructing the sewers; also to the paving of the streets, and the supply of water, as well for the service of public health as for use in private dwellings, and for the purpose of drinking. The desire of introducing into these different parts of the administrative economy the improvements already realized in the neighbouring countries, especially in England, determined the college of the burgomaster and magistrates to propose to the communal council to send the architect of the city to London, in order to study the system of public works of that great city, and to report on the various subjects all the information necessary to instruct the administration of the city of Liége with regard to works it was itself about to execute.

The Committee of Public Works decided that investigations should be made chiefly upon the following points: –

1. The distribution of water.
2. The different systems of sewers.
3. The system of paving; and
4. The arrangement of lodgings for workmen.

Accordingly Mons. Rémont departed for England, where he was engaged a considerable time in fulfilling, as completely as possible, the object of his mission; and on his return he arranged the numerous materials of information he had collected, and submitted to the administration the result of his observations and of his studies.

At a meeting of the Institute of Architects on May 21st, Mr. W. L. Donaldson laid before the Institute a summary of M. Rémont's statement.

The first chapter of his report relates to the supply of water, and after pointing out that the chief cities and towns in England and Scotland had organized companies for the supply of water, he traces the history of the supply in London from Peter Morrys, who founded the works at London Bridge, under the name of the Southwark Company, in 1581, and which was done away with in 1823, and united to the New River Company, whose works had been commenced by Sir Hugh Middleton in 1613, up to the present day. He gives a detailed account of the various existing water companies, and their amount of supply, with very minute statistical tables of the quantity and species of services in all cases. He also gives an explanation of the quality of the different waters, remarking that, according to the laws of health, water for drinking to be good should be clear, colourless, without taste, without smell, fresh in summer, temperate in winter, should contain atmospheric air and a small quantity of bi-carbonate of lime; in short, should not hold in solution either organic matter or sulphates of lime, nor any calcareous salt, the carbonates excepted. And after some further consideration of the subject he states, that one would understand from thence that the waters of the Thames, which is considered, and with reason, the greatest sewer of London, could not, notwithstanding the purifications to which they were submitted, satisfy the conditions required for being fit for domestic purposes. He sums up the chapter with the following observations:—

"One sees, moreover, that the English begin to understand that a good supply of water in a city cannot be the object of a speculative affair; that a supply without limit ought to be made at the simple price of the cost of the distribution; and that it can only be efficiently organised, regulated, and carried out by the magistrates who are entrusted with the very important interests of order and of the public health."

In his chapter on the sewers, he gives a short account of the Commission of Sewers established in the reign of Henry VIII. and of the system of management of the present day; and he enters very minutely into the construction of sewers, their forms, their inclination, the system of flushing, trapping, and the cost of construction. He also describes the tubular or pipe-drains for connecting houses with the sewers.

The fourth chapter is upon the carriage-ways and foot-pavements, and in this he enters into a full examination of the granite paving, the wood paving, and the Macadamizing, which he says is called in Belgium "Empierrement." He minutely describes the two modes of laying the granite pavings, the one in lines perpendicular to the axis of the street, the other in lines oblique to this axis, and in an angle of 45 degrees; and he enters into a full discussion of the subject, including in it the cost of the various modes of paving. He makes particular mention of the new mode of laying the paving at the London and North-Western terminus, which he calls "pavage Taylor." With respect to the foot-pavement, he speaks highly of the pavements of London, and he considers that the mode of paving is one of the most important and most useful works that this great city has accomplished. He remarks that in some narrow streets, where two carriages could not pass each other without sacrificing the convenience of the foot pavements, the carriage-way is lessened so as to allow of only one carriage to proceed, and a wide space, either at the middle or at the end, is left to admit one carriage to pass the other.

In chapter five he proceeds to describe the mode of cleansing the streets, and he traces the different modes of effecting this from the earliest times to the system of the present day. He describes the water-carts, and the patent machines for cleansing which used to operate in Regent-street, and which were first used at Manchester, Birmingham, Leeds, and other large provincial towns, before they were so in London.

The sixth chapter is devoted to the important subject of the dwellings of the working classes, and he traces the history of their establishment. He urges, that a house arranged according to the requirements of health and comfort, contributes essentially to the well-being of the family; inspires it with ideas of regularity, of peace, and economy; causes to arise insensibly in it respect for order and the laws, and altogether causing in it the knowledge of the necessity of fulfilling the duties that the social state imposes upon all good citizens.

He describes the formation of the Society for Improving the Condition of the Labouring Classes some years since under the patronage of Queen Victoria and the Prince Albert. He traces the progress of the society in not confining its operations to the cities, but extending itself to the country and erecting model cottages, of which several designs are given. In his observations he shows how much is due to Mr. Roberts, the architect, for his attention to the subject, and he refers also to Mr. George Beck, the architect of the St. Pancras dwellings for families.

Chapter seven is on the establishment of baths and washhouses. He traces, from the first establishment of eight baths and twenty washhouses at Liverpool, the progress of this system to the great establishments in London in the present day. The details upon this very interesting subject are very full and equally minute as on the other matters of inquiry, and are illustrated by many tables and drawings.

He calls particular attention to the extensive employment of slate in the baths and washing places, as a substance not susceptible of change by the influence of the hot and damp atmosphere, and not liable to be impregnated with deleterious and offensive substances

The eighth chapter is on the expedients in cases of fire.

He mentions the regulations in parishes, by Act of Parliament, to have two pumps always in good order, and in consequence of the insufficiency of the parochial arrangements, the subsequent establishment of the Fire Engine Brigade, which was founded and is supported by the different Fire Insurance Companies in the metropolis. He describes also the Society for the Protection of Life in Cases of Fire. The details he gives of the Fire Engine Establishment and its system of regulation are very full, and interesting to those who may not be acquainted with its operations; and the engine used in London obtains his warmest approbation. The fire-escapes also engage largely his attention.

At this part of the work he enters into a short account of the London Police, the whole system of which, and the conduct of the force, he warmly applauds.

The ninth and closing chapter is upon various subjects. First, the improvement of the sanitary condition of dwellings, of which the drainage forms a close inquiry and of very minute and lengthened details. The inscription of the names of streets does not escape this architect's attention, and he particularly notices the enamelled porcelain lettering fixed into a metal frame.

The extensive use of zinc in the present day attracts his attention, and he points out the difficulties to be guarded against in the use of this metal on account of its expansion and contraction under different temperatures.

How far the authorities of Liège have benefited their city by the information so largely given is not stated, but every traveller will admit that Liége is far from being a model town in any one of the points which are so fully reported upon and practically illustrated by M. Rémont.

ON CHRISTIAN ART.

ON Thursday in last week, Mr. George Scharf, jun. concluded his series of eight lectures on Christian Art at the Royal Institution, Albemarle-street. They were numerously attended, and, what is very unusual in a course of lectures, the audience did not diminish towards the conclusion. Each lecture was illustrated by a series of large diagrams of views and copies of paintings and sculpture, many of them coloured and elaborately finished. The following heads may serve to record the principal subjects treated of in the course:—

Lecture I. treated of the catacombs of Rome and churches of Ravenna. Mr. Scharf explained, in commencement, that his object was to exhibit a general view of the progress and changes in art connected with Christianity, from the earliest period to the times of Raffaelle and Michel-angelo. The increasing interest that was taken in the study of ancient paintings, not only for their own sake, but as illustrative of history, of science, and previous conditions of life, was especially manifest in several collections recently

formed by private individuals, and even in the National Gallery, where certain antiquated gold-grounded pictures had been introduced. Under these circumstances, he felt that some explanation of the subjects usually treated, the significance of the symbols and leading peculiarities of the more important painters and sculptors, might not be unacceptable.

He recognized the influence of the efforts of former writers and collectors of art, especially D'Agincourt, Lanzi, and Ottley, and invited attention to the important and still existing galleries of Lord Ward,* Mr. Rogers, Mr. Maitland, and Mr. Davenport Bromley. These collections are especially valuable, as containing genuine specimens of the best Italian masters, from the time of Giotto to Raffaelle and Michelangelo.

For historical information, his hearers were referred to the foundation of all art-biography, Vasari's "Lives of the Painters," and memoirs by Ghiberti, the sculptor.

In commencement of his subject, Mr. Scharf exhibited views of the interior of some of the Roman catacombs, especially the so-called Baptistery of St. Pontianus, and a chamber in the catacombs of St. Calixtus, where the wall-paintings might be descried in faded colours, but retaining all the grandeur and severity of the best times of ancient Pagan art. Many of the decorations exhibit a striking resemblance to the Etruscan excavated chambers, and the predominating colours, purple, green, and black, produced a remarkably solemn effect.

The love-feasts, the expressive attitude of prayer, and historical scenes from the Old Testament, were not confined to painting: they extended to sculpture, for the most part bas-relief, and to various glass vessels, many of which were adorned with beautiful figures and patterns, in flat gold, upon a surface of transparent glass. These are especially well figured in M. Perret's new work upon the catacombs, but the lecturer took the opportunity of mentioning that the mural paintings were a little too much *beautified* in M. Perret's representations. All these works were to be attributed to the early ages of Christianity. There are evidences of the changes that took place in their relation with those who held dominion in the ancient city. At times their symbols were more mysterious, and occasionally their types were more clearly set, so as to explain one another; but it was not till a comparatively late period that the figure of our Saviour was directly represented. During the infancy of the Christian religion any intruders into these subterranean sanctuaries would detect nothing at all unusual to what they were accustomed to see in other chambers for sepulture, and for celebration of rites connected with the memory of the departed. Even the form of the cross was not conspicuous! If it occurred it was not, in early times, to be seen alone. It was combined with the letter P, but more usually with the X, or St. Andrew's cross, forming, in fact, the first letters of the name of Christ in Greek. The A and Ω, alpha and omega, were of frequent occurrence. Our Saviour was first symbolized as the vine, as Orpheus, and as the good shepherd. Noah's ark was the type of the church. Jonah escaping from the whale, after three days, symbolized the resurrection of the Saviour. An important medallion from the centre of the ceiling was shown, which, although without painted glory or distinction of dress, is at once recognized as the earliest known picture of Christ. It was taken from the catacombs of St. Calixtus, near Rome, on the Via Appia.

After the Emperor Constantine made public profession of the faith, and Christianity was universally adopted, the art, so long cherished underground, emerged, and soon displayed its influence both in painting and architecture. The mosaics of Ste. Costanza, at Rome, executed upon a white ground, evince remarkable grace, and show how skilfully a Pagan subject of vine leaves, formerly attributed to Bacchus, could be applied to a Christian parable.

When Constantine removed the seat of empire to the shores of the Bosphorus, numerous works of art were required which drained Rome of the best workmen, and, for the first time, embellishments, both imperial in splendour and Christian in purpose, were produced.

The adjacent nations of the East were not long before exercising a powerful influence upon the Constantinopolitan, or, as they called themselves, Byzantine artists. The dome-shaped circular buildings, with pointed arches and mosaic wall decorations, sufficiently attest this in the time of Justinian (A.D. 537). The foundation of the order of St. Benedict, in the monastery of Monte Casino (A.D. 529), laid a means for the preservation of learning and many useful arts,—a security the more important, as the Eastern nations, called, indifferently, Arabs, Moors, and Saracens, were rapidly spreading along the southern shores of the Mediterranean, and in the first ages carrying devastation with them. The approach of the millennium—the year 1000—brought terror and alarm, and most persons, thinking the end of the world at hand, desisted from all undertakings or duties that had special reference to the future. The Saracens, at this juncture, possessed themselves of the Greek works on science, which they translated into their own language, and then destroyed the originals; but even by this means many scientific works have been preserved, and a practical experience in useful arts especially retained.

The excellence of art in the early period of the Roman empire was illustrated by tracings in colours, from the paintings at Pompeii. They were contributed by Mr. Digby Wyatt for the occasion. The lecture terminated with a minute description of the celebrated sarcophagus of Junius Bassus, who was prefect of Rome in 359: it is especially rich in sculptured compartments of Christian subjects, and had been discovered in the foundations of the Vatican about 1595.

LECTURE II.

Having illustrated the development of painting and sculpture, Mr. Scharf displayed a copy of the Pompeian Battle of Issus, as the finest antique specimen extant of Picture Mosaic. The interior of the Chapel of Galla Placidia, at Ravenna (A.D. 450), exhibited the free use of mosaics for mural decoration. The shape of this chapel is cruciform, the mosaics all on a dark blue ground, and in very gay colours.

The mosaic representing the Baptism of Christ, upon the centre of the ceiling of the Baptistery at Ravenna (A.D. 451), afforded a curious parallel with the same subject shown in the chamber of the Catacombs of St. Pontianus. The lecturer proceeded to exhibit the various mosaics of the ancient churches of Rome and Ravenna, explaining the position they usually occupied upon the concave heading of the niche or tribune, on the flat wall space around that recess, which is called the arch of the tribune, and of a second arch, which in most churches separated the presbytery from the nave, and was called the arch of triumph. Floors were richly inlaid with variegated marbles, but all pictorial mosaics were reserved for the walls.

The arch of triumph of S. Maria Maggiore, at Rome (A.D. 440), is remarkable, as being adorned with an infant Saviour, seated *alone* upon a throne, whilst the Virgin and angels stand reverently around.

The earliest representation of the Madonna and Child enthroned, is a mosaic in the church of S. Apollinare Nuovo, at Ravenna (A.D. 556).

A colossal portrait of Christ, in the act of blessing, adorned the arch of triumph of S. Paolo Fuori le Mura, at Rome (A.D. 450), constructed by Pope Leo the Great.

The position of the fingers in act of benediction was different in the Greek and Latin church. Both left three fingers fully extended, in allusion to the Holy Trinity, the other two bent as close to the palm as possible. In the Latin, the thumb and two first fingers were extended, and the third and fourth bent down. In the Greek, the tips of the thumb and third finger were joined, so as to leave the first, second, and fourth fingers extended. Much had been written upon the significance of each finger, but such is the invariable custom, and a simple statement of the case.

The Roman Mosaics of the Tribune of SS. Cosmo and Damiano, A.D. 530, were excellent specimens of the art of the period; the ground still dark blue, with the high lights on the draperies and edges of the clouds, in shining gold. The art of mosaic working had evidently declined in 630: the figure of St. Agnes was without middle tints: all careful regard to surface and modelling of forms had been lost: the features were indicated with coarse black lines, and the colour on the cheeks no more than crude patches of red, without the slightest blending into the rest of the complexion. The background of the figures was no longer blue, but bright gold. Mr. Scharf had prepared enlarged copies from paintings in various manuscripts, to show that the art of illustrating books kept pace with the changes and characteristics of larger decorations. The paintings of the Frankish style of art afforded, about the beginning of the ninth century, a curious contrast to the art then practised at Constantinople and in the East. The Frankish was all composed of crude earthy colours, very opaque, and of brick red colour in the flesh, whilst the Byzantine had a peculiar greenish tint, as a groundwork for the flesh, and the countenances were made solemn; that of the Saviour especially stern and ascetic. This was the result of a doctrine held at one time, viz. that as the Saviour had assumed a human form, he had selected one positively mean and repulsive, so as to increase, as it were, the mystery of the incarnation. The Russians and other barbarian nations being converted to the Christian faith, seized upon this point of view, and have ever since that time been distinguished by the meagre and ugly forms of their pictures.

The pointed arch was introduced from Kairwan into the South of Italy, by the Saracens (A.D. 827); and soon after, about A.D. 829, Theophilus erected a splendid palace at Constantinople, which was an exact model of a Saracenic one on the banks of the Tigris. This direct imitation gave great offence to the people at the time. The Mosaic decorations of Monreale, in Sicily, might be regarded as a most complete example of the Byzantine mode of treating pictorial subjects. Numerous Greek MSS. are preserved, in which the first pages consist of a series of pictures, occupying the full height; and sometimes on both sides of the leaf, illustrating the life of our Saviour and the Virgin Mary. The subjects are almost always the same, and always composed in the same way, the only difference being in the arrangement of colour and degree of finish. The Monreale Mosaics are in perfect accordance with these conventionalities; but some of the figures are conceived with extraordinary grace, and the draperies even effectively arranged.

The lecturer then explained the principal subjects in detail, comparing them with the sculpturesque treatment of a former age.

Pictorial representations of the Last Judgment were introduced into church decorations soon after the year 1000; as people, having escaped the expected doom, were beginning to forget the future, and the priests employed the subject as a reminder.

The contemporaneous erection of buildings in France, Germany, and England, occupied a considerable degree of attention; and the lecturer dwelt strongly upon the fact of the excellence of sculpture in England, before the appearance of the Pisani in Italy.

This portion of the lecture was illustrated by a series of beautiful large drawings by Flaxman, which he had prepared and used for his own lectures at the Royal Academy. Many of them have been published in the volume of his Lectures. Miss Denman had, with her accustomed liberality, afforded the free use of these treasures. Some casts of very beautiful ivory carvings, both Greek and Roman, evinced the elaborate style of finish attained in these ages. They were exhibited by Mr. Nisbett. A series of illuminations traced from MSS. in the British Museum, and from the collection of the Duke of Devonshire, marked the advance of miniature-painting,

LECTURE III.

The foundation of the mendicant orders of S. Francis and S. Domine exercised no small

* Lord Ward's valuable collection of pictures is still at the Egyptian Hall, Piccadilly, open to the public free of charge, every day of the week except Monday. Many of these ancient paintings serve as prologues to the pictures in the National Gallery, and it is to be regretted that his lordship's liberality is not more generally known, as many persons would gladly avail themselves of the privilege.

influence upon art, inasmuch as their deeds and sufferings have afforded an inexhaustible source of subjects for representation. Niccola Pisano was employed upon the tomb of S. Dominic in 1234, at Bologna; and this distinguished sculptor here displayed his wonderful abilities, which rose beyond the miserable chisel-work of his contemporaries at the sight of an antique sarcophagus sculptured with figures then in front of the Duomo at Pisa.

After the death of S. Francis in 1226, a magnificent church was erected to him at Assisi, the work of a German, and the first specimen of Pointed architecture north of Rome. It was completed in 1230. The painters of the day, chiefly Greeks, were employed in its decoration.

Greek art—that is, Constantinopolitan or Byzantine—still prevailed; and, with the same pertinacious adherence to precedents and conventionalities, everything became traditional; so that nature, the source of all art, was utterly forgotten, and consequently the significance of many touches became lost, frequently so perverted as to be no longer recognizable apart from the position they bore to the figure or place in the picture. Manuscript paintings clearly show this, and the British Museum has a rich store of them.

Giunta Pisano and Guido da Siena were old painters who wrought under the baneful influence just described; but the former master struggled for emancipation and partly attained it by studying from the living model. He painted a portrait of St. Francis, which still hangs in the sacristy of the church of the convent at Assisi. Cimabue, born of noble family, preferred when a boy to watch the painters working at the Dominican convent of S. Maria Novella, to studying literature, for which purpose he had been placed there. He ultimately painted a Madonna, so novel in style, so large, and so impressive, that the picture was carried in procession through the streets from the artist's house to the church for which it had been destined.

Cimabue's fame rests greatly on the circumstance of his having met with a lad who was tending sheep, and that he at once perceived his talent for drawing, which being carefully nurtured produced one of the most remarkable artists of Italy: the name of the youth was Giotto. His master, and parent by adoption, Cimabue, seems to have long been aware of the fallacious principle under which the artists of his day had been working, although he may not have been able to throw off the trammels imposed by his early instructors. He taught the boy, however, the course he would have pursued himself, and fully developed his wonderful dramatic powers.

The style of Giotto was perfectly novel. He threw aside the greenish complexion of the flesh, displayed great variety of character in his heads, most being from the life: he painted the portrait of his friend Dante about 1300, which still exists. The action of his figures was always natural, and sometimes boldly foreshortened; his execution slight and sketchy: indeed, his pictures were never highly finished, but generally well composed for the period. His mosaic of the "Navicella," a ship in a storm, with Christ and St. Peter on the waves, is universally celebrated. It is preserved in the vestibule of St. Peter's at Rome. Pietro Cavallini, who assisted in the execution, is said to have been also employed at Westminster. At all events, the mosaics of the tomb of Henry III. and shrine of Edward the Confessor afford an important example of the decorative ornament of the period. A curious gold-grounded mosaic, by Solsternus (A.D. 1207), marks the decline of art. It is on the front of the Duomo or Cathedral of Spoleto, and represents the Saviour seated on a throne, between the standing figures of the Madonna and St. John the Evangelist. A series of beautiful drawings of the relics of St. Cuthbert, at Durham, were exhibited by permission of the President and Council of the Society of Antiquaries. They illustrated the state of embroidery in this country about the beginning of the tenth century, and were very interesting, in comparison with the celebrated Bayeux tapestry. The society also contributed a curious old Greek painting, procured from Syria by Dr. Clarke, the traveller, which afforded a specimen of the traditional mode of representation.

The works of Giotto, in addition to Mr. Scharf's diagrams, were fully illustrated by large tracings from the originals, and a series of drawings from his frescoes, that had been prepared for publication by the Arundel Society, and were generously lent by the council on the present occasion. They were chiefly copied from his frescoes in the Arena chapel, at Padua.

FREEHOLD LAND AND BUILDING SOCIETIES.

So extensively has the system of popular subscriptions to benefit societies been carried out, that to give a digest of their action would require a committee as able, as energetic, and as tedious as the inquiry into the war management in the Crimea. In London there are over one hundred, and in the counties of the kingdom many more. The object of the first founders, from Robert Owen downwards, has, no doubt, been benevolent; but the plan has not been followed out, in all instances since, in that pure spirit of benevolence or mistaken philanthropy. What Socialist dreamers took up in fervour for the good of the multitude, has been adopted as a matter of business by shrewd, calculating traders; and these, in too many instances, have turned to account the fascinating delirium of artizans and mechanics to realize a real estate, and vote for the representatives in Parliament, by the too often penal sacrifice of 4s. 6d. a month out of their hard earnings.

It was easy for a knot of residents in any district to form a committee and appoint a secretary for the receipt of subscriptions: the rules were cut and dry—the regulations all in print—the indemnity to the movers and agitators complete. Mr. Tidd Pratt made these all right. The Act of Parliament secured all parties by a perfect immunity from responsibility; all from the defaults of their co-directors, and almost, if not wholly, from even their own laches!

Here was a temptation to do business. If ten acres were purchased at 200*l.* an acre, nothing forbade that it should be valued at 400*l.* (or 4,000*l.* for the ten acres), and subdivided at that ratio. The argument in all cases is, there is no mode of obtaining small freehold plots at the average rate of large tracts, and so far it is true; but there is a possibility of purchasing by a company which *will employ its own delegates* at the *actual selling price*, and of distributing the same for divisional proportionate sums. Whether real advantage has resulted to the public from the growth of these societies, is now a question.

Some estates there are within seven miles of London, which have been allotted, balloted for, won, and bartered, over and over again, upon which not one house has been erected out of fifty plots. Of the holders, many have realized handsomely by a timely transfer; the greater portion of the subscribers still retaining their long-coveted freeholds, and either from inability to build, or having discovered that a villa 16 feet by 25 feet, on a plot of 20 feet by 100 feet, at Ponder's-end or Finchley-common, would for themselves be useless and unavailable, and for their heirs and successors a profitless investment.

Such is the land of promise, in the issue, about the metropolis: farther afield the aspect of things is no better, save and except that here and there philanthropists of the Snig's-end kidney, who are prone to apostrophising "a bold peasantry, their country's pride," &c. &c. may felicitate themselves on the view of a few huts, cottages, boxes, hovels, and mud edifices, in the most fantastic confusion, at jars, angles, and cross purposes; presenting no doubt a picture of perfect freedom from all order or restraint—no roads, no sewers, and no harmony but of that negative kind which is assured by the absence of animation, and the liberty of free progress to every man who is his own architect.

On the first promulgation of the Freehold Land Societies, the whole class to whom the scheme was addressed, elate with the anticipation of certain freeholds for their heirs for ever, by the sacrifice of only 5s. a month for ten or twelve years, inflated with the importance of being invested with the elective franchise, flocked in by the 100,000 to get their names enrolled. The early societies profited by the rage: thousands of acres were bought, and the game of shares, or the traffic arising for their transfer, then began in earnest: a few gained by sale, still fewer realized the foundation of a heritable crib; but the great mass of prizes remain to this hour profitless and unreal.

What amount of good have all these distributions and amorcellements of freeholds effected? Look at the estate (Lord Cottenham's) near Wimbledon,—look at Finchley, or, indeed, any of them, and determine!

To win the basis or privilege of a foundation is not to acquire the means requisite for building: the site is not the fourth part of the value and essential cost of building: how is a poor man (on poorer security) to obtain that? At this crisis neither the money-changers of the Temple nor of *Walbrook* would look at the gage. Many of the societies are nearly done up, or steeped in mortgages.

A few of the many applications made to the magisterial bench for the restoration of subscriptions have come to light: the needy shareholder, unable to pay up his book and quarterage, redemanded his deposit. Alas! the money is spent, or invested in irremediably mortgaged estates. If he cannot await the lottery, he must bide his time for the definite acceptance of any balance that may be left after the deduction of periodical fines.

Q.

FALL OF CORNICE, WOOD-STREET, CHEAPSIDE.

ON Saturday last, an elaborate stone cornice which had been placed on the front wall of a large warehouse, now in course of construction under the direction of Mr. G. Somers Clark, architect, for Messrs. Nunt and Brown, in Wood-street, London, fell to the ground, and unfortunately killed a poor man, named James Thompson, who had brought some lime to the premises in a cart. Providentially, the other men had left the works for breakfast.

The cornice, with consoles, foot moulding, &c., was 7 feet 6 inches high, and projected at the top 4 feet 3 inches, falling into the wall 1 foot 11 inches, and in other parts more; upon which the principals of the roof and a blocking cornice were to have been placed. Upright iron nut and screw bolts were introduced at intervals, from the string to the top of the bed-mould, to tie the whole of the cornice together.

At the inquest the architect said, he had advised the builder's foreman, during the execution of the work, to shore up the cornice till the upper part was finished; but it had not been done. The jury returned the following special verdict:—

"That the deceased was accidentally killed by the falling of blocks of stone, or other solid substance, from a building in course of erection on the West side of Wood-street, in the city of London; and the jury cannot separate without expressing their strong conviction that due precaution had not been taken in shoring up the cornice of the building referred to, while under construction; and that the tie-bolts on which the architect and builders relied, were ineffective for the security of the work and the safety of the public; and they further consider that such unusual projections in narrow streets are highly objectionable."

Messrs. Lucas are the builders engaged.

ROCHDALE CEMETERY CHAPEL.

WE have already described the Episcopal chapel now in progress in the Rochdale cemetery. It is in the Norman style, and is arranged in the form of a parallelogram, 65 feet long by 29 feet wide, including the walls, from the centre of which, supported on two massive semicircular arches, will spring a broad Norman tower, 29 feet square, pierced with twelve windows. The interior is divided into three parts by arches and stone shafts; the former all ornamented with a characteristic moulding. The architect is Mr. R. Moffat Smith, of Manchester. Let us add that the walls are all 2 feet 6 inches thick; the whole of the exterior is faced with Yorkshire stone in pier-points, laid in courses; and the ashlar for the dressings is from Burnley. The cost, we are told, including all extras, will be about 950*l.*

EPISCOPAL CHAPEL, ROCHDALE CEMETERY.—Mr. R. Moffat Smith, Architect.

PROVINCIAL NEWS.

Bloxham.—The foundation-stone of All Saints' Grammar School here has been laid. The proposed buildings are from a design by Mr. G. E. Street, of Oxford. They comprise, chapel, hall, two large school-rooms, six dormitories for twenty boys each, separate rooms for the sixth-form boys, six sets of masters' rooms, library, common room, museum, oratory, and singing-school. They form a large quadrangle, with a cloister. A smaller cloister, south-east of the chapel, encloses a little burial-ground. The offices form a separate block of buildings, but communicate with the hall, &c. The style chosen is the Geometrical Decorated.

Gravesend.—A model of the monument proposed to be erected on Windmill-hill, to be called "The Alma Tower," is shown in the town, and the project has been laid before the town-council.

Sittingbourne.—The following tenders were received for the alteration and additions to Milton Vicarage, by Sittingbourne, in Kent, as advertised in the *Builder*; Mr. William White, architect:—

Jennings, London	£710
Dyne, London	580
Couch, Maidstone (and to complete in twelve weeks)	517
Cobb, Maidstone (and to complete in ten weeks)	515

The last tender was accepted.

Shorncliffe.—The huts at Shorncliffe, near Sandgate, for 5,000 men, are by this time probably completed. The sinking of the wells and the sanitary arrangements for the camp, however, are still in an unfinished state.

Dover.—The casemate barracks at the Castle overlooking the sea are in progress, and in a short time there will be accommodation there for a large number of troops.

Portsmouth.—A new dock was opened on Tuesday before last in Portsmouth Dockyard, by the entrance into it of her Majesty's new yacht, to be coppered. Its length is 335 feet; breadth, 82 feet; depth, 29 feet; ditto at high water, 23 feet (spring tides); width of entrance, 70 feet. It is 50 feet longer than any other of her Majesty's docks, and has consumed the following materials in its construction:—3,000,000 bricks, 152,359 cubic feet of stone, 94,783 cubic feet of timber, 729 cwt. of iron-work; and it has cost in the aggregate 63,000*l.* It was designed in 1851, and contracted for in same year by Mr. Edmund Smith, C.E. The work of construction was commenced under the superintendence of Captain Mould, R.E. and finished under that of Mr. Wood, C.E. clerk of Government works in Portsmouth Dockyard. It is the south inlet dock of the steamer basin, and, as docks take the name of the first ship admitted, this will be styled the "Royal Victoria and Albert Dock."

Bristol.—The works at the Bath bridge are progressing. On Friday in week before last the first of the iron ribs was brought up the river, and on Saturday evening floated to its permanent position on the buttresses. There will be no danger, it is said, of this bridge sharing the fate of its predecessor, as there will be a clear space from buttress to buttress. We shall give some particulars.

Taunton.—The tender of Messrs. Shewbrooks and Savery, for the erection of a wall and railing around the new cemetery, was accepted by the Joint Burial Board of Taunton, St. Mary Magdalen, and Bishop's Hull. The amount of the tender was 690*l.*——The ceremony of laying the foundation-stone for the new shire-halls and judges' lodgings, which was announced to take place on Tuesday before last, has been postponed for probably a fortnight.

Wolverhampton.—Plans and estimates for the erection of a new fat pig market in connection with the cattle market here have been laid before the town council, and the estimates of Mr. James Palmer, for the builders' work, at 674*l.* and of Messrs. Fletcher and Co. for the iron-work, at 803*l.* 4s. 5d. accepted, these being the lowest tenders. A committee has been authorised to carry out the proposed work in accordance with the specifications and plans of Mr. Banks, architect.——For the front of the new town-hall, the design of Mr. Veall has been adopted by the council, on the condition that a contract shall be entered into by a builder to erect it for 891*l.* the estimated cost.

Preston.—The Preston Banking Company are about to erect a new bank in Fishergate, from designs by Mr. J. H. Park. The buildings to be removed to afford space for the new bank, are two shops and two offices.

Oldham.—Arrangements have been made for laying the foundation-stone of the Lyceum here on Monday, the 25th inst. The magistrates, Freemasons, and other public bodies will take part in the ceremony; and Lord Stanley, Mr. Fairbairn, C.E. and the vice-president of the Manchester Chamber of Commerce, and others, have promised also to be present. The stone is to be laid by Mr. James Platt, the president of the Lyceum.

Shipley.—The General Board of Health having approved the plans submitted by the Shipley Local Board for supplying Shipley and adjoining districts with water, and authorized a loan of 14,000*l.* for the purpose of carrying them into effect, the works have been commenced. They comprise a compensation reservoir of about 8 acres in extent near Eldwick; a pure water conduit of glazed earthenware tubes, 15 by 20 inches within, upwards of 4,000 yards in length; a supply reservoir, about 220 feet diameter and upwards of 20 feet deep; and the pipeage therefrom to and through the districts to be supplied. Messrs. Swire and Blair, of Shipley, are the contractors for the compensation reservoir and pure water conduit; Mr. Lapish, of Bingley, for the supply reservoir; and Mr. Crosland, of Bradford, for the iron pipes. Messrs. Guest and Chrimes, of Rotherham, supply the stop-cocks, fire-plugs, &c. The iron pipes are being enamelled or coated by Mr. Angus Smith's patent process. The plans have been prepared by Mr. M'Landsborough, C.E. of Bradford, engineer to the Local Board, under whose directions the works are now being carried out. Mr. Geo. Hogg, of Saltaire, is clerk of works.

Glasgow.—Dr. William Clark, of Wester Moffatt, has placed at the disposal of the church the sum of 20,000*l.* for the erection and endowment of a free theological college in this city, provided others contribute a similar sum, so that 40,000*l.* should be immediately available for the purpose in view. The subscriptions in Glasgow towards this second sum already amount to 14,000*l.* Dr. Clark, moreover, offers to pay down or secure an additional sum of 10,000*l.* for the same object, provided a like sum of 10,000*l.* additional shall be guaranteed by responsible persons within the next twelve months.

CHURCH-BUILDING NEWS.

Braintree.—An appeal to the public has been made, with the sanction of the Archbishop of Canterbury and the Bishop of London, for assistance in the restoration of the old church here. Only a few hundred pounds can be realized within the parish, and the estimated cost of requisite restorations is about 4,000*l.*

Northampton.—An appeal has also been made on behalf of St. Giles's church, Northampton. This church has been for more than eighteen months undergoing extensive enlargement and restoration, including the extension of the church towards the west, the addition of a new north aisle, the opening of two of the ancient Norman arches, the whole of which are unfinished, that support the tower (by which means a large portion of the chancel will be made available for public worship), and the re-seating of the whole church in oak. The entire body of the church has also been newly roofed, and the windows are entirely new. The expense of this work will be not less than 4,800*l.* by which outlay the number of sittings will be nearly doubled, and the whole structure rendered more worthy of its sacred character. To meet this cost the parishioners have subscribed 3,000*l.* There remains a deficiency of 800*l.* or 850*l.* before the church can be thoroughly completed.

Cirencester.—The alterations in the parish church here, which, principally through the exertions of the rev. incumbent, have been from time to time made, are now to be further carried out by the removal of the organ and loft from the chancel arch, which it now occupies, to the western end of the north aisle.

Hardwick.—The following tenders for repairing Hardwick church, near Gloucester, were made:—

Coleman (Chavhill)	£240 10 6
Smart (Gloucester)	239 10 0
Spire (Eastington)	237 0 0
Chobaton (Quedgley)	234 0 0

The last of these was accepted. Messrs. John Jacques and Son are the architects.

Swansea.—The foundation-stone of a seaman's chapel was laid here on Friday before last, by Mr. H. H. Vivian, M.P. The site, given by the corporation, is in Adelaide-street, contiguous to the quays and docks. The building will be in the form of a cross, and in the style of 14th century. It will accommodate about 300 persons without the galleries, which (if put up) will give 120 more. About 500*l.* have already been subscribed, including 200*l.* by the late Mr. J. H. Vivian, M.P. and almost 500*l.* more will be required.

Liverpool.—Bidston Church, near Woodside, says the local *Times*, is to be pulled down, for the purpose of being rebuilt. It is one of the oldest, smallest, and most thoroughly rural of the churches in the vicinity of Liverpool. It was originally intended to repair the roof and the body of the church, but the walls were so dilapidated that it was determined to rebuild, leaving the tower alone standing. The funds will be raised by public subscription; and, for every 100*l.* raised, Mr. Vyner, the lord of the manor, has promised to give 200*l.* Several ancient and curious tombstones are found in both church and churchyard. Strange enough, within half-a-mile from Bidston there stands a new church which has never yet been opened for public worship, from having been placed in Chancery just as it was finished.

Mottram.—On Wednesday before last, the ceremony of laying the basement stone of one of the pillars in the re-erection of the clerestory of the parish church, Mottram, was performed by the vicar. Messrs. Heaton, Hallows, and Stokes, are the contractors.

Haslingden.—The foundation-stone of a new Wesleyan chapel has been laid here. It is to be erected in the Pointed style of architecture. The entire length of the building will be 95 feet; the breadth, 50 feet 3 inches, exclusive of buttresses. The length of the ground plan will be as follows;—interior of chapel, 62 feet 6 inches; exterior, including the vestibule, 71 feet. There are to be three vestries: the centre one, over which will be placed the orchestra, will be 18 feet by 19 feet 6 inches: the other two vestries will be smaller, namely, 11 feet 6 inches by 12 feet. The chapel is estimated to seat 1,000 or more persons, and the entire cost is expected to be 4,000*l.* The plans were furnished by Mr. James Wilson, of Bath, architect, and Mr. William Waddington, of Padiham, has contracted for the execution of the whole of the work. The stone will be procured from the delfs in the neighbourhood, excepting that for corners, door-heads, &c. for which Fletcher Bank stone will be used, and Catlow stone for tracery.

Slaithwaite.—On Thursday before last, the new burial-ground in connection with St. James's Church, Slaithwaite, was consecrated by the Bishop of Ripon.

ON SOME OF THE PRESUMED PORTRAITS OF SHAKSPEARE.

MORE than two hundred years have passed away since Shakspeare's death, and yet, strange to say, of such a man, there is not known to exist one authentic portrait of his form or features. There are, however, in place of positively proved paintings of the great bard, many assumed contemporary likenesses, and it is of some of these works of art that I purpose to make a few remarks, especially with regard to those which are best known by engravings. Although I have referred to painted portraits, it would not be wise to pass without notice the bust of Shakspeare which probably gives to the beholder the nearest approach to the general characteristics of his face, supposed to have been modelled after his death at Stratford-upon-

von, in 1616, by either a sculptor of the name Thomas Stanton, or one of the name of errard Johnson. In 1748, by the receipts ising from a performance of Othello, at the d Town-hall, at Stratford, a Mr. John Hall, eserved, as well as he could, the fading pig- ents, which the original sculptor, after the anner of the ancients, had covered the figure ith, and which Mr. Malone, in 1793, had inted white, to suit the then present taste, d for which he was afterwards most justly ndemned, as well as satirized.

"Stranger, to whom this monument is shown,
Invoke the poet's curses on Malone
Whose meddling zeal his barbarous taste betrays,
And daubs his tombstone as he marred his plays."

he portrait known by the name of the Felton ortrait,* is one that, with the Chandos ead, has, perhaps, divided public opinion ore than any other of the numerous aimants for the honour of truthfully repre- enting Shakspeare's intellectual and winning atures. It certainly has many claims for nperiority over the Chandos portrait, now ne property of Lord Ellesmere, not only in espect to the presumed antiquity of the paint- ng, but to its almost complete identification ith the engraved frontispiece to the collected dition of the poet's works, known as the first olio edition, 1623, by Martin Droeshout. If could be proved that Droeshout took his en- raving from the portrait we are referring to, here could exist no better testimony to its uthenticity; but as this cannot be done cer- ainly, the similitude of the one to the other as drawn forth a great many opinions on both ides of the question. Besides the critical pinions of many persons of celebrity on this ubject, the present possessor of the portrait as had communications personally made to him y the late Sir Francis Chantrey, the late Mr. Phillips, R.A. Mr. Pickersgill, Sir Charles East- ake, Sir William Ross, and others, to the effect hat they felt no doubt, from a comparison of he portrait with the engraving, that Droeshout sed the picture for the purpose of making his raving. Assuming this to be the case, there s very little chance of the palm of preferment eing given to the so-called Shakspeare of Lord llesmere, for independently of its being any- hing but a refined or intelligent-looking face, it ears no striking resemblance either to the Stratford bust in features or expression, or to the ead of Droeshout's engraving, in the above re- erred to folio edition. The ear-rings in the Chandos Head do not seem to accord with the generally re- eived notion of Shakspeare's style or habits, and although undoubtedly worn in the time of Queen Elizabeth by some courtiers, they do not seem to have been a prevailing fashion. The absence of ear-rings in the bust and in Droeshout's engraving, is, to a certain extent, evidence against the Chandos portrait being one of Shakspeare, although it does not prevent its being accepted as the likeness of some foreigner of distinction at the English court, as it bears many of the characteristics of a face from a more sunny clime than ours. Of the pencil writing at the back of the oaken panel on which the Felton portrait is painted, I have only to remark that it certainly enhances the value of the whole, for there is little doubt of the age of the painting, and therefore the attestation of the artist's initials "W. B." under the name of the person represented, would seem, at least, to vouch for the authenticity of the intended like- ness; for all who have seen the style of writing, agree that it is of the peculiar character of the period, and therefore most probably pencilled in on the completion of the work. Whether it be by William Burbage or not, must remain a matter of conjecture, for unfortunately there is little left to tell us of this artist's style, who, however, has a head attributed to him in the private gallery at Dulwich College, and is sup- posed to have been a scene-painter, as well as a fellow player with Shakspeare.

The next portrait I would call attention to is the once well-known painting in the posses- sion of the late Mr. Dunford, and which has in its time been the subject of much discussion: it certainly presents a very noble and animated expression, and decidedly must rank as the por- trait of an eminent and handsome man of the period; but it sadly lacks that soft and deeply intelligent look which one cannot help attribut- ing to the bard, and which, in the Felton head, is so naturally, yet modestly depicted. The same remarks may be applied to the beautifully painted head, published in chromo-lithography, by Mr. Hogarth; for although it comes before the world with a very plausible story, yet I think there is little chance of its being con- sidered a true likeness of those features, on which Ben Jonson wrote his famous lines, com- mencing —

"This figure that thou see'st put,
It was for *gentle* Shakspeare cut."

Before closing my remarks, I would allude to the little painting in oil and on copper, which I now exhibit, not from its intrinsic merit alone, but from the way in which it has been handed down as an heir-loom, for the last 100 years in the family, from a member of which I purchased it in 1851. In a paragraph of the will of the last bequeather, it is thus de- scribed—"and the small painting of Shakspeare on copper, in the old oak frame, mentioned in the will of my grandfather, Joshua Scholefield, of Saddleworth, in the county of York, bearing date the eleventh day of January, in the year of our Lord 1787, and directed by him to remain in the family,"* &c. &c.

I have now said enough, perhaps, to draw the attention of others much better qualified in every way than I am, to continue and enlarge upon the subject, for there remain in many galleries so- called portraits of Shakspeare, quite worthy of notice and remark, as the subject of them is of the admiration of the world, for all time to come.† G. R. W.

* The Rev Thomas Jones, of Whitehall Chapel has stated to the present proprietor of the Felton Portrait, which some have assumed came from the Boar's Head, in Eastcheap, that his grandfather, Philip Jones, was the auctioneer who sold that pro- perty, and that there were pictures disposed of at the sale belong- ing to the premises, which some commentators have doubted.

* The old oak frame was not in existence when the picture was brought to me, or I should have valued it the more, but the vene ration of Joshua Scholefield, of Saddlesworth, for Shakspeare, is a pleasing instance of the deep rooted affection his works have engrafted in many an Englishman's heart, whatever his station or calling may be, but which is not always perpetuated in the bosoms of his heirs, as we see in the present instance.

† Read before a meeting of the British Archæological Associa- tion, on the 13th inst.

M. CHARLES GEERTS, SCULPTOR.

WE have just now learnt, with regret, the death of Monsieur Charles Geerts, the Sculptor, of Louvain, who expired on the 16th inst. at the age of 48.

M. Geerts was a native of Antwerp, but settled at Louvain, where he was professor of the Academy of Fine Arts. He was created by the King of the Belgians a Chevalier of the Order of Leopold, and was a member of several learned societies in Belgium and other countries. In the Great Exhibition of 1851, in London, he exhibited some of his works: one, a group of the Massacre of the Innocents, carved in oak, was particularly distinguishable. This group is now in the possession of Mr. W. Stirling, M.P.

M. Geerts had in execution a series of statues, between 200 and 300 in number, to fill the niches of the well-known Hotel de Ville of Louvain, and was engaged in casting bronze gates with *bas-reliefs* for the new church of St. Joseph, at Brussels, which were intended to be of similar dimensions and treatment with the famous gates by Ghiberti, at Florence. The numerous statuettes of the stalls recently erected in the cathedral of Antwerp, are also his work.

BUCKINGHAM PALACE AND ITS IMPROVEMENTS.

NOT long since you called attention in your paper to the "Ram's-horn road," just constructed by the south-east corner of Buckingham-palace, but I believe nothing further has been said on the works going on there. The gigantic hoarding in that quarter, to the removal of which many have so long looked forward, in the hope that something both useful and beautiful might be disclosed, is at length *partially* gone; exposing to view a new entrance to the palace, con- sisting of one door, in the centre of an otherwise Ionic screen.

Is this entrance, with no projecting porch, a fit one for the hundreds of fair ladies to alight at when on a visit to her Majesty, perchance in a pouring rain? No, most assuredly not—for no sooner is the architect's back turned (for I imagine *him* innocent of the matter) than some one with more attention to the fair sex) sends for an upholsterer, who, doubtless, taking his idea from the elegant entrance annually erected in St. James's-palace, "rigs up" (for I can call it nought else) a wooden and canvas awning, bisecting the said Ionic columns in a manner that would have made Sir Wm. Chambers shiver.

Had the architect (whoever he be) ever read the "Palace of Architecture," by that excellent critic, George Wightwick, he would, I think, have at once acknowledged that a *covered* entrance was a most necessary adjunct to a palace; and instead of leaving it to be executed by the merciless hands of the upholsterer, would have designed one himself, in keeping with the existing buildings.

Workmen are now busy erecting a *high* range of stone piers, with *low* iron railings between them; gates inserted at intervals of a different height to either: the superfluous material in the piers would have gone far towards erecting a portico, and the piers themselves would have been much improved in appearance.

Stone curbs are put round the carriage drives inside the railing, and I understand that the inten- tion is to plant shrubs, &c. I would suggest that grass be laid instead (as is done with such good effect in one of the courts of the Louvre), grass ever looking far more pleasant and refreshing than stunted smoky plants.

I will just mention, that by the new foot-gate from the park, there is always in wet weather, a puddle, fully a yard wide; which passengers have the option of either stepping into, or jumping over: the former is disagreeable and prejudicial to health, and the latter, if one jumped too high, might be attended with fatal consequences, as there is a hori- zontal iron-bar across the top, placed so low, that the sentries, who, I am credibly informed, are con- tinually passing and repassing, are unable to do without knocking their bayonets.

I sincerely trust that the "ram's horn" com- plained of is only a temporary form of road, as the line of rails above mentioned would seem to indicate; and I shall therefore not make it a *butt* for criticism, further than to remark, that irrespective of its being *most* inconvenient for carriages, it has given pedes- trians a wide and muddy street to cross, there being now not a vestige of a paved crossing, or any signs of one.—A. F.

A CHANCE FOR ARTIST-WORKMEN.

IT is to be hoped that the advertisement of the committee of the Architectural Museum to artistical workmen will not be overlooked. Being desirous of encouraging and improving the practice of fine art workmanship (in stone, wood, and metal and in decora- tive painting), they have offered, as a first step, a prize of five guineas for the best specimen of wood carving which shall be exhibited in the present year in the rooms of the museum during the month of November. Following this up, Mr. Ruskin offers a prize of five guineas for the most successful specimen of stone carving exhibited at the same time in the rooms of the museum.

The wood carving must be a study of natural foliage, fruit, flowers, or animals.

The prize for stone carving will be given for the most inventive and well-arranged Gothic capital, con- taining figures of men, beasts, or birds, not more than two on each side, arranged with leaves or any other object the workman likes.

Particulars may be obtained at the Museum, Canon-row.

This is an opportunity for a man to individualize himself which should not be lost.

PROPOSAL FOR IMPROVING THE DWELL- INGS OF THE POOR IN THE UNITED PARISHES OF ST. GILES-IN-THE-FIELDS AND ST. GEORGE, BLOOMSBURY.

THERE are several courts in the parish of St. Giles so deplorably bad, the houses so filthy, and the inhabit- ants so depraved, that no district visitors can enter them; and the impurity of the atmosphere is the occasion of frequent illness to the Scripture readers or City missionaries, whose duties oblige them to visit these abodes. Our readers do not require to be told this.

It would be an incalculable benefit to the parish at large, and indirectly to the whole metropolis, could this state of things be remedied. The endeavour is to be made.

A committee has been organized for the purpose, and the Labourer's Friend Society have acceded to an arrangement, of which the following are the main features:—

The Labourer's Friend Society will expend on the improvement of the dwellings of the poor of St. Giles'- in-the-Fields, or St. George's, Bloomsbury, any sums

of money which may be entrusted to the Society for that special object.

The Society will accept of loans, in sums of not less than 50*l.* (subject to the condition of being expended as above), for which loans the Society will give security to the lender, with interest at the rate of 4 per cent. per annum, the principal to be returned at such period as, on the part of the lender, may be stipulated on making the advance, and afterwards on six months' notice, or, if required, on the part of the society, at three months' notice.

This arrangement affords the opportunity of investing money with a certainty of obtaining 4 per cent. interest, and, at the same time, of effecting results which will contribute to the sanitary, the moral, and religious welfare of this large and populous district of the metropolis.

The committee are looking for aid.

COMPETITIONS.

Lincolnshire Cemetery.—Twenty-seven sets of designs were received, and the committee agreed to recommend to the board the following:—For the chapels and lodge, 1st prize of 10*l.* to "Justitia," 2nd prize, of 5*l.* to "Hope." "Justitia's" buildings are in the Gothic style, and his estimates are—chapel, 987*l.*; lodge, 295*l.* 10s.; dead-house, 128*l.*; fence, 287*l.* 12s.; gates and piers, 44*l.*; total, 1,742*l.*; "the side and end boundaries of the ground are to be formed of brickwork, with panels for the reception of tablets; the front boundary next to Canwick to have a low wall, with iron fencing." For the ground plans, the committee recommend that the first prize of 10*l.* shall be awarded to "Hope" (who does not give any estimate of the expense of carrying out his design), and that the second prize of 5*l.* should be given to another, distinguished by an indescribable device, whose estimate amounts to 2,000*l.*

New Cemetery, Warrington.—The town council has confirmed the report of the committee, and the chapels, lodges, &c. are to be commenced forthwith, from the designs of Mr. T. D. Barry.

Newcastle.—The United Burial Boards of St. John's, Westgate, and Elswick, have awarded the first premium of 20*l.* to Messrs. Johnston and Knowles, and the second premium of 10*l.* to Mr. J. Johnston, for their designs for the proposed cemetery.

Salisbury Cemetery.—The Burial Board for the parishes of St. Thomas, St. Edmund, and St. Martin, after considering the thirty-two designs sent, decided upon those with the motto,—"Ad rem cum Deo,"—which, upon opening the letter, proved to be from Mr. C. Hutchinson Edwards, architect, of London.

Yeovil, Somerset.—The Charity Trustees of this town having decided to erect fresh almshouses, they offered a premium of 10*l.* for a design for that purpose. Thirteen designs were submitted: that of Mr. T. W. P. Isaac, of Bath, was selected.

BRIDGEWATER CHURCH AND THE ARCHITECT'S CHARGES.

SIR,—In your remarks upon the "local animadversion" which my charges have met with on the above works, I have nothing to complain of: they evince your usual gentlemanly feeling, and you could scarcely have done less, being called upon as you were for an opinion.

I may perhaps be allowed to say, on the other hand, that Mr. Donaldson would have acted more wisely, in my opinion, had he followed your example, and suspended all comment on your remarks until in possession of the particulars of the case: a simple application would have secured them.

I will proceed at once to an explanation. In the spring of 1849 the work in question was gained in a public competition, and I was induced at that time to give up my Manchester business through ill health, intending on its re-establishment to take up my quarters in London: in the mean time I went to Bridgewater, where, for many months, being duly employed as architect, I conducted the works personally as well as professionally.

In April, 1850, the vicar gave me the sum of 33*l.* 13s. as some acknowledgment for past services in the extra superintendence, and, unasked, offered, for the future, if I would continue to fill the position of clerk of works, a salary of two guineas per week, in addition to the commission of five per cent. which I received as architect. This I accepted.

At a subsequent period, within three or four months of the completion of the works, I intimated to the vicar my intention of giving up the office of clerk of works, as the salary attached to it did not answer my purpose, and that I was impatient to get to London; but to secure me still in the position I had so long occupied, it was arranged that two and a half per cent. should be added to my commission of five per cent. to compensate me, rather than the increase which I demanded in the salary should be allowed. This also I accepted; and it will account, I trust satisfactorily, for the amount of commission being charged at seven and a half per cent. in my account; and I trust also, that the foregoing remarks will justify my having, under peculiar circumstances, filled the two offices of architect and clerk of works.

Regarding the surveyor's account, I may say that generally, in the provinces, the old combination of architect and surveyor still exists, and was familiar both to the vicar and myself; and no one will contend, I should say, that the architect should do surveyor's work without receiving payment for it.

Under this head I may refute a not very delicate statement of Mr. Donaldson's,—that I have charged for work in one or two cases twice over,—by saying, that in the first place, although the chancel roof is referred to in each, the work performed is wholly distinct, hence the two charges. Again, the sum of 24*l.* 13s. 10d. is clearly not "included in the first item at the head of the bill," as measuring is not included in the work for which an architect is entitled to charge a commission.

The editor of the *Bridgewater Times*, in bringing this matter under your notice,—the manner in which he has treated my explanations, and the withholding of letters which in fairness should have been published,—justifies me in saying that this attack is a disgraceful and a personal one, and only to be traced to the fact, that some months since I refused, as an insult to the profession, as well as to myself, an offer of 100*l.* or 120*l.* in liquidation of my claim for balance amounting to 384*l.* The Exhibition Committee have since paid me 250*l.* and I have the vicar's acceptance for 50*l.* payable in twelve months. I have given up the 84*l.* have charged them nothing for the re-use of 1,200*l.* worth of old materials, or for a detailed set of designs, with quantities complete, for the rebuilding of the tower and spire, and many other things I could name; but I think this will be enough to convince all that I have done injustice to no one but myself in the matter, and scarcely deserve the serious charge of having brought discredit upon the profession by the course I have pursued.

Mr. Donaldson may rest assured that I am as warm a supporter of the dignity of the profession as he can be, and have on many occasions preferred the loss of both money and work rather than consent to terms which might bring discredit on our noble profession.

I have now encroached, Mr. Editor, too much upon your space, and I fear upon your patience also, to allow of my making any comment upon Mr. Donaldson's proceedings in this business, or on the views he has expressed thereon: indeed, I hope that its general interest and importance will induce a more able hand than mine to take the subject up fully. The whole subject of architects' charges *must* be put upon a more satisfactory footing shortly, or most serious consequences to the profession must result.

W. H. BRAKSPEAR.

METROPOLITAN COMMUNICATIONS.

MR. LIONEL GISBORNE has brought his plan before the committee on Metropolitan Communication. He proposes to confine the waterway of the river to a width of not less than 700 feet (the width of Westminster new bridge) by means of quay walls on both shores, the present wharfs to be accommodated with floating basins of a minimum width of 100 feet, with entrances for barges; the quay wall on the Middlesex shore, from Westminster-bridge to London-bridge, to be 21 feet over Trinity high-water-mark, avoiding the necessity of draw-bridges over the entrances to the tidal basin. From Westminster-bridge to St. Paul's-wharf, where a new bridge was contemplated by the Corporation of London, Mr. Gisborne proposed to have a covered esplanade for foot passengers next the river, 20 feet in width, alongside of which for 50 feet the ground would be let for building, except opposite Whitehall-gardens, the Temple, &c. Parallel with the esplanade, and extending from Westminster-bridge to London-bridge, a railway to be constructed. Next the railway a street, 40 feet wide, from Westminster-bridge to the proposed bridge at St. Paul's. Large cellars to be constructed under the esplanade, railway, and road. Opposite Whitehall, to Temple-gardens, &c. as well as from St. Paul's-bridge to London-bridge, the quay-wall to be 4 feet above Trinity high water, and the esplanade, railway, &c. to be carried on columns not less than 25 feet apart, so as not to interfere with the view of the river. Next the river a road 70 feet wide to be made, alongside of which the ground to be let for building purposes. The entire cost of the works was estimated under 1,900,000*l.* The annual ground-rents of shops, warehouses, wharfs, &c. with the receipts derived from the railway, would amount to 103,000*l.* annually on an outlay of 1,900,000*l.* He considered 55,000*l.* per annum was available by letting river-side property, which at thirty years' purchase would amount to 1,650,000*l.*—about the estimated cost of the whole work.

The committee met last week to hear the evidence of Mr. John Fowler, the engineer of the Metropolitan Railway Company, who called their attention to the fact that the company he represented was already incorporated by Act of Parliament, and had obtained powers to construct a line of railway from the Great Western, at Paddington, to the General Post-office, which would connect the Great Western, the London and North-Western, and the Great Northern with each other and with the heart of the City; and that the requisite capital had been subscribed. It had always been the intention of the promoters of the Metropolitan Railway, he said, by future extensions, to connect their line with the Eastern Counties Railway, and with the great railways on the south bank of the Thames. The extension to the Eastern Counties would be entirely underground, and would include a passenger-station at Finsbury-circus. The extension to the south of the Thames would pass from the Post-office by Fish-street and Upper Thames-street, and cross the river by a new bridge nearly midway between Southwark and Blackfriars Bridges, and by two short spurs form a junction with the London-bridge and the Waterloo stations. All the great railways would then be brought into communication with each other, and passengers and goods would be enabled to pass uninterruptedly from one part of the kingdom to the other. The entire cost of the proposed extensions, with four lines of rails, would not exceed 2,500,000*l.*

Writing us on the subject of metropolitan communications, a correspondent, "A. H. H." says,—Would it not be advisable to form an unpretending *lacteal*, before attempting a great artery? I propose for experiment, that upon some wide line of communication,—Oxford-street, for instance—a locomotive machine be constructed, resembling a magnified everlasting "band," composed of light platforms, fitted with canopied chairs, and working upon wheels in a "groove," formed in the centre of the street, 6 feet in width for the double line, and a few inches below the surface, bounded on either side by an iron railing. The motion, which would only be interrupted for three minutes, at intervals of ten minutes, and giving a speed of twenty miles per hour, would be derived from a stationary engine, or engines, placed in a subterranean terminus, where the travelling platforms would leave the *up* and resume the down line by describing the necessary circle. The descent to this terminus might be by an incline of 20 degrees, as the machine would ascend or descend a steep incline, without its speed being accelerated or retarded, and thus render viaducts and tunnels unnecessary. All traffic having to cross the line of route might readily do so by the use of a simple appliance during the stoppage of the "band." The ordinary traffic would still be continued on either side of the street.

Notices of Books.

The Harmonic Law of Nature applied to Architectural Design. By D. R. Hay, F.R.S.E. Blackwood and Sons, Edinburgh and London.

WE mentioned Mr. D. R. Hay's paper on "The Harmonic Law of Nature applied to Architectural Design," when it was read at the Institute of Architects (see Vol. XII. p. 627). Some of our readers may be glad to know that it has been published in a distinct form, with the diagrams required to explain its author's views, and some additional matter. Although we have not succeeded in converting ourselves to a full belief in Mr. Hay's system, we cannot withhold our praise for the ability that gentleman has displayed in the numerous works published by him bearing on the subject. With reference to the objections that were taken to his condemnation of "the sculptured figures which decorate Gothic architecture," Mr. Hay withdraws the expression "paltry in composition and puerile in conception," but still holds "that they are often grossly disproportioned, and much distorted in their attitudes."

Popular Guide to the Kew Museum. By Sir W. J. HOOKER, K.H. Director. London: Longman and Co. 1855.

UNDER the title of "Museum of Economic Botany, or, a Popular Guide to the Useful and Remarkable Vegetable Products of the Museum of the Royal Gardens of Kew," Sir William Hooker has published a shilling pamphlet, which, besides the more strictly scientific details connected with the botany of the most interesting of

the contents of the Kew Museum, also contains, in a condensed form, many curious and notable particulars with respect to them, whether as to their practical utility, superstitious or poetical ideas regarding them, or their peculiar formation, mode of growth, &c. so that the whole forms an excellent and much wanted guide to the curiosities of the very interesting museum at Kew.

The British Flora, comprising the Phænogamous, or Flowering Plants and the Ferns. Second Edition, with Additions, numerous Figures, &c. By Sir WILLIAM JACKSON HOOKER and GEORGE A. WALKER ARNOTT. London: Longman and Co.

THIS is an elaborate, condensed, and strictly scientific work of 618 pages, and of a very different class from the above. To all interested in grasses, as of meadows and pastures, or in weeds in general, and in hedges and ditches, woods, fields, moors, hills, rocks, bogs, and ponds, &c. this work must be very useful, as well as to botanical students in general.

Architectural Sketches in Italy. By T. C. TINKLER, Architect, 10, Great Marlborough-street, London.

MR. TINKLER has now completed his work, comprising villa outlines, doorways, gateways, candelabra, and other matters, on twenty-four large tinted plates, which he gives for a guinea and a half. It will be found suggestively useful.

VARIORUM.

LORD ARTHUR HERVEY, in a short pamphlet,* suggests that the universities should supply lecturers for the counties adjoining, to be called *rural* or *circuit professors*, by which means "we might look forward to having the population of the whole of the United Kingdom brought within reach of the best instructors which the country can afford, and a large amount of useful knowledge and sound sentiment diffused." ——"The Unity of Science" is a pleasant rhapsody, by Mr. William M'Cormac, read before the Queen's College Literary and Scientific Society, at Belfast. "Science," says the writer, "is not individual, is not solitary. Science is an estate given to man to cultivate. He farms off a portion here and a portion there; raises now this crop, now that; yet it is still one and the same estate." He would say that a general knowledge of all the sciences should be obtained by those who would obtain supremacy in one. —— "Plan for a Female College," by the Rev. F. D. Maurice,† is the substance of a lecture delivered at the Working Men's College, Red Lion-square, to a class of ladies. The objects the projectors have in view will be shown by mentioning the subjects of a course of lectures which have been commenced. They refer to dispensaries; to the treatment of surgical patients in hospitals; to different employments, and their effects on health and character; to the bearing of physiology on the mind as well as the body, and the way in which it may be studied; to the household economy of the poor; to district visiting, to hospital visiting, with reference to the spiritual condition of the patients; to the teaching of children in schools, and to the teaching of adults; to the condition of country parishes; to sanitary laws; and to other laws which affect the condition of working people. ——In Dr. Stenhouse's lecture "On the economical Application of Charcoal to Sanitary Purposes,"‡ he urges that charcoal being so powerful an oxidiser, it is manifestly injudicious to incorporate it with manure which is not to be immediately applied to the ground. For no sooner are the manure and charcoal in contact, than a species of low combustion ensues, and the manure is soon greatly deteriorated. "Notwithstanding this very obvious objection, this is the very process which a Company, called 'The Health of Towns' Improvement Institute,' established in Dublin, is constantly recommending. They propose that the whole of the offal from Dublin and other large cities, instead of being run into the common sewers, as at present, should be collected and mixed with peat charcoal. To say nothing of the enormous expense of such a proceeding, the deterioration which the manure undergoes would of itself, in my opinion, be a serious if not a fatal objection to their scheme."——"Every Boy's Book" is not a misnomer, for it is addressed to boys of all minds and dispositions, giving, in addition to information as to all sorts of games and athletic exercises, inducements to look to natural history, chemistry, pneumatics, and other sciences, for enjoyments.* Out of the boys of to-day must be made the statesmen, governors, and teachers of to-morrow; and when it is remembered that if you do not give boys something good to do, they will do something that is not good,—they must be doing;—that if you do not find them healthful, and innocent, and elevating amusements, they will make amusements for themselves that may not be either,—the value of such a book as this is at once seen.

* "Every Boy's Book." By Geo. Forrest, M.A. London: Routledge and Co.

Miscellanea.

ST. MARY'S, STOKE NEWINGTON.—On the 9th inst. the rev. the rector stated "that a sum of about 5,000*l.* had been collected towards defraying the cost of the new church, and a further sum of 4,000*l.* was required It was intended to be a solid lasting edifice, and could not be expected to spring up like a mushroom, as too many of the buildings of the present day do. However, it behoves the subscribers to have a definite understanding as to the arrangements that have been made with the builder—whether he has been limited to time and cost, and whether any contract has been entered into with him. Very few men are employed on the works, and they are sometimes standing still for want of stone. A number of stone sleeper blocks from the railways are being used in the foundations.—AN INHABITANT.

LEEDS MODEL LODGING HOUSE AND MECHANICS' HOME.—From a circular letter, it appears that there has been a falling off in the number of lodgers at these institutions during the past year, ending 31st March, 1855, of 4,500, and that the receipts only leave a balance of 41*l.* 9s. 9d. instead of 126*l.* 1s. 4d. Mr. Denison, the founder of the institutions, believes from returns in the possession of his superinteadent, that the decrease arises from the absorption into the militia and the regiments of the line of that class who avail themselves of such institutions, and he has issued the circular letter alluded to, addressed to chief constables of the principal towns in the kingdom, requesting a return of the number of lodgers in the model lodging-houses of such towns for the years 1853-4 and 1854-5.

MR. MONTI'S THIRD LECTURE.—Mr. Monti, in his third lecture, dwelt briefly upon the art of sculpture in Greece at the most flourishing period, when it was divested of the forms imposed upon it by religious symbolism. The most beautiful and sublime in art, he argued, was the ideal which could only be attained after a lengthened study of nature. He traced the different tendencies that prevailed among former great sculptors and the various subjects and schools which they followed. He eulogised the Achilles of the Louvre, the Parthenon Sculpture, and the Venus of Milo. The lecturer, in conclusion, announced that he should continue the subject on a future occasion, when he would point out the *modus operandi* of the Greek sculptor. His object, he said, was not so much to teach his hearers his noble art, as it was to make it well known, and plant a just appreciation of it in the minds of the English people.

SALE OF METROPOLITAN ROADS.—The Commissioners of the Metropolis Roads have let the tolls on the turnpike roads north of the Thames for one year, from the 1st July next. Mr. J. L. Panter, chief clerk to the commissioners, put up the several lots. The first, the Brentford, Kensington, and Isleworth roads, let last year for 15,910*l.* were put up at 15,000*l.* and knocked down to Mr. Cary at 15,020*l.*: the Upper and Lower Divisions of the Tyburn and Uxbridge roads, let last year for 9,730*l.* were put up at 9,200*l.* and sold for 9,270*l.*: the Harrow-road tolls, let last year at 1,150*l.* were put up at 1,100*l.* and sold for 1,110*l.*: the Kilburn and Edgware-road tolls, let last year for 3,230*l.* 11s. 6d. were put up at 3,100*l.* and were knocked down at 3,150*l.*

FIRE-PROOF CONSTRUCTION.—Our attention has been directed to specimens of clay-pots and hollow bricks, used by M. Vabre, in forming roofs and floors, by a combination of wrought-iron girders, supporting flat arches composed of these pots and hollow bricks. The system is stated to have been successfully applied.

A HINT TO MECHANICS.—The Commissioners of Patents have presented a complete collection of their series of copies of specifications of patents, with descriptive plates, indexes of patents, and all other works printed by them (embracing a period from 1617 to the present time), to the Marylebone Free Library, 27, Gloucester-place, New-road, on condition that they should be available for gratuitous consultation, and the taking of notes or sketches, every day in the week, from ten in the morning till ten at night.

THE NEW HIGH-WATER LANDING-PLACE AT MARGATE.—This work is nearly completed by the contractor, Mr. Bastow, from the plans of Messrs. Birch, of London. The pier commences at the Droit-office. The width at entrance is 84 feet: this part is curved, and it gradually narrows to 20 feet. At a distance of 180 feet from its commencement it is supported on twenty-three cast-iron piles, 12 inches in diameter, driven on an average 10 feet into the chalk. On the top of three cast-iron piles are placed seven wrought-iron girders 18 inches in depth, varying in length, being placed transversely according to the width of this part of the pier. On the top of these girders the timbers are placed, being 14 inches by 9 inches, running longitudinally, and on the top of these timbers is the platform. The pier-head is in the form of a parallelogram, 110 feet long by 45 feet broad, supported on fifty-seven screw piles, of solid wrought iron, 5¼ inches diameter, and 20 feet long. There are three landing-stages at the head, suitable for steam-boats at any time of tide. The staircase is in the middle of the head, 13 feet wide, of easy ascent and descent. The pier is 14 feet above high-water mark of ordinary spring-tides. The total length is 1,240 feet, giving a promenade of upwards of 30,000 superficial feet. The first pile was driven on 3rd May, 1853, by the chairman of the Pier Company, and the last pile was driven on 3rd March, 1855. The contractor has had difficulties to contend with: three months had scarcely elapsed after the signing of the contract, when materials advanced 30 to 50 per cent. labour as much, and freights 90 per cent.

THE SCOTTISH SOCIETY OF ANTIQUARIES.—The eighth meeting of the session of this society was held in their hall, at Edinburgh, on Monday before last. The secretary mentioned that he had received communications from the president, and from Colonel James, which gave every hope that the Ordnance Survey of Scotland would include all existing archæological remains. Mr. Spottiswoode of Spottiswoode called attention to the unfortunate condition in which St. Margaret's Well existed; and a committee was appointed with the view of endeavouring to get the state of this relic improved.

FRIGHTFUL EFFECT OF THE STUDY OF ART.—Mr. Chadwick, speaking of the female school teachers of the Government Schools of Art, in his last pamphlet, says—"The females have been so far advanced in mental power and influence as to have been lost to the service by matrimonial engagements obtained with exceeding rapidity. To avoid these losses, plainer candidates were selected for training, but they, too, have obtained preference as wives to a perplexing extent." Mere "blues" have no chance whatever against these ladies of all colours,—these Masters of Hearts!

AN AQUARIUM FOR BATH.—Mr. Charles Empson has been long advocating the construction of an aquarium in the gardens of the Royal Literary Institution, through which the tepid water from the hot springs finds its way from the baths to the Avon. The most eminent professional men have been consulted, and it is estimated that, for a very small sum, an aquarium for tropical rarities might be constructed, which would be superior to that recently added to the Royal Gardens at Kew. The experiment has been tried with complete success in a portion of the large tank in York-street. By taking advantage of Nature's gifts to them, all cost of heating would be avoided. And they have in Mr. Empson an excellent "guide, philosopher, and friend." We do not know of a more earnest and loving student of nature in all forms than this gentleman.

ARBORAL RECORDS OF BUILDINGS.—I think "T. P.'s" excellent suggestion in your last number should not be confined to ecclesiastical buildings. Why should not some of the finest monuments of the constructive skill of our age be thus transferred to our lawns? Take, for instance, the Menai Tubular-bridge. Plant oaks of sufficient distance apart in the width, and say 40 feet in the length; and graft the trunks of poplar trees (cut off close to the root), from one to the other horizontally, so as to form the four corners of a tube. It is not perhaps generally known that this mode of grafting will succeed, and the poplars draw nourishment through their connection with the oaks (beech would do as well), so as to give out their foliage. A little training is all that would be required, and I am sure future generations would thank us.—G. R.

PATENT STOWING, LOWERING, AND DISENGAGING APPARATUS.—On 9th ult. we noted the pressing necessity for the adoption of some new and safe, as well as speedy, mode of lowering ship-boats in cases of shipwreck and other casualties, whether in emigrant or passenger, mercantile or naval ships. We then instanced one new invention of the kind required, and now we have to note another, namely, Russell's patent davit and boats disengaging apparatus, for which Messrs. Troughton and Bevan, of Gravesend, are agents. By means of this apparatus it appears ships'-boats may be safely and speedily lowered even by one man, whether in the ship or in the boat. Without diagrams the mechanism—though seemingly quite uncomplicated, and not apt to get out of order,—cannot readily be described; but it has the opinion in its favour of such nautical authorities as Captain Bullock, R.N. Admiral Falcon, and many others. The apparatus, we believe, is already in use in a Sheerness steamer, called the *Queen*, and also in some Gravesend and General Screw Navigation steamers.

IMPROVED APPARATUS FOR DELIVERING MAIL-BAGS BY RAIL.—The *Liverpool Times* describes an apparatus, invented by Mr. T. Dalton, of Whitechapel, formerly a mail guard, for taking up and laying down bags from the mail trains, while going at their usual speed. This apparatus, according to the paper referred to, has many points of superiority to that at present in use; the principal advantage being the ease, celerity, and safety, to the contents of the bags themselves, with which the operation is managed

ENGLISH JURORS FOR PARIS EXHIBITION.—The Lords of her Majesty's Committee of Privy Council for Trade have appointed the following noblemen and gentlemen to act as jurors for the Paris Universal Exhibition:—For Fine Arts, Painting, Engraving, and Lithography—Division 2, Class 28.—Lord Elcho, Daniel Maclise, esq. R.A. Frederick Tayler, esq. and J. H. Robinson, esq. For Sculpture—Class 29.—R. Westmacott, esq. R.A. and W. Calder Marshall, Esq. R.A. For Architecture—Class 30.—Sir Charles Barry, R.A. and Professor Cockerell, R.A. For Glass and Pottery—Division 1, Class 18.—John Webb, esq.

BOILER EXPLOSIONS.—We have had various lengthened communications on this subject, which our limits prevent us from giving, except in a very brief form. Mr. S. C. Gant, C.E. of Merthyr, is of opinion that nine-tenths of such explosions arise simply from "a deficiency of water in the boiler, by which means a portion of the inner tube becomes weakened by being over-heated, when a collapse almost inevitably occurs, and the water coming in contact with the fire, or over-heated metal, the pressure of steam is instantaneously increased to an enormous extent, thereby producing the 'strange force' mentioned." Mr. Gant feels convinced that, if proper attention were paid to the "feed," explosions would be of very rare occurrence. "An Analytical Chemist" deprecates (as we not long since did) the reference to "electricity" as an explanation of every obscure phenomenon, although he agrees with us in regarding it as one of the most important forces in creation, if we only understood it aright. Boiler explosions, he thinks, have nothing directly or specially to do with electricity. The mere evaporation of water, he remarks, does not evolve it, although wet steam in the act of escaping does so, and the more rapidly the escape, the more intense the electric evolution, as, indeed, the astonishing force of Armstrong's hydro-electric battery clearly shows, the steam being positive and the boiler negative. Neither wet steam nor insulated boilers, however, are in ordinary use; and, besides, it is before any steam has issued that it is supposed to evolve electricity as a cause of explosion. Boiler explosions, continues our correspondent, are occasioned by either thinness of boiler, as when old and worn, carelessness in allowing pressure to accumulate, or, as in 75 per cent. of such casualties, lowness of water, and undue heating of boiler tubes, suddenly converting a new "feed" of water into steam of great pressure. It has even been supposed, we may add, that in such a case water may be actually decomposed into its elements, the oxygen being fixed in the iron while the hydrogen expands with irresistible force into the gaseous form, and bursts the boiler.

ST. ALBAN'S ARCHITECTURAL AND ARCHÆOLOGICAL SOCIETY.—The tenth anniversary meeting of this society was to be held at the Town-hall, St. Alban's, on the 19th inst. The chair to be taken by the Earl of Verulam, President. A paper was to be read by Prof. Donaldson, on "The Palaces of the Louvre and Tuileries, Paris."

DEATH FROM WANT OF DRAINAGE.—An inquest was held lately at Stalham, in Norfolk, on a child of two years, who had suddenly died there, finds a verdict to the effect "that the child died of spasmodic cholera, produced by the foul state of the yard where the child resided."

"HEAT WITHOUT FUEL."—At p. 75 of the fifth volume of the *Builder* (1847), we suggested, in an article titled, "Heat without Fuel," that by means of friction sufficient heat might probably be excited wherewith to produce steam, wherewith to continue the friction, and that it would then become a question whether or not a surplus of steam power might thus be obtained, wherewith to do other and less fruitless work than merely to evolve the heat necessary to produce the steam. Our main purpose, we confess, however, was to suggest, in scarcely a very serious way, something like a less absurd or less unfeasible idea of perpetual motion than ordinary. We now refer to the article in question, for two reasons;—first, because, happening to fall on it more easily than many suggestions in our columns not specially indexed and hence very troublesome to hunt out, we, by pointing specially to it, thereby dislocate the sneering apparatus of those who seem to think we have no right to remind our readers of our own suggestions, or to claim as our own what was subsequently appropriated, it might be, by the pretended sneerers themselves, as *their* original suggestion (although for all that we know, in the present instance, others may also have originated the suggestion quite independently and even previously to ourselves); and secondly, because we recently noted the following paragraph in *Galignani's Messenger*: "*Heat without Fuel.*—The problem of acquiring heat without fuel appears to have been solved by the invention of the machine of MM. Beaumont and Mayer, with which, by means of friction alone, they can make water boil. The machine, which may be seen at work at their establishment on the Quai Valmy, contains 400 litres of water, which is made to boil in two hours. A cone of wood, which turns in a cylinder so as to produce the necessary friction, is covered with tow, and that tow, in order that it may not catch fire, is kept constantly moistened by a stream of oil which runs on it. The heat gradually increases, until at last steam is generated."

DEPARTMENT OF ART.—An exhibition of the advanced works of the students in the metropolitan and provincial schools of art has been recently opened at Gore House. The award of medals has not given satisfaction. One correspondent says,—"The life-class in the metropolitan school, and study of anatomy, as well as the time-sketches of ornament, are all classes in which there are several models and therefore a competition, but in neither of these is there an award. Now, as the medal is to reward comparative merit, it is evident that these classes have been slurred for some unknown reason."

MONUMENT TO O'CONNELL.—A numerously attended meeting was held at Limerick, lately, for the purpose of erecting a statue to the late Mr. O'Connell, in that city. A letter was read from Mr. Hogan, the sculptor, in which he proposed to execute a statue, 8 feet high, in Portland or Caen stone, for 600*l*. The subscriptions to be received will govern the committee in the character of the proposed statue.

COMPETITION AT VIENNA.—A prize of 1,000 ducats was offered some time since for the plan of a church to be erected as a thank-offering in Vienna. Sealed letters were sent in with the respective plans, and one with the sign of a white cross upon a blue ground was selected. When the letter was opened it was found to contain the name of Henry Ferstel, a native of Vienna.

BUILDINGS AT ADELAIDE.—The new city bridge erecting under the supervision of the Government architect, by Messrs. McClure and Hinckley, is in progress. The superstructure was expected by last accounts from England. It is of wrought-iron, on the bow-string principle, and 100 feet in span. Government House is being enlarged at a cost of some 6,000*l*. The present house will form the eastern wing. The Legislative Council Buildings are now approaching completion. The style of the new Council Chamber is Elizabethan. The building covers 990 square yards. "By some strange inversion," says the *Adelaide Observer*, "the Upper House is stuck down below." We suppose, however, that, with our antipodes, where summer is winter and cherries bear their pips outside and their pulp within, this is all right. As for the President, it adds, "the builders are instructed to knock up a bit of a room for him which was not included in the original plan." The Adelaide City and Port Railway is regarded as the most important public work at present in progress. Labour, by last accounts, was at a discount for a season, and on this account it was thought a favourable time to begin such works as those of the new Hospital, for which money had been voted, and the plans prepared. The foundation-stone of a new Wesleyan chapel was laid on 30th April last: it is to be of stone, and to accommodate 500 persons. Mr. William Hanson, who many years since was with Mr. Thomas Cubitt, and subsequently with Mr. R. Stephenson, has been appointed by Government engineer to the Gawler Town Railway Commissioners.

RAILWAY MATTERS.—The committee on the Westminster Terminus (Clapham and Norwood Railway) Bill, which is to provide a west-end terminus for the Crystal Palace traffic, near Victoria-street, Westminster, have decided that the preamble was proved.——The committee on the West London and Crystal Palace and Westminster Terminus Bill have reported that the parties promoting it state that it is not their intention to proceed with the same.——The *New York Post* says, that on the Hudson River Railroad is an experimental car, furnished with an apparatus for ventilation. The air enters into a large funnel in front of the car, whence it is made to pass directly into the interior through an artificial shower of water. The shower is produced by a motion communicated from the engine, breaking the water into drops, and keeping it in constant agitation. The cost of fitting up a car with this apparatus is said to be about 150 dollars—not more.

MONUMENTAL.—Mr. Richardson has just placed in Kensal-green Cemetery, a temple tomb of Sicilian marble, by order of Major-general and Mrs. Perry. It is near to the tomb of General Casement, on the other side of the centre drive. It stands 15 feet high, by 6 feet at the lower base. The inscription is coloured azure. The same artist has on view two military memorials for Madras.

RATEABILITY OF THE ELECTRIC TELEGRAPH COMPANY.—In the Court of Exchequer, lately, judgment was given in the case of "The Electric Telegraph Company *v.* The Overseers of Salford," to the effect that the company were liable to be rated, and that judgment must be given for the overseers. Judgment, with costs, was accordingly entered for the respondents.

PIPE ACROSS THE THAMES.—There is now in course of construction upon the line of extension of the water-mains of the Chelsea Water Works Company, a pipe aqueduct, crossing the Thames from Putney to Fulham, and supported upon Mitchell's Patent Cast-iron Screw Piles. The structure is sufficiently advanced to be interesting to the profession.

THE ROYAL TOMBS AT DUNFERMLINE.—Dr. Henderson has been destroying a popular error. He says, in effect, within the hallowed walls of Dunfermline Abbey were interred the mortal remains of eight kings, five queens, six princes, and two princesses of Scotland. Their once magnificent tombs have long since disappeared,—not a vestige of them remains to point out the site of the ancient original "Locum Sepulturæ Regium!" Tradition, from time immemorial, has pointed to a spot now under the floor of the north transept of the present modern church as being "the sacred ground where the royal remains were deposited;" and why does tradition point to this place? Probably, because there lay here uncovered, until the year 1818, six extraordinary large flat gravestones, arranged in two parallel rows; and, as it was long the popular belief that there were only six kings interred in the abbey, very likely at some remote period an inference might have been drawn that these "six stones" covered the remains of the six kings, and thus, in process of time, tradition would point to these stones in this place as being the undoubted "Locum Sepulturæ Regium." But never did tradition commit a more serious error. For ages tradition has been pointing to this spot as the royal burial-place. All the while tradition has been pointing to a myth, for the royal tombs were not here. The site of the ancient "Locum Sepulturæ Regium" was not in this place: it was before the altars in the church of "the Holy Trinity." At least, so says our authority; and we will not contradict him.

TENDERS

For the erection of a girls' school and teacher's residence in the parish of Holy Trinity, Windsor. Mr. George Porter, architect. Quantities supplied.

Titcomb, Clewer	£1,050	0	0
E. Brown	1,045	0	0

Brown	1,175	0	0!

TO CORRESPONDENTS.

"*Pitch of Roofs.*"—What is the lowest pitch of roof which can be with safety, as respects water-tightness, covered with common Welsh slates 24 inches long? Pitch is understood to mean a certain proportion of the span, for example 60 feet span with a rise of 7 feet 6 in. would be an 8th pitch. Where has an 8th pitch been executed?—A. B.

"J. P." (simply repeats what has been already asserted in our pages.)—"G. R. W."—"J. M. and Co."—"Mr B" (will appear).—"S. S. M."—"W. R." (under our mark.)—"F. A." (title).—"W. W." (cost would be regulated by size, position, &c. and would vary considerably).—"B. W."—"G. S."—"J. B."—"H. E. sen." (we are forced uniformly to decline).—"J. R. V."—"H. C. H."—"A. M." (shall have attention).—"H. M." (thanks).—"T. G."—"Competitor, Dudley Workhouse."—"R. G. F."—"A."—"T. H."—"W. R."—"S. D."—"J. V."—"J. H." (the mode of forming iron houses is not yet so perfect as to lead us to advise the substitution of them for buildings of stone in this country).—"G. B. N."—"D. B."—"An Architect."—"Hall v. Owen" (some facts are wanting to make the report useful).

"*Books and Addresses.*"—We are forced to decline pointing out books or finding addresses.

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the EDITOR, and not to the Publisher.

ADVERTISEMENTS.

TO PARENTS AND GUARDIANS.

AN Eminent Architectural Firm, in a large manufacturing district, in one of the midland counties, have now a VACANCY in their Offices for an OUT-DOOR ARTICLED PUPIL, possessing a good address, and having a taste for drawing; to whom will be afforded peculiar opportunities and advantages.—Address to A. & B. Office of "The Builder."

AN Architect is in immediate WANT of a good practical DRAUGHTSMAN, well acquainted with detail, that can measure builders' work, and take out quantities. Unexceptionable testimonials required.—Apply, stating terms, &c. to Mr. WILSON, 1, Belmont, Bath.

APPRENTICE.—WANTED, to APPRENTICE (in-doors preferred) to a Mechanical Business, Pattern-making, or some such, a strong active YOUTH, in his 15th year. Premium moderate.—Address, H. CROUCH, Brunton's-place, Commercial-road East.

TO PARENTS AND GUARDIANS.

A CIVIL ENGINEER and LAND SURVEYOR, of twenty years' practice, largely engaged under Government, has a VACANCY in his Office for a well-educated YOUTH, as a Pupil. Premium moderate.—Address, BETA, Messrs. Waterlow and Sons, 49, Parliament-street, Westminster.

OFFICE LAD WANTED, in an Architect's Office, who can write a good hand, trace drawings, and would make himself generally useful.—Apply, in own handwriting, with salary required, to ARCHITECT, 6, John-street, Adelphi.

FOREMAN of EXCAVATORS.—Wanted, a steady Man, as FOREMAN; one who understands tunnelling will be preferred. Salary, 2*l.* per week.—Apply, by letter only, stating where and by whom last employed, how long, and on what description of work, addressed to ALPHA, at the Office of "The Builder."

TO SURVEYORS AND ENGINEERS.

WANTED, a Person to discharge the duties of SURVEYOR and INSPECTOR under the Gloucester Board of Health, including the management of the roads and streets, and the overlooking of the Public Sewerage Works, now nearly completed, and the superintendence of the private house drains to be made in connection therewith, and the performance of other duties under the Local Board, and also the superintendance of the existing waterworks, and of new works when completed. Also to fulfil the duties of CHAMBERLAIN of the city, and generally, to take charge of, and manage the corporate estates, subject to the directions of the Town Council and their committees. Two sureties in 500*l.* will be required. Salary for the two offices combined, 250*l.* per annum. An assistant will be provided at the expense of the Board. Particulars as to the duties required may be had on application by letter to Mr. A. H. JENKINS, Town Clerk, or Mr. R. H. FRYER, Clerk to the Local Board of Health, Gloucester, to whose office written applications from candidates must be sent on or before the 2nd day of JULY next, under cover, addressed to "The Gloucester Board of Health," marked "Surveyor's Tender." An intimation will be given at a future time to such candidates whom the Board may desire to attend personally.

WANTED, a Young Man in a Surveyor's Office in the country; he will be required to make drawings occasionally, and assist in the usual routine of a Surveyor's Office. Board and lodging to be considered equivalent for his services. For further particulars, address, H. P. at Cotes's Library, 139, Cheapside.

TO GAS-FITTERS.

WANTED, a FIRST-RATE HAND to go abroad, for three years certain.—Apply, with testimonials as to character and ability, to Messrs. WM. BIRD and CO. 5, Martin's-lane, Cannon-street, London.

TO BUILDERS' CLERKS.

WANTED, by a London Firm, a respectable YOUNG MAN, who is a good plain draughtsman, and can assist in the general duties of the office.—Address, stating age, particulars, and salary required, to L. M. Office of "The Builder."

WANTED, three miles from London, in the office of a PLUMBER, PAINTER, and BUILDER, a YOUTH, from 16 to 18 years of age, competent to keep books by double or single entry. One that has filled a similar situation preferred, as no other is kept.—Address, stating age, qualification, and salary required, to Mr. OLIVER PITTS, Plumber, &c. Waltham-green.

WANTED, an APPRENTICE, by a Staircase Hand, in good practice. References given and required.—Apply by letter to C. D. at Mr. Griffin's, Stationer, Hampton-terrace, Camden-town.

WANTED, for the neighbourhood of Paddington, in an Architect's and Surveyor's Office, a well-educated YOUTH, who has followed the profession, and has made himself generally useful. Full particulars of capabilities &c. to be addressed, post-paid, to R. S. care of Mr. Reeves, 3, Chiltern-road, Maida-hill, Paddington.

WANTED, during the alteration and enlargement of a mansion, a practical FOREMAN. He must be competent to take charge of the several works, and be thoroughly acquainted with the departments of each trade. A good joiner is indispensable; and if the person appointed should suit the advertiser, the situation may be permanent.—Apply by letter, post-paid, inclosing testimonials, to Mr. TOWNSEND, Engineer and Surveyor, Shrewsbury.

WANTED, by the Advertiser, a Situation as UNDER FOREMAN, or UNDER CLERK of WORKS.—Address to E. D. F. at the Office of "The Builder."

TO BUILDERS AND MASTER PAINTERS

WANTS a SITUATION, a middle-aged Man, of sober and active habits, as SHOPMAN, or any other place that he could make himself useful. Served a regular time to the trade, and conducted several jobs. As constant employment is his object, his terms will be very moderate.—Letters addressed H. I. K. at the Office of "The Builder," will be respectfully attended to.

TO BUILDERS AND OTHERS.

WANTED, a SITUATION (for the whole or part of his time), by a BOOKKEEPER and Building Trades PRICING ACCOUNTANT, of experience in extensive town and provincial works. No objection to the country or foreign parts.—Address, A. B. Mr. Vaughan's, Bookbinder, 31, Southampton-street, Pentonville.

TO PLUMBERS AND BUILDERS.

WANTED, by the Advertiser, a permanent SITUATION as PLUMBER, is well experienced, either in the jobbing or building trade; is also a good gasfitter.—Direct to M. C. Office of "The Builder."

TO ARCHITECTS AND BUILDERS

WANTED, a RE-ENGAGEMENT as CLERK of WORKS or FOREMAN, by a person of experience. Has first-rate testimonials from either of the above situations. No objection to the country. Address, A. Z. 31, Titchbourn-street, Edgware-road, London.

WANTED, by a Young Man, who has been articled to a Builder three years, a SITUATION, where, in addition to a moderate salary, he could obtain general practice and information.—Address, C. Post-office, Rugby.

WANTED, a SITUATION as CLERK of WORKS, or FOREMAN over Carpenters and Joiners, where an extensive business is carried on, by a person who has had twelve years' experience as foreman, and in the superintendence and estimating of buildings generally; also in preparing masons and joiners' details, and an expert draughtsman. Unexceptionable references given.—Address, stating salary, to J. B. care of Mr. R. Nickson, Joiner, Albert-street, Middlesbrough-on-Tees.

TO BUILDERS AND OTHERS.

A YOUNG MAN is open to an ENGAGEMENT in a Builder's Office, who has filled a similar situation with London builders for some years.—Address, A. B. 70, Tatchbrook-street, Pimlico.

WANTED, a SITUATION as CLERK of WORKS; is well experienced in all the branches of building, can make plans, working drawings, &c. and has unexceptionable references from previous engagements.—Address to C. D. 6, Little St. James's-street, Pall-mall.

TO PLUMBERS AND BUILDERS.

WANTED, a SITUATION as PLUMBER, or to take the three branches, if required, or to take new buildings to do the plumbing, &c. Has had great experience in new and jobbing work. Good reference.—Address, A. B. 21, Draytou-road, Ledbury-road, Bayswater.

TO BUILDERS &c.

WANTED, a SITUATION, as in or out of doors FOREMAN, by a respectable man, 35 years of age; is a good joiner. Can make plain and working drawings, take out quantities, &c. Apply, by letter, pre paid, A. B 96, Tyer's-street, Vauxhall, London.

TO BUILDERS AND OTHERS.

WANTED, by a sober, industrious Man, a Plasterer, a SITUATION as WORKING FOREMAN, or to take PIECE WORK, in town or country. Can be well recommended.—Direct to A. B. 36, Eccleston place, Pimlico.

TO BUILDERS AND PLUMBERS.

WANTED, a SITUATION as THREE-BRANCH HAND, by a Young Man aged 28. Has been fourteen years in the business.—Address, H. K. 118, Borough-road, Southwark.

WANTED, by a Young Man, a SITUATION, or PARTIAL EMPLOYMENT as Bookkeeper in a Civil or Practical Engineer's Office. Satisfactory references will be given.—Address to J. W. Office of "The Builder."

WANTED, by an experienced Person, 33 years of age, a SITUATION to MANAGE the BUSINESS of a JOBBING BUILDER, or to keep books and superintend workmen. He is a joiner by trade.—Address, B. D. Office of "The Builder."

THE Friends of a well-educated YOUTH are desirous of PLACING him with an ARCHITECT and BUILDER where a moderate premium will be required. He having a decided taste for the above business, would soon render himself useful to his employer. References required.—Address, stating full particulars, to X. Y. Z. Post-office, Whittlesea, Cambs.

THE Advertiser, who has been six years in the profession, wishes for an ENGAGEMENT with an ARCHITECT and SURVEYOR in good practice, at a small salary.—Address, T. H. S. Office of "The Builder."

TO ARCHITECTS AND ENGRAVERS.

THE Friends of an orphan Youth, 16 years of age, are anxious to obtain him EMPLOYMENT. He is of steady, gentlemanly habits, and has a taste for drawing.—Address, E. D. Post-office, Dulwich.

TO HOUSE DECORATORS.

THE Advertiser, who thoroughly and practically understands his business, is desirous of a SITUATION as FOREMAN or MANAGER. He is at present foreman of a large establishment, can measure, abstract, bill, and estimate, make plans, drawings, &c.—Address O. S. 21, Denbigh-terrace, Westbourne-grove West, London.

TO the PROFESSION GENERALLY.—Two Gentlemen, with about fifteen years' experience as Architectural Assistants and Principals in some of the first London Offices, having carried out on their own account several works, both private and public, are about COMMENCING BUSINESS. From their long experience, combined with a varied practice, they are enabled to undertake any description of work entrusted to their care. Their terms will be found to offer peculiar advantages to architects, engineers, and surveyors. Provincial architects can have their designs, working drawings, and specifications prepared with economy, punctuality, and despatch. The highest testimonials and references can be submitted.—Address to H. H. 38 Old Bond-street, Piccadilly.

THE Advertiser having just completed a job, has some surplus labour, which he is desirous of employing, and would be glad to a timate for any quantity of plumbing, painting, or glazing, in town or country. Any party requiring work done would find this worthy their notice.—Address, T. STANWAY, 10, Dorset street, Portman-square.

TO BUILDERS, CARPENTERS, AND OTHERS.

THE Advertiser (aged 24), who has been working at the trade six years, wishes for permanent EMPLOYMENT. Wages not so much an object as a better insight of bench-work.—Address, C. D. Office of "The Builder."

TO ARCHITECTS.

THE Advertiser, a good draughtsman, accustomed to prepare working, detail, and perspective drawings, a fair colourist, and possessing a knowledge of levelling and surveying, is open to an ENGAGEMENT. Salary moderate.—Address to F. R 17, Great Carter-lane, Doctors'-commons.

TO PLUMBERS.

IT is desired to APPRENTICE a BOY, aged 15, whose father died in the Crimea, to a respectable man in the above business. A small premium will be given.—Address, PATRIOTIC FUND, 18A, Great George street, Westminster.

TO LAND AND ENGINEERING SURVEYORS.

A YOUNG MAN, of some experience in the profession, and a good draughtsman, is desirous of an ENGAGEMENT.—Address to Mr. J. WINDER, Greenhill, Harrow.

TO BUILDERS.

A GENTLEMAN requires a RE-ENGAGEMENT as COUNTING-HOUSE CLERK and BOOKKEEPER; he is a thorough accountant, possesses a knowledge of business generally, and is qualified to take the super attendence of a Builder's Office, having had a similar situation for the last two years, where reference will be given as to character and ability.—Address, J. D. Office of "The Builder."

TO GILDERS.

A YOUNG MAN, who has served four years to the trade, wishes to ENGAGE himself for a year or two, for improvement. No objection to country.—Address, J. M. 21, Hatton-garden.

AN INSPECTOR or FOREMAN, who has had experience on railways, and has been engaged for the last 4½ years in public and private drainage works, under a local board, wishes for a similar SITUATION. Can give good reference.—Address, J. F. care of Mr. Pearce, 1, Albion-place, St. Sidwell's, Exeter.

A FRENCH GENTLEMAN, an Architect, who has just published a work on Architecture, and has another nearly ready, is desirous of meeting with a Partner or other interest in an Architect's office. Being a clever draughtsman, his knowledge of general drawing, mouldings, mathematics, and natural science, would be of some advantage if pupils were kept.—Address, by letter, Mr. STAPLEY, 20, Cannon-street, City.

TO ARCHITECTS.

AN Artistic Colourist, Draughtsman, and Designer OFFERS his SERVICES in the Preparation of Perspective Views, with landscape and figures, also in general Drawing, on moderate terms.—Address, A. Z. 61, Denbigh-street, Belgravia.

TO CARPENTERS, &c.

A YOUNG MAN, who may have served a part of his time, and wishes for improvement, may hear of an opportunity in one of the first shops in London, by addressing S. M. Office of "The Builder."

A GOOD DRAUGHTSMAN and COLOURIST is desirous of an ENGAGEMENT in an Architect's office. Salary not so much an object as improvement.—Address to L. M. N. Office of "The Builder."

AN ARCHITECT'S ASSISTANT, thoroughly qualified to prepare finished, detailed, and perspective drawings, take out quantities, and write, is practically conversant with construction, wishes for EMPLOYMENT on moderate terms.—Address, E. F. A. Office of "The Builder."

TO CONTRACTORS.

A SUPERINTENDING CLERK who has recently completed some drainage and waterworks, and is well conversant with the construction, and details of such works in all branches, wishes to meet with an ENGAGEMENT. The most satisfactory references can be given.—Address, C. C. L. 13, Kennet-road, Reading.

AS RESIDENT ENGINEER or SUPERINTENDENT of WORKS.—A Gentleman having just completed a two years' engagement on the Continent, is desirous of a RE-ENGAGEMENT. He speaks German, and can give satisfactory references.—Address, SALISBURY, Post-office, Southampton.

AS GENERAL FOREMAN, or CLERK of WORKS.—A good practical Man is desirous of an ENGAGEMENT as above. Good references can be given.—Address, W. Z. 3, Cumberland-street, Charles-street, Middlesex Hospital, Marylebone.

TO ARCHITECTS.

A GOOD and Expeditious DRAUGHTSMAN, who is perfectly capable of getting up working and finished drawings, perspectives, &c. is a good colourist, and understands the routine of an Office, is desirous of meeting with an ENGAGEMENT. Terms moderate.—Address, C. B. R. 132, Great College-street, Camden-town.

TO BUILDERS AND OTHERS.

A GENTLEMAN wishes to EXCHANGE a compact ESTATE of WEEKLY HOUSES, producing 80*l.* per annum net, for a PAIR of COTTAGES, held at low ground-rents of the same value, namely, 70*l.* in a north or north-west suburb of London, and within ten miles preferred.—Address to A. M. at the Office of "The Builder."

TO ARCHITECTS, &c.

AN experienced DRAUGHTSMAN is desirous of a RE-ENGAGEMENT. Has been accustomed to prepare finished, working, and detail drawings, both in Italian and Gothic; perspectives, &c. Satisfactory testimonials. Salary moderate.—Address, C. M. 1, 1, Britannia-place, Worcester.

TO CARPENTERS AND BUILDERS.

A YOUNG MAN, aged 21, wishes Employment, where he could improve himself, would not object engaging for a term. Bench preferred. Address, J. B. No. 38, Gloucester-street, Queen-square, Bloomsbury.

AN efficient MEASURING CLERK is open to an ENGAGEMENT. No objection to partial employ. Good references.—Address, W. T. Office of "The Builder."

PARTNERSHIP.—To ARCHITECTS and SURVEYORS.—WANTED to PURCHASE a SHARE in a well-established BUSINESS; a country practice preferred.—Address, post-paid, to F. Office of "The Builder."

This Office will be found highly eligible for every description of Life Assurance. Its main features are the publicity of its accounts, and the systematic readiness of its transactions.
Perfect security is guaranteed by an ample paid up capital, subscribed by persons of the highest character and respectability.
Policies may be effected without loss of time, formalities being carried through at the office every day.
Although the principal portion of the Society's Policies are upon first-class lives, its peculiar feature consists in the Assurance at equitable rates, of lives of individuals of regular and temperate habits, but in whom health may be more or less impaired.
Policy-holders may obtain loans on real or good personal security. The Directors have advanced upwards of 175,000l. to the members since July, 1848.
N.B. Active and influential persons will be appointed as Agents on liberal terms, in districts where the Society is not already represented. EDWIN JAMES FARREN, Secretary.

ACTUARY. Samuel Brown, esq.

LIFE DEPARTMENT.—Under the Provisions of an Act of Parliament, this Company now offers to future insurers four fifths of the profits, with quinquennial division, or a low rate of premium, without participation of profits.
The next division of profits will be declared in June, 1860, when all Participating Policies which shall have subsisted at least one year at Christmas, 1859, will be allowed to share in the profits
At the five divisions of profits made by this Company, the total reversionary bonuses added to the policies have exceeded 2,000l
At Christmas last the Assurances on force amounted to upwards of 4,250,000l. the income from the Life Branch in 1854 was more than 150,000l. and the Life Assurance Fund (independent of the Guarantee Capital) exceeded 1,700,000l.
FOREIGN RISKS. The extra premiums require l for the East and West Indies, the British Colonies, and the northern parts of the United States of America, have been materially reduced
INVALID LIVES.—Persons who are not in such sound health as would enable them to insure their lives on the ordinary premiums, may have their lives insured at extra premium rates.
LOANS granted on Life Policies to the extent of their values, provided such Policies shall have been effected a sufficient time to have attained in each case a value not under 50l.
ASSIGNMENTS OF POLICIES Written Notices of, received and registered
MEDICAL FEES paid by the Company, and no charge will be made for Policy Stamps
Notice is hereby given, That Fire Policies which expire at Midsummer must be renewed within fifteen days at this Office, or with Mr. SAMS, No. 1, St. James's-street, corner of Pall-mall; or with the Company's Agents throughout the Kingdom, otherwise they become void
Losses caused by Explosion of Gas are admitted by this Company.

NATIONAL PROVINCIAL PLATE-GLASS INSURANCE COMPANY.—Chief Office, 37, Ludgate-hill. The directors call the attention of Architects, Builders, and consumers of plate-glass, to this company, beg to point out the superior advantages it possesses over other companies of a similar character, namely, in guaranteeing glass against accident by breakage, this company agrees, in the event of a claim, that the glass so destroyed, shall be replaced with glass identical in quality and manufacture with the original. And as an inducement to carefulness on the part of the insured, a particular clause in the policy will be allowed, where no accident shall have occurred within a stated period. The rates for insurance charged by this company are so moderate as to enable all persons to avail themselves of the security here offered, against the many accidents to which plate glass is liable. Agents wanted
THOMAS DRAKE, Manager.

Offices (pro tem.) Bond Court-house, Bond-court, Walbrook.
East Cowes Park is within three or four hours' journey from London, and comprises 146 acres, forming a gradual ascent of about 60 feet from the sea, which it have l ave sold to her Majesty, who usually proceeds through the estate from Trinity Pier direct to the Royal Lodge at Osborne. It has been expensively laid out, roads made 66 feet wide, bordered planted, about three miles of iron palisading fixed, with gates, &c. good drainage, and an arboretum or pleasure ground of 22½ acres formed in the centre. Several mansions, villas, and dwellings have been erected, which, with other sources, produce a large annual income, leaving the greater portion of the estate available for beneficial operations. It has a good water supply, containing several acres of wood, a useful stone quarry, gravel, sand, and grit, the lower part abounding with coloured clays of great depth, in strata varying from pale white t deep c l oured clays of great depth, in strata varying from pale white t deep c l oured clays of great depth, in strata varying from pale white to deep crimson, and has a water frontage for vessels of large tonnage. An expensive kiln, pug mill, buildings, and machinery have been constructed, and supplied with coke, fuel and other tiles, drain-pipe, terra cotta, &c manufactured.
It is proposed to purchase and improve this property on the sound and accumulative principle of Time and when its lives only remain the fortunate owners so surviving will take the whole absolutely. Meanwhile the income already considerable, will be divided annually among the proprietors during their own or their nominees' lives.
As an investment this mode is both safe and eligible, with the certainty of immediate return and a yearly increasing income afterwards, besides the chance of final survivorship. The return of the capital, also, in case of early demise, might at a small outlay be secured by effecting a life insurance. To heads of families the system affords easy means of providing for children, and in arrangements for persons benefit it has the advantage of a progressively increasing income and existing interests always disposable by deed or will.
A detailed Prospectus, with plan, and form of application for subscriptions, may be obtained at the Offices, Bond Court House, Walbrook, where manufactured specimens of the clay produce may be inspected, and every information obtained.

FORM OF APPLICATION.
To the Committee of Management of the East Cowes Park Tontine.

Monday Evening, June 25th, Lecture on Astronomy, by Dr Bachhoffner, at Eight o'clock. Diorama of Siam Sketches &c.

ST. MARTIN'S HALL, LONG-ACRE.—GRAND PANORAMA of CREATION, SCIENCE, and CIVILIZATION, will be opened on or about time only on MONDAY NEXT, developing a series of Pictures, designed for the Millions, and New Homes for the People Daily at THREE and EIGHT. Monday mornings only excepted, doors open half an hour previous. Admission, One Shilling; Reserved Seats, 2s.; Stalls, 3s. Children, half-price. Mondays, Half-price for all parts.

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London made instruments, and considerably cheaper.—Apply to Mr. S. BARLOW, 3, Thavies-inn, Holborn (between 11 and 3 p.m.); or to Mr. H. E. BARLOW, Office for Patents, Ducie-place, Exchange, Manchester.

TO ARCHITECTS.
COMPETITION and other DRAWINGS.—Mr. THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Antwerp," &c and of "London as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS, 33, Albany-street, Regent's-park.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors &c For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural and Civil Engineering, Drawing, and Colouring. Maki g Finished and Working Drawings, Preparing Specifications, Taking out Quantities, Estimating, &c. &c. Terms: Day Pupils Three Guineas per Quarter; Evening Pupils, One Guinea per Quarter, which includes Drawing Boards, T Squares, Plans, Drawings, Models, &c. For Prospectuses apply at the Offices, 24, Guildford-street, Russell-square.

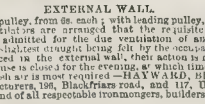
J. MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Stamford-street, Lambeth. Shop-fronts, fittings, staircases, &c. Well-seasoned materials and superior workmanship, at the lowest possible prices. A quantity of doors and sashes always in stock.—By enclosing a postage-stamp, a full list of prices will be returned.—Workshops, 100, Broadwall.

J. FISHER, 70, YORK-ROAD, LAMBETH, formerly shop foreman to Messrs. Lawrence. Shop-front Builder and Manufacturing Joiner. 1¼ and 1½ four-panel doors from 8s. each; 1¼ sashes and frames from 7d. per foot; 9 inch ditto from 8d. Windows fitted with Gribbon's Patent Hinges for cleaning, painting, &c. All kinds of joiners' work estimated for according to design.—A List of Prices sent on application.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at 1s. per foot super. Together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 2, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the ascension and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 60, 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, Whitehall Wharf, Cannon-row, Westminster.

PURE WATER.—The attention of Boards of Health, Water Companies, Engineers &c. &c. is particularly requested to a newly-invented PIPE for CONVEYING WATER, which possesses most important advantages. It can be made strong enough to resist any pressure, is comparatively flexible, easily joined, has great power of resisting the effect of frost, and what is of still higher consideration, is perfectly innocuous. This combination of desirable properties is produced by lining leaden pipes with cutta percha.—Further information may be obtained on application to the Patentees, Messrs STOCK and SON, Lead Works, Birmingham; or to the Gutta Percha Company, 18, Wharf-road, City road, London.



DAYLIGHT REFLECTORS. — GREAT NOVELTIES.—The Profession is hereby informed that Messrs CAPPE and Co. of 45 Skinner-street, Snowhill, London, are the Manufacturers of the ERIDGE never granted for DAYLIGHT REFLECTORS To this they have added two subsequent Patents of their own, embracing all the recent improvements down to the latest date. Messrs CAPPE and Co forward estimates, plans, &c. as usual, free of charge. The profession is warned that these are the only Reflectors which can with safety be recommended for adoption, as they never tarnish or become discoloured. The usual liberal allowance to architects, builders, decorators, c

VENTILATION.—PURE AIR.
Sheringham's Ventilator for the admission of pure air through an

EXTERNAL WALL.
With single pulley, from 6s. each; with leading pulley, from 6s. 6d.
These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole manufacturers, 196, Blackfriars road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

VENTILATION.

D. and E. BAILEY beg to call the attention of Architects and others to their improved
CIRCULAR ARNOTT VENTILATORS,
which are more sightly than the square ones in general use, much less liable to get out of order, and the flaps, being hung from the top, do not admit any smoke caused by down draught.
Price, bronzed, from 6s 6d.
D. and E. BAILEY, 272, Holborn.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers of White Zinc Paint on a large scale in this country, are enabled, by a process, which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Those direful maladies, paralysis and painters' colic, will be entirely avoided. It is entirely free from any poisonous or pernicious property. Neither exposure to heat, nor tropical climates act upon it. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. To be had of the Wholesale Patent-dealers in Original Packages, each cask stamped—HUBBUCK LONDON—PATENT. And if not so marked, the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers in this country. Paint and Varnish Works, Upper East Smithfield, opposite the London Docks.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any alteration has taken place in the oxide, either in consequence of immersion in the material or mainly made use of to produce it, an imperfect mode of reduction, or by mixing with the oxide certain substances calculated to give it increase i weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and Co.; when ground in oil, by Messrs. T. B MORLEY and CO. and by the Company's Grinding Agents. In London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 69, King William-street. City; FREDERICK BABY, Wholesale and Retail Agent, 8, Tottenham-court, New-road. In Manchester and Liverpo l by R. CLAY, 8, Mercer-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bush; and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable. Orders received at Great Scotland-yard, and at the Works.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the Natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements tread at the Institute of Civil Engineers, lately obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stucco-es dry quickly, and may be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent — KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland cement is manufactured at these works with especial reference to its destination, whether for stucco-ue, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Bell-alley-road, Lambeth.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman, Parian (under patents), and all other Cements in use for building purposes. Nine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs. Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

BATH CEMENT.—This Cement is equal to Portland in strength and durability, does not vegetate in damp situations, is perfectly hydraulic, of a regular and warm colour, resembling the Bath stone. CHARLES RICHARDSON, 6, South Wharf, Paddington.

11, George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

SOUTHAM.—BLUE LIAS LIME, and CEMENT WORKS.—OLDHAM and TATHAM'S Blue Lias Lime, Portland, Roman, and Lias Cements.
CHARLES RICHARDSON, 6, South Wharf, Paddington.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.
Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.
ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.
SECONDS, PAVIORS', STOCKS, and other BRICKS.
CHARLES RICHARDSON, 6, South Wharf, Paddington.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF-ROAD, Paddington.
WILLIAM PEYERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.
Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester, March 31, 1855.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 20, 1855. — CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Mansfield-street North, City-road Basin. Secondly, that the trade term, TERRO-METALLIC," is the exclusive right of the Proprietor, and, thirdly, that the "REWARD OF THE JURIES," page 381, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 23s. 6d. per 1,000; floor brick and 6-inch pavings, at 40s. per 1,000; 8-inch pavings, at 80s. per 1,000; 9-inch pavings, at 72s. 6d. per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties Railway.

GREAT NORTHERN WHARF, York-road, King's-cross. WHITE BRICK and TILE DEPOT. L. B PEARSE and CO. Brick, Tile, Lime, and Cement Merchants. Builders, contractors, and others supplied with every description of building material at the lowest market prices.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickures, of good and sound quality, constantly on sale at H. DODD'S Brickfields, where are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.
Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.
Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.
N B Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand

Depôt, Agar Wharf, King's-road, St. Pancras.

VITRIFIED STAFFORDSHIRE BLUE BRICKS, Paving, Roofing, and Ridge Tiles, Sanitary Pipes, &c Stourbridge Fire Goods, &c. of all descriptions, and of best quality —WOOD and SON, Manufacturers, Portway, Oldbury, near Birmingham. Agent — Mr. J. UNWIN, Private Residence, 20, Nelson-square, Blackfriars-road.

WHITE SUFFOLK and RED FACING BRICKS
COWLEY, KENT, and ESSEX BRICKS.
Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.
